In the 1940 elections the coalition which elected Batista polled more than 800,000 votes against a bare 500,000 for all opposing candidates. In that election, however, the opposition got a large part of its votes from the Liberal Party wing known as Accion Republicana following deposed President Dr. Miguel Mariano Gomez out of loyalty to his father, General and former President Jose Miguel Gomez. This group has gone back into the old Liberal Party and its strongest leader is now Prime Minister of Cuba under Batista.

A large part of the A. B. C. Party has also gone back into the old parties allied with Batista, and the same is true of a considerable part of the former followers of ex-President Ramon Grau San Martin's "Autentico," or Cuban Revolutionary party politicians and their followings.

The reconsolidated Democratic and Liberal Parties have extended their control as members of a coalition in power until they now represent, between them, at least 75 percent of the voting strength of Cuba, having absorbed most of the smaller factional groups.

The Grau party, which mustered nearly 300,000 votes of its own in the 1940 elections, only important opposition force still actively opposed to Batista, is believed to have a faithful nucleus of far less than 200,000 votes left.

The A. B. C. Party, never able to count on more than about 4 percent of the voters, which normally number around 1,400,000 out of a total population of a little over 4,000,000, decided a few months ago to give its cooperation to the government coalition majority in all matters of importance to Cuba's participation in the war efforts of the United Nations. This left the Grau party alone as the only real opposition group.

President Batista's very recent appointment of Dr. Joaquim Martinez Saenz, strongest figure of the A. B. C., as Minister of Agriculture, and of Dr. Emerterio Santovenia, another outstanding A. B. C. leader, as Minister of State, emphasizes the isolation of the diminished Grau forces as the sole remaining opposition group.

With such a consolidation of political power in the hands of President Batista and his friends and allies, and with the opposition reduced to less than 10 percent of the qualified voters, it is clear that the Batista forces are able to do as they please or as he may choose.

Batista is himself the most determined supporter of the present constitution to be found in Cuba, especially as it might affect his own political future, in spite of the fact that it was framed by his own enemies who had, with Menocal and Grau support, a majority in the 1940 constitutional assembly, his own coalition being only in a formative stage then.

The constitution resulting is one of the longest, wordiest, and windiest charters ever adopted by any nation, nailing down as binding articles many pieces of highly controversial legislative precept not properly material for a nation's basic charter. Much of this was aimed at hamstringing Batista's government, the opposition having become almost certain it would not be able to defeat him for the presidency a few months later.

GUARD RIGHTS OF MINORITY

One such article provides that the minimum pay of a school teacher shall be one one-millionth of the annual national budget for a month's pay, all special tax funds to be incorporated in the national budget. The same opposition which proposed and put over this article has consistently blocked every effort to vote a budget to comply with such constitutional requirements, during more than 2 years, forcing the president to extend the budget of 5 years ago by 3-month decrees. The government has faithfully prepared its budget recommendations each year and submitted them to the congress within the time set by the constitution, but the opposition has tied the hands of congress by parliamentary tactics amounting to a filibuster.

Batista being unwilling to let the majority leaders use their overwhelming majorities in each house to override the minority, or use any sort of cloture or gag rule, the smallest group can make any important legislation impossible within a time limit set by the constitution, as in this matter it is.

Now in the second half of his tenth year as the virtual and responsible head of Cuba's destinies, although six other men occupied the presidency, provisionally or by election, between the 4th of September of 1933 when he took command of a chaotic national situation and started straightening it out, and the 10th of October 1940, when he was inaugurated as first president under the new constitution which went into effect on the same date, Batista has come a long, hard road, speaking softly but always ready to act decisively in any real emergency where reason might fail to achieve the required ends without more forceful action.

STANDS WITH THE ALLIES

Also he is now entering the last half of his third year as president under a semiparliamentary form of government. His prompt action in declaring Cuba's stand against Japan, Germany, and Italy the same day the Japs struck at Pearl Harbor, calling Congress into immediate session to declare war, was wholeheartedly backed by the Congress and people of Cuba.

His insistence on the sale of Cuba's whole sugar crop to a United States Government agency at a price then clearly very low and now seen to be ridiculously so in comparison with the prices to which all the goods Cuba has to buy in the United States have been permitted to climb, was accepted less wholeheartedly but quite generally for what it was; an act of good faith and a testimony of Cuba's will to do her part loyally as one of the first to sign the Atlantic Charter, avoiding any possibility of suspicion as a profiteering member of the United Nations.

That insistence was also based on definite assurances of adequate shipping and supplies from the United States at controlled prices—a reciprocity Cuba has been far from getting.

Realizing that a changing situation as to essential war logistics and the basic impossibility of preventing rises in the prices of goods and supplies were chiefly responsible for the failure of Cuba to receive such reciprocal treatment as was promised and expected, Batista's government—and Cubans as a whole—have swallowed their disappointment and suffered their discomforts like loyal friends and allies.

They have had to taste the bitterness of seeing thousands of tons of foodstuffs rotting in their fields after they had spent their labor and money to produce it on the assurance that it was needed to help win the war, all for a lack of a little bit of transportation to move it even the 90 miles across the Straits of Florida or because they could not get storage or dehydration facilities to save it.

CUBAN WORKERS HELP UNITED STATES

Cuba has offered thousands of skilled and unskilled workers to the farms and industries of the United States, and other thousands of willing volunteers for military service with the United States or United Nations Armies on any battle front.

Neither of these offers has been effectively recognized or adequately acknowledged. To Cubans, traditionally intimate with and almost a part of the United States in ways of living, education, and business, this lack of reciprocity and recognition of their will to help in the war has been a sore disappointment, but they have taken it as proof that it is a big war and that the United States is too busy supplying the fighting fronts with materials and men to have time for small friends.

In 1940 negotiations were, finally, carried through for the Export-Import Bank to finance Cuba's sugar harvest to the extent of some $12,600,000 to save the growers from being forced into sale or taking local loan-shark financing. By the time the money was made available it was no longer wanted, planters having had to let go at low prices or pay higher interest rates than usual.

About 5 years ago Cuba was promised an Export-Import Bank loan of $50,000,000 for agricultural diversification, badly needed public works, roads, and sanitation. Before the red tape could be unwound the United States Congress had imposed new limitations on the purposes for which the bank could make loans, upsetting the whole plan after the Cuban Congress had voted legislation for the loan and its repayment taxes. A new loan of $25,000,000 was arranged, but war priorities made it useless after another law had been voted in Cuba imposing taxes to cover interest and amortization.

Since about 1929 not a dime has been loaned to Cuba by the United States, although other countries—most of them less friendly, less loyal, and far less important as customers and suppliers—have gotten fabulous sums on little or no security and after having repudiated or failed to settle previous loans. In that time Cuba has repaid to United States investors more than $100,000,000 in principal and interest.

The accumulation of funds collected to care for the recently arranged $25,000,000 loan now totals around $10,000,000 in little over a year of application of the taxes provided. Long before any materials or shipping become available for Cuba's use these funds should have passed the $25,000,000 mark, making it possible for Cuba to buy what is needed for cash and pay for the work as it is done.

IS UNCLE SAM'S CUSTOMER

It has long been understood among well-informed men in Cuba that some of the United States representatives here have been the most grossly misinformed persons as to Cuban affairs, an opinion based on a consistent record of betting blue chips on the lowest hands and losing every pot. Press-agency men here, too busy to bother about underlying causes and facts while being constantly hounded to make each story hotter and more colorful than those of competing agencies, have done a yeoman job of contributing to the fund of misinformation in the minds of executives, legislators, and plain people in the United States as to Cuba, long outranking as a customer all countries in the world except Canada and the United Kingdom.

It is an unfortunate fact that few people are now interested in facts, preferring the sort of bedtime tales that have caused us to stumble along dangerous paths which encouraged our enemies to play us for the suckers we were, and made our own best friends abroad afraid to count on us in an emergency. Buffalo Bill and Diamond Dick have been supplanted by Superman and Flash Gordon, but facts are still dull things for which we have little time and less inclination, even in high places with vast responsibilities.

PESO AT PAR WITH DOLLAR

No nation has a better record than Cuba's as to the respect shown international obligations—in spite of the Finnish fables taught our children. Finland never had a war debt to the United States, and only paid back a small fraction of what she borrowed after the war to go into business as a nation. Cuba did borrow $10,000,000 for war purposes, spent twice that much of her own holding enemy aliens and building up her forces. By 1921 Cuba had paid back the whole sum with full interest. As Prof. Hudson Strode blithely informs us: "Every school child knows Finland is the only nation that paid back its war debt." Perhaps such facts have a lot to do with making us prefer fiction.

Cuba has borrowed hundreds of millions of dollars and, with a single qualified exception, has never failed to meet her obligations in a prompt and businesslike manner when due. All have been well paid, including the exception. This exception occurred when Dr. Ramon Grau San Martin, as provisional president, late in 1933 while Cuba was still at boiling point after the end of the Machado regime, suspended payment on the Machado-issued 5½-percent public-works bonds, nominally an internal loan but underwritten and sold largely in the United States when bond rates on governments had dropped to 3 percent or less. The validity of that issue and the good faith of the underwriting banks had been attacked by Machado's enemies who used their charges as one of the chief weapons against the Machado government. Had Grau failed to act as he did he would almost certainly have lost the last of his supporters, but his action was not enough to save him. His followers wanted the moon and a lot of fancy fixings immediately. Since he could not deliver, his coleaders were among the loudest in telling him to get out after 130 hectic days and nights in Cuba's fascinating Presidential Palace.

ISLAND'S SCHOOL SYSTEM

Holders of those bonds, however, made a very good investment indeed. Those who bought from buyers afraid to hold them did much better. It took a lot of honest courage for Colonel Batista, then chief of the Army—and of the revolution of September 4, 1933—to use his fullest political influence to get the Cuban Congress to find a way to refund those popularly hated bonds. He did it because he knew it was right and needful to the reestablishment of Cuba's credit as a nation. The settlement gave holders $1,100 in new 4½-percent bonds for each $1,000 in old bonds, a year of interest coupons being attached when they were offered in exchange in 1937. Any United States investor who bought and kept his bonds has already made more than twice as much on them as on the best United States bonds—and his value is a tenth more.

Since Batista was inaugurated the Cuban peso has been kept at par with the United States dollar, although it had sold at a discount of 18 percent a few months before and few expected it ever to see parity again. Cuba's bonds have sold steadily at a premium for all issues except the one mentioned. The price of those bonds had gone to 28 cents on the dollar; they are now well above par. The new bonds with which they were refunded have climbed from a low of around 40 to well over 80, headed for par and a premium.

Batista's tasks as president have not been easy. He has had to forego his plans for widespread agricultural diversification and homestead distribution has been drastically reduced because of wartime shortages of supplies and materials, and of ships to carry them. These same difficulties have cut deeply into Government revenues from imports and sales.

He has found ways, however, to do a great deal toward carrying on his programs, and it cannot be truthfully denied that he, in spite of obstacles seemingly insurmountable, has carried Cuba further and faster forward in health, education, and social welfare work, than she had gone in the previous 40 years since Spain lifted her hand from the country after that hand had been mangled by fighting Cubans and the heels of United States soldiers.

HANDLING OF DELINQUENCY

Among these advances are such outstanding and solid achievements as the creation of more than 1,300 new country schools, all of them in regions so remote that their inhabitants had never heard a school bell and few of them had ever known a man who could read or write. Into these schools flocked hundreds of thousands of children and grown-ups, hungry for the bread of knowledge set before them for the first time by the hard effort of a man who knew by bitter childhood experience what Cuba's backwoods folks wanted and needed.

It was charged, purely for political reasons, that Batista had set up these schools under Army sergeant teachers to indoctrinate the country people of Cuba with fascistic and

militaristic ideas. The true reason was that only teachers under the strict discipline of the Army could be induced to render effective service in the backwoods and to stay on their jobs and teach. Not one of the new teachers had, however, ever been a soldier before he was made a sergeant in the Reserve, called to active duty and sent out to teach, after a specialization course to prepare him. They were selected from college and normal school students, each a specialist in teaching agronomy, home economics, animal husbandry, hygiene, manual training, or some other useful branch.

PUBLIC HEALTH ADVANCED

In order to permit their inclusion in the Army pay rolls as sergeants, all vacancies in that grade for nearly 2 years were left vacant, sergeants being promoted to higher ranks and corporals left without promotion. All these teachers have been discharged from the Army and included in the rural school program of the Ministry of Education. A special rural educational normal school prepares new teachers as the program is extended, the subjects taught being those most useful to making a better living on the farm.

Forty higher centers, one for each 25 country schools, have been distributed along the highways in the geographical center of each rural school group of 25 schools. These centers are the headquarters from which the teaching in the local schools is supervised by missions of specialists who also act as teachers to some 60 more advanced pupils from each district who have completed the elementary schooling and shown their capacity for going further, many preparing to become, in turn, teachers of rural schools.

The rural schools are only one phase of Batista's personally initiated and conducted school program. The schools set up for boys and girls whose bread-winning parents have been killed or permanently disabled at their work, largely children of farm and factory workers, are models of comfort, beauty, and scientific pedagogy. He has given every encouragement to the manual training and farming branches of the technico-industrial schools and the University of Habana. His complete change in the handling of delinquent children's establishments has given such children surroundings and opportunities equal to those offered in the best schools in Cuba and far superior to those available to average boys and girls. He says they need a better chance if they are to become useful citizens.

NUMEROUS FINE HOSPITALS

In Batista's health work the crusade against tuberculosis, planned with the cooperation of two outstanding tuberculosis survey and treatment specialists from Cornell and Princeton Universities, has been the most outstanding drive of its kind carried out in America. The number of available beds for tuberculosis patients has been increased from less than a thousand to more than 4,000, with separate hospitals for children and for different classes of the disease. More than 200,000 suspected cases have been given clinical examination and treatment, the most modern methods being applied to seeking out cases, diagnosing and treating them. Similar campaigns have been set under way by Batista against infantile paralysis, leprosy, venereal, and, most serious disease of all in Cuba, intestinal parasitism in its many forms.

Under the particular heading of social assistance, which is one of the two halves of the Ministry of Health and Social Assistance, every phase of family help has been set up, from maternity leaves for working mothers with the best of hospital care before and after delivery, to generous subsidies and exacting inspection of all institutions for rehabilitation of the blind, deaf, and dumb, and on to homes for the aged and infirm. These benefits actually reach many thousands of the poor, now supported principally from funds of the national lottery, and are not mere plans or nominal benefits. The maternity care is paid for out of pay-roll taxes to which workers and employers contribute and which produce enough for the building of large, modern hospitals and clinics with more than enough left for benefits in each individual case amounting to about $75 above hospitalization and clinical service.

LINCOLN AND WASHINGTON

In all this work it has been plain that Batista's least concern was the possible political benefits he might derive. This drive has been a burning determination to wipe out of Cuba the conditions under which he and his own family and neighbors suffered when he was a boy in Banes. In the same manner his reforms in the Army and Navy, and in the National Police, have been aimed at eliminating those conditions which he most resented as a soldier. In all those plans he has had his counselors Marti, de Cespedes, the grand Marques de Santa Lucia, Don Jose de la Luz Hernandes, Jose Antonio Saco and the revered Padre Varela—great Cubans of the past century who devoted their lives to study of Cuba's needs and efforts to remedy them.

Outside of Cuba, Batista's two great heroes and examples are Lincoln and Washington, in that order. He has devoted years to the reading and digesting of Lincoln's ideas on democracy, and is able to quote or paraphrase almost every important idea Lincoln ever expressed. He got a solid grounding in the sterling, homespun doctrines of the Quakers when, as a boy, he studied, in English, at a Quaker mission school in the little town where he was born. He is also well grounded in the Catholic social doctrines of Leo XIII and Pius XI.

Batista has always leaned backward in his respect for any shade of public opinion and in his efforts to satisfy even the smallest minority groups in their utmost demands, often presented only to embarrass him, but in the name of democracy. It has been Batista's principal aim to make Cuba a land of the broadest liberties and one in which laws, instead of personal or political ambitions, should rule, even when the laws be bad or defective, and to make the vote of each citizen, freely cast, an effective fraction of the national sovereignty.

HE IS PRACTICAL REALIST

To practical politicians with long experience these aims may sound like optimism carried to the point of demagogy, but it is typical of Batista now, as it was 10 years ago, regardless of the very different picture readers in the United States have had given them of him by regular news agency men and roving reporters who went to Cuba to get material for salable articles about what each of them came to realize was one of the most remarkable personalities in the political picture of our days.

Batista is also a realist, however, accepting politics for what it is now, while hoping it will be better and trying to make it so through the new generation which he believes will, with a little better chance in life, be a little better in civic spirits.

Like every other head of a state, Batista has had his misfortunes in men on whom he relied for loyal and honest service to his government and to Cuba. He has always been very slow to believe a man he knew and worked with was dishonest or disloyal. Even when convinced at last he has been grieved rather than angry, and almost incredibly lenient. As every leader, he has had friends and associates who were sad handicaps to him.

TWO OUTSTANDING FIGURES

Among the many aphorisms left by Cuba's brilliant martyr-apostle of freedom, Jose Marti, which are a part of Batista's political bible and which he applies in his thinking and actions, is one which says: "It is with these oxen that we must plow." It means, of course, that having no better motive power we must use the cattle we have at hand.

Under Batista's 10-year regime two outstanding political figures have achieved national prestige, each universally respected and widely acclaimed as of true presidential stature. These are the present vice president, Dr. Gustavo Cuervo Rubio, head of the democratic party and heir to the political mantle of old conservative President Mario Garcia Menocal, and, the other, Dr. Ricardo Nunez Portuondo, prime figure of the newly reunited Liberal Party.

Both are men of such unusual personal integrity and are so generally respected that many good Cubans hope they will maintain the present government coalition and be elected president and vice president of Cuba in 1944, to consolidate and carry on the social gains Batista has so ably started.

HIS SUPPORTERS NUMEROUS

As is usually the case, the political field of presidential aspirants, now that Batista's decision not to run has been made, is growing. Former Premier Carlos Saladrigas Zayas is an avowed candidate and is actively planning his campaign. Every morning at the Casa Zaladrigas there gather friends and supporters of the former premier. He appears to have a following drawn from all walks of life. Strong hints that President Batista quietly favors Zaladrigas are heard on every hand. Then, too, there is Premier Ramon Zaydin, whose office in Cuba's "second palace," a block from the presidential palace, is the scene of some definite activity. Here will be found the deft handiwork of Dr. John Montalvo, secretary to Premier Zaydin, and to observe the visitors who go quietly into the "second palace" is to observe such a powerful cross-section of Cuba's business, industrial, and political life that the suspicion gradually is growing that a genuine dark horse is being groomed for the finals in next year's presidential handicap.

Batista, 42 years old last January 16, could well carry on much of his work for Cuba during the next 4 or 8 years with two experienced men in the top government positions, all working together to better the quality of Cuba's democracy. On his return to the presidency, in 1948 or 1952, Batista would be even better able to carry through his plans and go on making realities for the happiness of Cuba out of his vivid and usually remarkable common-sense dreams.

To those who actually know the real Batista it is not hard to believe that he has some such plan as this already figured out. He is certainly one of the very few, perhaps the only one, of the present-day political leaders in Cuba capable of formulating such a long-view plan, and of carrying it through—barring major accidents, of course.

Federal Assistance to State School Systems

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, Sept. 15), 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and challenging editorial written by the distinguished editor of the Anniston Star, of

Anniston, Ala., Col. Harry M. Ayers, and published in that newspaper under date of September 15, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SHAMEFUL LESSON

In his appearance before the Anniston Rotary Club yesterday, Dr. E. B. Norton, State school superintendent, stressed one pertinent fact that educators and other progressive-minded laymen have hammered on for years—the crying need of Federal assistance to the school system of the various States.

These pleas for many years were but a voice in the wilderness, for Congress and Government agencies cast the suggestions aside as merely another attempt by State governments to obtain gravy from the Federal barrel. It took selective service and its high rate of rejections because of illiteracy to bring the lesson forcibly home to Government officials and the general public.

Too long, far too long, there was a general attitude among the majority of Government officials, and the public, that the illiterates would always be with us. State governments, more closely allied with the problem, struggled to correct the evil as best they could; but their best efforts were not good enough, and today we are seeing the results in the rejections through selective service.

It was some twenty-odd years ago that Alabama first called on the Federal Government for aid in financing its educational program, not because it was seeking money for money's sake, but because it sorely needed help, and still does. If this help had been forthcoming at that time, the Federal Government would not now be forced to spend large sums of money educating men after it had inducted them into the armed services. Due to the manpower shortage, it is forced to take these illiterates, and then teach them the rudiments of education.

Since Pearl Harbor, Mr. Norton pointed out in his speech before the Rotarians, the United States Army has rejected because of inability to read beyond the third-grade level at least enough men to make up 15 divisions, or some 200,000 men. That is the stark truth, and it is all the more tragic because it could have been changed.

Alabama's Senator LISTER HILL has drafted legislation which he plans to further in the present session of Congress making possible Federal aid to the school systems of the various States, action that had it been 25 years earlier would have given us a wider selection of men for our present armed services, and a more intelligent personnel in general.

There is no doubt that education has made vast strides forward in the last quarter of a century, and this is reflected in the make-up of our present-day armed services; but the tragic part of the situation is that it could have made even greater strides had the Federal Government cooperated with the States' programs. Greater progress than ever before must be made in the next few years, for the world of the future is to be dominated by thinkers, as Winston Churchill pointed out in his Ottawa speech, and the man or woman who does not possess the basic foundations of an education will stand little, if any, chance.

Many of the so-called illiterates which the Army is now taking into its ranks and giving the rudiments of education will come out of the war with a passion for knowledge. The mere inkling which they have received will have whetted their appetites for more, and they will not be satisfied until they receive it. Having had their eyes opened to the future which they can unlock with the key of knowledge, they will want, and demand, educational opportunities which, through various circumstances, have been denied them heretofore.

Even failing to obtain all the education and knowledge they may desire, these men will be determined that their children shall not be denied these same opportunities, and it is up to us to provide those facilities. Making educational opportunities available to all, rich and poor alike, is one of the greatest programs ever conceived by man, and nothing must stand in its way, for in enlightenment lies the hope of the world.

Some of our States, of course, are further advanced than others on educational matters and their school systems are more modern likewise. This is a natural course of events, but there is no reason why those lagging behind in this program should not be extended financial aid in order that the Nation as a whole may benefit.

As the 48 States of the Union are unified in the war effort, they must remain unified to solve their domestic problems, and no sectional feeling must be allowed to obtrude itself upon the calm reasoning required to solve the problem.

Illiteracy is not a problem of Alabama alone, nor of New York or California; it is a problem for all, and will require the efforts of all to overcome. The only method is through the National Government, and if this assistance is rendered through Federal funds, the shocking illiteracy problem will soon be solved.

The Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. LOUIS J. CAPOZZOLI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. CAPOZZOLI. Mr. Speaker, it is difficult for me to understand why any American should be opposed to the passage of this resolution. I certainly condemn any deviation from the fundamentals of our Government. Whatever is to be done should be done in accordance with the methods provided by American governmental procedure.

This resolution specifically provides that the United States should participate in a plan to maintain a just and lasting peace "through its constitutional processes." The quoted language surely should suffice to allay the fears of any reasonable person that an attempt might be made to give up the sovereignty and independence of our country and make it subject to the whims and controls of foreign countries.

Let us realize that the people of our country are fully in accord with the general idea to prevent future wars. How successful we shall be remains to be seen. Some have honest doubts that future wars may be prevented. However that may be, we should not refuse to help with any attempt made in that direction. I should hate to know that 20 or 25 years hence, the children of today will be called to duplicate this war, or perhaps fight a worse one.

It is impossible, of course, at this stage of world affairs, to formulate a detailed plan which should be used to achieve the purposes of this resolution, but we should experience no difficulty in arriving at the general proposition that our country should participate in a plan to maintain peace. This is especially true when it is provided that in so doing the fundamental law of our land should be respected and observed.

It will be a terrible blow to the unity of the Allied Nations if the impression should go abroad that our country will not be interested in the future peace of the world.

Mr. Speaker, I favor the purpose of this resolution because I am convinced that the peace of the world means the peace of the people of our country.

New England Factory Safety Record

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Sunday Globe of September 19, 1943:

MACBRAYNE LAUDS NEW ENGLAND FACTORY SAFETY RECORD

New England war industries have—because of plant safety programs—next to the lowest accident frequency rate in the country and have reduced their death percentage by better than 2 percent in the first 6 months of 1943 as compared with the like period last year.

So, said Lewis E. MacBrayne, regional director of the National Committee for the Conservation of Manpower in War Industries, of the United States Department of Labor, in a press conference yesterday afternoon. He credited "the finest cooperation anyone could ask" on the part of New England industries with his committee, as being responsible for the fine record.

MacBrayne and Arthur E. Orne, field representative of the national committee, were praised for having done a fine job in New England, by Maj. Laurence B. Tipton, War Safety Training Supervisor of the United States Labor Department's manpower conservation program.

Major Tipton, on a country-wide tour, said 44,792 safety engineers have been trained throughout the country, through cooperation of 116 engineering colleges, since the manpower conservation program began in mid 1940, 1,800 of them in New England. By July of 1944, he added, 55,000 will have been trained and they in turn will instruct 625,000 war-plant foremen in safety measures.

On a national scale, Major Tipton disclosed, safety committees have surveyed 22,000 war plants, reduced the accident rate in 62.1 percent of these, saving 1,173,000 man-days for war work, the equivalent of full-time employment of 800,000 workers.

In 1942, despite the national committee's work, Major Tipton said, more than 2,500,000 war workers received injuries, which, he pointed out, is a number five times the total of United States casualties in the armed forces in this war so far. In 1943, however, he declared, this figure was reduced 2 percent.

Mr. Orne reported that, when the committee began work in New England, 2 years ago, only 12 percent of the war plants had any type of safety program and there were only about 110 full-time safety engineers in the region (most of them in Massachusetts and Connecticut).

Now, he said, 65 percent of the plants have safety programs and there are some 300 full-time safety engineers.

Massachusetts' record is far better than the average, he pointed out; 2 years ago, 55 percent of the Bay State's war plants had safety programs, protecting employees, and now fully 90 percent have them.

United States Foreign Policy

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. KLEBERG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann:

UNITED STATES FOREIGN POLICY: SHIELD OF THE REPUBLIC

(By Walter Lippmann)

THE ATLANTIC COMMUNITY

We come now to the practical question of what alliances the United States must seek to form and on what terms. If that question can be answered correctly we shall then be able to see how the level of our post-war armaments, the degree of our military preparedness, and the choice of strategic outposts and bases should be determined. For obviously we cannot remain permanently at the level of armaments which we have set for 1943. It is no less obvious that the Nation will not, in any future we need consider, disarm. Somewhere between the two extremes the level of our post-war establishments must be fixed.

Yet it will be impossible to fix it except in relation to the military power of other states, and on a basis of assured knowledge whether we must regard each of them as partner, potential foe, or uncertain neutral. We must also have this knowledge in order to determine what strategic dispositions we should make. For unless we have organized our own position in the post-war order of the great powers we cannot have a military policy. It is impossible to prepare against every contingency and all conceivable combinations. It is the business of diplomacy to reduce the uncertainty by forming dependable alliances, in order to limit the number of potential opponents against whom we must prepare our armaments.

At the end of this war, if we succeed in destroying the military power of Germany and Japan, there will exist only three great military states—Britain, Russia, and the United States. China is only potentially a great power of the future. For though the Chinese are brave and numerous, China is not yet an arsenal, and only a state which can raise great forces and equip them is a great power. France will, we may confidently believe, rise again. But there are not enough Frenchmen to make her one of the great powers of the modern world.

Germany and Japan, we have declared, will not be allowed to become great powers for a long time to come, and if this declaration is to be enforced, the three surviving great powers—Britain, Russia, and the United States—will have to enforce it. They cannot, however, enforce it unless they are allied. If they fail to form an alliance it will be because they are potential antagonists. Once that potential antagonism is recognized by their dissolving the alliance which exists in order to wage this war, one or all of the three victors will inevitably move toward arrangements with the defeated powers.

This is what happened after 1919: When the victorious alliance dissolved, vanquished Germany made an alliance with victorious Italy and victorious Japan. The state which rejects all alliances will give a high inducement to the other states to form an alliance in which it does not participate. If that state should be America because the American people still want isolation, then we must expect the other powers, who have no such prejudices, to combine for their own security.

The question then is on the formation of an American alliance with Britain and with the Soviet Union.

When we consider the region which the United States must defend, we find that Britain is established within that region as well as outside of it. Canada is in the geographic center of this region. The only land highway to Alaska passes through Canada. All the short airways to Europe and Asia pass over Canada. Thus the geography of air power links the leading Dominion in the British Commonwealth inseparably with the United States.

But no matter how boldly we allow ourselves to imagine the range, carrying capacity, and striking power of the aircraft of the future, two limitations are unalterable. The first is that aircraft taking off in North America must for civilian purposes be able to land outside of North America—somewhere in Europe, Africa, and Asia. A flight is between two airfields on the ground. So without the use of advanced air bases across the oceans, American air power cannot be developed effectively. At the utmost, American air power, with assured use of air bases only in North America, would be condemned to the strategy of the passive defense—to waiting for the enemy to strike if, when, and where he chooses. We have already examined the fatal disadvantages of the passive defensive.

The second limitation is that American air power cannot be effective without sea power. It is not practicable by means of the air alone to establish, construct, supply, and defend overseas air bases. Thus for Alaska, destined to be one of the greatest centers of the air power of the future, the use of the land highway across Canada and the command of the seas from our Pacific coast to the Aleutians are absolutely indispensable.

In regard to Greenland, or a more advanced air base in Iceland, the support of American air power also depends upon sea communications. On one side of that sea lie Canada and the British colony of Newfoundland, and on the other the British Isles. The security of the northern approaches to the American Continent is thus inseparably related to the sea and air power of Britain.

The strategic defense of the whole South American Continent as it faces the Atlantic is dependent upon sea and air communications, commanded by the outposts of Great Britain. We find the British power projected to Bathhurst and Freetown in West Africa, and to Capetown in South Africa. The British Isles command the northern entrance to the Atlantic. Gibraltar commands the Mediterranean entrance. Capetown commands the southern entrance from the Indian Ocean. The Falkland Islands command the southern entrance from the Pacific Ocean around Cape Horn. Thus the region we must defend can be attacked only from the region over which Britain commands all the approaches by sea.

Moreover, because the defense of Canada is inextricably bound up with the defense of the Western Hemisphere, the British vital interest and the American vital interest are complementary and inseparable. Britain must go to the defense of the Americas or the British Commonwealth of Nations would dissolve. America must go to the defense of the United Kingdom and its positions on the other side of the Atlantic, or run the mortal risk of letting a hostile power establish itself in the near approaches to the Western Hemisphere.

Francis D. Culkin

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. KILBURN. Mr. Speaker, words of mine are inadequate to express the loss which the Nation has sustained in the passing of the Honorable FRANCIS D. CULKIN at his home in Oswego, N. Y., August 4, 1943, and who represented the Thirty-second District of New York State in Congress for 15 years.

Congressman CULKIN'S district adjoins the district that I have the honor to represent, and problems of the two districts are more or less similar. Therefore, I came to know him well and often turned to him for advice. Sound thought, profound wisdom and intellect were found in his discussions of legislation.

He believed that he was elected to Congress to look after the people's interests and this he did according to his own sincere belief. He was a fighter when he knew he was right. One of the most fearless acts of his career was his support of the St. Lawrence seaway because he thought it was desirable even when much of his home community, the port of Oswego, was opposed to it.

He was a true friend of the farmer. He courageously opposed any reactionary policies having to do with the farmer. He always fought those who would exploit the farmer and the dairy industry.

His belief in the American way of life, his balanced judgment, his fine personality, and above all his gift of true and lasting friendship will long be remembered by those who had the privilege of knowing him.

FRANCIS D. CULKIN was a statesman in the true sense of the term. In these critical times the Nation can ill afford to lose such men.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Watertown Daily Times of Thursday, August 5, 1943, written by his friend Harold B. Johnson:

THE LATE CONGRESSMAN CULKIN

FRANCIS D. CULKIN was a wise, conscientious congressman. He represented this Thirty-second Congressional District comprising Lewis, Jefferson, Oswego, and Madison counties for 15 years. He passes away at his home in Oswego after a trying illness which was precipitated by his prolonged attendance upon the sessions of Congress last winter and this spring when he should have had a period of relaxation. He fought stubbornly on, thinking he would be able to "whip it"

as he expressed it, but in May he was compelled to return home and he had been seriously ill since then. He was an admirable fighter always. Usually he won his battles. He was entitled to victory in this last fight but his strength was too far reduced, and he peacefully passed away in the upper room of his long-time residence, that old stone house, the early home of one of the pioneer industrialists of the Oswego of a century ago.

This man of pure Irish parentage rose from humble beginnings to be one of the best lawyers of his area, a conspicuous citizen, a liberal Member of Congress who steered a straight, unbending course of right as he saw it. The family of children of which he was one possessed a strain of genius that brought them success and attention in the field of public affairs, service as teachers, and in letters. They were hard workers and they were endowed with good ability which served as their foundation.

FRANCIS CULKIN early aspired to the law. He was a youth of fine appearance and stirring ambition. He was coming of age and into manhood in the mid and late nineties when the Cuban adventure was developing. He was conspicuous in National Guard affairs and in army service in the Spanish-American War. Half the people of Oswego County knew him as "Cap CULKIN" for he was long the captain of his outfit and a dashing figure of a soldier.

He entered the law and soon politics attracted him. He had a straightforward, frank way with him. Characteristic of the race from which he sprang, he liked politics. If any man survived in Oswego County politics of another day he must be a fighter and he must have quality. FRANK CULKIN came forward in Oswego County politics when the strong political figures of another day in that district, now passed away, were leading and battling, Col. John T. Mott, H. H. Lyman, Merrick T. Stowell, Patrick W. Cullinan, Thaddeus C. Sweet, John S. Parsons, Luther Wright Mott. Politics to them was more than a pastime; it was a leading interest and a profession.

FRANK CULKIN developed as a lawyer and in public affairs and politics. He became district attorney and there laid the foundation for his subsequent career. He was a good lawyer, quick of conception of a situation, a deep and thorough student, and withal invariably a relentless fighter. He had a high conception and sense of responsibility to see that law and order were safeguarded. It would be difficult in studying the records to find a county with a district attorney more conscientious than he. He had a passion for minute thoroughness in preparing a case. As a trial lawyer he had few superiors. No one could influence him in the discharge of his duty and he pursued criminals relentlessly, so it became widely recognized in Oswego County that it was dangerous to break the law.

On he went to the bench. He became county judge and here again he served conspicuously. His long service as district attorney made him well fitted for the county bench, and yet he was never the prosecutor on the bench. He had an intuitive sense of justice. He became widely known throughout Oswego and the adjoining counties. In his private practice of the law he had one of the largest practices in the fifth judicial district prior to his going to Congress. An appraisal of his qualities as a trial lawyer to determine what was responsible for his success would probably show that he succeeded so well because of his thoroughness in preparing a case, his experience in the courts, his honest, confidence-instilling way of examining witnesses, and his down-to-earth attitude before a jury. Jurors had confidence in what he had to say about a case and the points be brought out.

He was the long-time friend of the late Thaddeus C. Sweet, of Phoenix, long assemblyman from Oswego County, later Member of Congress from this district, who was killed in an airplane accident as he was near the end of a flight from Washington to Oswego. It was perhaps natural that FRANK CULKIN succeed T. C. Sweet in Congress. Speaker Sweet succeeded Luther T. Mott upon Mr. Mott's death for the Sweet machine had come to the fore prominently during the period Sweet was speaker of the legislature, and the Mott machine, always an independent group, held together by the Mott leadership, made no attempt to hold the lines after Congressman Mott died.

Thus FRANCIS D. CULKIN went to Congress. He never aspired to build up and maintain a political machine. He was responsive always to requests of constituents, and he knew instinctively the art of politics, but he kept away from the little political fights here, there, and elsewhere throughout his district, not because he was afraid of them but because they were distasteful to him. He was interested in bigger things. There is no other Congressman of recent generations in Washington representing this district who was as absorbed as he in the big issues before Congress. He studied the questions passionately. He was an omnivorous reader and the student always. He would study the most exhaustive book or pamphlet if it had to do with the subject in which he was interested, and would master it. He was far more interested in proposed policies as being considered by Congress than in the politics of Washington or of his State. At political conventions, State or national, he always preferred the sidelines.

It is true that he was criticized bitterly on occasion in his district for some of the positions that he took, but at least no one could charge that personal interest or political expediency ever influenced a single act. He supported the people's causes. He sprung from a sturdy, thrifty stratum, the son of a family not so long out of Ireland, and as he once said, he knew the annals of the submerged. He saw the average man's side of a question, and he was for it, whether it be labor or agriculture or economic development as the St. Lawrence power project. He believed that he was elected to Congress to look after the people's interests, and this he did according to an interpretation which he made with sincerity. He fought what he considered reactionary policies as having to do with the farmer and those who would exploit the farmer and the dairy industry.

One of the most courageous acts of his career was his support of the St. Lawrence seaway because he thought it was desirable and even when all his home community, the port of Oswego, was opposed to it. His intelligent work and his leadership before the congressional committee in its long hearings on the St. Lawrence seaway will stand as a monument to him. He always said that one of his deep regrets as he looked back upon his congressional career was the fact that he voted against T. V. A., which has proved so valuable during the war period.

His interest in public affairs was far reaching, not confined to those things which particularly had to do with his district. Again, while he was a Republican he did not carry party loyalty beyond the point where he thought public interest began. And no Congressman was more attentive and more devoted to his work than he.

To his friends he was loyal and devoted. Jefferson county, such an important part of his district, was almost his home. Every summer for many years he had spent many weeks in our lake waters. He sailed his yacht, the *Southerly*, out of Sackets Harbor at first, then out of Henderson Harbor, and he knew intimately the eastern end of the lake both here and in Canadian waters. He had a deep affection for the waters of Ontario. He loved sailing. He knew the vagaries of wind and weather; in so many ways he was the typical lake salt. He would cruise this end of the lake for weeks at a time. Sitting on the deck of the *Southerly*, sailing toward Henderson Harbor or Sackets, he would say, "Look at Jefferson county from here, Dry Hill, Rutland, State Street Hill. It's a wonder that Champlain ever left here, having seen the country."

Thus passes one who served the public long and well. His passing brings deep sorrow to many, many persons up and down the district. He will be remembered long as a man of strictest integrity, of rare intelligence, of unflagging energy in public position, and in his private law practice. He was brave always, he was never afraid, he had a self-sustaining mind to a most unusual degree. No matter who opposed him he stood unafraid when he felt that the position he had taken was right.

Resolution of Connecticut Wholesale Milk Producers Council

EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein a copy of a resolution recently passed by the Connecticut Wholesale Milk Producers Council. I feel sure the expressions contained in the same will be of interest to other Congressmen and Senators representing the New England area.

RESOLUTION

That the Connecticut Wholesale Milk Producers Council is fundamentally opposed to any order such as the recent War Food Administration order limiting the sale of fluid milk, a basic food of highest nutritional value, at a time when the shortage in national grain supply is causing heavy liquidation of livestock and when inept handling of price relationships has seriously reduced the prospective supply of canned goods. It is clear that to provide adequate food supplies to support the people of this State and of the Nation, and to provide foods for our armed forces, allies, and liberated populations, recourse must be to more direct consumption of grain as cereals—a diet which can be most satisfactorily balanced only if ways and means are immediately found to increase, not to limit, the production of fluid milk.

The council hereby wishes to express to the people of Connecticut their growing concern for the future food supply of the State and their conviction that, with a policy designed to increase instead of limit milk production it would be possible to meet the increased milk requirements called for by the inevitable reduction in other supplies of food.

Further, the council wishes to commend and thank Governor Baldwin for his aid in bringing the distress of the State's dairy industry to the attention of James Byrnes and in turn to the Office of Economic Stabilization and the War Food Administration; and the council hereby orders its secretary to transmit to Governor Baldwin, the War Food Administration, the National Director of the O. P. A., and the Senators and Congressmen of the Northeast a copy of this resolution.

Address of Hon. John W. McCormack Before 1943 Encampment of United Spanish War Veterans

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOHN W. MCCORMACK, the majority leader, before the 1943 Encampment of the United Spanish War Veterans at Boston on August 16, 1943:

I appreciate and value very much your kind invitation, and as majority leader of the National House of Representatives, welcome you to historic Boston.

We are gathered at this national encampment at a time when our country is engaged in war—a war of survival—when we are fighting not only to preserve our beloved country—but to save and preserve the religious civilization that is ours.

You are representing at this national encampment not only the remaining living comrades of the Spanish-American War, but also the memories of the heroes who served with you and who have taken the journey into the Great Beyond.

I know that in your business meetings you will pass resolutions that are fitting to the momentous period we are undergoing.

The veterans of the Spanish-American War are near and dear to the hearts of all Americans. You gave your every-all to our country in its crisis of your day, and history records that as fighting Americans you brought further honor and glory to our flag and to our country.

You fought among other things to free people. Today, your sons and grandsons are fighting to preserve freedom—not only for ourselves—but for the very people you fought to free. You freed the people of Cuba—you freed the people of the Philippine Islands. The people of the Philippines have again temporarily had that liberty taken away by the cold, vicious, cruel Jap.

The fighting Americans of today will see to it that you did not fight in vain. One of the solemn guaranties of our country is to restore to the people of the Philippines their liberty. That guaranty will be carried out by a fighting America.

The Spanish-American War was more than a war of liberation of oppressed people. As we look back, it constitutes a turning point in the history of our country. We now know it had far-reaching effects—that it brought about a marked change in our foreign policy.

The winning of the Spanish-American War made completely effective the Monroe Doctrine as a fundamental part of our national defense. It extended our responsibilities beyond continental United States—the education and development of the people of the Philippines to become free and independent—a promise we had given—as a result of which we had to assume our position as a world power. These are the main reasons why the Spanish-American War, and the results that flowed therefrom, constituted one of the most important events—a turning point in the history of our Government.

Since the war you so nobly fought in was waged—we have had World War No. 1—and we are now engaged in the present destructive conflict. Probably most of you had sons who fought in the last war, and you probably have grandsons fighting in this war. Since the days that you fought we have had two world conflicts—one still being fought.

Our first task is to win this war—but let us hope and pray—after that is done—that we will win the peace.

You have seen your children and your children's children patriotically fighting for our country's cause. The youth of this generation, to whom we all owe a salute, are nobly fighting the vicious forces of destruction and paganism. After it is over, are we going to allow world conditions to drift along—so that 25 or 30 years from now some other bandit nation or nations will be whipped into a state of fanaticism—hurl the world into another war, and instead of allowing your descendants to live a normal, happy life—to have them fighting the hordes of destruction in order to preserve a decent way of life.

Twenty-five years ago the veterans of that war fought "The War to End Wars." They fought to obtain that great objective, "Peace on earth to men of good will." Evil forces prevented the attainment of that great humane objective. Out of the efforts of the immortal Wilson, whose fame grows with each passing year, we gained experience which we should capitalize for the future.

Our country is in another war. Our youths are fighting and dying nobly, for a great cause. But after this war is over, what about the next generation of youth—the children of today and of the next 10 years or so? Are we going to allow international banditry to continue to exist with the fear of war constantly hanging over our heads, or are we going to do something based on justice and equity that will save the next generation—our own flesh and blood—from fighting to prevent a repetition of what we are going through today?

The Spanish-American War was a turning point in the history of our country.

This war is another turning point. Either there will have to be some kind of world order or there will be world disorder, with the powerful nations sitting around the so-called peace table—each grabbing what they can get out of the bag—imperialism running wild, and the basis being laid for the next war when the exhaustion of this war is over, and another generation of youth has been born and has grown up.

You fought to obtain peace. The veterans of the last war fought to obtain peace. Our boys are fighting this war to obtain peace.

The one thing that can be done is for men and women of good will in all countries to see that their representatives at the peace table—their statesmen—have the vision and the courage to take those steps necessary to stop the elements and forces of evil from at least hurling the next generation into war. If we do that we will have performed our trust. We will then leave a living heritage—after we are dead and gone for the next generation to improve upon.

America is on the march. The United Nations to date have worked together to defeat the common enemy.

Gloom existed less than a year ago. America of today, thank God, possesses fighting men and women. We are fighting to preserve our country, and a civilization that has its origin in God Himself. The motto on our coins, "In God We Trust," sets forth effectively what we are fighting for. To put it in other language, we are fighting "For God and for Country." We have a great cause. Our people are devoted to that cause.

Our fighting men and youth, and our fighting women and girls, on the actual battle front, and on the home front, have changed the gloom of a year ago.

Great events and changes have taken place during the past year. More will take place in the near future, not only on the European front, but on the Far Eastern front. This is not the time to become overconfident. This is the time to go forward with grim determination—no holding back—but to hit the enemy harder and harder—to make the enemy become more and more groggy so that the knock-out punch and victory will be all the quicker.

In this crisis—as Americans—ignoring whatever our party affiliations may be—we must admit that the general of generals, the admiral of admirals—yes, the private of privates—our Commander in Chief, President Franklin D. Roosevelt, has used unerring judgment and shown outstanding courage in leading our people and the ship of state during this war.

He is our constitutional leader. He will go down in history as one of the great men of all times. I am not talking of him as Franklin D. Roosevelt the Democrat. I am talking of him as Franklin D. Roosevelt the President and the American.

In times of danger, and particularly in a war of survival, such as faces us now, strong and courageous leadership is necessary to victory.

After you and I are dead and gone and if some future generation of Americans are faced with a situation similar to that which faces us today, my one hope and prayer is that at that time there will be in the White House a man of courage and judgment, but, above all, courage.

In days like these strong leadership is necessary to victory; weak leadership is the road to defeat.

Without regard to our creed, race, color, or political affiliations or inclinations as Americans we can thank God that in this crisis He has given to us as our leader and Commander in Chief our farseeing and our courageous man of destiny, Franklin D. Roosevelt.

The Foreign Minister of Chile

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. BLOOM. Mr. Speaker, the Capitol had a distinguished visitor yesterday in the person of His Excellency, Señor Dr. Don Joaquin Fernandez Fernandez, Foreign Minister of Chile, who was present in the Diplomatic Gallery when the House began consideration of the Fulbright resolution. Under leave to extend my remarks, it is a pleasure to insert in the RECORD an editorial about Dr. Fernandez which appeared in the Washington Post of this morning, Tuesday, September 21, 1943:

The cordiality of the welcome which Señor Dr. Don Joaquin Fernandez Fernandez, Foreign Minister of Chile, has received during his stay in Washington is a reflection both of the high personal regard in which he is held by the leaders of our Government and the warmth of the friendship that exists between his country and ours.

Still a young man—his forty-seventh birthday occurs on October 24—Señor Fernandez can look back on a long and very distinguished career in the Chilean Foreign Service. Before he became foreign minister a year

ago he had held posts in Holland, Paraguay, Spain, Italy, and France and more recently in Bolivia, Argentina, and Uruguay, where he served as Chile's first ambassador to that country.

When he was recalled to Santiago in October 1942, to replace Barros Jarpa as foreign minister, his country was faced with the necessity of making a far-reaching decision. Chile was then one of the two remaining nations of Latin America which had not yet broken with the Axis, the other being Argentina. It was to no small extent through the efforts of Señor Fernandez that the break occurred. He took the position that only by sending the Axis delegations at Santiago home could Chile make her full contribution to hemisphere solidarity and be true to her own inspiring tradition. Since then the long-standing and intimate friendship between the United States and Chile has been further cemented by wholehearted cooperation in the great task of continental defense and economic interchange. Into this work Señor Fernandez has thrown himself heart and soul. In saluting him, Washington pays homage to a real statesman and the representative of a great country.

Army Retirement Program

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Army and Navy Register of August 21, 1943:

ARMY RETIREMENT PROGRAM

Almost simultaneously official releases show that approximately 900 efficient, over-age retired officers, actually performing duties of great responsibility, will be placed on inactive duty, while thousands of officers are being promoted, ordered to active duty, and newly appointed.

The economic unsoundness of wholesale retirement and promotion is apparent when it is understood that the 900 officers already are on the retired list because of an average of over 30 years' active service or physical disability, disqualifying them for field duty, though still permitting them to perform limited administrative duty at a desk in an efficient manner because of their long years of technical training. At the outbreak of the war these experienced administrators were recalled to active duty at the relatively small additional cost to the taxpayer of the difference between their active-duty pay and retired pay. When these officers are returned to retired status, they will resume their retired pay and will be replaced by other officers, many years their junior in age and training, who will get the full-duty pay of the positions vacated by this retirement.

It requires no imagination to foresee what action would be taken by the directors of a corporation on a proposal to place on one-half pay pension keymen, shop foremen, and managers of 25-40 years' service solely on the basis of age and replace them with men of 10-75 per cent of service at the same active pay in the midst of contracts quadrupling the corporation's business.

The Army policy in regard to utilizing retired officers is radically different from the sound economic position taken by the Navy. The Navy has consistently called to active service every retired officer, without regard to age, who could competently fulfill the duties and responsibilities of an administrative job. Naval officers over 70 years of age are reported performing highly satisfactory duties, so that the retired pay roll in the Navy is confined mostly to the infirm, bedridden, and crippled personnel. The recent Army orders force on to inactive-duty status practically every regular retired officer over 60 years of age in the grade of major, lieutenant colonel, and colonel, sweeping about 900 officers out of offices and administrative positions they are now handling and placing them again on the retired pay roll. Further, these 900 retired officers represent only that part of the overage retired Regular Army officers able to do limited administrative duty in an efficient manner who were fortunate enough to secure active duty since Pearl Harbor. Many others of overage officers, experts in their line, never succeeded in their ambition to be returned to active duty. Positions these retired officers might have filled successfully were filled by citizen soldiers of much less technical training, who were withdrawn from civilian war-effort activities, at considerable cost to business establishments, to add avoidable cost to the Army pay roll.

It would appear an elementary economic principle that every retired officer capable of doing an administrative job efficiently should be detailed on that job instead of making further drain on civilian manpower and adding additional expense to the Army pay roll. In its last analysis this is purely a question of getting a technical job done at the least expense to the taxpayer, since there is no question that these retired officers are handling their administrative jobs in a competent manner, since the positions vacated include scores of post commanders of large posts, staff officers at the heads of important supply branches, commanders of depots handling hundreds of millions dollars' worth of property, and chiefs of staffs of service commands, all of whom were selected for their positions because of their long training.

At times such as these, it would appear that officers with a background of training, understanding, judgment, and foresight would be more readily found among the older officers.

How To Boost 1944 Food Output

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Prairie Farmer:

HOW TO BOOST 1944 FOOD OUTPUT—FOLKS LIST WAYS THAT WASHINGTON CAN HELP—THINGS TO DO NOW

(By John Strohm)

If the folks of Prairie Farmer land could climb into the driver's seat in Washington, here's how they would crack the whip now to increase food production in 1944. (And remember this straight-from-the-shoulder talk comes from folks who are already raising a bigger chunk of food than any comparable group in the country.)

They believe Washington officials should do these things now, to get more food in 1944:

1. Guarantee a fair price for farm products.
2. Plan for manufacture of adequate machinery and repairs.
3. Insure sufficient skilled labor.
4. Give better leadership.
5. Remove unnecessary restrictions which slow down production.

Prairie Farmer surveyed a cross-section of dairy, poultry, hog, corn, and sheep farmers, and asked them this one question: "If you were in Washington and had the power to back up your decisions, what steps would you take now to insure greater food production in 1944?"

Our folks got down to brass tacks with ready suggestions for increasing food output. They offered suggestions that Congress, Food Boss Jones, and all other Washington mess sergeants can ponder—and, we hope, do something about.

Different people had different ideas. Some folks thought officials in Washington, on the whole, were doing a pretty fair job and others disagreed. The majority agreed on these points:

Fair price: A fair price for farm products is first on the list of the things Washington officials should do to insure more food production in 1944, believe farmers. Two out of three (68 percent) want a guaranteed price that will assure them a square deal with industry and labor. They want a fair return on their investments, same as business has. They practically grit their teeth against subsidies, and roll-back is now a fighting word in the Farm Belt.

"No subsidies, no benefit payments, no conservation payments—just a fair price in the market place," urges A. B. Alexander, Knox County, Ind.

And Raymond Shaffer, Noble County, Ind., says, "If I were in the driver's seat, I'd guarantee a stated price on all basic crops. That's no more than manufacturers producing war materials receive."

"Equalize ceiling prices so that the farmer gets a fair return for his products. I have 2,000 chickens and no feed. I must sell them or buy corn at above-ceiling prices. I either lose money or am forced into a black market," reports an Illinois farmer.

E. Seulemyre, Huntington County, Ind., says he used to feed out two carloads of cattle every year. "But because of the high prices of feeder stock and labor, not to mention the threat of price ceilings which may be slapped on the finished product at any time, our feed lots are empty. We believe in doing all we can for the United States of America, it's the best place to live in the world, but going broke isn't one way of helping."

Machinery: Two-thirds of the farmers surveyed (66 percent) want steps taken now to insure plenty of machinery and repairs for next year. They want plenty of machinery, they want it in time to do some good, and they want it distributed with a minimum of red tape.

"Build more three-bottom tractors and two-row corn pickers instead of three-bottom tractors and one-row corn pickers. Add 20 percent more material to a one-row picker and you have a two-row which will save vital materials and help whip the manpower shortage. Same applies to plows," advises J. W. Ervin, Douglas County, Ill.

"If we have machinery to work with, long hours will make up for most of the help shortage," says Charles W. Trigger, Peoria County, Ill.

"Distribute through established farm machinery suppliers rather than by appointed boards who in many cases are not informed as to needs," says J. H. Forell, Eaton County, Mich.

"Allocate steel to manufacturers so they can get us machinery when we need it—not 2 months late," is advice of Conway Farms, Rock County, Wis.

"I was unable to hire a corn picker last fall, so half my corn was out all winter. If

that happens again I will be ready to quit," says Harry Keffaber, Wabash County, Ind.

Labor: More than 57 percent of those interviewed urged that farmers be insured plenty of labor by stopping draft of skilled farm labor, releasing some farm labor from the armed forces, and bringing farm and industrial labor wages more into balance. Farmers fear draft boards will take more farm labor after fall harvest—labor needed for 1944.

Mrs. George Merm, Dodge County, Wis., reports: "We have marketed 100 broilers weekly until a few weeks ago when we were left without help. Taking care of 60 head of livestock, 40 cows, 15 sheep, 40 hogs and 1,400 chickens is just a bit more than my husband and I can manage. But if we only had one reliable helper it could easily be done."

"The 40-hour week, time and a half and double-time in war industries will cause a food shortage in this country at present prices for farm products. A farmer can't pay more than 30 cents an hour and board for help, while it would take 60 cents an hour and board to keep good help on a farm," says S. G. Appel, Vanderburgh County, Indiana.

Leadership: More than half of the farmers interviewed (52 percent) think there's plenty of room for improvement in Government. First, they want experienced agricultural men in key positions with power to back up their decisions. They want less confusion in what's wanted and what's not wanted. They want politics tossed out the window. And they want great numbers of nonessentials lopped off the public pay roll and put to hauling manure.

"I would place all planning for the highest food production in the hands of men who are real men of agriculture—and give them plenty of power to back up their decisions," says John F. Seltzer, Champaign County, Ill.

"Do not meddle with the prices every other day. We cannot change our program every month or week. Because a farmer must go through with his program as started out, or lose money," says Wm. Werner, Carroll County, Ill.

"The farmer has been told to do things so many different ways he does not know where he is. First, more hogs. Then make them bigger. Then not so many hogs. And by the time they get heavy, they don't want them that way. If definite policies are not laid out right away, there will be a shortage of all meats in nine months or a year," predicts Cecil Johnson, Sullivan County, Ind.

Red tape: Red tape and unnecessary restrictions slow down production, say 48 percent of those surveyed. Half of these people want to farm as they know best and with those crops fitted to their present land, without advice from Washington. The other half want rationing and other merry-go-round rules simplified.

"Why should a person, every time he needs an extra gallon of gas for field work, have to drive 20 miles to get a permit to get that gas, then stand in line for half a day? Wastes time, rubber, gas—can't spare any of them," says one farmer.

"There are many instances where it requires driving as much as 200 miles to obtain priorities and parts when they should and could be available locally and without signing of any papers," believes L. F. Richards, Ford County, Ill.

"I know of cases where farmers do not ask for things they need for actual production because they dislike being made to feel like they are trying to chisel by insulting ration board members," writes a Howard County, Ind., farmer.

"Rationing of farm machinery has taken so much of the farmers' time, gas, and tires that instead of being a benefit it has been a detriment. The same amount of material would have been as equally distributed without the rationing to say nothing of the waste in paper and clerical help, which is a large item," believes A. H. Parrott, Marquette County, Wis.

Equality Before the Law

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. ROBSION of Kentucky. Mr. Speaker, there appeared in the New York Herald Tribune on Monday, September 20, 1943, a very able and illuminating editorial under the caption "Equality before the law" urging Congress to adopt the resolution proposing an amendment to the Constitution providing that equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. This proposed amendment was first introduced in 1923 by former Senator and Vice President Charles Curtis, of Kansas. Many hearings have been held through the years. The present proposed amendment was introduced in the Senate on January 21, 1943, by Senator GILLETTE, of Iowa, with 23 cosponsors and was introduced in the House by Representative LOUIS LUDLOW, of Indiana, on January 6, 1943, with 43 cosponsors. On May 28, 1942, the full Senate Judiciary Committee reported this proposed resolution favorably. On June 23, 1943, a subcommittee of the House Judiciary reported it favorably by unanimous vote. Many women's organizations including the National Woman's Party, the National Federation of Business and Professional Women's Clubs, the National Board of Directors, General Federation of Women's Clubs, St. Joan Society—Catholic women—and 15 or 20 other great women's organizations.

The Republican Party at its national convention in Philadelphia in June 1940, adopted a plank by unanimous vote favoring the submission by Congress to the States of an amendment to the Constitution providing for equal rights for women.

The very able editorial referred to above is as follows:

EQUALITY BEFORE THE LAW

Twenty-three years ago women, playing a greatly increased role in every human activity by reason of the First World War, asked to share the responsibility for elections with men. So asking, they could not be denied. It was as a simple act of justice that the nineteenth amendment was ratified.

Viewing the status of women today—in industry, in the armed services, in the responsibilities of the modern home—we have reached the conclusion that the next step in their advance cannot be delayed. We urge upon Congress the adoption of the following amendment for submission to the several States:

"SECTION 1. Men and women shall have equal rights throughout the United States and every place subject to its jurisdiction.

"SEC. 2. Congress shall have power to enforce this article by appropriate legislation."

Various objections have been raised to this proposed alteration in our fundamental law. Some of them come from able and high-minded women who battled for protective legislation for women at a time when it was sadly needed. We believe that this fight has been won and that the principle of protection for the health and welfare of human beings has become a part of the general creed of people as well as of the courts.

On one point in this protective legislation we have always differed with its proponents, that of night work for women. Work has to be carried on by night as well as day and we believe that women should have the right to decide which time they prefer. Conditions pertaining to health should be handled through the category of health, not of sex. We recognize that the women who have signed a public statement opposing the amendment made a real contribution in the past. In our judgment the spirit of their efforts will be preserved while the many existing inequities throughout the country will be done away with through the passage of this amendment.

Like the suffrage amendment of a generation ago, the change comes as an inevitable phase of the era in which we live. When countless thousands of women have entered industry and the armed services to help save their nation, it is idle to attempt to withhold from them the equality to which they are entitled. The precise application of the amendment would wait upon the action of Congress. Its spirit, whether in respect to opportunity or reward, would be instantly recognizable. It would grant nothing which women did not deserve. It would destroy no safeguard which seemed appropriate. It would simply establish in the law the standard toward which every civilized people has been gradually advancing by the slower routes of custom and economic change.

We feel that the passage of the amendment is a logical product of the years through which the Nation is passing. We urge its acceptance upon Congress and the States.

Tribute to Poland

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation issued by Hon. Thomas E. Dewey, Governor of the State of New York, setting aside a day as Free Poland Day:

Four years ago, on September 1, 1939, the German army, acting under orders from Adolf Hitler and without a declaration of war, invaded the republic of Poland. The Nazi hordes finally overwhelmed the Polish armies and ravaged the country. But the invaders soon discovered that they could never conquer the Polish people.

Despite a planned Nazi program of brutality and murder, the Polish people, to the last man, woman, and child, have never ceased to carry the fight to the Nazis. No Polish Quisling has arisen to lead a puppet government, and the Polish underground, working against tremendous odds, has constantly harassed the invader.

In the armed forces of the United Nations, free Poles are fighting on the battlefronts of the world in the war against the enemies of mankind and are helping to bring ever closer the day of final victory and freedom from enslavement.

Now, therefore, I, Thomas E. Dewey, Governor of the State of New York, do hereby proclaim Wednesday, September 1, 1943, as Free Poland Day and do urge the residents of the

State to participate in patriotic exercises in honor of the heroism of the Polish nation.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 30th day of August in the year of our Lord one thousand nine hundred and forty-three.

THOMAS E. DEWEY.

By the Governor.

PAUL E. LOCKWOOD,
Secretary to the Governor.

Bullets

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, bullets can be used in many ways. Sometimes they afford protection, while other times they bring disaster. These bullets which I am about to describe almost backfired, not as a result of ill handling by their owner, but by the unpardonable red tape of a bureaucracy here in Washington.

Boiled down, here is the situation. The case involved only one individual corporation and, comparatively speaking, would be unimportant were it not for the fact that this company is but a symbol representing tens of thousands of other similar companies and individuals in the United States which have one of the most important jobs in this gigantic war effort—the job of supplying oil for our tremendous war machine, and at the same time using as little steel as possible in the production of same.

Here is the so-called "crime" which the Interior Department set up a committee to go on a fishing expedition, bringing one of its lawyers from Texas, and causing a busy oil operator to transport his whole organization to Washington at a loss of thousands of dollars to him, thousands of dollars to the taxpayers, thousands of barrels of high-octane oil and hundreds of manpower hours. After a full hearing, the following was the crime which came to light—a resourceful oil operator had taken a handful of steel bullets and reworked a dry well which would produce thousands of barrels of oil without the use of any additional steel piping, drilling equipment, and manpower hours. The so-called heinous part of the so-called crime brought to light was as follows: "The reworking of a dry well which had been abandoned with a handful of steel bullets at a spot where the oil sand was rather than at a spot where the oil sand was not. That, and that alone, constituted the basis for this fishing expedition by the Interior Department here in Washington."

Here is what I said at the conclusion of the hearing, and I quote from my own remarks:

Congressman MORRISON of Louisiana. For purposes of the record, my name is JAMES H. MORRISON. I am a Member of Congress and represent the district in which this oil field is located, the district, also, in which the company is located and does business.

I want further to say that I came here on my own, at the request of no one, that I am not representing Mr. Jones in any way. He evidently doesn't need me as he has so many able lawyers with him. I came here, having found out that this was going to take place by a long-distance telephone call yesterday from a person in my district. Naturally, after being here, I am not only surprised but amazed at what I have seen and what I have heard.

I am interested in this from two angles. Both are serious. One angle resulting from the fact that I am a Member of Congress, the body which appropriates money to pay employees of the Government, which, of course, would take in about four or five people who have been in this room conducting this hearing and who are members of the Interior Department. The other angle is that of a man in the oil business, producing oil, which is a very critical war material, down in my district in Louisiana who is representative of tens of thousands now operatng all over the United States.

To put it mildly, I have been shocked. I can't understand what this is all about. You say it may be making a mountain out of a molehill or attempting to do that. I can't even find a molehill. In other words, here is a man who is in the oil business in Louisiana, operating as a corporation, as most of them do. He has gone by and faithfully kept every law and regulation of the State of Louisiana; that is, of the department that handles and supervises that industry—the minerals division of the Louisiana Conservation Department. As I see it, every State has some sort of governing body for their minerals, and especially, Louisiana has its mineral division, and I think it is a very efficient organization, from every report I have heard and from what I have seen.

We sit here and hear testimony that we lost 25,000 barrels of high-octane crude oil for the reason that the Department up here in Washington refused to notify the Louisiana department. Having heard no testimony to the contrary, this Department had nothing to do with that department down there—the Louisiana Conservation Commission—but nevertheless they, as a matter of policy, held up production in that well until they heard something from the Interior Department here. Finally when they didn't hear anything from you, they went ahead and opened the well—but only after the loss of 25,000 barrels of high-octane oil.

The practical part of this is what impresses me. I can't help but look at this hearing, and if this happens to this businessman, I can imagine that it may happen under the same rules and regulations, maybe, to a thousand or ten thousand more businessmen of America. I surely can't help but believe that it is a very serious mistake and that the quicker it is stopped, the better.

In the first place, there is the manpower problem. There have been 15 people in this room and, as I have seen it, they have accomplished nothing except to realize that this is much ado about nothing and that it never should have taken place. We have here four Government officials who are paid out of the taxpayers' money. They come over there to the Hill and ask us as Congressmen to appropriate money for them—for what? Is this an example of the way they carry on for the money that we appropriate?

As I see it, the thing is backwards; any man in business, especially in the oil business in Louisiana, or this man in particular, is guilty, and he has to come up here and defend himself. My conception of law—and I am a lawyer—is that not only business men, but everybody in this country is innocent until he is proven guilty, but in the particular instance of this man, "You are guilty." Guilty of what? Guilty in the practical way of saving thousands of feet of precious and critical oil pipe, of saving thousands of man-hours, drills, and drilling equipment, and of producing oil through the more or less, I would say, resourceful and very constructive manner of taking old wells and wells where the steel is already lost and bringing in new wells. Every well that he brings in out of an old well means that 10,000 feet of pipe, approximately, in round figures, are saved. That means also thousands of hours of manpower are saved.

Here is a man who is actually producing oil, that we say is one of the most critical materials that we need, and instead of being a benefit to the country—I don't know whose fault it is, but whoever's fault it is, they should immediately remedy it and they had better immediately remedy it—instead of complimenting the man, this department holds him guilty and says that it is going to go on a fishing expedition, and tells him to come on up here and let's look and see what he has done.

They talk about the railroad trains being crowded, and ask people please to stay home. They talk about the hotels in Washington being crowded, and ask people please to stay home. How are you going to stay off the railroads and how are you going to stay out of the hotels in Washington in a situation like this? There are two gentlemen I am pointing to, whom I think are employees of this company. They work out in the field. I happen personally to know about that field. I have been there; I know all about it from first-hand knowledge. You see other men here who are connected with this company, and they are all here—to do what? to accomplish what?

Certainly by sitting in this hearing they accomplished nothing. It is a waste of time; it is a waste of money, and it is not only clogging the railroad system, but it is clogging Washington hotels and keeping other people out who, maybe, should be here and have to be here—to accomplish what? This man hasn't done anything.

If you sent one man down to Louisiana, if he had ordinary intelligence and knew anything about the oil business, he could go out there and find all the facts in the world that are necessary; and if that man had violated a State law or a Federal law, then that one man could find it out, and he could turn it over to the authorities down there, to the grand jury. If he were guilty, he ought to be punished; if he were innocent, he ought not to be punished. In other words, he ought to be turned loose, or it would be up to the grand jury to do it.

As I understand it this gentleman [indicating] is here from Fort Worth. Probably you brought him all the way from Fort Worth up here to Washington for the Department—for what? Well, that seems to be the big mystery.

I heard the chairman of the committee say that we are trying to find out the facts. In finding out the facts, are you going to summon every businessman from all over the United States who is producing oil, who is taking 10 pounds of steel and saving hundreds of thousands of pounds of steel, and bring them up to Washington and find the facts?

As I see it, this is a typical case of what a lot of people are kicking about. A lot of people in the departments here say that they are being unjustly criticized. If I get up on the floor of Congress and tell what I saw here, nobody is going to tell me that I am not justified in saying what has happened, because I know and I have seen what has happened right here, and I have been very patient. Still, it is a mystery to me how this happened. Whoever is responsible for this certainly should get the works, to put it in plain language, and if this is going to con-

tinue, then somebody should do something about it and do it in a hurry. Personally, I, for one, as a Member of Congress, am going to try to do something. I don't think it is going to be necessary, because whoever is responsible for this, I think, is going to get the works.

It all boils down to this: Instead of having a premium put on the accomplishments of this man, instead of thanking him not only for contributing to the war effort but for saving critical materials, he is being condemned and he is being put in a position that he has to spend thousands of dollars of his own money to come here to Washington to defend himself. Things have come to a pretty pass when that happens.

As I said, I am not speaking for Mr. Jones; I am not speaking for his company. I am speaking as Congressman from this district. I know that he is not the only oil man down there. I know there are other oil men down there. I am also speaking from the taxpayers' angle, because I, as a Member of Congress, appropriate the money to pay these people who, as I said, have not only wasted their time, but have wasted other peoples' time, because not one thing has been accomplished and not one thing can be accomplished by such a hearing as this.

Personally, I think that if the system is wrong in the Interior Department, you had better start correcting it, and correcting it in a hurry, because after all, we need the oil. It isn't a question of the means you use in war; it is a question of the gain in the end. I have heard all the charges made and the answers made, and that man has done absolutely nothing but what any ordinary businessman would do, what any other ordinary oil man would do—except for one thing:

In a very ingenious fashion, he took a few bullets and made new wells, and that handful of bullets, less than five pounds of steel, took the place of 10,000 feet of heavy, critical oil pipe, together with thousands of hours of manpower to drill those wells.

Regardless of what the sands are, this department up here can never check into every possible sand and can never regulate the oil business in every community in this country. That is why you have the State departments. They know the sands, and they know them better than this Department up here in Washington ever did know them or ever will know them.

I say that I think this is a terrific blunder on somebody's part, and I think there is only one thing that can be salvaged out of it. That is a good lesson. Let's not let this occur any more, and let's close down any kind of hearing like this in Washington. If you have any complaints of any oil operators in Louisiana or any other State, send one man down to Louisiana (you have men in the State or nearby in the regional offices) and let him investigate. If you have serious charges, present them to the law enforcement authorities and let them go to it.

This is wartime. We haven't any business having anything like this going on. In peacetime it would be ridiculous, but in wartime it is absolutely inexcusable, and there is no basis, there is no argument that can satisfactorily sustain the Interior Department's position in trying to create this circumstance, which I don't believe exists.

To sum up the whole thing, instead of bringing this man up here to defend himself after he has done a remarkable job down there, what should have happened is that he should have stayed there, and they should have sent him a big plaque or a big pennant and complimented him for his resourcefulness and his ability and his results in getting the necessary oil. I think I have fully explained the entire situation.

Here is what Mr. J. Edward Jones said in his defense:

Mr. Commissioner, I am president of Sugar Field Oil Co., Inc., against whom the charges contained in your letter dated May 31, 1943, were made. As president of the company, I am solely responsible for the direction of its affairs, as I have been since the inception of the company, and accordingly I desire to make a statement relating to your charges.

In presenting the statement which I now am about to make, I want you to know that I shall do so respectfully, that, also, I shall do so without bias or prejudice against you or the head of the Interior Department, of which you are a section but that, at the same time, I shall give no ground, so far as the matter of justifying our position is concerned. Neither shall I supinely avoid pointing out to you some, at least, of the matters for which I feel you justly can, and should, be criticized adversely. As an ordinary, humble American citizen, charged as I have been charged by you, I feel my duty allows me no other course to pursue. Thank God, this still is America, where officials, though highly placed, do not yet outrank private citizens, so far as their valid rights, privileges, and immunities are concerned.

In appearing before you, at your suggestion, and having in mind the statement contained in your letter or charges that if we failed to answer such charges you would recommend appropriate action, we do so with the understanding that anything we may do or say at this so-called conference will not be done or said in prejudice to our rights. We waive nothing in that connection. We are of the opinion, gained from competent advice, that your entire proceedings are invalid and without the force and effect of law.

You officially define this proceeding as a conference and state that it is informal. You have charged a violation of your Order M-68, as amended, which order, itself, states as follows: "Any person who wilfully violates any provision of this order * * * is guilty of a crime and upon conviction may be punished by fine or imprisonment." This proceeding, or this conference, is called specifically for the purpose of enabling us to answer a charge of an alleged violation of that order. Yet you have refused in writing to allow us to subpena witnesses in behalf of our defense, and you have even denied in writing, our request for the making of a stenographic record of what may transpire here.

Although you dub the conference as informal, you advise us that from the findings of fact which may flow from such informal conference, an imposition of penalties may result. Surely such an action as penalties is still regarded as a formal step in the administrative procedure of the American Government. It is strange, therefore, that the formalities in this matter apparently begin behind closed doors where the penalties are determined by arbitrary decisions of high administrative officials.

In this conference you state that the Commissioner does not act as a judge but "merely" writes a report in which he states the material facts. Since the Commissioner, you state, is no judge, he, apparently, must be the jury who in an ordinary course of events wherein citizens may be found guilty enough to merit and to receive penalties are the fact-finding agencies in all hitherto accepted principles in the administration of justice.

In these circumstances, we must declare to you that we regard you as proceeding beyond the scope of the power or authority granted to your department by Congress or by valid Executive order, that in such capacity you are attempting a usurpation of power that invades our constitutional rights, privileges, and immunities, and that you are attempting improperly to inflict penalties upon us for an alleged failure to comply with your rules, regulations, or directives, without affording us an opportunity to present a proper defense before a fair and impartial tribunal. In other words, without desiring to appear provocative, we call this performance a star-chamber proceeding—although it is headed toward penalties for us, it is not our day in court as ordinary Americans understand to be due in a proper administration of justice.

A great and fundamental difficulty which we operators find in attempting to do everything possible to cooperate with you, is the bald fact that, in your attempt to regulate the petroleum industry through your Order M-68, and all its many amendments and the exceptions which you have issued for the order, you extend your field of asserted authority to a point where it considerably overlaps State authority and supervision in regulating and ordering us in the conduct of our own businesses. In the instant case, we have done nothing at all that violates or negates the authority of the sovereign State of Louisiana. In fact, everything we have done and that you have listed as your charges against us, has been done with the expressed and written permission of the State of Louisiana. It has been done in innocence by us, acting as we have acted, in the belief that the State of Louisiana was sovereign sufficient in the exercise of its State rights to empower us to do that which we did. We wittingly violated no order of yours; we did not know or realize that we were compelled to turn to any commissar for additional permission to do that which Louisiana already officially had authorized and empowered us to do.

After studying your order M-68, and such of the many amendments and exceptions thereto as came to my notice, including Petroleum Administrative Order No. 11 (which alone numbers some 15 closely-typed pages) and your supplementary order No. M-68-1 (sec. 1047.6), supplementary order No M-68-2 (sec. 1047.7), supplementary order M-68-4 (sec. 1047.9), supplementary order M-68-6 (sec. 1047.11), Petroleum Administrative Order No 2 (sec. 1515.1) and Petroleum Administrative Order No. 6 (sec. 1515.2), and many of the amendments to such orders, and after attending lectures by your own representatives in New Orleans and elsewhere at which places effort was made to convey to us oil men understanding of that which was intended in all the hodge-podge of orders, rules, regulations, pronunciamentos and directives, my intelligence, ordinary as it is, actually came off with the none too brilliant idea, apparently, that what you were trying to do was to regulate the use of steel—primarily tubular goods—by the industry. Any other conclusion you may insist should have been arrived at by me was one which my limited mental capacities simply excluded. My mistakes, therefore, have been, as I at first so informed you by letter, unintentional and quite innocent. I also advised you that your charges were petty, trivial, and frivolous, because the only violations which I admit, had to do—not with the use of heavy tubular goods, or above-ground equipment, but simply the steel bullets used in plug-back operations—material that must be weighed in units of grains, not tons.

Our Griffith No. 2 well (formerly our Learner-Victory well No. 1) was drilled to a depth of 10,159 feet under an exception to your order M-68, granted by you for the University Field at Baton Rouge, La. This operation is your charge No. 1 in your letter of charges, previously referred to. Your exception was for the drilling and completion of wells (on a nonuniform spacing program) to the lower Oligocene zones in that field. This meant to depths below 7,300

feet. I fully advised you concerning all pertinent facts of this operation.

The log of the well indicated probable production at several deep levels and casing was set. We had a right to that casing under your exception and no objection to our use of it ever has been made. We tested five different formations—from 7,745 feet to 9,935 feet—all of which, unfortunately, proved nonproductive.

Your permission for obtaining and using the steel casing had been granted, the well had been completed as a failure in the zones for which the casing had been used, and we were confronted with a fait accompli, inasmuch as we had a dry hole with 10,000 feet of steel cemented in it. But at 6,770 feet, the log revealed a sand we knew well, a prolific sand capable of large production of high octane, aviation gasoline, crude oil, used exclusively in the war effort and badly needed for just that effort.

Since the well had failed to produce at levels below 7,300 feet, for which you had granted the permission to use the steel required to case it, I concluded then and I believe now, that the jurisdiction as asserted by you in your exception to Order M-68, ceased to exist and, desiring to complete the well in the 6,770-foot sand instead of foolishly abandoning all that steel which stood cemented at 10,000 feet, and the well itself as a dry hole, I asked the State of Louisiana to allow me to perforate for production at 6,770 feet. This the Louisiana authorities, of course, did, and I completed, last November 1942, an excellent oil well of large capacity. In the completion operation I used 15, one-half-inch steel bullets, each weighing 217 grains. The total weight of the steel required to enable me to complete this well in the 6,770-foot sand, therefore, was 0.0002325 ton. It easily could be placed in the palm of one hand. This is the steel for the use of which I, unintentionally, apparently violated a portion of your long order, a portion that, even now, I cannot discover!

At best, giving credit for sound and mature judgment regarding such a circumstance, it is inconceivable that Federal officials, charged with the grave responsibility of regulating American industry with the primary thought and purpose of winning a great war, should leap at an opportunity to make a charge against any citizen for such a frivolous, technical violation of an order. It is difficult for me, also, even having in mind my previous experiences with New Dealism, to realize that underlings of Mr. Ickes' Department might be interested in petty, trivial matters that perhaps could be termed "political persecution." But when I learned that your Department was claiming a violation, that your representatives had visited the Conservation Department of the State of Louisiana, warning their officials that I had violated an order of yours and that you could not look with favor upon my being allowed to produce the well—regardless of the country's vital need of the high octane aviation gasoline crude oil—I realized that something strange, indeed, had possessed you. I came to Washington for a conference with your Department, since the Louisiana authorities requested me to obtain a clearance from you before giving me a permit to produce the well.

At our conference with your Messrs. Schilthius, Allen, Willebrandt, and Jones, attended by me and my executive assistant, Mr. Buckley, I explained to you that the State of Louisiana authorities were quite willing for me to produce the well if I could obtain a statement from you that you had no objection to its being produced. I urged the war need for the well's production. At the conference, I specifically was advised that you had no objection to the well's being produced but that I had violated an order in perforating the well and that you could not advise me what might be done to me for having committed such violation.

I was advised that you would state in writing that you had no objection to my producing the well, providing I asked you in writing so to state. This I did, at once, but you went directly against your promise to me, and instead of advising me that you made no objection to the well's being produced, you notified me of your intention to investigate and this conference followed. You have never even at this late date, granted your permission to produce Griffith No. 2—apparently desiring, in spite of our war needs, to do everything in your power to keep the well closed in. Since November last, even on a greatly restricted proration basis, the well easily would have produced some 25,000 barrels of high octane aviation gasoline crude oil that the Standard Oil Co. would have used exclusively in the supplying of war contracts. You knew this because I advised you of such need—and for you to deny the country that oil which the Nation vitally needed in fighting the war was and is, in my opinion, to speak mildly, inexcusable. It should be called to the attention of Members of the Congress, whose cooperation in the war effort supports you. For you now to be taking my time, which I know is valuable, not to mention that of your own, which I will not appraise, is, I believe, ridiculous in the extreme. What is it you want of men in this business?

Your charge number two relates to our Richard well No. 3. In this instance, I had your specific permission to deepen this well from 6,800 feet to 7,200 feet. At the latter level, I found no production, even after I had set a small liner from 6,661 feet to 7,214 feet—and with your specific permission. Perforations were made at 7,192 to 96 feet with no results. Since production failed at the 7,200-foot level, I perforated at 6,934 feet and completed an oil well. For this latter perforation, you may charge a technical violation, since I did not complete the well finally at 7,200 feet, the depth of the originally granted permission. But the steel I used in the operation was only 24 bullets weighing .00372069936 tons. Full written permission to do this was obtained from Louisiana authorities.

Your charge No. 3 relates to our McDonald No. 2 well and complains of another plug back from a sand at 6,934 feet to one at 4,350 feet. This well was drilled long before you came into existence with your orders and your directives. The well was completed originally in March 1940. When we plugged back from the 6,900-foot level to the 4,350-foot level we did so with full permission from the Louisiana authorities. As all the history of this particular well preceded you and your asserted authority, I never thought for an instant that you had any authority over the well—certainly none that superseded the State authority. Consequently I did not ask you for your permission for me to use the 48 small bullets that I found necessary for the job. These 48 bullets weighed 0.00186034968 tons. But in the plug-back operation, I salvaged the 2-inch tubing that previously had hung from the 4,350-foot level to the 6,934-foot level, a difference of 2,584 feet. This salvaged steel meant a saving of 6.0724 tons. Measuring these 6 tons of steel saved in the operation as against a handful of bullets used, makes me, as a practical-minded businessman, ask you, a high New Deal official, What is it, that you want of me in this petty business?

Your next charge in your letter of May 31, 1943, relates to our McDonald No. 4 well. This again, is a well drilled long before your Order M-68, having been completed in March of 1941. You charge me with plugging back this well from a formation at 7,217 feet to one at 5,000 feet, claiming it violated your order. In this case, also, written permission of the Louisiana authorities was obtained for the operation. The only steel used was the bullets that perforated the 5,000-foot formation, and other formations tested between the two levels. In all, 136 bullets were used—0.0021084 tons. But I salvaged the 2-inch tubing that previously had hung from the 5,000-foot level to the 7,217-foot level—weighing exactly 5.20995 tons. Measuring these 5 tons of steel saved in the operation as against the handful of bullets used, again raises the question, What is it that you gentlemen want of me in these trivial matters?

The next, and last, violation charged has to do with our plugging back our Reinken No. 1 well. Again, this is an old well, completed long before you people ever came into existence—in September 1939. Written permission, of course, was obtained from the sovereign State of Louisiana. Seventy bullets did the job of perforating in the 4,195-foot level. It had been plugged back from the 4,350-foot sand. But in the operation, I salvaged the 2-inch tubing that previously had hung from 4,195 feet to the 4,350-foot level. The steel thus salvaged in this well weighed some 0.3642 ton. Measuring this over a third of a ton of steel saved as against the handful of bullets used, well, what is this all about?

Gentlemen, my company is a small company. It is an independent oil company that produces natural gas and some 1,200 to 1,500 barrels of high octane aviation gasoline crude oil, every day—all of which is used exclusively in the war effort. I have a letter from the War Production Board that states that activities of my company have been thoroughly examined and found to be appropriate to the public interest and essential to the war effort. I am proud of this effort and am giving all the time I can to a proper operation of my business. I do not desire to engage in petty controversy with little men of brief authority in officialdom. I have touched here upon only those specific matters under formal charge against us, but I have omitted and overlooked—deliberately—a number of other small, petty, obnoxious things you have done to me that, were we to go into them, would make triviality the order of the day. Strange quirk of destiny, when American citizens, busy as we are busy, must be haled before grave and supposedly serious-minded men, sitting high in the great Interior Department of our Government, to answer charges so petty, so trivial, so frivolous as should and would put to shame a more worthy purpose that surely must occupy the minds of our Federal officials. We businessmen of America really have no time now, for such foolishness. The "bullet case" should be allowed to die a natural death. Its force has been spent and nothing will be gained.

Mr. Speaker, and now, in closing, I, as Congressman, have one suggestion to make to the Interior Department. Let us use bullets to whip our enemies and to produce oil and not use them to fight our own loyal citizens who are doing a magnificent job in producing that oil.

Letter From a Constituent

EXTENSION OF REMARKS

OF

HON. CHARLES L. GERLACH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. GERLACH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ALLENTOWN, PA., *September 16, 1943.*

Mr. CHAS. GERLACH,

Member of Congress, Ninth Congressional District of Pennsylvania.

DEAR SIR: I dare you to read this on the floor of the House.

I get a good laugh, and get mad almost every time I hear a Congressman or Senator on the air. All you fellows know is talk about Government bungling and bureaucrat government, what in h--- do we want with a Congress anyway, what have you done in all this mess. You are all afraid of organized crowds, labor, the farmer, and who not, so you just do nothing leaving everything up to some bureau, and then holler about it.

If I had the power I would vote every mother's son out of both Houses of Congress and put in a crowd of small businessmen. I bet you they would handle this mess.

If Congress would at any time have had any guts they would have done what the Parliament of Canada done in January 1942, stopped all price rises including labor, there are no $1.32 per hour munition jobs in Canada.

Telling one man to make shells at $100 per month for his brother to shoot at $50 is no more regimentation than army drafting, only the factory worker votes. Many men in the war factories are only putting in time at 10 percent above wages.

Even the soldiers helping to can tomatoes at Campbells have to pay union dues, why not let Mr. Lewis inside.

Wake up Congress or are you afraid of making mistakes.

Yours truly,

A. W. CROUTHAMEL.

Jim Farley

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article from the Nevada State Journal of September 5, 1943:

VALUES IN THE ROUGH

(By Brewster Adams)

JIM FARLEY

One of the pleasant and profitable gains of the summer are the acquaintances you make.

Folks are friendly in the mountains and after wintering with the Rotarians it is refreshing to meet with those who don't try to sing.

Even the Democrats are democratic and some of the scattered Republicans come out of the woods to greet you. Of course, there are a few other nuts left which the squirrels haven't got, but all-in-all there are good people in the hills.

Appearances fool you. A fellow comes along with pants as baggy as the editor's, and to your surprise he really is somebody. You realize that even these dudes may be human at home, although with a blotch of cream on their noses they do remind you of the old clown in the circus.

Often the loudest are the least and the homeliest are the highest. Nature calls for naturalness and the most important are usually the least imposing.

That was my opinion in meeting Jim Farley. Always I have had a reluctant admiration for his kind. One who does the work and shares few honors when the job is done. A plugger, he, and a plodder and a patient performer. We Republicans haven't much left which we can admire, but I learned a great admiration for Jim Farley.

He is one of those who carries the load and brings his party into pleasant places and then usually is turned out to make his own. When the sugar is passed around he gets a kick and not a pat. Faithful is his name and loyal is his nature.

It was typical and pretty to see the friends that Jim Farley drew. Perhaps that is his great gift. The children clamored for him and climbed all over him while the men showed him much respect.

They say he never forgets a friend but also has a great, if dangerous, memory for any who may impose upon him. There was a suspicion that he was holding a stored resentment for one party whom he had packed into camp and who left him in the short grass.

Anyway, I would rather have him for a friend, rather have him carrying the load for me, than to have even an uncertainty as to his good intentions.

No disrespect, but always I have heard that Jim Farley has long ears—that nothing went on or off that he did not hear and store in his amazing memory—so sagacity he shows which is almost more than human.

So it is my pleasure to recall and to relate some of my impressions in meeting with this interesting character—rightly named, I doubt if there is any better pack mule following the trails through the high Sierras.

(Any resemblance or correspondence to any living character is purely intentional.)

Participation in World Peace

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. FORD. Mr. Speaker, just an additional word as to the high-lights of the debate on the Fulbright resolution.

Those wholeheartedly favoring the resolution are to be congratulated on their understanding of the situation and for the clarity and sincerity which characterized their remarks.

Those who in their hearts opposed the resolution, and with fine courage said so frankly, are likewise to be congratulated.

But, Mr. Speaker, what are we to say to that lost legion who, because of their deep-seated partisan rancor, but lacking the courage to record that rancor frankly, indulged in an orgie of damning with faint praise a resolution which they wanted to oppose but dared not.

What was their out? Simple indeed. They asserted that the resolution was too far reaching in one breath and utterly futile and meaningless in the next, but they announced that they would support it. Why? Because of the psychological effect on other nations.

These gentlemen are first and foremost congenital isolationists who have not changed their views but have changed their tactics. That is their great American prerogative.

It seems to me, however, that since these are their sentiments, they desert their great American prerogative because of a lack of intestinal fortitude.

Flood Control in the Arkansas River Basin

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. CRAVENS. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I am including speeches delivered by Col. A. M. Neilson, of the United States Engineer Office, Little Rock, and Col. F. J. Wilson, of the United States Engineer Office, Tulsa, at a meeting of the Arkansas Flood Control Commission, held at Fort Smith, Ark., on September 2, 1943.

The people in the Arkansas River Valley are indeed grateful for the services rendered by the Corps of Engineers in the great flood disaster of last spring and for their untiring effort to construct facilities and projects, which will prevent the recurrence of such disasters.

The speeches above referred to supplement each other. The address of Colonel Neilson was given first and was followed by that of Colonel Wilson, and are as follows:

ADDRESS OF COL. A. M. NEILSON

Mr. Chairman, members of the State Flood Control Commission of Arkansas, distinguished guests, ladies, and gentlemen, during the major flood which occurred on the Arkansas River in May and June of this year, the maximum stage of record for floods of recent years was exceeded at Fort Smith by 5.05 feet, and the maximum stage of the great historical flood of 1833 was exceeded at Fort Smith by 3.75 feet. As a result of this disastrous flood, 1,450,000 acres of land were overflowed along the Arkansas River and its tributaries in the States of Arkansas, Oklahoma, and Kansas; 26 lives were lost; and preliminary estimates indicate that damages were sustained in the amount of $33,000,000.

This great flood on the Arkansas River resulted in four separate and distinct activities on the part of the Army: The flood fight, the rehabilitation of farms and county roads in the inundated area, the repair of damaged levees, and the preparation of a review report, which is now under way, covering all levees on the main stem of the Arkansas River.

THE FLOOD FIGHT

High water predictions were received by my office on Monday morning, May 10, 1943. By 11:30 a. m. sandbags, shovels, portable lights, and other miscellaneous equipment were en route to the threatened areas in the vicinity of Van Buren, Dardanelle, and Morrilton, Ark. Supervisory personnel were moved to their high-water stations during the morning and afternoon, and by 3 p. m. all levee district officials had been advised of the approaching flood.

Over 19,000 troops from Camp Gruber, Camp Chaffee, Camp Robinson, Camp Claiborne, Camp Polk, and other stations were used for sandbagging existing levees, construction of new levees at locations threatened by caving banks, patrolling and guarding flood-control structures, and the evacuation of residents in threatened areas.

Rescue activities were performed by units of the Eighty-eighth Division from Camp Gruber, Okla., under the command of Maj. Gen. J. E. Sloan, and the Fourteenth Armored

Division from Camp Chaffee, Ark., under the command of Maj. Gen. V. E. Prichard. Approximately 6,500 officers and men of these two divisions were on continuous duty on work of this nature and other activities connected with the flood. These troops were dispatched at once with power boats, amphibious peeps, and ponton boats to comb the lowlands day and night from Fort Gibson, Okla., to Paris, Ark. A total of 2,700 persons, who were stranded and in danger of being drowned, were rescued and delivered to safety. These errands of mercy were made during darkness in unknown and dangerous waters, and this rescue work was continued until all residents of the lowlands were evacuated. Six soldiers lost their lives near Sallisaw, Okla., while on this rescue mission. The One Hundred and Twenty-fifth Engineers, of the Fourteenth Armored Division, assisted by 260 officers and men of the Fifty-third Engineers and Fifty-sixth Engineers of the Eighth and Eleventh Armored Divisions, respectively, from Camp Polk, La., also placed ponton equipment in the swift waters to carry three temporary 8-inch water lines, which provided nearly 6,000,000 gallons of water per day to the city of Fort Smith and Camp Chaffee and replaced the permanent 27-inch pipe line which was broken by the flood.

Approximately 4,000 officers and men of the Ninety-fifth, Three Hundred and Sixty-fourth, Three Hundred and Seventy-second, and Three Hundred and Ninety-third Engineer regiments from Camp Claiborne, under the command of Brig. Gen. John W. N. Schulz, supplemented by about 7,000 officers and men of the Eleventh and Fifteenth regiments of the Branch Immaterial Replacement Training Center from Camp Robinson, under the command of Brig. Gen. Francis B. Mallon, were used along the sections of the river lying downstream from Conway, Ark. In addition, the Seventy-fifth, Five Hundred and Eleventh, and Five Hundred and Twenty-seventh Light Ponton companies from Camp Beauregard, La., Camp Swift, Tex., and Camp Bowie, Tex., were also engaged on this work. The commanding general of the Eighth Service Command, Maj. Gen. Richard Donovan, furnished about 850 officers and men of the Seven Hundred and Sixty-sixth Military Police Battalion, the Five Hundred and Nineteenth Quartermaster Regiment, and the Four Hundred and Twenty-fifth Ambulance Motor Battalion from Camp Robinson; about 875 officers and men of the One Thousand Eight Hundred and Fiftieth Service Unit from Camp Chaffee; and arranged for the use of a large amount of military equipment in connection with this work.

During the period of the flood, Col. Edgar R. Todd, commanding officer, Stuttgart Air Field, under the command of Brig. Gen. W. W. Welsh, the commanding general of the Southeast Army Air Forces Training Center, provided planes for reconnoitering the flooded areas for the purpose of locating persons who had been stranded by the rising waters. This information was furnished to my office and promptly relayed to the Red Cross in order that marooned persons could be rescued. In addition, Colonel Todd provided planes upon request to transport personnel on special flood missions, which would have been impossible of fulfillment by automobile or train in view of the fact that highways, railroads, and bridges were inundated by the flood.

I would like to give you a few details relative to the unsuccessful fight which we made to save the Fourche Place-Woodson levees. Three companies of troops had been assigned to this area prior to the arrival of the first crest. When I arrived to inspect the disposition of troops, I was immediately confronted with the fact that the levees were about to fall in two locations. During that night, 3,400 troops were moved in from Camp Robinson and assigned to various threatened sections of the levees. Needless to say, this was a difficult task in view of the fact that the officers and men were entirely unfamiliar with the approach roads and the location of the levees which extended over a 15-mile front.

A total of 4,000 officers and men fought the rising river all that night and the following day. During this long period of time, we were constantly faced with threatened levee failures or overtopping at various locations. Finally, the levees broke simultaneously at two places and a most difficult problem of evacuation of troops and equipment had to be immediately solved. I give great credit to those comparatively inexperienced company officers for effectively carrying out the orders for withdrawal without the loss of a single soldier or item of major equipment. I wish that you could have seen those hundreds of trucks moving out the thousands of soldiers ahead of the onrushing water. All officers and men cooperated in an outstanding manner during the fight to protect the levees from the great flood on the Arkansas River. They behaved like veterans, some of them working 28 hours without rest under extremely trying conditions, and showed a determination and will to win which should carry them far in the strenuous days to come.

THE REHABILITATION PROGRAM

After the recession of the floodwaters, it was discovered that 11 counties lying within the boundaries of the Little Rock district had suffered extensive damage to their roads. The nature and extent of damage varied considerably due to local conditions affecting the movement of the floodwaters. At some locations, entire sections of the roadway were completely washed away leaving holes 20 to 25 feet deep. At others, heavy deposits of sand and silt were found on the roadway. It was necessary to completely relocate some sections of the roads in order to provide rights-of-way for levee setbacks. Numerous small drainage structures were washed out and several timber bridges were so badly damaged that they had to be replaced. Large areas of surfacing of the roadways were so eroded that the gravel had entirely disappeared. Surveys indicated that very few sections of the roads lying in the inundated area escaped without some damage.

Under peacetime conditions, the use of troops and the issue of Government supplies are authorized only during the actual existence of a flood emergency, and assurance is not rendered during the period of rehabilitation which necessarily follows such a catastrophe. Troops are normally withdrawn and the issue of supplies is stopped at the earliest practical moment. In view of the extreme shortage of manpower and construction equipment as a result of the war effort, authority was obtained by Governor Adkins and the Arkansas Congressional Delegation to rehabilitate the county roads in the inundated area by the use of troop labor. Conferences were held between representatives of the Government and State and county officials with the result that a plan was adopted whereby county judges provided the necessary materials and the Little Rock district made available most of the essential heavy construction equipment. Gasoline, fuel oil, and lubricants required for the trucks and heavy construction equipment were furnished by the Army.

Over 2,400 officers and men of the 372d and 393d Engineer Regiments, under the command of Brig. Gen. John W. N. Schulz, were promptly moved from Camp Claiborne into the devastated area. Work was initiated between Fort Smith and Pine Bluff immediately after the arrival of the troops, and civilian employees of the Little Rock district were assigned to each company commander to act as consultants during the performance of the work. Four power shovels, 7 draglines, 15 carry-all scrapers, 34 tractors of which 15 units were equipped with bulldozer attachments, 13 motor graders, 6 pull graders, 181 dump trucks, 50 miscellaneous trucks and automobiles, 1 piledriver, 25 portable electric light plants, 4 power pumps, and other items of equipment were provided by the Little Rock district.

The work accomplished by these engineer troops in a period of about 1 month consisted of repairs to 13 large box culverts, repairs to or reconstruction of 31 bridges, 345,000 cubic yards of grading, and 82,000 cubic yards of gravel surfacing. In addition, over 4,700 linear feet of pipe culverts, ranging from 12 inches to 48 inches in diameter, were relaid, which required 2,500 cubic yards of hand excavation. Approximately 200 miles of road were restored to use in the inundated area, thus making it possible for the farmers to get back on their land and replant their crops.

In addition to the country-road rehabilitation program, a 6-point program for the rehabilitation of farm lands and improvements was undertaken by the Eighth Service Command. The 6-point program consisted of the following items:

1. Removal of debris.
2. Leveling of drift deposits on croplands.
3. Restoration of surface drainage.
4. Temporary repairs to farm buildings.
5. Temporary replacement of fencing.
6. Other general rehabilitation work necessary to get the farmers to their fields.

This program was accomplished in the Little Rock and Tulsa districts by troops which operated under the direction of district commanders of the Eighth Service Command. In the Little Rock district, 21 companies, totaling 2,850 officers and men from camps in Texas, Louisiana, Mississippi, and Arkansas, were employed on this work in 10 counties and assistance was rendered on 1,167 farms comprising 53,640 acres. In the Tulsa district, 19 companies, totaling 2,460 officers and men from camps in Texas and Louisiana, were employed in 9 counties and work was accomplished on 873 farms covering 19,192 acres.

THE LEVEE REPAIR PROGRAM

Immediately after the floodwaters had subsided sufficiently surveys were undertaken to determine the condition of the levee systems. The most severe damage was suffered by levee districts along the main stem of the Arkansas River between Pine Bluff and Fort Smith and on the lower reaches of the Grand and Verdigris Rivers.

Responsibility was placed on the War Department for the accomplishments of levee repairs on tributaries of the Mississippi River by the Flood Control Act of May 15, 1928, which authorized the sum of $5,000,000 for such work. Further authorization of $15,000,000 was included in the Flood Control Act of June 15, 1936, and an additional authorization of not to exceed $1,000,000 for any one fiscal year was provided in the act of August 18, 1941. Funds remaining in these appropriations were not sufficient to cover the cost of repairs required as a result of the 1943 floods which occurred in many sections of the country and an additional amount of $10,000,000 was, therefore, authorized by the act of July 12, 1943. Operating under this authority, the War Department is now in the process of restoring all of the damaged levees to their preflood effectiveness.

In the area affected by the May-June flood and upstream from Pine Bluff there are 69 individual levee districts and private levees on the Arkansas River and tributaries. These levees have an aggregate length of approximately 358 miles and provide protection for about 460,000 acres of land. During the recent flood approximately 278 miles of these levees in 63 of the districts were rendered ineffective, causing overflow of about 140,000 acres.

The question may arise as to the reason for the failure of so many of these levees. Reviewing the history of their origin, we find

that practically all levees on the Arkansas River and tributaries were originally constructed by local interests. Most of the structures were designed to protect against moderate floods only, and a record of their performance in the past shows that they have failed on every occasion when the river has exceeded what might be termed an ordinary flood stage. The successful maintenance of 80 miles of levee in 6 districts which protected 320,000 acres during the recent flood was, with one exception, made possible by the fact that the protective works in those areas had been reconstructed or enlarged by the Government as projects authorized and approved by the Congress. The one exception was the Fourche Island levee on the Arkansas River downsteam from Little Rock which was maintained against a stage approximately 2 feet higher than the maximum stage which heretofore had been successfully withheld. This levee was saved only by the use of great quantities of sandbags and materials and by the determined efforts of about 1,200 troops.

The levee repair program now under way along the Arkansas River and tributaries is quite extensive. Even before the floodwaters had receded, applications for repairs to levees were received and plans were being formulated for the accomplishment of the work. The initiation of these emergency repair projects is in itself quite a task. The full cooperation of all levee boards and affected individuals is essential. Detailed field surveys of each damaged levee were undertaken as soon as entry could be made into the flooded areas. Plans and specifications were then prepared for each project. Under the present established policy for the work, it is incumbent upon the local levee boards, at the time of submission of the application for repairs, to assure the War Department that the levee district will furnish rights-of-way without cost to the Government and will assume all liability for damage to crops or any other damage incident to the prosecution of the work. While the fulfillment of these requirements may appear to be easy of accomplishment, such is not always the case. With few exceptions, the acquisition of rights-of-way presents a serious financial problem, and in many cases serves to delay the initiation of the work.

The present levee repair program far exceeds any previous program which has been undertaken on the Arkansas River and tributaries since the War Department was charged with the responsibility for making such repairs. The work will involve the placement of approximately 2,700,000 cubic yards of embankment and the construction of numerous floodgates at an estimated total cost of $1,325,000.

THE REVIEW REPORT

I shall not discuss the status of authorized and approved reservoirs in the Arkansas River Basin as that subject will be covered later by Col. F. J. Wilson, district engineer of the Tulsa district. The first act which authorized the construction of extensive flood-control works in the Arkansas River Basin was approved on June 22, 1936. This act authorized 33 levee projects on the Arkansas River and its tributaries. Ten of these authorized levee projects are on the main stem of the Arkansas River and the estimated Federal cost of these improvements is $8,000,000. Only 3 of these 10 authorized projects have been completed: namely, North Little Rock, Ark.; from North Little Rock to Gillett, Ark.; and Faulkner County levee district No. 1. Not one of these levees was seriously threatened by the recent major flood on the Arkansas River. The construction of the other 7 projects on the main stem has not been undertaken because of the failure of the local interests to meet the requirements of local cooperation.

The flood-control act approved on August 18, 1941, authorized 4 additional levee projects on the Arkansas River and its tributaries of which 3 of them are on the main stem; namely, Tulsa and West Tulsa, Okla.; Crawford County levee district, Arkansas; and south bank of the Arkansas River from Little Rock to Pine Bluff, Ark. With the exception of the Tulsa and West Tulsa levees, these projects have not been undertaken because appropriations have not yet been made available for their construction.

In recent years, numerous reports have been submitted in connection with local flood protection at various localities along the Arkansas River. Some of these reports were unfavorable because the local interests were of the opinion that the requirements of local cooperation would not be met. These requirements of local cooperation, which have been established by Congress, are as follows: (a) provide without cost to the United States all lands, easements, and rights-of-way necessary for the construction of the project; (b) hold and save the United States free from damages due to the construction works; and (c) maintain and operate all the works after completion in accordance with regulations prescribed by the Secretary of War. Because of this established policy, a project for local protection cannot be favorably recommended to the Congress unless there is a definite indication that these requirements will be met, even though the project may appear to be economically justified.

Because of the exceptional damage suffered from the flood of May and June of this year, the Committee on Flood Control of the House of Representatives adopted a resolution on July 2, 1943, requesting that previous reports on the Arkansas River be reviewed with a view to determining whether any modification should be made therein at this time with respect to local flood protection along the main stem of the Arkansas River. This resolution makes it possible to prepare a comprehensive levee report covering the main stem of the Arkansas River. Because of the experience obtained from the recent major flood, higher levee grades will be considered in this report than were previously contemplated. It is deemed to be of the utmost importance that this report be submitted to Congress at an early date in order that any justifiable projects contained therein may be placed in line for authorization in the event that the Congress should consider flood-control legislation during the coming session. Based upon the rapid progress which has been accomplished to date by the combined engineering forces of the Tulsa and Little Rock Districts, it is expected that this comprehensive review report will be submitted by my office not later than September 27, 1943, and will be forwarded by the division engineer to the Chief of Engineers by October 4, 1943.

CONCLUSION

Since the organization of the Little Rock District on July 1, 1937, extensive studies have been made of projects in those portions of the Arkansas and White River Basins which lie within the boundaries of the district. We have completed the preliminary plans for all of the authorized and approved projects and are preparing comprehensive reports covering navigation, flood control, hydroelectric power, irrigation, and other beneficial water uses in the Arkansas and White River Basins. Detailed construction plans and specifications are now being developed for the Bull Shoals, Table Rock, and Water Valley Dams in the White River Basin. My office is, therefore, thoroughly familiar with the potentialities of the various dam sites and all of the problems involved in connection with the development of the water resources of these basins.

The construction of the Nimrod Dam on the Fourche La Fave River, a tributary of the Arkansas River, has been completed and this dam is now in operation. The Norfork Dam on the North Fork River, a tributary of the White River, is well on the way to completion. The construction of the Clearwater Dam on the Black River, a tributary of the White River, and the Blue Mountain Dam on the Petit Jean River, a tributary of the Arkansas River, was suspended last year by order of the War Production Board so that critical materials and construction equipment could be conserved for the war effort. The Clearwater project is 55 percent complete and the Blue Mountain project is 69 percent complete. Contracts for the completion of these two projects could be entered into immediately upon receipt of an order to resume construction.

From what I have said, it is evident that the stream improvement investigations and projects which have been assigned to the Little Rock District have been prosecuted concurrently with the extensive military construction program which has been accomplished during the past year and a half. We are rapidly completing this military construction program, and, therefore, a large group of engineers who have been connected with this work are now available to supplement the engineering forces which have been continuously employed on civil projects for many years. With this nucleus of highly qualified civil works personnel, together with selected engineers who have been engaged on military projects, and with our knowledge obtained from past investigations and planning in this area, we consider that we are in a position to expeditiously prosecute a program for stream improvement of any magnitude that Congress may approve.

ADDRESS OF COL. F. J. WILSON

Mr. Chairman, members of the State Flood Control Commission of Arkansas, distinguished guests, ladies and gentlemen, you have heard Colonel Neilson describe the May 1943 flood, the greatest flood of record on the Arkansas River in eastern Oklahoma, and western Arkansas. My remarks will deal with the planned flood-control improvements in the Arkansas River Basin, in the area west of Fort Smith, Ark.; in detail for those within the limits of the Tulsa engineer district, and in general for the entire basin.

Before considering these projects in detail, I believe that a brief outline of the approach to the comprehensive plan would be of value. As you no doubt know, the Corps of Engineers, acting under congressional authorization, has studied the problems of flood control, and the other allied beneficial uses of water within the Arkansas River Basin. These other uses include hydroelectric power generation, abatement of stream pollution, conservation of water for municipal supplies and for recreation purposes and wildlife refuges. In the western areas of the Tulsa district, the use of stream flow for irrigation of agricultural areas is of primary importance, although within this immediate area, the demand for such use is not great.

Any study of the possible uses of water and the control of its flow must consider the path of the water from the time it first falls on the ground in the form of rain or snow, to the time when it finally reaches its temporary resting place in the ocean, from whence, through evaporation, the cycle is repeated. Terraces, contour farming, reforestation, and other controlled cropping practices are of value in obtaining the greatest use of the rainfall for agricultural purposes and for the retention of the largest possible portion of

the water, near the place where it first falls. Intimately related with this method of control which has been called the little waters is the reduction of soil erosion by the use of these practices. We are all familiar with the devastating effects of gullying and sheet erosion, wherever such destruction has taken place. In this connection, it may be interesting to note that in an average year the amount of silt and sand that passes Fort Smith on its way to the ocean is about 100-000 acre-feet, or approximately 120,000,000 cubic yards. The topsoil of our agricultural areas is a national resource which should, by all means, be conserved, for the utilization of not only this, but for future generations. In addition, the silt, eroded and transported from its former resting place on the uplands presents a problem which must be given careful consideration in the design of projects for flood-control and other beneficial uses.

I am sure you will all agree that any decrease in the rate of erosion is a benefit, but we must not lose sight of the fact that erosion is a geological process which has been active throughout the ages. For example, the Appalachian Mountain Range has been leveled off to a plain at least twice in past ages, in alternate cycles of elevation and depression. At the present time, the flood plain and Delta of the Mississippi is an illustration of the eroding and transporting power of water, as is the Grand Canyon of the Colorado.

While the practice of head-water conservation will assist in the control of destructive flood waters, it is obviously impossible to obtain total control by such means. The study of major floods on the larger watersheds shows that such floods result from continued rainfall occurring after the soil is saturated when the highest run-off is produced, so that the effect of terracing, contour farming, and other controlled cropping practices is largely lost during major storms. It is therefore necessary to direct our studies and investigations to the problem of controlling this run-off, so that it does not devastate the flood plain areas along the streams.

The problem must be considered in the light of the interrelated problems of the entire basin. It cannot be solved in a piecemeal manner. Reservoirs for the detention of flood water must be strategically placed, particularly since the highest economic justification is obtained for the projects considered as a group, and their effects upon each other and on the basin as a whole considered. In addition, the urban areas in the flood plains of the streams may require protection by means of levees and floodways, and similar protective measures may be needed in the more favorably located agricultural areas.

As previously stated, the Corps of Engineers has studied flood control and the related problems of water use in this area, and from its studies and investigations has evolved a comprehensive plan for the solution of these problems. This plan, as we now see it, will consider the use of reservoirs for flood control and all the other benefits, including hydroelectric power development where it is justified. It will also include protection of areas subject to flooding, by means of levees, floodways, and other such purely local protection works, wherever concentrated industrial areas and fertile farming communities are found by careful study and investigation to warrant such protection.

With reference to the projects proposed in the Tulsa district, there are at present authorized for construction by the 1936, 1938, and 1941 Flood Control Acts 14 reservoirs, in addition to 2 which are essentially complete. In addition to the projects in the Tulsa district, 2 projects have been authorized in the Little Rock district in Arkansas, Blue Mountain on the Petit Jean River, and Nimrod on the Fourche La Fave. Also, Conchas, on the South Canadian in New Mexico, and John Martin on the Arkansas River, in Colorado, both in the Albuquerque engineer district have been authorized. All of these except Blue Mountain are now in operation. These projects were authorized after the Corps of Engineers had reported to the Congress its recommendations for such projects based upon the results of careful, comprehensive studies of the needs of the Arkansas River Basin, and of the desires of local interests. There are also authorized local flood-protection projects at various localities in Kansas and Oklahoma.

The authorized reservoir projects in the Tulsa district which have been completed or are under way are:

Pensacola, on the Grand (Neosho) River, has been completed by the G. R. D. A., an agency of the State of Oklahoma.

Fort Supply, on Wolf Creek, a tributary of the North Canadian River, in Oklahoma, now essentially complete and in operation.

Great Salt Plains, on the Salt Fork of the Arkansas River, in Oklahoma, also essentially complete and in operation.

Canton, on the North Canadian River in Oklahoma construction of which had been initiated prior to the war and which requires only the spillway structure and final closure, the embankment having been completed. This project has been placed in a stand-by status for the duration of the war emergency.

The authorized reservoir projects on which work has not been initiated are:

Optima, on the North Canadian River in Oklahoma, or a substitute therefor.

Hulah, on the Caney River, in Oklahoma.

Mannford, on the Cimarron River, in Oklahoma.

Oologh, on the Verdigris River, in Oklahoma.

Toronto and Neodesha, on the Verdigris River, in Kansas.

Fall River, on the Fall River, in Kansas.

Elk City (Table Mound), on the Elk River, in Kansas.

Markham Ferry and Fort Gibson, on the Grand (Neosho) River, in Oklahoma.

Tenkiller Ferry, on the Illinois River, in Oklahoma.

Wister, on the Poteau River, in Oklahoma.

The active authorized local protection projects are:

Tulsa-West Tulsa levees, on the Arkansas River, at Tulsa, Oklahoma. This project is very desirable due to the protection which it affords essential industries and will be placed under construction within the near future, as a war measure.

Cherokee floodway, near Cherokee, Oklahoma, on Cottonwood Canyon, a tributary of the Salt Fork River.

We can, therefore, consider that the comprehensive plan is established, in its component parts. Let us now examine these reservoirs and see just how flood control by reservoir works.

The operation of a flood-control reservoir can be compared to filling a bathtub with the drain left open. As long as the water runs in at the same rate that it runs out through the drain, the tub remains empty—when the rate of inflow is increased, the tub starts to fill.

Similarly, in a flood-control reservoir, the storage space reserved for flood control will remain empty when the rate of inflow equals the rate of outflow. Whenever inflow exceeds outflow, the excess water is stored in the flood-control pool. For the safety of the valley below the reservoir, the rate of outflow should not exceed the safe channel capacity of the stream. Therefore, the basic criterion for the allocation of storage space in a reservoir is that sufficient storage must be made available, if possible, to detain excess flood flows until the reservoir can be safely emptied. In addition to the outstanding benefits immediately below the project, the detention of floodwaters in the upstream reservoirs has a decided effect on flood flows into downstream reservoirs. Sometimes the physical limitations of reservoir sites require that the engineer be content to provide control for all but the greatest flood of record or perhaps the two or three greatest floods of record. Such floods, however, can always be reduced in severity.

As an insurance for the safety of the projects themselves, emergency spillways are provided to care for flood flows in excess of the capacity of the reservoir. These spillways may never go into action during the life of the structure.

Specifically the reservoirs contained in the comprehensive plan will provide protection for the valleys of the streams below the dam sites, as follows:

First, the fort supply project will control the greatest flood of record on Wolf Creek, controlling as it does nearly 99 percent of the drainage area of that stream. Its benefits will, of course, be greatest in the short reach of the valley of Wolf Creek from the dam to its confluence with the North Canadian near Woodward, Okla. However, since Wolf Creek is a major contributor to floods in the North Canadian in the reach from Woodward to Canton, Okla., it will also play a large part in the control of floods in that area.

The Canton Reservoir will afford protection from all but the greatest flood of record, immediately downstream from the project, and, in conjunction with the proposed Oklahoma City floodway, will afford protection to Oklahoma City, with a decreasing effect farther down the North Canadian River.

The Optima Reservoir, or a substitute, would be operated as a unit of the three-reservoir system on the North Canadian, to obtain control of the greatest flood of record and would increase the protection afforded by the Fort Supply and Canton Dams.

The Great Salt Plains Dam will control the greatest flood of record on the Salt Fork, from the dam site, near Jet, Okla., to its confluence with the Chikaskia River, near Tonkawa, Okla., about 22 miles above the mouth of the Salt Fork. Below this point the effect of the dam decreases due to tributary inflow.

In a similar manner the maximum benefit from construction of the Hulah Reservoir will be gained from protection of the flood plain immediately below the dam site to a short distance below Bartlesville, Okla. The four projects on the Verdigris River system, in Kansas—Toronto, Neodesha, Fall River, Elk City (Table Mound)—would fully protect against the repetition of all except the maximum flood of record on the Verdigris River within that State and to the headwaters of the Oologah Reservoir. The latter reservoir will effectively control flooding from the dam site to the mouth of the Verdigris River with incidental benefits on the Arkansas River below its mouth.

The Wister Reservoir in southeastern Oklahoma will control the greatest flood of record on the Poteau River to the mouth of the James Fork, where backwater from the Arkansas River is noticeable during high flood stages in the latter stream. Incidentally, the Wister Reservoir will protect an extensive coal-producing area located within the flood plain of the Poteau River and its tributaries below the town of Wister, Okla.

Of the remaining authorized flood-control projects, Mannford will provide a large measure of control for the Cimarron River to its mouth and will be effective on the Arkansas River from the mouth of the Cimarron to well below Tulsa. The Markham Ferry and Fort Gibson Reservoirs, operated in conjunction with the flood-control storage proposed to be contained in the Pensacola Reservoir, will control most of the flooding originating in the Grand (Neosho) River and will mate-

rially reduce stages in the Arkansas River from even the greatest floods. For instance, had this complete system been in operation this year in May, the stage at Muskogee would have been reduced 9.6 feet and would have eliminated damage from lesser floods. These reservoirs from a flood-control standpoint are the most important to the Arkansas River plan. The Tenkiller Ferry Reservoir on the Illinois River, located as it is near the mouth of the stream, will effect practically complete control of floods originating in the Illinois River basin.

Perhaps at this point a very brief outline of the types of structures proposed for these projects will be of interest. In general, the dams will consist of rolled earth-fill embankments with concrete spillway structures in which the outlet works will also be located. The two exceptions to this general scheme are the Markham Ferry and Fort Gibson projects. These two dams will be of mass concrete with gated spillways and will have provisions for hydroelectric installations.

It is of interest to note that the materials required for flood-control projects, if we defer the power installations during the war emergency, do not include items which are hard to supply or which detract from the war effort on other fronts. Most of these jobs have earth fills, which are made from local material, and mass concrete, the aggregates for which are procured in this area and the cement for the projects is available in many mills in the Southwest. The problem of manpower and construction equipment must be evaluated on each project. If flood-control projects hinder the war effort, they should certainly not have priority over jobs that are essential, but if, on the other hand, it can be determined that they do not detract from the war effort and do aid in the building up of the morale of the people and actually facilitate the production of food, then it seems evident that everyone, especially the people who have been wet, will agree that such projects should be given consideration even at this time.

As a more detailed description of the project which is of considerable interest to the people in this immediate vicinity and in eastern Oklahoma in general, I will describe to you, briefly, the proposed Fort Gibson Dam. As I stated before, the Fort Gibson project is included in the Flood Control Act of 1941. An appropriation of $3,425,000 was made available for its construction on May 8, 1942. However, due to the war effort and the shortage of critical materials, the War Production Board did not release the project for construction at that time and funds in the amount of $6,000,000 were impounded by the Bureau of the Budget in October 1942. The Tulsa district office has at this time, funds allotted in the amount of $2,425,000, which are being used for the acquisition of necessary lands, relocations, reports, studies, and preparation of construction drawings. Additional funds will be required to complete the project.

The revised design of the dam for construction for flood control only is practically completed and the project can again be placed under construction very quickly if it should be released by the War Production Board. If constructed now, the project will be mainly for the purpose of flood control, with incidental use for recreation and as possible source of water supply for the city of Muskogee. The development of hydroelectric power at this site will come later, after the end of the present war emergency, when and if a demand for power exists. As a flood-control project, operated in conjunction with the Pensacola and the Markham Ferry reservoirs, the dam will control flood flows from approximately 12,615 square miles of drainage area, which is over 99 percent of the Grand (Neosho) River watershed.

The Fort Gibson Dam will be a concrete gravity-type structure, about 2,950 feet in length, with a maximum height of about 110 feet above the existing stream bed and an average height of 85 feet above the valley floor, and will have a 22-foot roadway across the top of the entire structure. Seven dikes will be located across saddles in the lower part of the west bank of the reservoir to prevent the flood-control pool from overflowing into the adjacent Verdigris River basin.

The spillway will be located across the existing river channel. The spillway weir will be of concrete with its crest at elevation 547, about 45 feet above the stream bed, and will ultimately be controlled by 30 steel radial-type gates, each 40 feet long and 35 feet high. Due to the present emergency war demands for steel, the gates will not be installed at this time, but the openings will be closed with temporary nonmetallic bulkheads, so designed that they can be removed if necessary. In addition, 10 sluices for low-water control will be provided to discharge about 18,000 cubic feet per second. The combined flow of the crest gates, sluices, and normal power releases would equal the capacity of the main channel which is 100,000 cubic feet per second.

The spillway for this project will have a capacity in excess of that required for any flood of past record in this vicinity. This excess capacity is essential to insure the safety of the structure. The peak of the design storm is about three times greater than the May 1943 flood. The probability that such a storm would ever occur is exceedingly remote.

The powerhouse and appurtenances, when constructed, will be located on the left bank of the existing channel and will consist of intake structure, switchyard, and powerhouse, with the necessary power-generating machinery equipment, and so forth. For the flood-control-only project, the top of the flood-control pool will be at elevation 582, about 100 feet above the present stream bed, which will provide about 1,187,000 acre-feet of flood-control storage. In addition, a conservation pool of 100,000 acre-feet will be provided, with its surface at elevation 533, about 50 feet above the stream bed.

The top of the ultimate flood-control pool will be at elevation 582.0, as in the flood-control-only plan, which is also the top elevation of the spillway gates. The flood-control storage capacity will be about 922,000 acre-feet with a depth of 28 feet above the top of the power pool, inundating about 31,900 acres of land.

In the ultimate project, the top of the power pool will be at elevation 554.0 about 70 feet above the stream bed, and will have a storage capacity of about 365,000 acre-feet. This power pool will permanently inundate approximately 19,100 acres of land. The four power generator units, operating with an average power head of 61 feet, will generate about 78,800,000 kilowatt-hours prime electric energy annually, and will generate on the average a total of about 155,000,000 kilowatt-hours of energy annually including secondary energy.

The reservoir, with the water surface at the top of the flood-control pool, will have a capacity of 1,287,000 acre-feet and at that elevation will inundate aproximately 51,000 acres of land. When full to the top of the flood-control pool the lake will extend 39 river miles above the dam site and will have a maximum width of about 3 miles across the main river valley.

As constructed, the Pensacola reservoir provided only 245,000 acre-feet of flood-control storage, or about 715,000 acre-feet less than that recommended by the Corps of Engineers. Under present approved plans, the Government through the Federal Works Agency has been acquiring the necessary lands to make available additional potential capacity of 295,000 acre-feet above the present top of flood-control pool at elevation 750. With completion of that program, Pensacola will have available, if so used, a flood-control storage capacity of 540,000 acre-feet.

Our studies have indicated that the deficiency in flood-control storage capacity at Pensacola should be regained as soon as possible, and a need for a total storage capacity of about 922,000 acre-feet for flood control in the ultimate Fort Gibson project.

Had the Fort Gibson dam, as now proposed, been in operation during the May 1943 flood, the discharge from the dam could have been held to about 160,000 cubic feet per second. This discharge is directly comparable to the actual discharge of 345,000 cubic feet per second past the Wagoner gage during the same flood. This amount of control could have resulted in a stage reduction of about 6.0 feet at Muskogee.

With reference to the status of the projects which I have described above, and on which construction has not been started, I can only say that on most of these, we are ready and waiting.

Contract drawings for the completion of the Canton dam and for the reinitiation of the Fort Gibson project and the construction of the Hulah project can be ready for bids within a very short time after the release of the projects for construction. As more of the personnel in the Tulsa district office are released from their duties on the decreasing military construction program, we are rapidly completing construction plans for such projects as the Markham ferry, Tenkiller ferry, and Wister dams. Funds have also been made available for detailed engineering studies on the Elk City (Table Mound) and Neodesha reservoirs in Kansas, and for the Cherokee floodway in Oklahoma.

In addition to the study of specific projects, further surveys are being made under Congressional authorization of certain streams and localities within the district. These surveys include at the present time certain reaches of the Cimarron River, New Mexico, Kansas, and Oklahoma; the Grand (Neosho) River in Oklahoma, Kansas, Missouri, and Arkansas; the Verdigris River in Kansas and Oklahoma; and Polecat Creek, Oklahoma. Also, the Tulsa district is cooperating with the Little Rock district, of which Colonel Neilson is district engineer, in a study of the recommended plans for levees on the main stem of the Arkansas River, in Kansas, Oklahoma, and Arkansas, and of the complete development of the Arkansas River for navigation, flood control, and power. These surveys can be considered as supplementary to the existing comprehensive plan.

One of the most important aspects of this flood-control program which I described to you is the fact that planning for these projects has proceeded in an orderly fashion, and the most urgent projects of the group are now in a position where the plans and specifications are essentially complete and work could actually start within a very short time after funds are appropriated. You should also bear in mind that the tremendous construction program on military works in this area is nearing an end and that trained personnel who through their adaptability and versatility have been able to go from civilian projects to military projects are now ready to go back to civilian works on which they are experts by training and experience. As an example of this condition in the Tulsa district, I may cite that the Okmulgee hospital is essentially complete; the whole organization now engaged on that job is ready to be transplanted to the Fort Gibson Dam just as soon as a release from W. P. B. is forthcoming. The key people on the Okmulgee hospital job have had previous experience in dam building and

other flood-control works, so you can see it is no idle statement when I say that the Tulsa district is ready in all departments to initiate and prosecute a flood-control program with vigor and economy.

I should like to reiterate and have you carry away the thought that the Corps of Engineers has made careful and comprehensive studies for controlling floods in this area. We are ready to proceed with the actual construction just as quickly as funds are available and we have the actual plans and specifications in such shape that work could start almost at once.

Jim Farley Comes to Town

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arizona Daily Star of Friday, July 23, 1943:

JIM FARLEY COMES TO TOWN

Jim Farley came to Tucson this week to spend 2 full days. As usual he lived up to his unusual reputation. He proved himself to be the genuine Jim Farley who could connect names and faces not merely in one or two instances but in many instances. He had only kind words to say about everybody from the President on down. He was full of good stories. He had little to say about politics. Politics, he said, should be adjourned until after the November elections and all effort concentrated on winning the war.

Jim Farley probably knows more people than any other man alive. But this knack of his in knowing so many people appeared here in Tucson in its most impressive light. He knows so many people, because he likes people. He seems to revel in talking to bootblacks, mayors, politicians, labor leaders, bankers, and farmers. Anyone who watches him talking with all of these different people can see that Jim does it because he enjoys it. He likes his fellow men.

In these days when hospitality seems to require offering a drink or talking public affairs with plenty of set-ups around, Jim Farley's example is a rare one. He does not drink and does not smoke, neither does he offer to buy a drink or take for granted that he must serve drinks or smokes to fellow politicians. Yet he makes things so interesting for those who talk to him that nothing in the way of liquid refreshments is missed.

Jim Farley is one of the remarkable men of our country. Despite the fact that he has been mixed up in New York and then national politics ever since he was a youngster, he has kept his name not merely clean but respected. Despite the fact that he is a constant doer, he has that unusual knack of not offending despite his fluent conversation. He can say "No" with more skill than probably any other man.

During Mr. Farley's 7½ years as Postmaster General the Post Office Department saw more improvements than in many previous years. Despite the fact that he was a practical politician, who did not deny the need of patronage as a means of maintaining a political organization, more was done to take postmasterships out of politics than ever before.

Much could be written about Mr. Farley's skill in organizing the first two campaigns for President Roosevelt, about the way he willingly took raps to help the President, about his loyalty to the President, about the way he finally broke with the President because he did not believe in any President serving more than two terms. His record shows him to be a man of character.

But all of this political record pales into insignificance in comparison to Mr. Farley's long persistence and apparent delight in knowing his fellow human beings. During his brief visit in Tucson he showed that, while today he is doing the same thing in California. A year from now he will still be doing it regardless of what turn the wheel of fortune takes.

Resolutions of the Supreme Council of the Knights of Columbus

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Supreme Council of the Knights of Columbus at the annual international meeting held August 19, 1943, in the city of Cleveland, Ohio:

Whereas recent gratifying events portend the utter destruction of the armed forces of Germany, which under Hitler, with indescribable savagery and ruthlessness and without declaration of war, attacked Poland on the 1st day of September, 1939; and

Whereas the valiant armed forces of Poland, with the sublime fortitude of Christian soldiers whose forbears for a century and a quarter had suffered persecution under Prussian, Russian, and Austrian military despots, resisted to the utmost the terrific onslaught of overwhelming Nazi hordes until the Vistula and the Warthe, with their tributaries, were crimsoned with the blood of a hundred battlefields, Warsaw reduced to rubble, its resolute mayor holding his post until the survivors of the million and a half brave inhabitants of the city were utterly helpless, and the Polish nation itself partitioned between the German Reich and Soviet Russia; and

Whereas the 4 years of enemy occupation have witnessed a bloody and relentless persecution of the people of Poland; 2,500,000 Poles murdered and 500,000 starved to death by the Nazis; 2,000,000 Poles deported to Germany for forced labor; 1,600,000 driven from their homes in the western provinces of Poland and sent to the east; hundreds of thousands confined in concentration camps; the population reduced to human slavery; dissenters who disputed the Nazi philosopsy of state absolutism and a "master race" eliminated without mercy; more than a thousand towns and villages evacuated; 348 villages burned; everything of value confiscated, including farms, factories, workshops, stores, and even household furniture and personal effects; seven dioceses under "total persecution; churches, colleges, and high schools closed, and in some instances churches desecrated; members of religious orders banished; archbishops and bishops deported, imprisoned, and in some instances, put to death; thousands of priests and religious executed; other thousands thrown into concentration camps where large numbers of them died of maltreatment; and the civilian population, especially of the Jews, in many localities subjected to terrible "blood baths"; and

Whereas the final assault upon the German Reich by the armed forces of the Allied Nations has begun, and the craven Hitler, after 4 years of organized but unsuccessful effort to accomplish his avowed purpose of destroying Christianity and substituting an omnipotent state for the omnipotent God, turns forlornly to the church for help, and appeals to Polish Catholic opinion for support against "Bolshevik atheism"; and

Whereas the armed forces of the Polish Government-in-exile, in conjunction with the armed forces of the other Allied Nations, press on to final victory, with the establishment of peace with justice throughout the world, a consummation devoutly prayed for by God-fearing people of every land, and an answer to the unceasing supplication of the shepherd of Christendom, Pope Pius XII, that almighty God in His infinite wisdom and mercy will pardon the sins of the world, will save the people of Poland and of all other nations from further cruelties and sufferings of war, and will restore all things in Christ: Now, therefore, be it

Resolved, That the Supreme Council of the Knights of Columbus in convention assembled in the city of Cleveland, Ohio, on this 19th day of August 1943, mindful that 80,000 Knights of Columbus are serving in the armed forces of the United States, Canada, and Newfoundland, recommends that during the month of September the 2,497 councils of the organization join with other organizations in promoting public exercises in commemoration of the murderous attack on Poland, at which the God of Nations shall be praised, and tribute paid to the culture, the virtue, the valor, and the steadfast and unbroken spirit of the Polish people, and to the immense resolution and gallantry of the Polish Army; and be it further

Resolved, That the supreme council of the Knights of Columbus, speaking for the entire membership of the order, hereby tenders to the people of Poland, and to the millions of men and women of Polish birth and descent in the United States and Canada, the homage of our affectionate regard and esteem, and the expression of our complete confidence in final victory and fulfillment of the obligation of recognition of the sovereignty and territorial integrity of Poland; and be it further

Resolved, That copies of this resolution be transmitted to the Secretary of State of the United States and to the Ambassador of the Government of Poland-in-exile to the United States.

That Word Is "Mackinaw"

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. MICHENER. Mr. Speaker, since Congress has resumed its session, a day has not passed without reference being made on the floor of the House to the Republican Conference recently held in northern Michigan. Some call it the

"Mackinac" Conference while others refer to it as the "Mackinaw" Conference.

Mr. Carl Saunders, editor of the Jackson (Mich.) Citizen Patriot, one of the leading out-State dailies, has written an editorial which sheds some light on the correct pronunciation, and by virtue of the permission granted me, I include herein that editorial, which is as follows:

THAT WORD IS "MACKINAW"

Political issues discussed at the Republican conference in a Michigan northern resort have all been pretty well threshed out, but there remains one important point for Michigan authority to settle. Whenever there was mention of the locale of that conference its name always called for hesitation and doubt. Some of our most learned commentators and politicians didn't know whether to call that island Mackinac or Mackinaw, and they're still hesitating and stumbling over its pronunciation.

Of course, some of the maps of Michigan show the island is spelled Mackinac and the straits are likewise misspelled; but the town honorably clings to the grand old spelling and the grand old way of saying it—Mackinaw.

In the lusty, roaring days of timber cutting in Michigan, that whole locality was known as Mackinaw and nothing else—town, straits, island and all. If any old-timer ever had the temerity to refer to any of them by the fancy name of "Mackinack" some resentful lumberjack would have knocked him down, and left the imprint of his calked boot on the offender's face.

In winter, the old lumberjack wore a mackinaw—a combination of peajacket and reefer made of thick, honest wool, that was a yard wide and about an inch thick and in colors that made the northern lights look pale and anemic. He also wore mackinaw shirts, and mackinaw pants, mackinaw socks, and mackinaw boots—all guaranteed to give long wear and full protection against the cold of a Mackinaw winter or a dunking in icy waters during the spring log drive.

The majestic old side-wheeler which plied those waters with its loads of summer tourists and happy honeymooning couples was also the *City of Mackinaw*—not the *City of Mackinac*. The youth of that age also had a mild expletive for use on special occasions. It was "Holy Mackinaw!" and not "Holy Mackinac." The latter would have sounded silly, and there is a suspicion that the name "Mackinac" was invented in later years as something extra fancy to lure the tourist trade.

But a simple respect for the memory of those old lumberjacks and fishermen ought to inspire Michigan authority to preserve the old name and the old pronunciation, and that's Mackinaw and nothing else. That's the name that preserves all the romance, all the history, and all the old tradition. It's utterly impossible to be sentimental over anything called Mackinac. But the name "Mackinaw" can bring up wonderful memories.

New York's Governor on Labor

EXTENSION OF REMARKS

OF

HON. WINIFRED C. STANLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Miss STANLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered at the New York State Federation of Labor Convention held in Buffalo, N. Y., by the Hon. Thomas E. Dewey, Governor of the State of New York. Governor Dewey's message is expressed with admirable clarity and forcefulness:

[From the American Federationist of September 1943]

NEW YORK'S GOVERNOR ON LABOR

Great, stirring victories have come to the armed forces of America. All of us have been deeply proud of the achievements of our fighting men. After long months in which our Army and Navy were handicapped by lack of material, we have seen the tide turn. We have seen American airplanes sweep the skies in overwhelming numbers above enemy territory. We have seen the courage and ability of our troops at length backed up by the weight of weapons needed to roll back the aggressors upon their own soil.

These victories on the fighting front abroad were made possible by victories previously won on the production front at home.

Too often, understanding is one thing and action on that understanding is another thing. We know it will take great sacrifices to win the war. But it is easy to let the other fellow make the sacrifices. We know that winning the war is greater than the issue involved in any strike. Yet it is too easy to let little issues become big issues which roll up into strikes.

With such fateful events hanging upon the continued outpouring of arms from our factories here at home, we have a single task ahead of us. We must redouble our every effort. We must be vigilant against the relaxation which is so apt to follow initial success. We must be vigilant against the human impulse to slacken effort in the face of a hard task long continued. We must be vigilant against those who would impede our production by dividing us against each other. The stream of supplies must flow to the fighting fronts not only in equal but in ever-increasing volume and without cease. Of these things, organized labor in the State of New York has shown its deep understanding.

Accordingly, we can all take particularly great pride in the fact that there have been no industrial strikes of any moment in the State of New York. There have not even been any industrial controversies here which are worthy of the name. The New York State Federation of Labor can point with similar pride to its record of having authorized no strikes in the industrial shops where it represents the worker. Labor in this State has kept its no-strike pledge.

In other parts of the country the production of coal, the production of steel and the production of other essentials to the machines of war have been critically hampered by industrial disputes. That has not happened in this State. In New York there has been no interruption in production.

At the height of the war effort, the people of the State changed administrations. They brought a different party into power and a complete new set of State officers. And with that change there was not one second's interruption of the public service or the production of goods, services, and food for war. On the contrary, I can confidently say that this State is more vigorously in the war effort in every department than ever before.

In the entire session of the legislature which ended last March, there was not one provocative incident which might impair the war effort. Not a single law was recommended by the executive or passed by the legislature affecting either industry or labor which would cause dissension affecting the war effort.

In this critical year we have had no contest between the executive and the legislative branches of the State government.

We have had no squabbling between department heads in the public prints, or, to let you in on a secret, in private. In order that the Nation might fight better abroad, we made certain that in this State there should be no fighting at home.

Yet not for one moment has there been an impairment of the two-party system of free discussion or of differences of opinion. There have been plenty of differences. But we have settled them after full debate in the American way and then got along with our job.

In the same way, and perhaps for somewhat the same reasons, labor has kept to the job. Of course, there have been differences between workmen and employers. Of course, there have been hotheads among both. But among men of good will there have been earnest discussions and peaceful settlements. And the men of evil will have not lasted long in important positions.

There has been little or no disposition among our leaders of labor to use the war to advance their personal power or their private ideologies at the expense of the people as a whole. Aside from limitations imposed by the war, through the National Government, the rights of workingmen of this State have been scrupulously preserved—even advanced—and the welfare of the Nation as a whole steadily served.

This free society of ours can wage total war and remain free. This we are proving in the State of New York. I am sure that you will wish to share some of the credit for this with the several State agencies that mediate between industry and labor. They have lived up to their responsibilities as you have, disinterestedly and intelligently.

The prime reason for the lack of major internal friction in our State can be put in one word—teamwork. We have had in New York a reasonable and cooperative attitude by enlightened employers devoted to free enterprise. We have also had a reasonable and cooperative approach by enlightened leaders of labor who also see in the enterprise system the only economic society we know under which labor can advance and remain free.

There was nothing magical about the teamwork which averted interruptions in production within our State. It has been achieved by hard work and the employment of common sense and good will. It is founded upon the basic principles of this free republic—a decent respect for the welfare, the opinions and the rights of every citizen whether he be in the majority or the minority, whether he be rich or poor, white or colored, employer or employee.

Democracy in a republic is not merely a word or a formula.

It is not something for which we cheer on public occasions and which we then go home and forget.

We cannot achieve it just by voting occasionally and considering that to be the end of our duties.

Good free government must be a habit of our lives from day to day.

It is good democracy in industry for free men to get together and solve their problems as freemen. That means to solve them man to man, without force, without violence, without coercion. It is good democracy in government for freemen to get together and solve the problems by which they govern themselves as freemen without force, without violence, without coercion.

In other words, democracy is a faith and a political philosophy, which we practice in a constitutional republic. Its principles rest upon the ideas that should guide us in all our human relations, the relations between neighbor and neighbor, the relations between electors and the people they elect, the relations between employer and employee.

We are sometimes told that the growth of America, the great development of its industries, has made impossible the human understanding that used to prevail when the boss knew every soul that worked for him and called him by his first name, and was called, in turn, by his first name. It is true that the early, friendly period was followed by unhappy days when labor relations were decided at meetings of a board of directors far distant from the plant. This is not true today and what has been happening in New York State is proof of it.

Both labor and management are increasingly learning to have competent, trained men on the job where the work is done. Each learns the problems of the other. Differences are adjusted by people on the spot, by those closest to the problem. That is a condition we need to encourage and expand not only in industry but in government. Good government in a free republic depends inevitably upon good local government. By the same token good relations between industry and labor are being steadily built by good human relations between those on the job, united in the will to do a good job for their country.

The war has inexorably brought us closer together in the solution of our common problems. We are learning that free men, living in mutual respect, can solve any problem. We are also learning to lift our eyes above immediate irritations of the day and look to larger objectives. Today those larger objectives are all submerged in the winning of the war. Tomorrow let us make sure we keep our eyes lifted up to the objectives of a happy and productive peace. It is not too early to discuss the direction in which we want to go when that time comes.

Under the pressure of war we have all willingly submitted to restraints by the National Government which are foreign to our most vital principles. In fighting total war we have learned we must mobilize our every resource and our every moment. A multiplicity of Federal regulations have been promulgated, governing hours, wages, and conditions of employment. In large measure these regulations supersede the functions of collective bargaining. They have superseded private management and, in some cases, have even taken plants away from their owners when the owners were without fault.

In time of total war such an abridgement of our rights is probably inescapable. But it is a condition which can only be justified by the sacrifices of war. We are fighting to make sure that such totalitarian conditions cannot exist in time of peace.

For, whether we recognize it or not, the peacetime effect of government control over the terms and conditions of labor would inevitably be to regulate out of existence the whole purpose of labor unions.

It is a fundamental truth that there is no place for genuine collective bargaining in a regimented economy. We have seen that strikingly demonstrated in the Fascist economies against which our whole Nation is today fighting. Collective bargaining is a right of free labor which can only be exercised by free labor. And there can be no free labor except in an enterprise economy conducted by freemen.

It will take vigilance and understanding to make certain that the wartime change in the relations of government to organized labor is not carried over into peace.

The hard-won rights of labor which have been abridged by wartime controls are as fundamental as freedom of speech and freedom of the press. Like these other rights, they must be restored intact to a people who have temporarily yielded them in the cause of freedom.

We can be sure of this only if we make certain that the regimented economy of war is succeeded by a peacetime economy of freedom under law. We can preserve it only in an economy of full production and full employment. For we can never, as a nation, consume more than we produce.

So that we shall truly regain and keep the vital freedoms for which we fight today, I invite you to join with all your vigor in the struggle to restore them at the end of the war. We can be neither free nor strong in a peacetime regimented economy. We can be both free and strong if we recover for labor and enterprise the dignity and unfettered strength which only free men can enjoy.

We are all fighting for the same thing—total victory. Workers and employers are equally interested in that goal. They are all gladly making every possible sacrifice to win the war and to win the peace after the war. An indispensable part of that peace will be continued progress in all our relations—the relations between labor and management, between both and Government.

The teamwork that we have set up in New York State must not be a temporary arrangement. It must be something that will last—that will enable us to live together and to work together, more keenly alive than ever to the ultimate truth that what benefits one group will benefit all.

America never turns back. Whatever our calling, we Americans look forward to the sharing of an ever greater future.

Renegotiation of Contracts

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. POULSON. Mr. Speaker, inasmuch as the Ways and Means Committee is at this time considering the important subject of renegotiation of contracts, I thought that not only the members of the committee but other Members of the House would be interested in a speech delivered on this subject by Lucian W. Shaw.

Mr. Shaw is a tax attorney, who up to 1940 was Senior Attorney in the Office of the Legislative Counsel of the Treasury Department. Since then, he has been assistant to the comptroller of Lockheed Aircraft Corporation and is considered an authority on tax matters.

The speech follows:

There is general agreement in the United States that we do not wish anyone to realize excessive profits from the war. Businessmen fully subscribe to this statement. This has been demonstrated by conservative dividend policies; to the extent that profits are desired, they are not for creating war profiteers but to achieve a firm footing to withstand the difficult period which looms ahead after the war ends. Despite the loud wails that emanate from particular concerns when the amount of their own alleged excessive profits is being discussed, there is general agreement with the basic purpose of the renegotiation statute which is to prevent excessive war profits.

It is not a mere accident that, according to the Truman committee, in nearly a year since enactment of the statute, only a handful of cases have been closed. The explanation is in the basic unworkability of the procedure. The situation bears a striking resemblance to the situation which arose with respect to the provision for certificates of nonreimbursement in connection with amortization, as provided in the Second Revenue Act of 1940. It is still an unhappy memory that after a year under that statute only about a dozen certificates had been issued, due to the basic impossibility of determining whether nonreimbursement existed. After two attempts at improvement by way of amendments, the departments finally recognized that the thing would not work and prevailed upon Congress to repeal it completely, which was done early in 1942.

The renegotiation statute was enacted April 28, 1942. In March 1943 the Truman Committee reported that 85,000 contractors were eligible for renegotiation. Of these only 203 cases, or one-fourth of 1 percent had been closed. Even if the exemption for volume were increased from $100,000 to $500,000, as recommended by the War Department, there would still be 20,000 elegible contractors, of which 203 cases settled is about 1 percent. One-fourth of 1943 had passed by and 1 percent of the cases were closed, with another 20,000 cases building up for 1943.

There is some reason, therefore, to believe that renegotiation is not workable. Let us proceed to an examination of its defects. Are they so profound, as in the case of nonreimbursement, as to indicate that the process cannot be made to work, regardless of changes and improvements? There seem to be two basic defects:

A. Lack of standards: The only guidance furnished by Congress in connection with renegotiation is that excessive profits are to be eliminated. After concluding in 1940 to deal with war profits by taxation, through an excess-profits tax, Congress spent 64 pages trying to define excess profits, without notable success. And yet, in the renegotiation procedure, a large group of administrators in the departments has been directed to determine excessive profits of many thousands of concerns, large and small, with no guideposts to go by other than those two words themselves, "excessive profits." As a result, hopeless confusion, both in the minds of Government administrators and of contractors, is unavoidable and will doubtless continue.

Formerly, when constitutional law was given more attention than it is now, one of its important concepts was that the legislative branch should not delegate its authority to administrators unless adequate standards for the exercise of the authority were provided. There was good sense to this; it is the place of Congress to determine the rules of the game; hundreds of thousands of administrators cannot be expected to achieve any degree of equity or uniformity if they have no rules to follow. This involves no criticism of any particular group of administrators; it is simply a basic principle.

Nor is there any hope of remedying this situation by more specific definition of excessive profits. Experience with the excess-profits tax clearly indicates the hopelessness of achieving exact definitions; and even if we did, how do excessive profits differ from excess profits? The departments have at last agreed upon a general statement of principles and policies on renegotiation, but it is of substantially no assistance in reaching a decision in any particular case.

B. Lack of review: Renegotiation is necessarily causing the establishment of a large administrative organization. It will doubtless grow larger and larger in its efforts to cope with an unworkable situation. Despite this fact, and assuming (which is not clear) that the departments have authority to force their decisions upon contractors, no appeal from, or review of, these decisions has been provided. It is sometimes necessary in wartime to deviate from the established democratic principle that a court review of administrative decisions is necessary. This, however, is too large a problem, involving too

much control over our economic welfare, to permit such deviation here.

This argument cannot be answered merely by providing for a court review of renegotiation decisions. To do so would clog the courts and it would take years to reach final decisions. This would impose such hazards and uncertainties upon busy war contractors that they would find it impossible effectively to carry on their war efforts for an extended period. A mere administrative appeal would offer no substantial improvement.

The two basic objections to renegotiation which cannot be surmounted can be aptly illustrated by an analogy of taxation. Suppose Congress in 1940, in its struggles to define excess profits, had thrown up its hands and said, "We can't do it; we will give the Commissioner of Internal Revenue the job of collecting a 50-percent tax on excess profits and he will have final authority to decide what excess profits are." A justifiable howl of protest would have swept the length and breadth of the land. Yet this is exactly the effect of renegotiation, except that the 50-percent rate is not even specified; that, too, is left up to the administrators.

In addition to the basic difficulties with renegotiation, there are other serious problems which it presents.

1. Does renegotiation encourage efficiency? Government officials have recognized publicly that if renegotiation does not reward efficiency, its basic justification is missing. Evaluation of efficiency of one contractor as against another is a herculean task. With thousands of contractors to deal with, how can the Government officials find sufficient time to make an adequate study of all of the obstacles encountered by each manufacturer, and its relative efficiency. How can the efficiency of one aircraft manufacturer making fighter planes be measured against another making an entirely different plane? The answer would seem to be that the decision must be based on more or less offhand information which is not a satisfactory basis for a decision perhaps involving many millions of dollars. To go further would require an enormous staff so that each contractor might be individually studied for many months.

If it is true that Government renegotiators are faced with making decisions as to efficiency without the opportunity for adequate study, then contractors cannot be convinced that they will be rewarded for hard work and cost reduction. They cannot escape the conclusion that the more they reduce costs, and hence increase profits, the more they are expected to refund on renegotiatiton. This leads to the same unfortunate psychological effects as the old cost-plus contracts and eliminates the incentive for efficiency which might otherwise be of benefit to the Government in the form of future price reductions.

2. Are book profits an adequate basis for determining excessive profits? Renegotiation proceedings are based on book profit figures. There are many new products being produced and complete changes are occurring in manufacturing methods with which scientific accounting cannot keep pace. As a result, book figures for any one year are subject to so many uncertainties that they cannot properly serve as the basis for refunding huge amounts to the Government. And yet, if the book figures should subsequently be proven to be wrong, it is not possible to reopen renegotiation and obtain a refund. For example, some large war contractors believe that their inventories are largely overstated; they cannot stop war production to take an actual inventory and check up; if they subsequently verify their fears after they have completed renegotiation, they have no remedy. This problem cannot be solved merely by leaving the renegotiation open; that would work both ways and would make permanent the uncertainty which now exists as a result of not having completed renegotiation when annual earnings statements are prepared. Stockholders and managements cannot operate successfully with a permanent renegotiation ax hanging over their heads.

3. Enormous waste of time: The unending confusion which is inevitable because of the lack of a measuring stick for excessive profits is most wasteful. Renegotiation is probably the most important single transaction faced by most contractors; their top executives must devote their best efforts to it. Adequate information on the operation of renegotiation on other contractors is not available, due to the present secrecy of administration. Because of the confusion, management's efforts will be never ending and the distraction from productive activities will continue for the duration of renegotiation as a procedure. This unquestionably interferes with the war effort.

Assuming that renegotiation will not be able to serve the very proper purposes which are supposed to justify its existence, can we simply cry "Off with its head," in an Alice-in-Wonderland manner? The answer, of course, depends upon the seriousness of the problems of excessive profits. If we agree with the basic policy that excessive war profits are to be avoided, their extent and the adequacy of other controls must be considered. It would appear that a twofold program relying on careful future pricing by the departments and taxation of profits already earned, should be adequate:

1. Future pricing. The departments have now learned a great deal about procurement methods and price determination. It cannot be denied that when we entered the war, there was no adequate opportunity to insure the reasonableness of prices. Products were new, the effect of enormous volume expansion on costs was unknown, and the departments themselves were growing very rapidly. All of these factors made for prices which proved to be unreasonable. Perhaps this would furnish a justification for leaving it in effect permanently.

The period of enormous expansion of the war program is now over. In connection with their renegotiation efforts, the departments have learned a great deal about costs and prices. There are not so many new products. There is no reason why a large part of the control over profits cannot be exercised in the normal manner, by keeping prices reasonable. Most contractors are beginning to have some kind of cost figures which can be used to check prices. The departments themselves, and the Truman committee, have indicated that more careful pricing is to be expected. This result would be insured if the efforts now being devoted to renegotiation were devoted to still greater efficiency in procurement. A large and capable staff of businessmen has been assembled for renegotiation; if their energies were devoted in full to assisting in the bargaining with contractors on prices, still further control of profits through prices would be achieved.

The problem of controlling subcontractors' prices is, of course, a difficult one. One solution would be to provide some supervision by the procurement agencies over prices charged to prime contractors by their major subcontractors. Efforts of renegotiators would be better spent on this type of activity than in the hazy field of recapturing profits previously earned.

2. Taxation. Assuming a substantial reduction in excessive profits which is already resulting from improved procurement methods, taxation should be adequate to deal with the remainder of the problem. There does not seem to be much hope of developing a beautiful new formula of taxation to solve the problem; all possible avenues of approach have been pretty well considered. The present excess-profits tax of 90 percent with an 80 percent ceiling would appear reasonably adequate. Certainly, if the rate were increased by 5 percent sufficient control should exist, always assuming adequate supervision of procurement. If the small proportion of profits remaining after taxation at such rates is still too much for a particular contractor, the fact should shortly become evident to the procurement officials who can reduce his further profits. If it be argued that they wouldn't discover him it can probably be replied that he is so buried among the 85,000 contractors subject to renegotiation that he won't be found by renegotiation either.

The foregoing remarks are made in all humility. The more one studies this subject the more in doubt he becomes. So far it appears that renegotiation cannot work in a manner which will produce reasonable fairness and equity and avoid the waste of enormous amounts of time. If this view is wrong, then renegotiation should be retained, for, as a matter of principle, it seems to have advantages which cannot be otherwise obtained. But if renegotiation is doomed to ultimate failure because it is unworkable, then the quicker that fact is generally accepted and the situation rectified the better it will be for the war effort.

Oil Production

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. VURSELL. Mr. Speaker, on Friday when the President's message was being read to the Congress I was surprised and amazed when, in referring to oil production in his message, he made the following statement, and I quote:

> Since the outbreak of the war in Europe we have increased our output of petroleum by 66 percent.

It is apparent that the President has been wrongly advised in arriving at such conclusion and that if this statement is allowed to go to the country without correction, it places in a false position many of the Members of Congress who have been urging the extreme necessity of greater oil production and who have recommended a price raise in crude oil to help bring about such production. It also places in a false light the majority of independent oil producers of the Nation and many of those who are directing the affairs of major companies who have gone on record time and again pointing to the alarming conditions which the administration has allowed to develop with regard to the production of oil which sees the Nation now in the midst of an oil shortage with gasoline rationing throughout the land that is disturbing the morale of the people and retarding our war effort. I have written the President asking him to give the Congress the facts upon which he based his statement.

The plain facts are that the increased demand caused by the war for petroleum products for our tanks, planes, and ships has increased over production so rapidly during the past year that every producer and refiner of oil in the Nation has become disturbed for fear the supply of oil, if the war is to last a year or 2 longer, may not be sufficient for the military forces even with more severe rationing on the home front.

As a further proof that our oil production has failed to keep pace with consumption, possibly the best witness that can be called now, is a member of the President's Cabinet, Petroleum Coordinator Ickes. Let me quote, in part, from a statement he read to our congressional committee in Chicago, on August 13, when further rationing of gasoline was being discussed with our congressional committee.

I quote from Mr. Ickes' prepared statement of that date on pages 4, 5, and 6. This is what he read to the committee:

During the last 4 years, we have used our known reserves much faster than we have discovered new sources—twice as fast, as a matter of fact, for while we have been using our known supply at the rate of one and one-half billion barrels, new discoveries have approximated only three-fourths of a billion barrels per year.

This is the basic reason why a curtailment of civilian consumption of gasoline is necessary—in fact, inescapable—in the Middle West and the Southwest.

This statement will very likely seem incredible to most people. For years, we in the United States had been led to believe that we had all of the oil that we could possibly use, and probably would continue to have plenty for an indefinite number of years to come.

We have finally come to the disturbing realization that this is not true. On the basis of known military requirements—let alone such unexpected additional requirements which may develop—many an oilman is worried about the question of whether we shall be able to produce enough crude oil this year and next to satisfy the demands of the military, plus war industry, agriculture, and essential civilian needs, to say nothing of the relatively less essential requirements.

Unless important new discoveries are made, the natural decline in the productive ability of the fields in the United States—a decline that ranges from 1 to 2 percent each month—a widening gap between the production capacity of the United States and the anticipated crude-oil requirements will develop.

In the Middle West, which produces about 25 percent of the United States total, production has been falling off substantially as many of the oil fields enter their period of decline, hastened in many instances by wasteful production methods. I feel sure that you will be discouraged by the detailed record on this point, which members of my staff will present.

The stocks of crude oil above ground in the Middle West, available to make up for the deficiency in production have declined since Pearl Harbor. Those stocks have declined from 29,000,000 barrels to 19,000,000 barrels between Pearl Harbor and July 1943.

The total crude-oil production from district 2 has declined from a daily average of 1,180,000 barrels per day in December of 1941, to 940,000 barrels per day during July of this year. Production experts see little hope in sight for reversing this trend in the light of the meager results of exploratory efforts of the past several years. Oklahoma, Illinois, Indiana, and Nebraska, which together account for 570,000 barrels of our current daily production are steadily declining. Kansas, Michigan, and Ohio, which account for 370,000 barrels of our current daily production, are holding at levels of the recent past. Only in Kentucky, which accounts for 23,000 barrels or only 2.4 percent of current production, have there been any recent increases.

Although the search for new reserves and new productive capacity is continuing and is, in fact, being accelerated throughout the district, the results have been disappointing and the decline is expected to continue so that daily production will drop another 100,000 barrels by the first quarter of next year.

That is Mr. Ickes' testimony. He should know the facts.

The very fact that we have gasoline rationing Nation-wide is the most positive proof of the seriousness of the oil shortage that is now upon us. The responsibility of this man-made oil shortage rests directly upon the President and his advisers who have insisted on keeping the price of oil down to such a low level that such a policy has driven countless thousands of independent oil producers out of business. The price of oil today is only about 60 percent of parity. The oil shortage becomes more acute in the Nation. It cannot be waved aside by a general statement from the Executive that oil production has increased 66 percent.

That is a strange assertion to those of us who have been noting with alarm the rapid depletion of our producible reserves of petroleum, warning of the impending shortage, and finally witnessing the arrival of the shortage against which we warned.

The President has been given some erroneous information. No such increase in the output of petroleum has occurred. The outbreak of war in Europe is generally given the date of September 1, 1939, when the German troops marched into Poland. In that September, the output of crude petroleum from the fields of the United States was 3,608,000 barrels per day, and in August of this year it was but 17 percent higher. It is a fairer assumption that the demand for gasoline and petroleum products has increased by over 66 percent, but not the supply.

The statistics which someone supplied to the President would indicate a healthy condition. To move forward from the base figure of September 1939 the application of such a percentage of gain would mean that our fields are producing nearly 6,000,000 barrels per day. Would that it were so. We would have plenty of oil for all purposes. The several Federal bureaus which have a hand in regulating petroleum, from the drilling of a well to the rationing of the gasoline, would not then be issuing statements that they have allotted a trifle more to run the school busses or a modicum of increase to enable the farmer to raise the food for the Nation and to bring it to market. There would not be evident the concern I have heard in some quarters as to how the products will be provided with which to fill and operate to capacity that $75,000,000 pipe line, financed with taxpayers' money, and now nearing completion from Beaumont, Tex., to the Atlantic coast.

Nor could the President have meant that we had increased our "output" by taking it out of the tanks throughout the Nation. True, we have had to draw on such reserves; we have used up some 58,000,000 barrels of that above-ground stockpile of petroleum and products since September 1, 1939, on the basis of latest official figures. We continue to withdraw from stocks. For the past 2 months we have withdrawn at the rate of 100,000 barrels per day. Substantial as was this draft and frightening as this is as a symptom of our growing impoverishment in petroleum; to win the war and to have something with which to set about our work of conducting the Nation's economy when war shall have ended, this form of "output" still is not 66 percent.

I have tried many combinations of figures and dates and I still cannot find the 66-percent increase—nor in the figures I have examined is there basis for that comfort which some of the Government turnkeys of the petroleum prison loudly proclaim from time to time.

We have been given the entire range of explanations and rationalizations. There is nothing to add. First, it was a deficiency in transportation. That one we all understood. Next, rubber conservation. On both these points we have been given reassuring statements in recent weeks. The oil companies, with much rearrangement of their pipe lines, barges on inland waterways, and with herculean efforts on the part of the railways, and with the expenditure of $160,000,000 of public money to build two of the largest capacity pipe lines ever built, have provided for the movement of enough petroleum and products from the Middle West and the Southwest to take care of the eastern needs. William Jeffers has finished his job and has gone home, telling us that the rubber program is well along.

But the oil supply has been allowed to fail. No, it has been made to fail. Over in the Petroleum Administrator's office they now say it is scarcity that is the trouble. They hint at scarcity in heating oil this winter and they are quite positive that the gasoline supply will not improve.

Why did supply fail? Because the oil producer was "frozen" along with his income. He was the first victim of the "freeze." Leon Henderson and his doctors of philosophy put oil prices in the quick-freezer back in 1941 and they are still there. They chanted, did these learned men, that there would be plenty of oil for all purposes, never bothering to learn the first rule of maintaining and increasing oil supply which is that new drilling must be carried on consistently. Instead of drilling more, the producers have been handcuffed and hobbled by price and denial of materials, with costs going up all the time, until their effort is now half what it was in 1941. In Illinois, near the great consuming centers and the great industrial regions, the

search for new pools—what is known as wildcat drilling—will be about three-fourths this year what it was in 1942, according to the figures of the Illinois Geological Survey. Total wells drilled in 1942 in Illinois were not much more than half the number drilled in the year before and this year they will fall still further—probably not more than 80 percent of the number drilled in 1942.

Our Illinois production in September 1939—at the outbreak of the war in Europe—was 348,000 barrels daily. It is now 100,000 barrels daily less, and it is 180,000 barrels less per day than it was when we entered the war. Oklahoma is off about 100,000 barrels a day from the amount this great oil State was producing when our country entered the war. Kansas has increased, but the State conservation authorities have already served notice that the rate cannot be maintained. In State after State the story is the same—the producers cannot keep up the pace they have been setting.

As I have said, they have increased by 17 percent the amount they were producing when the war began in Europe—not 66 percent—but the war demands have increased in far greater proportion. And, to effect the increase that has been made, the industry drew upon a reserve that was created in pre-war years; a reserve not brought about as the result of anything done by the emergency authorities but solely through the operations under a system of free enterprise.

Let the blame be placed where it belongs. The record is clear. The oil industry and a large number of the Members of Congress have tried in every reasonable way to ward off the present distress. No heed has been given to their efforts by those who control oil and oil policies during this emergency. The situation will become a debacle if allowed to continue.

In Opposition to the Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include a telegram signed by a number of prominent constituents of mine in opposition to the Fulbright resolution, indicating a fear that this resolution may be used as a loophole by President Roosevelt to involve us in foreign commitments in defiance of Congress and the Constitution.

The point made by the signers of this telegram, that in the last analysis the American people should be afforded the final determination on all foreign policies and on any commitments that might involve us in military alliances and war commitments, is correct.

We should win the war first, and then when we know the peace aims of all our allies and have given our returning soldiers an opportunity to express their views, it will be time enough to enter into any foreign commitments, particularly if they are to change our traditional foreign policies and independence of action.

The telegram follows:

NEWBURGH, N. Y., September 21, 1943.

HON. HAMILTON FISH,

House of Representatives:

We the undersigned wish to record our protest against the Fulbright bill. We oppose any bill or proposal past, present, or future, which commits the United States to the assumption of post-war responsibility for military, economic, or any other European maintenance. We feel no such enmeshing legislation should be passed without a referendum to the returning service men. The undersigned feels violently on this subject. It is not a mere parlor pastime. Every family represented has members in the armed forces, and incidentally, American citizens ranging from three generations to the *Mayflower*. We do not want any permanent alliance or commitments to Great Britain or anyone else, nor any discussions of it until after the war when much will be clearer than it is now. In our opinion this bill is a neat opening wedge for cat's-paw politics. Its innocent appearance and noble sentiment cover most damnable potentialities if not intentions.

Eva Thompson Purdy, Mable and William Alwood, Thomas Merritt, Mr. and Mrs. Arthur Maharay, Beatrice McKay, Harrison; Elisa Coutant, Norman and Audrey Coutant, Harrison; C. and Catherine Coutant; John S. and Mary Evans; Mr. and Mrs. Frank Bell; C. Scott Satterly, New Windsor; Charles and Margaret O'Neil, Stuart and Helen G. Satterly, Meadowbrook; Clarence Warford, Edith Warford, Charlotte Bull, Nathan Brewer, Walter Brewer, Helen Biedecap, Barbara Beidecap, Ethal Biedecap, Jean Biedecap, Mrs. Edna Corwin, Louise Corwin, and George Corwin, Newburgh, N. Y.; R. Speidell and A. L. Gillam, Port Jervis, N. Y.; H. Franklin Waltman and Carolyn Waltman, Dover Plains, N. Y.

Letter of Hon. John J. O'Connor

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to enclose a very interesting letter from a former distinguished Member of this body, the Honorable John O'Connor, which I am sure will prove very interesting reading to Members on both sides of the aisle and especially to those Members who are lawyers by profession.

NEW YORK, N. Y., *September 16, 1943.*

HON. FRED BRADLEY,

House of Representatives,

Washington, D. C.

DEAR FRED: In his belated message to Congress, on its reopening on September 14, the President continues his planned campaign of disparaging the legislative body, the only remaining curb to his dictatorial ambitions.

In his attempt to garner, for 1944, every communistic and radical vote in the country he castigates the Congress for daring to even suggest that those "pinks," Watson, Dodd, and Lovett, be separated from the Government pay roll on November 15, unless the President and the Senate decide to retain these Stalinites.

In his diatribe, against the House of Representatives especially, the President reiterates the statement, which someone undoubtedly fed to him months ago, that the act of Congress relating to these radicals was a bill of attainder.

The cold fact is that this act of the American Congress is no more "a bill of attainder" than Roosevelt is a Democrat.

Section 9 of article I of the Constitution of the United States, relating to the powers of Congress, provides: "No bill of attainder * * * shall be passed."

In his message the President says: "The Supreme Court has defined a bill of attainder as a 'legislative act which inflicts punishment without judicial trial.'"

There can be no question but what he refers to the case of *John A. Cummings* v. *The State of Missouri*, decided by the Supreme Court in 1867, and reported in 4 Wall. 277, and 18 Law Edition 356.

While the expression quoted by the President appears in the majority opinion, written by Mr. Justice Field, a careful reading of that opinion will readily distinguish that case from that of the three "pinks." Four of the nine judges dissented—Justices Miller, Chase, Swayne, and Davis—as they likewise did in the case immediately following in the reports, *Ex Parte A. H. Garland* (4 Wall 333, 18 L. Ed. 366).

The Cummings case involved the constitutionality of a provision of the constitution of the State of Missouri, which required a certain form of oath to be subscribed to by priests and ministers before they could practice their calling.

Father Cummings refused to take the oath and was indicted, tried, convicted and fined $500. The Supreme Court reversed the conviction and held the Missouri test oath unconstitutional.

Father Cummings' counsel were Reverdy Johnson, David Dudley Field, and Montgomery Blair. For Missouri, there appeared G. P. Strong and J. B. Henderson. Mr. Justice Field wrote the opinion in both the Cummings case and the Garland case.

The oath required Father Cummings to state, in effect, that he had not taken any part in the Civil War against the Union.

Mr. Justice Field points out that "Fine and imprisonment are prescribed for holding or exercising any of the offices * * * without taking the oath." Congress has made no suggestion, yet, that our modern three radicals shall go to jail.

Mr. Justice Field also said (L. Ed., p. 361):

"Many of the acts, from the taint of which they must purge themselves, have no possible relation to the fitness for those pursuits and professions."

This is not the case with Watson, Dodd, and Lovett, who are now holding policy-making positions in the very government which they would undermine.

The Garland case involved an act of Congress, of January 24, 1865, which prescribed a test oath for the admission of attorneys to practice before the Supreme Court, and which included an affirmation that they had never voluntarily borne arms against the United States.

In an opinion by Mr. Justice Field, five justices held the act void. Three justices joined Mr. Justice Miller in a dissenting opinion in which he also discussed the Cummings case. Following his statement that the Cummings care is the first Federal definition of

"a bill of attainder," Mr. Justice Miller proceeds to adopt the English, and only existing definition, that an "attainder" is " 'the stain or corruption of the blood of a criminal, capitally condemned; the immediate inseparable consequence of the common law, on the pronouncing of the sentence of death.'

"The effect of this corruption of the blood was, that the party attainted lost all inheritable quality, and could neither receive nor transmit any property or other rights by inheritance.

"This attainder or corruption of blood, as a consequence of judicial sentence of death, continued to be the law of England, in all case of treason, to the time that our Constitution was framed and, for aught that is known to me, is the law of that country, on condemnation for treason, at this day.

"Bills of attainder, therefore, or acts of attainder, as they were called after they were passed into statutes, were laws which declared certain persons attainted, and their blood corrupted so that it lost all heritable quality. Whether it declared other punishment or not, it was an act of attainder if it declared this. This also seems to have been the main feature at which the authors of the Constitution were directing their prohibition; * * *."

The present act of Congress directed against the three Moscovites says nothing about their blood. Congress stopped short of that. As Mr. Justice Miller says (L. ed., p. 373):

"It is not claimed that the law works a corruption of blood * * * this leading feature of bills of attainder."

Any suit brought after the firing day, November 15, under the aegis of the President, or otherwise, should be most interesting, even though it was not foreseen by our founding fathers that the executive would make a practice of taking the legislative branch of the Government to court.

You and your colleagues in Congress may be assured, however, that there are still some of us, including lawyers, not afraid of some tests who will gladly volunteer, as party or attorney, to test out the question should the occasion arrive shortly after the Ides of November.

Sincerely yours,

JOHN J. O'CONNOR,
Former Congressman.

Aviation Problems and the Government

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the American Bar Association, Chicago, Ill., August 25, 1943:

My subject today is aviation, but I do not wish to imply that the airplane will supplant other forms of transportation; instead, I believe that a further strengthening and development of all forms of transportation, air, highway, rail, and water, each in its own proper field, is essential to the continued progress of America.

There are few, even among those now engaged in the field of aeronautics, who have a full conception of the terrific impact with which post-war civil aviation will strike our world civilization. Its giant strides in pre-war development gave only a glimmer of what is yet to come, and are puny steps in comparison with the many new and startling aviation discoveries emerging from the inescapable urgency of our struggle for survival.

Technological advances since Pearl Harbor have been so vast that they are difficult to comprehend. More important, we have trained and trained well, hundreds of thousands of our best young men in various branches of aviation. The results of this program have already become visible for all the world to see.

American skill, plus American courage, aided by Allied strength, has battered the once mighty Luftwaffe into a quaking shell, unable today to do more than struggle weakly against the inevitable tomorrow when it will be swept from the skies. Boastful, strutting Mussolini has been blasted into black oblivion. The arrogant Jap, trained to welcome death before surrender, fled from Kiska through the fog. On fronts the whole world over American airpower is demonstrating its supremacy in a manner that will shorten the war by years, perhaps by decades, and save millions of American lives.

When the conflict is over, when these discoveries and trained men turn to the useful purposes of peaceful society, civil aviation will come into its own, in a manner that will affect the daily lives of all humanity. Because so much of its development is American, its greatest effects will be felt here, and because of its vast scope, its impact will be as great in the field of law, perhaps, as in any other profession.

Development of the railroad in the last century offers a classic example of how a new form of long distance transportation can influence your profession. We are meeting today in a city that became powerful because geography and the call of the steamboat whistle on Lake Michigan made it the greatest railroad center in the world. Think of the many knotty legal questions that accompanied the railroad's growth, of the problems that required solution before such growth was possible. What, then, of the far more complex legal problems which post-war civil aviation will present for your solution?

Consider the relative speed of development. In less time than it took to push the first railroad from Chicago to Aurora, the Army's Air Transport Command has built a global network of flying boxcars that probably carry more ton-miles in a week than all of the railroads emanating from Chicago did in their first 5 years of existence, to say nothing of the passenger traffic involved. When the war is over, much of these facilities, and the men to operate them, will be ready for rapid conversion to the works of peace, but the question of their ultimate ownership and regulation has already arisen. Are you ready to tackle even this one problem? I came here from the Twin Cities of Minnesota, where I spoke before the Midwest Global Air Conference. In attendance were more than 500 representatives from cities throughout the Middle West, gathered to consider the changing relationship between their communities and the rest of the world that is coming from the global growth of civil aviation. One of the major problems was airport construction. I doubt if any citizenry has ever built an airport large enough; requirements for space and facilities seem invariably to grow more rapidly than cities are able to purchase land and build ports.

Today, Chicago is a great railroad and manufacturing center, but it is hundreds of miles from the nearest seaport. Tomorrow, it may well be the hub of a world-wide aerial network through which traffic from much of America is routed to remote destinations all over the globe.

Here I ask your indulgence while I digress for a moment about the potentialities of this city which is our host. This metropolis is blessed by geography as are few of the world's cities. With equipment in existence today, it would be possible to leave this room, walk to the Michigan Avenue Bridge, step into a launch, 10 minutes later board the clipper and begin an aerial voyage that can terminate any place on earth in less than 60 hours, following the great circle routes which are the global airways of the future. By the great circle, much of Europe is closer to Chicago than to most of the Atlantic seaboard, just as most of Asia is nearer to it than to the Pacific coast. Yes, I predict that Chicago will be one of the world's leading air terminals, but there will be others just as important to be builded throughout America.

Aerial argosies of the future will fly with a degree of safety and dependability of schedule hitherto unknown. We will have better and more efficient planes, with more powerful and dependable power plants. We will know much more about the elements; at the same time, bad weather will be much less of a problem, with stratosphere flying becoming commonplace.

Thanks to war-spurred advances in the science of radionics, fog has ceased to exist so far as it affects the operation of a properly equipped plane. The pilot of the future will look into the end of a radio tube and "see" his way as clearly through dense fog or black night as through brilliant sunlight. He will be in constant touch with land bases by two-way radio, and the exact position of his plane while in flight will be determined with another radionic device. I predict that global air traffic of the future will be as safe and dependable as that known today by any form of transportation.

Parallel to the expansion of this type of traffic will be an unprecedented growth of domestic aviation. The air lines we know today will multiply and expand, with thousands of new cities added to the list of those with improved airports. There will probably be glider trains rendering local service over long runs with tow planes that do not land at intermediate points; gliders will cut loose from the train and glide to earth at stations along the way while the tow plane picks up new gliders on the fly. This will develop along with a similar type of feeder service which has brought daily air mail to 115 communities in 6 mountainous Eastern States for the past several years. By this system the plane sets out with mail for a number of cities along its course; at each city it swoops low, drops a sack of mail, picks up another on the fly, and continues on its way, landing only when it reaches its terminus at a junction with one of the major air lines. A number of mountain communities in West Virginia receive this daily service; few of them are equipped with airports, and at least 2 of them do not even have rail service. Applications are now pending from 15 different companies to give similar service to more than 2,000 communities in 39 States.

I have barely scratched the surface in discussing the future of aviation, but there is enough here to pose some very complex questions for the legal profession. Sooner or later the lawyer will run into the question of jurisdiction, with its content of constitutional controversy, conflict between Federal and State regulation, and complications in criminal and civil remedial laws.

In the area of administrative law and regulation his labors have been made immeasurably easier by the excellent Civil Aeronautics Act of 1938 and by the Board's announcement on December 18, 1938, of its plan to separate its functions of judge and prosecutor in the handling of regulatory cases.

The administration of the Civil Aeronautics Act calls for the highest technical and professional skill of the lawyer. Just to mention some of the subjects: air-carrier regulation; the application for and obtaining of certificates of public convenience and necessity, involving the intricate matters of competition and priority of air space; permits to

foreign carriers; rate making; air-mail transportation and rates therefor; regulation of business practices and prevention of unfair competition; registration and recording of aircraft; safety of transportation and equipment; and airport regulation.

For some time to come, no doubt, such matters will be committed to specialists in aviation law, but it will not be long before the general practitioner, or so-called business lawyer, will master some of the complexities of the practice.

The sphere of activities of the attorney will be greatly enlarged, both in Federal and State taxation. Interesting and complex questions will undoubtedly arise under the Federal income-tax law, and in connection with such other tax legislation, which will, no doubt, supplement the income tax to meet the stupendous burden of war. Many important questions will arise in State and local taxation. One occurs to me, namely, to what extent will the States extend the principle of taxation of migratory tangible property, based upon the average number of days present in the taxing area, as announced in the Johnson Oil Refining Company case, or some other average basis, which ought to be interesting and profitable to the lawyer.[1]

While somewhat restricted and local in character, the law affecting airports, their establishment and operation, will pose new problems. Even in a narrow field as zoning, there will be many interesting questions. One has already arisen in Maryland where zoning ordinance restricting the height of structures within specified distance of the perimeter of an airport was held repugnant to the constitution of Maryland, and for that reason invalid.[2]

Where the general practitioner and the business lawyer will be called on most will be in the enlargement of commercial transactions and the vast increase of passengers, freight, and express transportation which will flow from the certain expansion of aviation. New problems under old principles will arise. There will be need of pioneering. The law will be elastic enough, as it always has been, to adjust itself to the new conditions, and I believe that you will avail yourselves of the opportunity for business and for service to the community in this fascinating field.

The contraction of the world and the elimination of great distances between countries, especially between North and South America, will result in the exchange of legal ideas and concepts and will call forth the highest skill and capacity of lawyers, not only those specializing in international law but the ordinary practitioner as well.

It has been said that insurance is the handmaiden of industry. Certainly, as lawyers concerned with insurance problems, you recognize immediately that the growth of commercial as well as private flying will to a considerable extent be directly affected by the type of insurance benefits available, the cost of such benefits, and the ease or difficulty with which aviation liability problems generally can be solved. If all branches have efficient insurance machinery available, civil aviation will be encouraged. If, however, the machinery is inefficient, the growth of civil aviation will be hampered.

Those of us in Congress who are interested in promoting the fullest possible growth of civil aviation, and who have long been interested and active in this field, are particularly aware of the increasing attention which must be given to aviation insurance problems. Several bills have been introduced touching upon various phases. Other bills undoubtedly will appear when Congress reconvenes. We must decide what to do with these bills. To do that we must have clearly in mind the general principles which are to guide decisions on specific pieces of legislation. In all of this the Congress needs, and I am sure will welcome, the advice and suggestions of a group such as your own.

The problems, of course, are not wholly legal. Many underwriting and actuarial matters must be considered. The lawyer, however, has a unique opportunity to make a contribution in this field. His knowledge of legislative and administrative procedures, and pitfalls and his practical contact with the various business phases of insurance, place the lawyer in a unique position to be of aid.

I do not presume to be able to indicate what the so-called solution should be. I can, perhaps, point up what appear to be some of the most pressing questions which require immediate attention.

One problem, for example, which I know has had the consideration of some of you, and which is far from solved, involves the question of whether or not there should be enacted by the Congress a national workmen's compensation act. It would, perhaps, be patterned along the lines of comparable legislation in the railroad field, which would establish uniformly the rights of employees and the obligations of employers for all types of injuries or fatalities in the field of air transport employment.

The application of many State workmen's compensation statutes to the new field of civil aviation is not clear. What provisions of the existing statutes apply to aviation employees and how those provisions will be interpreted in the light of the novel situations presented are not clear. The provisions of the laws themselves differ substantially. Efforts to bring about uniformity have not been successful. There should be no doubt as to what the worker rights are or what the employer is obligated to pay in the event of an employee's injury or death. Yet such confusion exists. This uncertainty may become greater as the number of employees increases and business becomes more complex.

The proposal for a Federal statute has much to commend it. A Federal plan should be relatively simple. It would necessarily bring uniformity of benefits and liability. Much of the confusion would be eliminated. What form the bill could take and what are the advantages and disadvantages of the various proposals which have been made present technical problems on which the Congress will need your constructive suggestions. Perhaps some satisfactory alternative to Federal legislation is feasible. There would be wide interest in a pragmatic solution to this pressing problem, which must be dealt with effectively as a necessary job of bringing stability to civil aviation and making employment in that industry attractive.

Another special problem, and one of which the solution has been already too long delayed, is that presented by those who advocate the enactment of a Federal aviation liability act. We recognize that we do not have in our body of common law or in our existing State legislation principles which are sufficiently definite, precise, or inclusive to enable anyone at the present time to state the rules of liability in the field of civil aviation. Many novel types of liability are created by this new development—aviation. Of course, if sufficient time is permitted to elapse, the nature of this liability and the rules of law which control will be slowly whittled out through numerous court decisions and patchwork legislation. This is an expensive, unscientific, and cumbersome process. We should, on the basis of our experience, be able now to determine what these rules should be and to establish rules which will be fair and equitable to all concerned.

It is obvious that aviation presents a special problem and that a separate approach to it is necessary. The air lines have indicated a willingness to assist in working out a satisfactory solution. They have not objected to compulsory insurance and they are willing to accept definite rules which, for practical purposes, will impose liability upon them in many doubtful cases, asking only that such liaibility be limited by statute to reasonable amounts.

Many of you undoubtedly are familiar with the report prepared by Mr. Sweeney, of the Civil Aeronautics Board, dealing with this complex subject. He suggests that in Federal legislation lies the solution of the many difficult questions of aviation liability. Whether the solution lies in State or Federal legislation is a problem which must be decided soon. There can be no doubt the problem exists.

Another question receiving congressional attention involves the special field of liability insurance for air transport companies. It is obvious that the growth of air transportation, both domestically and abroad, can be accomplished only if adequate and efficient insurance and reinsurance coverage can be readily obtained at proper cost by American flag air lines. If adequate insurance protection is not available from private sources, it must be made available through governmental machinery. There is no reason to believe, however, that private groups cannot supply this insurance, except, of course, war risk insurance, where obviously the Government must cover the risk. Private insurers, however, writing air-transport insurance, must be continually alert to the changing conditions. They must keep ahead of the industry and encourage its development. They must suggest modern types of policies which are designed to meet the air carriers' needs. They must be willing to open their records to the fullest disclosure so there may be constant scrutiny of profits and the type of practices followed in reinsuring risks abroad.

There has been some discontent in airline circles with the existing insurance machinery. The whole problem is being thoroughly reviewed and a practical solution can and should be worked out. I am certain appropriate committees of Congress will watch these developments with genuine interest. Whatever solution is achieved will be one which must withstand the most careful examination.

The types of problems which I have mentioned will come before the Federal legislature. There are many related problems which are constantly requiring the attention of the States. I feel, however, that, looking at the picture as a whole, we must recognize there is need for centralizing the bulk of the regulatory and legislative activity in the civil aviation field in the hands of the Federal Government. This is a policy which the American Bar Association has supported. It is welcomed by various aviation interests, and which is a well-established national policy as evidenced by the Civil Aeronautics Act. When one considers regulatory problems in the field of aviation insurance, however, a conflict arises. While aviation is committed to a Federal policy, insurance groups have consistently shied away from Federal legislation. They fear, perhaps with justice, the encroachment of the Federal Government and seek a continuance of State jurisdiction. However desirable and right such a policy is with respect to insurance generally, the peculiarly Federal character of civil aviation must not be overlooked in dealing with aviation insurance matters.

The Federal Government, by reason of the broad national aspects of its program for civil aviation development, may be expected to take steps to eliminate any serious obstacles which inadequate insurance or insurance regulation places in the way of continued development. Immediate and careful consideration of aviation insurance problems, if coupled with concrete affirmative

---

[2] *Mutual Chem. Co.* v. *Mayor and City Council of Baltimore et al.*, Baltimore Daily Record, Jan. 27, 1939, p. 2.

action designed to eliminate the existing difficulties, will obviate the necessity of any drastic legislation in this field. All groups concerned, including lawyers, must recognize the challenge and get to work. A great opportunity is presented.

No discussion of post-war aviation could be complete without some comment on the world of tomorrow, which aviation will help us build. I believe that the time is long since past when we should use such labels, or epithets, if you will, as "isolationist," "interventionist," or "internationalist." For better or for worse, we have been propelled into a new conception of our relations with other nations. At war's end the United States will be by all odds the most powerful nation on earth, and so, for better or for worse, we will largely be responsible for the nature of the post-war world.

I would like to make it very clear that, both as a private citizen and as a public official, I approach this problem as an American, and only as an American. More than 3 years ago I introduced legislation in the House of Representatives directing the President to begin negotiations with Britain and France for the acquisition of their possessions off our Atlantic seaboard in partial payment on their debts from the First World War. The measure did not pass. However, I am today more certain than ever that these islands, which are geographically part of our domain, should come under our jurisdiction, and that we should begin negotiations for their acquisition immediately.

I do not believe in piracy, but, on the other hand, I do not believe we should permit our just claims to be dismissed with a suave smile by the owners who rightly can thank us for their continued free existence, coupled with their own courage.

When I introduced this resolution in 1940 I did not mention Greenland, because in the Virgin Islands transactions we had specifically waived all claim to that vast Arctic island. Moreover, in the hands of peaceful Denmark it seemed safe enough.

Today, however, the picture has changed. We were forced to assume de facto sovereignty of Greenland when Hitler swallowed Denmark, and Greenland has rapidly come to have enormous strategic value to the United States. First, it is today our secure source of cryolite, an aluminum compound which is essential in our present method of extracting aluminum from bauxite. Second, its 700,000 square miles of smooth ice cap make it a perfect intermediary base for air transport between the United States and Europe, in peace or in war. Third, by routing flights over Greenland, there is no over-water hop longer than 500 miles.

We must be realists in looking at post-war Europe. In our hands, Greenland is worth a thousand pursuit planes as a defense against any hostile European nation; if controlled by a hostile nation it is worth, to him, a thousand bombers. I believe, therefore, that we must make some type of agreement with post-war Denmark which will give us Greenland. It will not be long until we return to the Danes the freedom of their own country; is it too much if we ask them to give us Greenland as an expression of gratitude, and as assurance that in the remote future we will again defend them against alien dominance? And why is not gratitude for lend-lease, and for the coming restoration of France, reason enough for us to be given all British and French possessions in our waters?

On the same basis, I believe we should insist on retaining the Pacific islands which have threatened our safety in the past, and the air bases we are building as a means of winning this war.

I repeat: I approach the post-war world strictly as an American. I welcome eagerly the new concept of world relationships which global aviation forces upon me; I believe in international cooperation; I do not believe in piracy. But I believe we should insist on retaining the margin of superiority which we are forced to build in order to win the war; that we should disarm only as others disarm, retaining always this managing supremacy; that we should never again permit strategic points which might one day be used against us to remain in the hands of other nations; that from now on we should retain the power to quickly punish any nation anywhere that threatens our peace and safety; and finally, in necessary and desirable collaboration with other peaceful peoples America can best serve itself and world humanity by keeping always its identity—that history and heritage so fundamentally founded on justice.

Air Transportation and the Future of America's Communities

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on the occasion of Oklahoma's Aviation Day, 1943:

This war is presenting, as one of its principal byproducts, a challenging issue to every community in America, particularly to the smaller communities not now receiving air transportation service.

Every load of bombs carried over Germany shows us something more of the possibilities of air transportation as a carrier of people and goods through all kinds of weather, day and night, at high speeds, for short and long distances.

Every sortie by our intrepid airmen in Africa—and now, thanks to their prowess, in Sicily and the Italian boot—shows us something more of the possibilities of air transportation as a means for enriching our communities through a new, faster, safe, and more pleasant means of travel.

Every thrust by the Fortresses and Liberators on the vast expanse of the southwest Pacific toward our ultimate goal in Tokyo shows us something more of the possibilities of air transportation as a tie which will knit the communities of our Nation more closely together in the unceasing quest of a free America for the fuller life for our millions.

For this war has proved, even to the blindest among us, that air transportation is just as much a part of our transportation picture as rail, motor, or water transportation. In the America of the post-war world, transportation by air will become an essential vehicle of our Nation's economy.

It is necessary, therefore, that every community give serious thought and make necessary plans for those steps which will assure that it is a full participant in the benefits of air transportation. It is just as important that there be brought to each of our communities the benefits of air transportation as it once was that the lines of steel rails be laid to them or that the highways of concrete and gravel be threaded through them.

The community which is asleep, or which, by the failure to exercise diligent foresight, lets the march of air transportation pass it by, will find in the next decade or so that it is a forgotten eddy in the rush of the great stream of America's national life.

To the American community, large and small, of tomorrow the airport will be one of the most important utilities in its possession. To and from that airport will come all of the travel of more than a hundred miles or so and much of the small package cargo and virtually all the mail, save for the shipments and mail between nearby points. The airport will become the principal point of contact between the average community and the great world lying over the horizon.

When I say contact with the world I mean precisely that. With the slower surface transportation it is waxing too poetical, perhaps, to speak of contact between the average community and the whole world. But the speed of air transportation will so revolutionize our habits and our thoughts and our interests that it will become a matter of course for the ordinary citizen to take an occasional trip to our neighboring nations, or even to other hemispheres. It will be no more startling to take off from some one of our communities in the Midwest bound for Buenos Aires than it is now to go to the railroad station for a trip to Minneapolis or Seattle or Atlanta.

If we read some of the history of our country of fifty or a hundred years ago, it is not unusual to find reference to communities, then important, which have either been forgotten or have disappeared, or which have now become insignificant. In each case the explanation of their decline can be found in their failure to secure for themselves the advantages of modern transportation. This waning in the position of a community can still occur and in fact will occur for those of our cities which fail to assure themselves a place in the great air transport network in the years to come.

There are three indispensable conditions to a proper development of air transportation for the benefit of all our communities.

The first is that the regulation of air transportation shall take place under fair and uniform conditions without sectional and regional discrimination. This can be accomplished only through a centralized regulation under the Federal Government. The speed, the complexity, and the mobility of air transportation are such that the problem of regulating the basic conditions under which it is to be conducted cannot be adequately handled by the various States, as in the case of the slower motor or rail transportation. State regulation would only tend to create barriers making it more difficult for an individual community to assure that it is adequately connected with its sister communities throughout the Nation. State regulation would only lead to competition between State regulatory agencies to secure a favored status, with inevitable harm to the growth of the industry for the benefit of all, provoking retaliation and discrimination. State regulation would be inefficient and present cumbersome red tape, multiplying governmental requirements—of which in this day and age we should all be heartily sick—which could serve no useful purpose.

The second condition is that the development of air transportation should be left free of control by competing surface carriers. Today there is a strong movement, on the part of many surface carriers to move into the air transport field. This effort is understandable. These carriers are naturally worried lest the competition from air transportation might affect their own traffic and revenues. But it is of supreme importance that these different modes of transportation be kept separate, and on a truly competitive basis. One of the saddest chapters in our history was the tendency on the part of transportation enterprise in an earlier day to combine into great monopolies stifling the interests of local communities. It was this effort to monopolize transportation which was one of the evils leading Congress to adopt the antitrust laws beginning in the latter part of the nineteenth century. But recently railroad interests have been seeking to be relieved of

such laws and of other guaranties of competition, and to secure legal permission to construct great systems of transportation by every means—land and air—under common ownership, on the plea that such integration as it is called will result in economies and improved service. The plea is false. By theoretical talk about operating economies, it is sought to delude us into surrendering to the dominant interests the determination of the future of our transportation development. There is no more possibility of operating economies, in any real practical sense of the term, through combinations of rail and air carriers than there would be through combinations of a grocery store in Maine with an oil field in Oklahoma. The operating problems of the two forms of transportation are just as different as the wheels of a locomotive are different from the wings of an airplane.

Strong, vigorous competition between the two forms of transportation, in the traditional American way, must be maintained if this young and coming industry of air transport is to realize its rightful place. By strict requirements that the older means of transportation keep hands off, we can assure that the growth of the one will not be stunted by the vested interest of the other, and that American communities everywhere, no matter what the private interest of the other carriers might dictate, will enjoy the advantages of the swiftest and most modern of all transportation media.

The third condition for the proper growth of air transportation in the best interest of all of our communities is an active, intelligent interest on the part of the local community itself. It would be a wise investment if the citizens of each of our communities should band themselves together into a local organization in each city, through their own chambers of commerce or otherwise, with the specific purpose of planning for and securing adequate air transportation as soon as it is practicable to furnish that transportation. One of the first concerns of any such a group should, of course, be an adequate local airport, properly zoned so as to assure freedom from dangerous obstructions to flight to and from that airport. Also such a group should make the surveys and studies which will be most beneficial in showing its immediate and future needs for air transportation and the amounts of trade and travel which it can expect to generate. Likewise it should encourage a continued interest on the part of the youth of the community in the art of flight in order that there can be available locally the skills to engage in various aeronautical pursuits which will attract aeronautical industry to its borders. In these and other ways, such a group can assure that its community will not be left in the wake of our progress in the air.

With each of these three conditions a bill pending in Congress deals in a constructive manner. It provides for Federal regulation, with proper provision for the cooperation of State and other local agencies. It provides that surface carriers will not be permitted to capture air transportation. And it provides numerous means for encouraging and aiding States and municipalities in airport construction and airport zoning, in aviation education, and in other such activities.

It is to be hoped that this bill may become law in the near future. This war will one day be over. It may not end this year or next. But whether it continues for 2 or 3 or even 4 years, it is not too soon to begin now to plan for the future place of air transportation in the community life of every American city. The problems of air transportation are complex and difficult. The industry is new and the engineers are still performing miracles of invention which cause in its technology overnight changes of revolutionary importance. This state of technical flux enormously complicates all the problems in connection with its successful development. Therefore, our best minds are needed to solve its problems, and we must take plenty of time in order to be sure that we do not make too costly mistakes. That is why we need now the legislation in Congress which will do all our lawmakers can do to assure that the three basic and indispensable conditions for the sound development of the industry are taken care of. The rest is up to the cities of America, and to the young men and women in this new industry.

Insurance for Employees of Certain Organizations

REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. LYNCH. Mr. Speaker, on the first day after the summer recess I introduced in the House a bill to establish and provide for a system of old-age and survivors' insurance for employees of religious, charitable, educational, and certain other organizations, and for other purposes. This bill has now been numbered H. R. 3204.

This proposal is designed to provide old-age and survivors' insurance protection for the secular lay employees of nonprofit tax-exempt institutions and agencies.

The bill embodies most of the features of the present title II of the Social Security Act; but in order, first, to give due recognition to their nonprofit functioning—affording public services without gain motive—with its attendant financing problems, special needs and limitations, and, second, to safeguard the traditional tax-exempt status of nonprofit organizations, includes certain special features.

It proposes under a new title II–a that every tax-exempt organization—as defined in this title—which is an employer, shall secure Federal old-age and survivors' benefit for its secular lay employees by insuring such employees in a separate trust fund to be known as the Federal old-age and survivors' insurance trust fund for employees of religious, charitable, educational, and certain other organizations.

It attempts to distinguish clearly between contributions required under the plan and general taxes levied by the Federal Government. The payments to be made are denoted as "premiums" and these premiums would go directly into the fund without passing through the general funds of the Treasury and without requiring appropriation by Congress. The Social Security Board has been designated the collection agency, but it would be possible under the provisions of the bill for the Board to arrange that the Bureau of Internal Revenue do the actual collecting.

Benefit payments are identical with those provided under title II, but premium rates are one-half percent lower. Nonprofit agencies have no means of passing on the cost of the insurance to their beneficiaries or to those they serve. It is likewise believed that this lower rate is sound in the light of experience.

These distinctions are desirable and sound. The proposal is a constructive one, and with the text proper, subject to perfecting alterations, will afford desired protection to the many employees of such organizations and at the same time continue the long-established and deep-rooted recognition of the vital contributions the churches, the charitable and community agencies, and the private schools and colleges have made to our country and its people, and assure that these services shall not be threatened but fostered.

Argentine Debt Repatriation

EXTENSION OF REMARKS

OF

HON. ED ROWE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. ROWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal of Commerce:

ARGENTINE DEBT REPATRIATION

Argentina's decision to redeem 500,000,000 pesos of its Government bonds held in Great Britain, out of its huge accumulations of blocked sterling balances in London, will favorably affect the financial and economic position of both countries for the immediate future.

The funds for this operation will be raised through the sale of Government obligations within Argentina. This financing will absorb surplus purchasing power, and thus abate the inflationary pressure which has been becoming increasingly pronounced. At the same time, the reduction in the Argentine external debt will reduce that country's foreign debt service further, and thus strengthen its balance of payments position after the war when imports of both consumer and capital goods are likely to be quite heavy for a time, so that the trade balance may turn unfavorable.

The money that will be raised through the sale of refunding obligations within Argentina will be used to pay off the Argentine exporters who hold sterling balances, while the bondholders in Great Britain will be paid off out of the sterling balances frozen in that country. The Argentine business concerns involved will thereby be placed in much stronger liquid position, which should strengthen their credit standing for the postwar period.

Great Britain, also, will be favorably affected for the near future. Blocked sterling balances due Argentina, it has been estimated, would have increased to £42,000,000

by the end of this year, owing to heavy British imports of meats, hides, and other products, and subnormal exports of manufactured goods to Argentina. These balances had caused so much concern that special provision for their gradual liquidation had been included in the American plan for an international stabilization fund. The redemption of the Argentine bonds held in Britain will reduce these frozen balances by some £32,000,000, or more than 75 percent. This will facilitate stabilization of the pound after the war.

It should be noted, however, that over the long run redemption of Argentine investments held in Britain reduces that country's ability to buy Argentine products. In the past, Great Britain has paid for her heavy imports of animal products and grain from Argentina in part with interest and dividends received on investments in that country. Repatriation of these investments will reduce such receipts sharply, and the British will have to sell more manufactured goods to Argentina if these imports are to be sustained. In view of the industrialization going on during the war, it remains to be seen whether the Argentine will be willing to buy more from Britain over the long run.

A Fighting Sailor Commends a Fighting Congressman

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to call attention to a most interesting experience of a colleague, Hon. MELVIN J. MAAS, which appeared in the Northwest News under date of September 15, 1943:

One day early this month, MELVIN J. MAAS, blunt, outspoken Congressman from Minnesota's Fourth District, home for a much-needed rest before returning to a strenuous congressional program in Washington, was called on to defend his voting record in Congress. His questioners and bitter critics were 28 legislative chairmen representing Minnesota C. I. O. local unions.

The rotund, fast-moving, little solon lost no time in informing his critics just where he stood. He read from a printed sheet, handed him when he entered the closed meeting room in St. Paul, Minnesota's St. Paul Hotel, his record which had aroused hostility among C. I. O. members. He promptly told them that he thought he had voted in the interests of all the people and that he would vote the same way again on any and all bills that have been presented to Congress.

Robert Madigan, chairman of the C. I. O. Victory committee, presided, and gave MAAS the floor first. Madigan said union members gave up the right to strike and said the record of the last Congress is one of "vacillation, refusal to grasp major issues, failure to mobilize the home forces behind the armed forces, a retrogression from progress and measures to improve morale were undermined."

MAAS said, "I stand absolutely on my record. I never intentionally ducked a vote and in the several cases I am not recorded I was investigating congestion of transportation and housing and lack of food in vital areas such as Norfolk, Va., and San Diego, Calif."

The Congressman said he was absent when the vote was taken on the Hobbs anti-labor-racketeering bill, but would have voted for it, if he had been present.

He said the $25,000 limitation of incomes bill, which the group severely criticized, strikes at Americanism. "When you establish the principle that a man is limited to any amount you destroy initiative. That's the fair way to limit incomes anyway. We would have no surpluses to build industries that create jobs, if you limit income."

When the discussion was most heated, a big, brawny sailor in active white service uniform applied for admission. Glad to accommodate a fighting man from Uncle Sam's armed forces, the gob was allowed to enter and sit down. After listening for some time, the big, broad-shouldered Navy man asked permission to speak, which was quickly granted.

What the sailor said and what followed threw the meeting into turmoil, bewildered the gathering, and caused the little Congressman to puff his inevitable cigar white hot. Hailing from Duluth, the Navy man said his name was Nelson. Home on a furlough after service in the southwest Pacific, where he said the name MAAS is a byword among Navy men, he happened into the hotel lobby, heard MAAS was speaking, and strolled in for the express purpose of shaking the Congressman's (member of the potent Naval Affairs Committee) hand.

Sailor Nelson said he was ashamed of the group; that they should be ashamed of themselves for wrangling over insignificant, petty things when there is so much of far greater importance to consider. "Boys in the armed services are out there in hell fighting for your freedom and mine, while you fellows sit at home with nothing better to do than pan a Congressman for trying to honestly represent the interests of all the people, rather than the selfish interests of a minority."

While Nelson was speaking a motion was put to "stop this foolishness and ask this man to get out." The motion was lost, however, in other shouts from the floor, "Let him continue." Sailor Nelson, in the prime of excellent physical condition gained from the Navy, was not inviting trouble, nor did he expect to be thrown out of the meeting. It is doubtful, though, if there were any 3 men together out of the 28 present who could have or would have attempted to forcibly eject the big fellow.

Nelson told the gathering that, "It is a sad commentary on American democracy and free speech and you fellows above all, as proponents of liberalism, who won't allow a fighting man to have his little say and perhaps the last say I'll ever have, I'm going back into that hopper of hell in a few days."

Nelson described the sensation of a rolling, pitching, rocking battleship under heavy fire with bombers flying overhead dropping fire and hell on deck and said: "It takes real guts to stand up under such terrifying punishment, but damned if I can understand what it takes to pull what you fellows are pulling here tonight. If there's anyone here who would like to change places with me let him stand up."

One out of the 28 got to his feet, whereupon the big sailor grabbed the hand of the lone taker in a hearty shake. "I am proud of you," Nelson said. Then walking over to the astonished Congressman, the sailor accomplished the purpose for which he had sought admission to the meeting—to shake the hand of Navy's Congressman MAAS, which he did with, "God bless you, Congressman," and "Good night, gentlemen."

Sailor Nelson was lost in the night and so was the rest of the critical meeting, the sum total of which left the Minnesota Congressman with a high vote-right average of nearly 98 percent.

With a parting shot from the Congressman, "If you fellows can find only 15 bills out of 400 to kick about I think that's a pretty good record in my favor. I challenge you to go out and defeat me if you are not satisfied," the meeting adjourned.

Ex-House Member, Wounded in Pacific Area, Eager to Fight

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of September 19, 1943:

EX-HOUSE MEMBER, WOUNDED IN PACIFIC AREA, EAGER TO FIGHT

(The following story was written by Technical Sgt. Dan Campbell, a Marine Corps combat correspondent, and distributed by the Associated Press.)

SOMEWHERE IN THE SOUTH PACIFIC, August 15 (delayed).—Oklahoma's fighting ex-Congressman asked for action, got it with both barrels, and now wants to go back for more.

As soon as his wounds are healed, Maj. Phillip C. Ferguson, U. S. M. C., of Woodward, Okla., expects to rejoin what he calls "the fightin'est outfit in the south Pacific." He is a marine raider.

Major Ferguson, who served in the House from 1935 to 1941, is recovering at an island hospital from machine-gun bullet wounds in the wrist and hip incurred when marine and Army units wrested Enogai Inlet from the Japs.

Asking for assignment (it's a volunteer job) to a marine raider outfit is asking for extra trouble, but the major was ready for it. Wiry and tough as a rawhide quirt, weathered and tanned as a piece of saddle leather, he marched in the van of a 6-day forced jungle trek across Dragon Peninsula on New Georgia Island.

While tough raider youngsters half his age were finding the jungle a mean opponent, the rangy Oklahoma plainsman was taking it in his stride—a long one. It kept him at the head of the reconnaissance column until July 8.

"We were approaching Enogai and I was just going back to report the disposition of our troops when the Japs attacked," he said. "I got caught in the spray of a machine gun. I crawled 50 yards and two corpsmen (Navy medical corpsmen) helped me back to the command post."

Major Ferguson joined the Marine Corps in 1938 because he believed "war was coming."

His wife, Mrs. Martha Ferguson, and two daughters live on their ranch at Woodward, Okla.

No Oversight

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. LARCADE. Mr. Speaker, without undertaking an exhaustive discussion of

the subject, and under leave to extend my remarks, I desire to call your attention and that of the Congress to an article in the Washington Daily News of September 20, 1943 by Raymond Clapper relative to assistance rendered the cause of freedom by the French. Notwithstanding the fact that the statements made therein are substantially correct, I am certain that our President did not purposely fail to make any reference to the Free French and those French people whose resistance to the despots extends to every corner of France. Since the President's report concerned primarily the accomplishments and statistics of our country it can easily be seen why no reference was made to France. However, in the victories of north Africa, the French Army rendered great assistance to the Allied cause and we may be sure that French forces will be fighting on newer fronts ever nearer to France as the war progresses. I feel confident that at the opportune time the President for himself, and on behalf of the American people and our allies, will pay just tribute and give full recognition to the French.

The fact that Americans respect the French tricolor which the Germans have temporarily torn down is demonstrated by the plan to issue a new United States postage stamp this month in honor of France. This tribute goes to a nation which is temporarily on its knees but which will rise again in all its former splendor from the ashes of this great holocaust.

Mr. Clapper's fine remarks in behalf of the French are as follows:

IMPORTANT OVERSIGHT

(By Raymond Clapper)

The last message of President Roosevelt was such an admirable and helpful report on the war that one hesitates to find any fault with it. Yet the silence about our relations with the French committee was disappointing.

We are going to need France. Even if a miracle should bring victory without an invasion of France, the French people would still be a most important factor in achieving allied peace and security.

In his message to Congress, Mr. Roosevelt praised the Russians and the Chinese and distributed words of encouragement to all the victims of fascism and to the little satellite peoples longing for freedom in Rumania, Hungary, Finland, and Bulgaria.

But no word to the French. No word to the French Committee of National Liberation whose divisions we are arming to help in France. No word of explanation or friendship toward the Frenchmen who have kept alive the spirit of resistance in France.

Why not say the friendly, encouraging things to General de Gaulle? Why are we so careful not to say the words that will give the French people a greater feeling of pride in him and a stronger feeling of confidence that allied forces are working together, and not against each other, for the liberation of France?

Russia has recognized the French committee fully, instead of grudgingly as we have. And Moscow says kind words about General de Gaulle. If we fear that he is slipping into too close relations with our ally Russia, where else have we been driving him by our scowling attitude?

This French affair has a long history. And it would be a good deal better for all of us if we would just let that history go into the safekeeping of the historians and devote ourselves to the present. Do we have to go on forever insisting that it was right to deal with Darlan? Most people think it was a good deal. Why not let it go at that? Nothing but a guilty conscience could keep anybody defending the Darlan deal this length of time. It got us what we wanted, so let's get on. Now it is General de Gaulle who can get us what we want—or come nearer to it than any other Frenchman.

What do we want? We want the French people to get up on their hind legs and kick the hell out of the Nazis as soon as the Allies come in. We don't want them to become all tangled up like Badoglio and the little King did in their own spaghetti, and disappear from sight.

General de Gaulle is temperamental. He annoys even such a patient man as Anthony Eden, who has been in his corner. He has exasperated Churchill and Roosevelt beyond words. But there are also some others in the war, some other Allied leaders, who are not exactly easy to get along with. Yet we try to be patient and understanding, and we certainly overlook no opportunity to tell them what a great thing they are doing.

Now, General de Gaulle, with all of his temperamental faults, is the only Frenchman in sight who has any political force, who has anything of what it takes to lead mass French resistance to the Nazis. He has an excellent military man in General Giraud—a man who is organizing what evidently are efficient French divisions. He has no interest in political leadership and no flair for it. But with de Gaulle rallying the French people, and Giraud as the military commander, we have a team that can pull a good deal of weight in the allied boat. And when we try to crack France, every bit of it will be needed.

The talk goes around that President Roosevelt is even more critical than the State Department people of General de Gaulle. He could very well take opportunity to leave no room for doubt and to work energetically to knit good relations with the only responsible group of Frenchmen the allies have. That is what he is doing with regard to Russia. Some of the same effort should go into preparing the French for the day when they can fight with the Allies.

For instance—the French ought to be part of the Mediterranean Allied Commission, which thus far includes only ourselves, Britain, and Russia.

The Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. WEISS. Mr. Speaker, the American people have spoken. Yes, through their Representatives in the Congress of the United States on Tuesday, September 21, 1943, when the House of Representatives, by a vote of 360 to 29, adopted and passed the Fulbright Concurrent Resolution 25, introduced by Congressman J. W. FULBRIGHT, a freshman Member from Arkansas, a Rhodes scholar, and former president of Arkansas University. The resolution is significant in its simplicity. It reads as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace, among the nations of the world, and as favoring participation by the United States therein through its constitutional processes.

It is a plain and simple statement of basic principle. As a leading world power, America must lead the way in establishing a foreign policy that will bring everlasting peace among the nations of the world.

Following World War No. 1, a few isolationists in the United States Senate were able to defeat the Woodrow Wilson peace proposals. We then accepted the Versailles Treaty. The result, World War No. 2. The policy of isolationism following World War No. 1 has been and will be a costly lesson in blood and money to the American people. We must profit by the grave errors made by American statesmen following World War No. 1. It is my firm conviction that the Fulbright resolution is our first step in the right direction. Let me quote the remarks of the editor of the Washington Star as stated in the Monday, September 20, issue:

What we need now is a simple expression of our determination that, having won a global war, we shall live up to our responsibilities of maintaining global peace. This resolution will not settle the future of the world. But if the House gives it united support tomorrow, the representatives of the people will have outlined the pattern of the policy we are to pursue in international collaboration after the war. What most Americans want to see is some agreement among their representatives on where we are going after this war is won. Nonpartisan endorsement of this resolution by a solid House will tell them what they want to know.

I firmly believe that the overwhelming vote by which the resolution passed the House will hearten our allies and the free peoples throughout the world; it will serve as a grim warning to the Axis that the United Nations intend to work together in peace as well as in war to destroy the ruthless and savage forces of aggression.

I rejoice in being a Member of this Seventy-eighth Congress in that I participated in and voted for the passage of the Fulbright resolution to lay the groundwork in the first step to establish in this chaotic world a just and everlasting peace.

Powers of the Courts Must Be Restored To Review Regulations and Orders of O. P. A.

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. DIRKSEN. Mr. Speaker, when Congress created the O. P. A., and delegated power to the Administrator to

make rules and regulations to effectuate the act, it created an emergency court of appeals and vested in that court exclusive jurisdiction to pass on complaints and grievances and divested all other Federal courts of any power whatsoever to consider the validity of any order, regulation, or price schedule or to stay, restrain, enjoin, or set aside, in whole or in part, any provision of the act authorizing the issuance of such orders and regulations.

Now read that again and you will observe that all Federal, State, and Territorial courts were divested of their jurisdiction and the power lodged in a special emergency court.

There was a theory behind this provision. The O. P. A. stated in a written memorandum when the bill was first under consideration in 1941 that such an emergency court would become expert in these matters; that it would relieve the congestion in the regular Federal courts; that the emergency court could be set up in divisions so that justice would be readily accessible to all litigants, whether rich or poor, and no matter where they might be located.

It was a noble theory but it didn't work. For one thing, sufficient Federal judges were not available to do the work. For another, the emergency court spent most of its time in Washington so that aggrieved citizens must trek to the Nation's Capitol and lose valuable time and incur heavy expense in seeking redress from the administrative orders of this agency.

Only recently were we treated to the spectacle of a very reputable business firm in Peoria, Ill., coming before a three-judge Federal court to secure a remedy against O. P. A. action only to have the court solemnly say that it had no power to provide a remedy because Congress had divested it of all jurisdiction under section 204 (d) of the O. P. A. Act.

The comment of one of the Federal judges was that—

> This is a culmination of a long series of acts depriving courts of jurisdiction, vesting decisions in various boards throughout the country * * * the act provides that no court, Federal or State, shall have power to consider the validity of any regulation of the O. P. A. or any price schedule and this court has no power to restrain.

There is the whole story from the lips of a Federal judge. His court has no jurisdiction. His court has no power to restrain. Thus, every citizen is at the mercy of an administrative agency unless he comes to Washington, first appeals to an administrator for redress, then to a special court. Consider the time, the expense, and the inconvenience involved in such a practice. The time has come to provide a remedy and permit the citizen to go before his appropriate Federal judge for relief from the unwarranted orders and regulations of a Federal agency.

Last week, we observed the anniversary of the Constitution. It set up a form of government and provided for a law-making branch, a law-administering branch and a law-interpreting branch. Congress has, however, rendered the law-interpreting branch, namely the courts, impotent in cases of this kind and denied to the citizen a ready access to the courts.

Today I am introducing an amendment to the O. P. A. Act which will remedy this condition and restore jurisdiction to our Federal courts to handle all matters coming under the O. P. A. Act.

[From the Peoria (Ill.) Star]

WHAT PRICE BUREAUCRACY?

Three Federal court judges, all estimable jurists, made a statement recently in a Peoria courtroom that was nothing short of historic.

It was a statement that they had no jurisdiction over a case in which an O. P. A. ruling restricting the business practice of a Peoria concern was being appealed.

In effect, it said that the people of this democracy were denied the right of redress by their Government under the terms of a war-born measure known as the O. P. A. Act, a so-called emergency measure for the purpose of price control.

We are not presuming to say that the judges were surprised at one section of this act which thus deprived the courts of their function and a petitioner from taking his case to the courts. But we know that certain attorneys were surprised, and we know that certain legislators, queried on the moot section, expressed surprise that it was in the bill.

This section says in essence that anyone who has a grievance, no matter how well established, cannot take his case to the regularly established Federal courts, or any other court of local jurisdiction. He must take his case to a special court, in Washington, and one that was set up under the very act that created the Office of Price Administration, from whose ruling he is appealing.

In addition, this court can keep the petitioner waiting, at 30-day periods, ad infinitum, while the O. P. A. official in charge makes up his mind.

Because the small businessman cannot, in times like these, go to Washington at will, this section is tantamount to denying anyone who disagrees with a bureaucratic ruling their day in court. It stymies the citizen completely.

It establishes the complete dominion of one agency or one man over the free thought and action of the American citizen.

This sounds so incredible it will be believed only by a few.

Yet the record is there, for all who will see it, including the Congressman who admittedly didn't know what he was passing when the bill sailed through both Houses of Congress.

One Federal judge, Hon. Charles G. Briggle, made this personal comment:

"This is a culmination of a long series of acts depriving the courts of jurisdiction, vesting decisions in various boards throughout the country * * * the act provides that no court, Federal or State, shall have power to consider the validity of any regulation of the O. P. A., or any price schedule, and this court has no power to restrain. The act also covers declaratory judgments."

Attorney John Cassidy declared that if any individual's private or personal action was deemed, at the whim of the administrator, to affect the price structure, almost any regulation could be put into effect without recourse.

"There never was a more cunning device contrived to deprive the citizen of his rights in court than this section which says that jurisdiction of such cases is in a special court in Washington," he declared.

We wholly agree with this gentleman. This unbelievable statute is the most vicious and un-American item we have ever seen. It is extremely significant in showing, again, how we are veering toward centralization of government.

This kind of a thing does not aid the winning of the war—which all true Americans want to win—it defeats the very purpose of our fighting overseas.

You don't just suspend democracy in the United States. You don't slap a piece of paper across the face of the United States Constitution and veto it in favor of some theory propounded by a bureaucrat.

At least you didn't used to. After the astounding revelation of this Peoria case, nothing will surprise us very much.

The Bill of Rights to our Constitution says quite clearly in article I, under the heading of "Personal freedom": "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble," and "* * * to petition the Government for a redress of grievances."

Let this outright and flagrant and arrogant violation of this traditional American right come as a dash of water on the face of American citizens. While our boys fight and die for freedom over there, we are losing it over here.

The time has come to wake up and fight on the home front.

This odious un-American thing—this section 204 of the O. P. A. act—must be wiped from the books as soon as Congress convenes. This can be done by the surging, indignant will of the people, leveled at their Representatives and Senators.

Otherwise, the function of the courts can become less than useless, an outright mockery of its honorable intent, and we shall have strayed far afield from the democratic traditions which have builded this Nation to its present eminence in the past century and a half.

[From the Peoria Star]

FIRST ROUND OF O. P. A. SUIT IS STARTED IN UNITED STATES COURT

An elderly lawyer sitting in United States district court this morning recalled the old opening phrase fo. Federal court sessions—"God save the United States!" He was there to observe a trial in which opposing sides were trying to do that very thing, each according to its own lights.

On one side of the counsel table sat Government attorneys representing the Office of Price Administration and the United States District Attorney. On the other side were John E. Cassidy and John F. Sloan, attorneys for the J. D. Roszell Co. and 26 milk haulers, who believe they have a better way of saving the United States than does the O. P. A.

The question was up before three Federal judges, the first triple tribunal here in a number of years. In the trio were Judge J. Leroy Adair, presiding judge of the Federal court here; Judge J. Earl Major of the Chicago circuit court of appeals, and Judge Charles G. Briggle of the district court at Springfield.

AMEND COMPLAINT

Involved was the Roszell dairy's petition with its milk haulers for an injunction against O. P. A. officials and the district attorney to restrain them from interfering with the dairy's better-service-award plan, O. P. A. approval of which, given last April, was reversed in August. The plaintiffs maintain that the plan is operated in the public interest, that it does not raise the retail price of milk products, and that the regulation cited by O. P. A. officials does not apply to this program—that in ordering the program abolished, O. P. A. is acting beyond the regulation's provision.

A confusion of procedure developed today at the outset of the hearing, which has attracted widespread interest because of the plaintiffs' attack upon the constitutionality of the Emergency Price Control Act under which O. P. A. is created.

Mr. Cassidy, attorney for the plaintiffs and former attorney general of Illinois, was allowed to file an amendment to his original complaint, this addition asking an alternative of a declaratory judgment declaring the act unconstitutional and its orders and regulations invalid.

Alex Elson, regional O. P. A. attorney from Chicago, contended that the amended complaint presented entirely different issues, that the Government was prepared to argue only on the first petition. The three judges were of the opinion that no different questions were involved, disliked the thought of postponing the hearing and returning here later.

Thereupon Howard Doyle, United States district attorney, asked for 10 minutes "to get this car back on the track."

It was allowed, after Mr. Cassidy asked, "Why split hairs and deal in hypertechnicalities? We've been in this controversy and we all know what we're going to say. We have three judges, and I'd like to say what I've got to say."

TO FILE BRIEF LATER

Judge Major told counsel that the general picture would be given here today, and then ample time would be given the Government to file later written briefs in answer to the amended complaint.

In the recess it was agreed to argue solely on the question of the original complaint, with its request for a preliminary injunction.

With that, Mr. Cassidy launched an hour and a half opening statement, explaining the better-service-award plan. He emphasized that the dairy supplies a large portion of the community with milk products and also provides milk for thousands of soldiers at Camp Ellis.

"No issues in this controversy," he stressed, "has any effect on what consumers pay for their milk—or on the basic hauling charges." He pointed out that the plan was meant only to increase the milk supply by obtaining new producers and stimulating present producers, and to maintain the quality and purity of milk. He dwelt upon the fact that a point system was used to grade haulers on their "doing and extraordinary" in obtaining producers, cleaning their trucks and insulating the truck boxes, using the Roszell name on the trucks, improving their personal appearances, etc. He said that haulers made considerable investments under the plan. They were paid directly by the dairy for these extra services, and not by the farmers who pay them for the actual hauling.

This program, said Mr. Cassidy, was approved April 8, 1943, by Dale Smith, district price officer, who wrote that it "does not seem to violate any regulation of the Office of Price Administration." It was then put into successful operation, under contracts made by the dairy with the haulers.

On August 7, "out of a clear sky," said Mr. Cassidy, two letters were received from O. P. A. saying that the plan constitutes payment for hauling services and that 15 days would be given for compliance with the regulation, with no further payment to be made to the haulers. This regulation is that no price higher than that paid for services in March 1942 be paid. The better-service-award plan did not exist until 1943.

"We were faced with this dilemma under the Government of the United States" exclaimed the plaintiff's attorney. "If you perform your contract, you will be guilty of violating the law. If you don't, the haulers will withdraw their service."

The dairy, therefore, did not pay. Pontiac haulers refused to continue their service, and on being told the situation, said Mr. Cassidy, they went to O. P. A. to demand that they be paid for their July services.

There, he said, they were told by Miss Bonham, an O. P. A. attorney, that they could receive the July payment since there had been no notification of the reversal until August, but that the plan could not be continued. Mr. Cassidy questioned this procedure, asked for written authority, was told it would come later. The dairy, he said, paid the July money to the haulers.

"If this is the law," he said, "we violated the law by performing our contract."

Haulers, however, wanted the plan continued, said they did not wish to continue hauling milk without it, said Mr. Cassidy. They were persuaded to continue, being credited with points but not paid until the issue is determined.

Mr. Cassidy declared that he pointed out to the O. P. A. official who wrote the August letters that the O. P. A. regulation did not apply to the better-service-award plan, that he was going beyond the regulation. The official did not agree, reported Mr. Cassidy, and also refused to take it up with his superior or to start injunction proceedings in court, saying a protest could be filed in Washington. Therefore the case was brought to court.

"That regulation," declared the attorney, "has no application to the facts of this better service award, no more than it does to how many trees I might plant in my yard or whether the milk was delivered in a Mack truck or a Dodge truck."

A CUNNING DEVICE

"There was never a more cunning device contrived to deprive the citizen of the availability of his courts than this section (204) which attempts to exclude jurisdiction by all courts of the United States upon its validity except a special court which sits only in Washington.

"The act," he continued vehemently, "provides that the Administration may issue regulations and orders, which amount to Federal statutes because they can subject a person to a jail sentence, or a large fine, and gives O. P. A. the right to sue for treble damages.

"The citizens," he said in contrast, "were put in an entirely different class, because whoever wrote it decided either that it was so unconstitutional it couldn't dare be put before a court or that citizens didn't have the moral right to invoke the remedies of their courts. They were allowed to file a protest with the Administrator, who can accept or reject it. If rejected, then the only place the citizen could go for relief would be to an emergency court of appeals of three judges appointed by the Chief Justice of the United States Supreme Court. * * * While the case was pending, the Administrator could write a new regulation if he wanted to, and the citizen would have to start all over again with his protest.

"So a special court, presumably in Washington, is the only court on this earth to which a citizen can go for remedy, whether he might live in Illinois or California or Alaska, according to this.

"This was a pretty ingenious thing. If there was ever a cunningly devised channel for absolute and complete centralization of government, this is its acme and epitome of perfection.

"Regulations under an act of this kind should get a very rigid construction, since they are written by one man with no checks or balances or restrictions of any kind, and every employee in O. P. A. can do the same thing.

"If he can do that, the administrator becomes the general manager of the American people in every phase of their lives."

Court adjourned for a noon recess and was to resume this afternoon.

A bill relating to court review of certain orders and regulations of the Price Administrator

Be it enacted, etc., That (a) the first sentence of section 204 (a) of the Emergency Price Control Act of 1942, as amended, is amended to read as follows: "Any person who is aggrieved by the denial or partial denial of his protest may, within 30 days after such denial, file a complaint with the Emergency Court of Appeals, created pursuant to subsection (c), or with the appropriate district court, specifying his objections and praying that the regulation, order, or price schedule protested be enjoined or set aside in whole or in part."

(b) The fourth sentence of section 204 (c) of such act, as amended, is amended to read as follows: "The court shall have the powers of a district court with respect to the jurisdiction conferred on it by this act."

(c) The first two sentences of section 204 (d) of such act, as amended, are amended to read as follows: "Within 30 days after entry of a judgment or order, interlocutory or final, by the district court provided for in subsection (a) or the Emergency Court of Appeals, a petition for a writ of certiorari may be filed in the Supreme Court of the United States, and thereupon the judgment or order shall be subject to review by the Supreme Court in the same manner as a judgment of a circuit court of appeals as provided in section 240 of the Judicial Code, as amended (U. S. C., 1940 ed., title 28, sec. 347). The Supreme Court shall advance on the docket and expedite the disposition of all causes filed therein pursuant to this subsection. The district court provided for in subsection (a), the Emergency Court of Appeals, the appropriate circuit court of appeals upon review of judgments and orders of such district court, and the Supreme Court upon review of judgments and orders of the Emergency Court of Appeals and of such district court or circuit court of appeals, shall have exclusive jurisdiction to determine the validity of any regulation or order issued under section 2, of any price schedule effective in accordance with the provisions of section 206, and of any provision of any such regulation, order, or price schedule."

Mr. Speaker, too long have some of the processes of democracy been suspended and I sincerely hope that the appropriate committee of this body will take immediate and favorable action on this proposal. It must not be delayed.

To amplify the case presented in Peoria, Ill., I am including a recent editorial from the Peoria Star and also a news article which sets forth the details in the case. A copy of the amendment as introduced is also included.

Now, note the language of the O. P. A. Act as contained in section 204 (c) and 204 (d):

(c) There is hereby created a court of the United States to be known as the Emergency Court of Appeals, which shall consist of three or more judges to be designated by the Chief Justice of the United States from judges of the United States district courts and circuit courts of appeals. The Chief Justice of the United States shall designate one of such judges as chief judge of the Emergency Court of Appeals, and may, from time to time, designate additional judges for such court and revoke previous designations. The chief judge may, from time to time, divide the court into divisions of three or more members, and any such division may render judgment as the judgment of the court. The court shall have the powers of a district court with respect to the jurisdiction conferred on it by this act; except that the court shall not have power to issue any temporary restraining order for interlocutory decree staying or restraining, in whole or in part, the effectiveness of any regulation or order issued under section 2 or any price schedule effective in accordance with the provisions of

section 206. The court shall exercise its powers and prescribe rules governing its procedure in such manner as to expedite the determination of cases of which it has jurisdiction under this act. The court may fix and establish a table of costs and fees to be approved by the Supreme Court of the United States, but the costs and fees so fixed shall not exceed with respect to any item the costs and fees charged in the Supreme Court of the United States. The court shall have a seal, hold sessions at such places as it may specify, and appoint a clerk and such other employees as it deems necessary or proper.

(d) Within 30 days after entry of a judgment or order, interlocutory or final, by the Emergency Court of Appeals, a petition for a writ of certiorari may be filed in the Supreme Court of the United States, and thereupon the judgment or order shall be subject to review by the Supreme Court in the same manner as a judgment of a circuit court of appeals as provided in section 240 of the Judicial Code, as amended (U. S. C., 1934 ed., title 28, sec. 347). The Supreme Court shall advance on the docket and expedite the disposition of all causes filed therein pursuant to this subsection. The Emergency Court of Appeals, and the Supreme Court upon review of judgments and orders of the Emergency Court of Appeals, shall have exclusive jurisdiction to determine the validity of any regulation or order issued under section 2, of any price schedule effective in accordance with the provisions of section 206, and of any provision of any such regulation, order, or price schedule. Except as provided in this section, no court—Federal, State, or Territorial—shall have jurisdiction or power to consider the validity of any such regulation, order, or price schedule, or to stay, restrain, enjoin, or set aside, in whole or in part, any provision of this act authorizing the issuance of such regulations or orders, or making effective any such price schedule, or any provision of any such regulation, order, or price schedule, or to restrain or enjoin the enforcement of any such provision.

Then take particular note of the last sentence in paragraph (d) which states that—

Except as provided in this section, no court—Federal, State, or Territorial—shall have jurisdiction or power to consider the validity of any such regulation, order, or price schedule, or to stay, restrain, enjoin, or set aside in whole or in part, any provision of this act, authorizing the issuance of such regulations or orders or making effective any such price schedule or any provision of any such regulation, order, or price schedule or to restrain or enjoin the enforcement of any such provision.

Nothing more is needed to make the rule of bureaucracy complete.

The People's Constitution

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun of September 21, 1943:

THE PEOPLE'S CONSTITUTION

The campaign of isolationist reactionaries pretending to defend the Constitution against internationalists has reached the point of a so-called permanent lawyers' committee, with natal high jinks supervised by that trio of celebrated obstetricians, Robert R. McCormick, Dwight Green, and "CURLY" BROOKS, the Tribune's tame-tabby Senator. In the Halls of Congress the familiar voices—HOFFMAN and WOODRUFF, DAY and HAM FISH—are pounding away at the new line, in which this wrecking crew raucously postures as champions of American sovereignty. It was to pave the way for this that Republican tories stage-managed their little Mackinac declaration for constitutionalism in international affairs, but the stunt is strictly a phony.

We have heard this spurious brand of constitutionalism before. It comes today from the same people who argued that the Constitution forbade the National Government to do anything about mass unemployment and relief of the hungry; it comes from those who said the Constitution prohibited old-age pensions and decent housing to replace pestiferous slums; who claimed it was unconstitutional to set up the Tennessee Valley Authority to replenish wasted land and help break the stranglehold of the Power Trust.

It comes from those who whimpered about freedom of the press when the Government made them obey decent wage-hour laws and checked their employment of 10-year-olds as little merchants to sell papers on the streets, and we all remember the Liberty League, which, in 1935, branded the Wagner Act unconstitutional and advised businessmen to ignore it.

The reason is plain for the wrecking crew's frantic effort to stir up a constitutionality issue on foreign policy. The tory-isolationists have been beaten in the court of public opinion. The people don't want their sons dying in Italy and New Guinea merely to prepare the seeds of another war. They want the world organized with intelligence and good will, and they want America to take leadership and responsibility commensurate to America's power. The last chance of the isolationists is to muddy the waters by appeals to prejudice and misunderstanding.

Unless the Nation loses its common sense, they will not be able to make the Constitution a stumbling block to the Republic. The people have full power, through their elected Congress, to meet the problems of the new world, which technological progress has shrunk to small proportions. They can proceed and they know it, by perfectly constitutional means, to consider and approve treaties and conventions which make America a partner in arrangements for a sound world order.

To do this will not be sovereignty's destruction but the highest exercise of sovereignty. Marplots may scheme and rage, but the glory of the Constitution is that it is no burden on the people's back. It is still the great emancipating document under which for over a century and a half the people have met their new crises in a way to promote the general welfare and serve the deepest national interest.

Glance at the Record

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of September 22, 1943:

GLANCE AT THE RECORD

It is immensely edifying to hear accusations of treachery from the lips of Adolf Hitler and Benito Mussolini. The term has, apparently, its own very special meaning for them. Both of them are now quivering with indignation and injured innocence over their "betrayal" by the Italian people. Their attitudes transcend effrontery. Here is a morality so warped that it is impervious to shame, incapable even of a sense of guilt.

The record of their guilt, written in human blood, is unlikely ever to be erased from the memory of man. It is, by now, a long and tedious and familiar record—too long for full recital here. But some of its highlights are worth recalling briefly, if only to remind us freshly of the moral hideousness against which we are waging war. Here are some of the protestations of Adolf Hitler made in the days when there were still some who would give him credence:

"The German people have no thought of invading any country." (Berlin, May 17, 1933.)

"Germany has neither the wish nor the intention to mix in internal Austrian affairs or annex or unite with Austria." (Reichstag, May 21, 1935.)

"We have no territorial demands to make in Europe." (Berlin, March 7, 1936.)

"We are ready to acknowledge and guarantee these states (the Low Countries) at all times as inviolable neutral territory." (Reichstag, January 30, 1937.)

"We succeeded in arriving at an agreement (with Poland) which, for the duration of 10 years, basically removes the danger of any clash . . . We are two peoples. They shall live. One cannot annihilate the other." (Sportspalast, September 26, 1938.)

"The German Reich and the Kingdom of Denmark will under no circumstances resort to war or any other form of violence against each other." (Article I of pact signed in Berlin, May 31, 1939.)

"I will not war against women and children. I have ordered my air force to restrict itself to attacks on military objectives." (Berlin, September 1, 1939.)

"We (Germany and the Soviet Union) have, therefore, resolved to conclude a pact which rules out forever any use of violence between us." (Berlin, September 1, 1939.)

"In the spirit long existing of good German-Norwegian relations the Reich Government notifies the Norwegian Government that she has no intention, through her measures now or in the future, of infringing upon the territorial integrity or the political independence of the Kingdom of Norway." (Berlin, April 9, 1940.)

What happened on the heels of these protestations needs no repetition here. As for that satellite aggressor, Mussolini, who now whines that even his own followers have turned upon him, it is necessary to recall only Ethiopia, Albania, Greece—and the infamous "stab in the back," administered to stricken France. Such is the background of the men who now prate about "betrayal."

Willkie—How To Win in 1944

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. PLUMLEY. Mr. Speaker, the Evening Star of yesterday carried a full-

page advertisement which read in part as follows:

ANOTHER LINCOLN?

Wendell Willkie is Hoosier, farmer, business executive, world traveler, author, defeated candidate, and leader of the opposition party. Is he also the man to "bind up the Nation's wounds" and achieve a "just and lasting peace among ourselves and with all nations" as next President of the United States?

America and her allies stand today in much the position of the North at Lincoln's second inaugural.

Victory is in sight, and while no one can say when the war's end will come, we can foresee as Lincoln did the great need that will follow it.

We know, as he knew, that the first job was to win the war—"to finish the work we are in," as he put it in his second inaugural address.

We can see also that, after this, comes the same need he defined in that same talk to his countrymen—"to bind up the Nation's wounds, to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

The problems to be faced by our next President will not be merely the military and naval problems of winning the war.

They will be the even more difficult problems of winning the peace—of restoring domestic and world-wide economy—of uniting many factions on both Nation-wide and world-wide scale—of healing the wounds of depression-born class prejudice—of putting a great Nation back in smooth running order again in both its domestic and its foreign affairs.

Answering questions put to him by Look, Wendell Willkie has expressed himself on the most pressing problems to be faced by the country in the next 4 or 5 years.

He has outlined his idea of a liberal Republican platform, stated his belief as to what is the most important matter before the American public today.

With it are frank estimates of Willkie by shrewd newspaper correspondents of leading rank. There is a full picture biography covering Willkie's boyhood, his Army service, the campaign in which he was elected "President of 45 percent of the people," and his world-girdling travels since.

Does all this mark Wendell Willkie as a "second Lincoln" capable of leading us through the critical post-war period?

Are his views the views that can shape the kind of post-war world the American people want?

Since I am in very general accord and positive agreement with the positions he has taken and his answers made, and am sure that he is capable and the man to lead us as President through the critical post-war period, under permission heretofore granted I am including and inserting the answers of Wendell Willkie to the questions propounded by the magazine Look:

HOW THE REPUBLICAN PARTY CAN WIN IN 1944

(By Wendell Willkie)

(EDITOR'S NOTE.—The editors of Look asked Wendell Willkie to answer four questions. He agreed, with the stipulation that Look permit him to ask and answer another—the fifth in this article.)

1. WILL YOU BE AVAILABLE FOR THE REPUBLICAN NOMINATION FOR PRESIDENT IN 1944?

If the Republican Party intends to drive heart and soul for liberal objectives, such as I seek to outline below, I shall give it my complete and undeviating service, whether as the convention's nominee or as a worker in the ranks.

I shall do this because I believe these principles are inherent in the aims and ideals of the Republican Party, and that this party alone can realize them.

I shall do it because I am convinced that the administration, while giving lip service to some of these principles, does not understand them, does not really believe in them, and, therefore, cannot realize them.

I see within a liberal Republican Party the possibility of the formation of a real team, the members of which can work together for the accomplishment of common purposes. No such team exists in the Democratic Party at the present time, nor can it exist in 1944.

The Democratic Party is torn asunder by conflicting forces. In the past we Republicans have also been torn; but there is emerging a new spirit in our party, a spirit of progress and determination, promulgated by many leaders in many parts of the Nation, and warmly backed by the rank and file. The new spirit, I believe, is right now building a party fit to govern, a party that knows itself and its objectives. If those objectives are the liberal ones I believe them to be, I want to be on the team.

2. WHAT KIND OF PLATFORM WOULD BE NEEDED TO REESTABLISH THE LIBERAL LEADERSHIP OF THE REPUBLICAN PARTY?

That is a big question which it is difficult to answer briefly. A great many issues pertaining to the conduct of the war, unconditional surrender, and the establishment of sound measures for rehabilitation will of course arise during the coming year. Without undertaking to speculate about these, I would say that there are five indispensable planks for a liberal Republican platform. Briefly, these are:

1. We must never forget that, while democratic government rests on majority rule, the essence of freedom is the protection of minorities. The Republican Party has always advocated equal rights for all, irrespective of race, creed, or color. Now, above all times, we must make these principles a reality, because the whole world is watching us. Only if we can make individual liberty a reality among Americans, can we hope to gain adherents to our cause among other peoples. We must not protect these rights fitfully, inconsistently, and with political purposes, as has the present administration.

2. We must have efficient, well-managed and economical administration. The more money we spend for government, the less we have available for new enterprise and the creating of new opportunities. Moreover, inefficient administration causes jealousy and bickering, with the powerful taking advantage of confusion to promote their own interests.

The entire executive branch of the Government, in my opinion, needs a very substantial revision to the end that it may give the people better government for their tax money.

3. We must have a rebirth of enterprise—real enterprise. This is where the liberal element in the Republican Party has such an enormous role to play. Some of the talk we hear about free enterprise or private enterprise is just propaganda on the part of powerful groups who have not practiced real enterprise in a generation, and have no intention of doing so.

We must distinguish between enterprise and private ownership. A corporation may be privately owned and still be the worst enemy of free enterprise. Unfortunately, some of our big corporations are in this class, and the Democratic Party, despite noisy proclamations, has done nothing really effective about it.

Of course, it is true that we must have private ownership in order to have enterprise, in our American sense. But private ownership is not enough—we must have competition, invention, expansion, lower rates, lower prices of manufactured goods. Only thus can we create more opportunities, raise the standard of living and—most important—maintain real jobs for all.

The trouble with the enterprise system has never been enterprisers, but men who talked about free enterprise and then went ahead and violated all the rules of enterprise.

This is something for the liberal Republicans to remember. We must prevent the further missue of the word "enterprise" by those who wish merely to preserve their idle capital and their vested powers. We must give the word a meaning for every American, whether big or little, and whether he owns his own business or not.

Workers on a production line are also enterprisers—or should have an opportunity to be. But this can only be brought about by making available to them a fair share of the profits derived from their efforts. A free enterprise system does not belong to a few at the top—that is a vested-interest system. A free enterprise system belongs to everybody in it.

4. While a courageous government may hope to check somewhat the disastrous ups and downs of the economic cycle, we cannot hope to do away with them entirely. This means that absolute guarantees must be provided by our society against unemployment—and against want because of old age, injury, or incapacity. In addition, our present social-security system must be reinforced and extended to cover those large elements in our society that do not at present enjoy it.

First, it must be the aim of a dynamic enterprise system to dispel unemployment by a continuing expansion. Thus government intervention is reduced to a minimum.

Second, all forms of social insurance, including protection against unemployment, must be taken out of politics. The exploitation of human fear and misery for political ends is a shocking crime. Hereafter, I am convinced, the people of the United States, in the name of humanity, will pledge themselves to protect the unemployed and unfortunate within their midst as a common and bipartisan public duty.

Therefore, all our Government insurance policies, for whatever purpose, must be set up on an actuarial basis, so that their costs will be predictable and shared by all alike on the basis of ability to pay.

5. Finally, the Republican Party, as I have said so many times, must take the leadership in formulating a new foreign policy, by which we and other nations can assure our future safety and promote our mutual interests. The biggest job that faces the party right now is to crystalize its thinking on the form that our participation should take in the post-war world.

There is not a moment to lose. Each advance of the United Nations' armies makes more urgent the announcement of an American policy toward conquered and liberated peoples and toward the nations of the future. The administration has no such policy to announce; it is all too clearly acting on pure expediency. The Republican Party must lead the way.

3. IT IS CONTENDED THAT, WHILE THE REPUBLICANS CAN SURELY IMPROVE OUR DOMESTIC AFFAIRS, THE NEW DEAL IS MOST ADEPT IN THE FIELD OF FOREIGN RELATIONS. IS THAT TRUE?

The answer is "No." The proficiency of the administration in foreign affairs is a myth that will have to be carefully examined by the people before November 1944.

The cold fact is that before this war we were living in a balance-of-power world in which our enemies were calculating their chances against us. Yet the administration,

possessed of information that was available to no private citizen, never really looked this fact in the eye—until we were struck at Pearl Harbor.

For example, Japan raised a red flag when she denounced the naval limitation in 1936. She raised another when she attacked China in 1937. We know now—what the State Department then concealed from us—that Ambassador Grew repeatedly warned our Government of Japan's intentions.

Yet our foreign policy was such that we continued to provide Japan with vast quantities of scrap iron, oil, and other munitions to be employed against friendly China and, a short time later, against our own soldiers on Bataan. What kind of adeptness was that?

On the other side of the world, Germany detected more readily than the United States the declining power of France, and believed that the odds were in her favor. Naturally, our own unpreparedness during the 1930's was a factor in her calculations. She gambled on a swift war, with easy victory on both fronts; and it was Britain—not we—who foiled her plans in 1940 and 1941. The New Deal foreign policy did not face the Hitler facts.

Indeed, for the 6 years prior to the German attack on Poland—years measured by the beginning of the Nazi domination of Germany and, in this country, by the inauguration of the New Deal—the crying need of the world was for statesmanship that would avert the impending conflict.

Defeatists will say that nothing could have been done; apologists will contend that domestic opposition, much of it Republican, made a constructive course impossible. Still, the stakes were worth a major effort. And such an effort was never made. However adept our leadership in foreign affairs, we contributed substantially nothing toward saving the world from catastrophe.

It is time now, at last, for Americans to face this fact: That unless we do something about it we shall encounter in the future, as in the past, the balance-of-power problem. This time we shall not be blind to that problem. We know now that we are always exposed to enemies and that, if we are to be safe, we must act.

There are some who advocate that we should try to solve the problem by arming to the teeth, refusing to participate in any organization for collective security, and living in wary isolation. I have no hesitation in predicting that this course would lead directly to another war. History has proved that war cannot be prevented merely by the exercise of power. We must develop something new and different—and fundamentally American.

In my opinion, the Republican Party is drawing closer to unity on a post-war program every day. Mueh greater unity exists among To assume leadership in establishing a pracus than is found among Democrats, where high officials air feuds in the public press. tical program for world unity and peace is the greatest opportunity now open to our party.

4. CAN THE REPUBLICAN PARTY WIN THE ELECTION IN 1944 AND, IF SO, WHAT SHOULD BE ITS FIRST STEP?

In my opinion, the Republican Party will have in 1944 the greatest opportunity in its history. But in order to seize this opportunity it must first win a victory within itself.

Under Abraham Lincoln the Republican Party took shape as the party of progress. The cornerstone of its doctrine was a strong union, and its ideal was the political and economic freedom of every American—big or little, black or white. For about 70 years, with only a few interruptions, our party led the American people to constantly expanding horizons. It raised the standard of living of every worker. It gave freedom a real meaning.

But, like any human institution that wields power for long, the party became corrupted by vested interests in its own ranks and by reactionary forces. It forgot its own great liberal traditions. It ceased to look ahead and plan for the interests of ordinary Americans. And so the people, who cherish freedom and opportunity, lost confidence in the Republican Party—and have never quite regained it.

So when I say that the Republican Party must win a victory within itself I mean that the progressive and courageous members of the party must now reestablish its great liberal traditions—and not only reestablish them, but carry them forward to solve the problems of a new world.

The Republican Party must become what it was in its origin, the great American liberal party, the party that not only speaks for freedom, but actually acts for freedom; the party that knows how to give freedom a meaning, politically, economically and in terms of human well-being.

In recent years, of course, the Democratic Party has claimed a monopoly of liberalism. In my view, it has failed to substantiate this claim. Yet, without arguing about the past, it has become a manifest political impossibility for the Democratic Party to provide the liberal leadership of the future. The Democratic Party is now a coalition of two major groups, neither of them liberal in outlook.

One group consists of southern Democrats, professional officeholders who completely control the South's political machinery by denying the vote to a majority of its citizens, white and colored. The other group is composed of the big-city political machines, such as the Kelly machine of Chicago, the Hague machine of Jersey City, the Flynn machine of the Bronx—and whatever is left of the Tammany machine of New York.

These political machines, indispensable to the survival of the Democratic Party, are among the most reactionary forces in our society, and we cannot look for liberal leadership in any party subject to their control.

Nevertheless, if the Republican Party thinks it can coast into power in 1944 without meeting the liberal challenge, it will be rudely disillusioned. For the entrenched elements of the Democratic Party are too strong to be ousted by mere political manipulation and "back to normalcy" doctrines. We must meet the liberal challenge, we must provide new liberal leadership, from the grass roots up. Only if we do so, can we win the confidence of the American people. That is why I say the first step toward victory in 1944 must be a victory of the liberal forces within the Republican Party itself.

5. WHAT IS THE MOST IMPORTANT QUESTION BEFORE THE AMERICAN PEOPLE TODAY?

The simple answer to that is: The war. This is, of course, a military problem, primarily. I think the American people are fortunate to have such able commanders as General Marshall, General MacArthur, General Eisenhower, Admiral King, and Admiral Halsey. Considering how long we neglected our Army, Navy, and Air Forces, those men are performing wonders. Yet they cannot hope to succeed unless we at home give them our full support. Our job is threefold.

First of all, we must measure ourselves against our own soldiers. We must try as best we can to equal them in our ability to "take it"—and to "give it."

Secondly, we must win this victory in the shortest possible time. Every day that the war is prolonged means more American lives lost, more men wounded and maimed. Every man at the front has one hope shining in his heart—to get back home and to get back home as soon as possible. We on the home front must contribute fully to the realization of that hope.

Consequently, I cannot agree with those who belittle the importance of the home front. We are not heroes back here, but we have tremendous obligations to meet. It is a duty of our leadership (which has not been fulfilled) to see that no one uses the war as an instrument of profit, whether employer or employee, whether capital, labor, or agriculture, and whether the profit be financial or political.

The disgraceful manipulations in Washington have at times constituted a betrayal of our troops. Our home front should be administered along clear lines of authority, in accordance with the established principles of American management. A better management of the home front would greatly shorten the war.

Third, we must look ahead and prepare to make our victory mean something. Again I suggest that we use as our criterion the men who are under fire. Every soldier, sailor, and aviator is determined that his children shall be spared a war like this. And he is aware of certain terrible mistakes in the past which must not be repeated in the future. He knows of the triumph of Allied arms in France in 1918, and he knows that, somewhere along the line, political incompetence sacrificed the fruits of that great victory. In my view, that incompetence was the result of two factors.

On the one hand, we forgot that freemen must be strong. While tyranny and dictatorship were rampant all over the world, we in America failed to prepare and arm ourselves. We were poorly armed in airplanes, tanks, and ships, and our industrial preparations were everywhere neglected.

We even depleted our resources by plowing under our crops and slaughtering our livestock. Instead of a doctrine of plenty, which would have made us strong, we adopted a doctrine of scarcity, which made us weak. And we unnecessarily harassed honest business, without really correcting the practices of bad business. It is no wonder that the aggressors, seeing our weakness, went right ahead with their bloody designs. They felt certain we were not strong enough to stop them.

And, on the other hand, we forgot the real nature of freedom. We had the idea that freemen could exist alone, surrounded by international confusion, tyranny, and bloodshed.

In their military campaigning our men have now captured many enemy soldiers and have entered cities formerly dominated by totalitarian governments. Perhaps in many instances they have been surprised to be received, not as foes, but as liberators. But this is because those men of ours are freemen and bring with them the hope of freedom, which, all over the earth, is prized next to life itself. And they are learning the lesson which we must all learn—that freemen to stay free, must stand together.

These are the two big goals we must set for ourselves as we prepare for peace: We must see to it that the United States is strong, in economic as well as military terms; and we must work out a plan by which, in the future, freemen all over the earth can stand together.

Poultry Shows—Their Importance and Effectiveness

EXTENSION OF REMARKS

OF

HON. ELMER H. WENE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. WENE. Mr. Speaker, recently I had occasion to make a close study of one of our principal agricultural activi-

ties, and endeavored to ascertain just what some of the stimulating factors were through which it has contributed to our progress as a nation. At the same time I made it a point to learn how we may have been neglectful in applying the many phases of this particular agricultural pursuit in its relation to the well-being of our people.

The activity referred to is our poultry industry, the national income of which has increased in the last hundred years from $12,176,170, as shown by Government figures quoted in the American Poultry Yard by D. J. Browne, published by Saxon Co., of New York, in 1843, to $1,987,694,357, reported by the United States Department of Agriculture as the official Government figures for 1942.

I feel it is the duty of all of us who have the development and progress of our country at heart, to encourage the greatest possible production of every essential agricultural commodity. Such consideration should be given to poultry and egg production because of their great importance in America's subsistence.

The average farmer and especially every poultryman should be guided and educated to appreciate that purebred fowls are as superior to the average barnyard chicken as the Hereford, Shorthorn, and Angus cattle are to the common mongrel type of cattle that formerly roamed the prairies. When this is thoroughly understood, flock improvement, resulting in more economical production of both poultry meat and eggs should become the universal practice of our poultry industry.

Probably one of the most important factors in the development of the poultry industry in the United States has been the annual poultry shows held in different sections of the country. The first of such annual poultry shows was at Boston, Mass., in 1849. It is interesting in this connection to find that the suggestion which led finally to the development of the Boston poultry show, came from a letter by Dr. John C. Bennett, not a poultryman primarily, but a scientist with a mind trained on the importance of genetics and heredity. This letter was addressed to the editor of the Boston Cultivator, who also saw the value of improving breeds of poultry and who published the call for a meeting to discuss the subject. From that beginning, the holding of annual poultry shows increased rapidly and generally throughout the country for a number of years. These poultry shows created and stimulated interest in better poultry breeding methods, and largely as a result of these progressive activities, great strides have been made in the entire poultry industry especially among poultry breeders, by reason of the improved and constantly advancing methods of selection of the breeding stock, the very keystone of the entire poultry industry.

It is now generally recognized by all who are familiar with poultry raising that breed improvement is the very basis of success of all poultry activities and that neither good management, nor good feed, can make hens of poor breeding lay well.

The annual poultry show brought together the Nation's finest breeders, and competitive exhibition of their birds demonstrated knowledge, skill, and patience, while the ever-improving excellence of their breeds inspired other breeders to greater effort, all of which has done so much to bring about a clearer conception of the importance of good breeding. This has resulted in the annual increase in egg production per hen from 15 eggs of the wild jungle hen to 144, the average egg production per hen per year in this country, according to the United States Department of Agriculture.

In 1874, 25 years after the first Boston Poultry Show, there was developed a standard of excellence, now known as standard of perfection, which serves as a basis for guidance in selection for breeding operations and in properly judging the qualifications of the various breeds shown at the poultry exhibitions. This standard is revised periodically as new breeds and new points of excellence are discovered and developed. It is universally recognized as the authority on breed quality in purebred poultry.

However, despite the splendid efforts to promulgate high standards in poultry raising, an alarming situation has gradually arisen which threatens to retard the progress which has been made. Gone are the great annual poultry shows of Chicago, Baltimore, Philadelphia, Washington, Kansas City, and similar large centers of our population. In addition, there is a gradual disappearance of State and county poultry shows.

It is for this reason that I feel the time has come when we should awaken to the danger of national carelessness and indifference to the great value of competition and competitive activities in the promotion of our national poultry wealth and health program in which poultry shows have been such an important and contributing factor. It should be with pride that we look upon the long list of poultrymen whose untiring efforts, both physical and financial, have kept alive the Boston Poultry Show, the first and last of the really great national poultry expositions, and now the oldest of its kind in the entire world. For 95 years there has been an unwavering spirit to continue the activities of this annual exhibition of the best of poultry breeds originated and developed by our American breeders. This poultry show has carried on through four wars; through boom times and depressions, and has been a national institution. It has aided and promoted not only good poultry breeding, but other activities necessary to successful poultry production, such as artificial incubation, feeding and housing equipment, feed materials, medicinal products, biological and vaccine products for disease prevention, publications for the dissemination of information—in fact, every constructive activity for the furtherance of the successful undertaking and continuance of the poultry industry as a great national agricultural asset.

It is of such national importance that I believe Congress should undertake the responsibility of reawakening our country to the extreme importance of the annual poultry show to our agricultural prosperity. We simply cannot afford to wait until a national calamity overtakes us and be not prepared to meet the situation. Congress should and could encourage and assist in causing to be reborn the annual poultry show in every State, county, yes, if need be, in every hamlet where poultry is being raised.

Well might we consider and seriously study the pattern established, proven and kept alive these 95 years under which the Boston Poultry Show, which, instead of declining, is growing in size, attendance and usefulness to the poultry industry. Such spirit as evidenced by this important agricultural activity can well be considered a clarion call to the Nation and to those of us in Congress who have the interest of the country in our hearts and who have every desire and thought to aid in its progress to the benefit of all the people.

In all sincerity, I believe I am bringing to my fellow Congressmen a message of tremendous significance. If heeded, it could prevent a possible disaster since proper and successful poultry breeding is the very lifeblood of our entire poultry industry and the stimulus of competition between breeders which the poultry show makes possible, is a most important and tremendous factor for better breeding.

Such expressions may be interpreted as rather extravagant but a study of the national importance of the poultry industry, the value of the poultry show to the poultry industry and the decadence of poultry shows throughout the country is convincing proof that we may be in danger of losing an art in our national economic life which has been largely responsible for the development of the American Poultry Industry, one of the Nation's most important and most lucrative agricultural activities.

I am today introducing a resolution in the House authorizing and directing the Committee on Agriculture to make a full and complete study and investigation with respect to poultry shows and expositions in the United States and to report to the House not later than March 1, 1944, the result of its findings together with specific recommendations as to the best methods to be adopted for encouraging the continuation and expansion of poultry shows throughout this country.

Racial Discrimination of American Citizens

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave granted to me, I am having printed in the RECORD as a

part of my remarks a resolution sponsored by the American Legion post at Northfield, Minn., on the subject of racial discrimination, which resolution was adopted at the American Legion State convention on August 21, 1943. I commend the sentiment expressed in the resolution to your attention. The resolution follows:

Whereas the fourteenth amendment to the Constitution of the United States guarantees equal protection, under the law, to all persons irrespective of race, color, or creed; and

Whereas one of the cardinal principles of the American Legion is its support of the Constitution of the United States; and

Whereas, at its national conventional in 1942, the American Legion accepted as one of its war aims the following statement: We condemn religious prejudices, racial or national antagonisms as weapons of our enemies"; and

Whereas there appeared in the official publication, the American Legion magazine, for June 1943, an article entitled "Japs in Our Yard," by one Frederick G. Murray, M. D., which urged, among other proposals, that native-born American citizens of Japanese descent, without regard of proved loyalty or good character, be relocated on islands in the Pacific Ocean—in direct violation of our constitutional guaranties—and urged this, not as a military measure but as a social, political, and economic policy: Therefore be it

Resolved, That we, the Department of Minnesota, the American Legion, do vigorously protest against our national magazine being used to foster race discrimination and hatred, in violation of the constitution of the American Legion and the Constitution of the United States; be it further

Resolved, That the officials in charge of the publication of both the American Legion magazine and the National Legionnaire, be instructed that it shall be their policy not to permit the publication of such articles as urge or advocate policies in conflict with the basic principles of the American Legion; and be it further

Resolved, That this resolution be submitted to the national Legion publications commission at the national convention at Omaha, for adoption by said commission; and, be it further

Resolved, That this resolution be submitted to the National Legionnaire for publication in the first available issue.

Address of Gov. John W. Bricker

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Gov. John W. Bricker before the National Society of the Sons of the American Revolution at Philadelphia over a Nation-wide hookup on September 17, 1943:

One hundred and fifty-six years ago this day, on this spot, the final draft of the Constitution was submitted to a waiting people. The enduring greatness of this work is proven by the history of those 156 years. It has served an agricultural and individual craft age. It has continued to serve during the greatest industrial and economical development of any nation of all time. It still serves to meet the needs of a great mass-production era. The Constitution has survived from the toll of the Liberty Bell heralding independence to the sweep of the human voice around the world in a flash.

There are critics who say that the Constitution was adapted only to the days of the frontier, that it was merely a pioneers' government. They contend that the Constitution was adequate only when businesses were small, towns were small, and when social problems were comparatively simple.

During the past 10 years our national leaders have been obsessed with the idea of a "mature economy." America had grown up, her industrial plant was built, they said. As the President put it, "our task now is not discoveries or exploitation of natural resources or necessarily of producing more goods. It is the soberer, less dramatic business of administering resources and plants already in hand." From that pessimistic point of view it was an easy step to managed economy and bureaucracy, in defiance of the Constitution, if necessary, to achieve their ends.

But the idea of economic maturity is a fallacy. In fact, it is not a new idea. It was entertained as long ago as the 1880's by some faint-hearted persons who could not see looming on the horizon such great new industries as the automobile, electric power, radio, and the airplane.

The error in the thinking of these defeatists is that they identified the frontier with geography. It is true that the geographical frontier has disappeared.

But while the geographical frontier has disappeared, there are new frontiers, in the opening of which we need the protection of constitutional liberties even more than did our forefathers. We are at the very beginning of a great new age of discovery and scientific development. Synthetic materials, plastics, electronics, radar, television, glass, prefabricated structures, and undreamed-of air transportation—these and many others are examples of frontiers yet to be opened.

No, the Constitution of the United States was not created for the days of the geographical frontiers alone. It was created for such eras as now lie before us when men need full opportunity to transform ideas into instrumentalities and tools for a better way of life and a higher standard of living. The extent to which we shall realize the constructive possibilities of the industrial and scientific period which lies ahead, depends not only upon economic and political stability in the world. It will depend also upon the elimination of economic confusion within our own land. It will depend especially upon the elimination of those arbitrary governmental restraints which kill initiative, and the lifting of the dead hand of bureaucracy which stifles creative action and creates unemployment. What we need in America is a real return to free enterprise under the Constitution.

Here at Philadelphia the founders did not create a State or write a Constitution designed to establish a tyranny of perfection, a despotism of efficiency, a utopia maintained by force. They brought with them the wisdom of thousands of years and from that wisdom sealed forever the right of Americans to govern themselves.

There have been other times, as now, when men have tried to avoid the restraints placed upon them by the Constitution. This Constitution restrains officials but not the people. Every official, however exalted, must function within the confines of the Constitution. The people alone can amend it to meet changed conditions.

The chief architect of the Constitution, James Madison, said, "An elective despotism is not the Government we fought for." Many years later Woodrow Wilson eloquently put it this way: "The history of liberty is a history of the limitation of governmental power, not the increase of it. When we resist, therefore, the concentration of power, we are resisting the processes of death, because concentration of power is what always precedes the destruction of human liberties."

The office of the Presidency was built around the character of George Washington, and throughout the century and a half of our national life the Presidency has been exalted. Yet even the President must serve within the powers granted under the Constitution.

The President of the United States initiates the foreign policy of this country. He may negotiate treaties and agreements. Yet no such commitment has final validity unless authorized by law, and, if incorporated in a treaty, it is not binding unless ratified by the Senate.

Today, all the world should know and appreciate that fact. For that reason the American people ought to be advised on all matters of national and international importance, excepting, of course, necessary military secrets, that their will might be understood and followed.

When an Executive functions outside the Constitution, those who deal with him do so at their own risk.

In recent years cunning cultists have attempted to change our form of government without amending the Constitution. By devious and often unsuspected methods they have brought about a bureaucratic system under which administrative departments of Government have been vested with policy-making powers. They have sought to accomplish by flanking movement that which they would not dare by direct and open attack. These boards and bureaus legislate by interpretations and regulations. The mass of law in the form of regulations, orders and directives coming from bureaus, boards, and commissions is as large as the CONGRESSIONAL RECORD itself and constitutes half of the law of the land today. Adequate judicial review of such orders and restraint of arbitrary administrative action are necessary to maintain our freedom from the tyranny of government itself.

All of these boards, bureaus, and commissions have been placed beyond the vote and control of the people. Many of them are dominated in the background by invisible influences. A recent president of the American Bar Association pointed out that counsel for a commission frequently "drafts rules and regulations for his commission, directs an investigation, files a complaint in the language of an outraged plaintiff, presents evidence to the commission to support the complaint, writes the opinion of the commission sustaining the complaint of his outraged plaintiff in judicial language * * * and in event of appeal, moves heaven and earth to prevent a review of the facts." In one agency, a self-created bureau which was neither created by Congress nor the President actually received an appropriation. That is not constitutional government. Not long ago Congress instructed its agent, a committee engaged in writing the tax law, to gather data from the Treasury Department. The Constitution provides that the Treasury shall collect taxes, but that tax policy and tax rates are the business of Congress. The Secretary of the Treasury declined to permit the congressional committee to gather these data. That is not constitutional government.

When the Constitution is flouted by the servants of the State, when it is held in disrespect, when its specific provisions are ignored and when officials act, not according to law, but by whim, we are on the road to tyranny, to dictatorship and despotism.

If we are to continue to live under the protection of the Constitution of the United States we must take the policy making power of our Government from the hands of arrogant bureaucrats. We must restore it to the elected representatives of the people.

One of the most serious domestic problems facing us today lies beyond the present provisions of the Constitution. In fact it is inherent in bureaucracy. When a personal regime is long in power, job holders become more and more active in efforts to perpetuate themselves. In the 10 years of the present administration at Washington the number of civil job holders has mounted from less than 600,000 to almost three and one-half million. These job holders acquire a selfish interest in perpetuating and multiplying themselves. Their votes and those of their families constitute almost 20 percent of the voting population. This is one out of every five of our voters. This may easily represent the balance of power in a presidential election. To permit this to continue is to strangle republican Government.

The Constitution offers a way for curbing this growing power. It can be amended and I have suggested that it should be amended to limit the tenure of the President of the United States by constitutional mandate. I would favor a single term of 6 years. This question has been debated many times. It was discussed in the Constitutional Convention. It was suggested and followed by President Hayes. Such a provision was in the Democratic platform of 1912. Such a step would assure the people of this country that popular government is secure and that their basic freedom will be inviolate.

Whatever the merits of this proposal may have been in other times we have witnessed such an expansion of government that its adoption now would, in my judgment, be clearly in the public interest.

The framers of our Constitution were practical men of great judgment. They were also men of great vision. They foresaw the growth of our Nation as a world power. They wisely set up rules and controls governing the conduct of our foreign policy based upon their experience. They knew we could not live alone in the world. They wanted foreign policy guided by the President but always subject to constitutional control.

We face a situation today which calls more eloquently than ever before for a world-wide endeavor to remove the causes of war. We must be assured that the fruits of the vast sacrifices of this war shall not be lost through lack of foresight. This assurance is a sacred obligation of the Nation.

This is the assurance that sacrificing American fathers and mothers are asking of those to whom they entrust leadership and office. A positive answer must be given. That answer cannot be fulfilled with words alone, even words of noble aspiration and good intent. To win the war Americans will meet their tragic losses with God-given fortitude. The hour has struck when we must get beyond our good intentions and into the practical realities of our problem. What, as we face the world beyond victory, are our materials for action? Primarily, we have the aid of past experience. We need more than that, but history will be a helpful guide. Many people are telling us that our past is a record of selfishness, of self-containment, and of isolation. But, the facts belie that view.

Ever since Franklin, during the Revolutionary War, made an alliance with France, we have consistently carried on a vast variety of relationships with other nations. As an infant nation, this first citizen of Philadelphia skillfully guided our course amid the clash of great empires. His diplomacy, his courage and his resourcefulness helped establish our identity as a Nation.

As free nations arose in this hemisphere we created the Monroe Doctrine for mutual protection. Through that doctrine we have preserved the independence of our half of the world for more than a century. In 1881, a great Secretary of State, James G. Blaine, strengthened that doctrine with the ties of friendly cooperation. We participated with other great nations in attempting to lay the foundations of peace in the Pacific. We gave sympathetic aid in many of the problems of Europe. We fought a great war to preserve Europe and ourselves from tyranny. We gave liberally of our substance to feed and rebuild Europe. We labored for more than a dozen years after the armistice to reduce the threat and burden of armaments. And we joined in many international movements to promote human welfare over the world. This is not a record of selfish isolation. Unselfish was the service of Seward in maintaining the Monroe Doctrine and the peaceful purchase of Alaska, of Blaine who initiated the good-neighbor policy in this hemisphere, and of Hay, whose diplomacy helped stabilize Eastern Asia for a generation, and of Hughes who labored to promote disarmament among the great powers. It was Theodore Roosevelt who urged that the Nation be sufficiently armed to protect its world-wide interests and responsibilities so recently expanded under President McKinley.

It was with these facts in mind that I recently said that "America is not, never has been, and never will be an isolationist nation. America must deal with other nations of the world and America must assume leadership." I said further that the term "internationalist" is just as absurd. No sane man would think of wiping out our national lines. That is what the United Nations are fighting to prevent.

In geographic position, in the wealth of our resources, in the ingenuity and enterprise of our people, in our potential military strength, and in the character of our Government, we are the most fortunate and the strongest single Nation on the face of the globe. Therefore we have the greatest responsibility. If we do not, in the years following victory over the Axis Powers, exert every talent, effort, and means at our command to keep our own and other countries out of wars, then we are not worthy of our Christian heritage. From the hearts of millions of God-fearing people, members of every religious denomination, there is a daily outpouring of prayer that man may learn to rescue himself from the folly and iniquity of mass murder.

If we do not now, after the present most destructive of all wars, make a serious and conscientious effort to build a better understanding among the nations and the peoples of the earth, then, indeed, we must stand convicted before posterity as ignorant, heartless, and unworthy reactionaries.

The specific steps which we should take cannot at this time be detailed. No man in position of authority has attempted so to do. This war is not yet ended. As the tide of the world battle lines advance and recede, constantly changing governmental, economic, and living conditions arise throughout the world. No man is wise enough now to state with exactitude what this Nation's obligations to others may be at the conclusion of the war, or how they may best be carried out.

Our foreign policy should be based upon the absolute necessity for the preservation of our identity as a Nation and on our traditional freedom of action at all times. Only thus can we be strong in our help of others. The United States should adhere to a policy which will preserve its constitutionalism as expressed in the Declaration of Independence, the Constitution itself, and the Bill of Rights, and as administered through our republican form of government. Constitutionalism should be adhered to in determining the substance of our policies and in the making of international commitments.

In looking to our future foreign policy we shall be wise to formulate carefully those plans under which our Nation must live with other nations. People responsible for negotiating our foreign arrangements should be truly representative of the American people. Never again should our peace negotiations be directed by those from only one political party, from any one department of government or any one section of our national life. We do not want a one-man or a one-party peace. If we believe in collaboration among the nations we must put it in practice among Americans.

The exact forms of cooperation among the nations are not matters to be determined in a few days. It may well be that a more lasting peace can be achieved without a single supreme peace conference. It has been wisely suggested that many conferences may be more desirable. The making of a lasting peace may be a matter of many months or years.

This brings me to another essential of peace-making—the knowledge and consent of the American people. Consent of the governed is inherent in constitutional government. During the period, in which plans for permanent collaboration are being made, there will be time for each proposal to be considered by our citizens, debated in Congress and thoroughly examined in all its aspects. We want no treaties, this time, hastily written and thrust before us to be accepted without question. If we believe in freedom, we should act constitutionally in the spirit of freedom by showing full confidence in our own countrymen.

The position of the United States in the creation of world stability should be made known beyond the shadow of a doubt. Appreciation of our aid in the war will surely be succeeded by distrust and hatred if we encourage hopes or make promises that we cannot fulfill. If we do not know our own minds, we shall exhibit before the world a picture of vacillation and opportunism. Double talk and double dealing are not in the great tradition of American diplomacy.

We should retain an incomparable Navy and Air Force for our protection and for the protection of our interests which lie in the two great oceans of the world. We are definitely interested in the essential approaches to the Western Hemisphere. We must, in close collaboration with our neighbors, maintain an impregnable defense. And we must see to it that our military and naval technical services maintain themselves at the utmost frontiers of the scientific universe.

In the economic field we should sustain the faith of the world in its means of exchange by making sure of our own financial integrity. Our dollar must be a sound dollar wherever it goes. We must abolish the policies that encourage inflation. For we cannot have inflation at home and abundant trade abroad.

Our sons are offering their all in fulfillment of a sacred contract with those who shall guide our policies in the making of the peace. That obligation must not be lightly held, for it is a promise in the light of which we must live. In that light we must measure our words and guide our steps. We cannot offer clever substitutes for integrity.

The elements of that sacred contract comprise two broad obligations. First, we must preserve the heritage of a free republic at home, strong with the treasure of free enterprise, firm in the observance of political and religious liberty, and just and humane in its attitude toward the individual. Second, this Nation must with the other peace-seeking nations of the world, open the door to broad cooperative efforts to build a better world. The sad ordeal of two great wars has taught us the stark reality of interdependence. The intelligence of men is challenged by the need for a durable peace. In spite of our past failures, we must not flinch from the task ahead. We have a covenant with the future and with our sons. That covenant can be performed only if we determine our course at home and abroad by our charter of freedom, the living declaration of faith in man's capacity to govern himself, the Constitution of the United States.

War Frauds

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Joseph Leib, together with a document which I think will be of interest to the entire Nation:

Hon. JAMES H. MORRISON,

Member of Congress, Washington, D. C.

DEAR CONGRESSMAN MORRISON: Would you be good enough to place in the CONGRESSIONAL RECORD the enclosed statement about war production inspection laxity.

It is self-explanatory and I am sure that it voices the sentiments of the men in the service. As a buddy of theirs I assure you that they want this situation corrected.

Very truly yours,

JOSEPH LEIB.

LET'S DO SOMETHING ABOUT THOSE WARPED SOULS WHO WORRY MORE OVER PROFITS THAN ABOUT THE SAFETY AND WELFARE OF OUR SERVICE MEN

(By Joseph Leib)

How long will the people of this Nation tolerate defective products or defective assembly of war materials for use by American soldiers fighting in defense of the United States?

Why are patriotic American citizens turning their heads to the revolting scandals emerging from some of our great and powerful war plants?

Why are certain industrial tycoons protected by high Government officials?

Only recently the influential Anaconda Wire & Cable Co. got out of a Federal indictment by paying merely $20,000 fine for producing $5,000,000 worth of fraudulently tested defective wire for the Army. This left a tremendous profit for Anaconda.

What about the potent Carnegie Steel Corporation indicted for producing defective steel plates for warships? The Truman committee contends that an amazingly large number of freighters have been sunk because of poor material or improper welding.

Several weeks ago another gigantic corporation—the Curtiss-Wright—was cited for producing defective motors for Army planes.

There have been a number of other flagrant examples of this type of sabotage brought out in the public press. Yet, not in a single instance has there been meted out a stiff fine or a suitable prison sentence. Neither has there been heard any public condemnation from the so-called pious lips of Government officials who are under oath to protect the citizens of this Nation.

Why is this kind of sabotage allowed to continus unmolested? Why are these powerful corporations allowed to gamble with the lives of our soldiers?

What has happened to the intelligence of the American people?

In two flagrant cases the Under Secretary of War came to the defense of the accused companies for making defective war material. Your Under Secretary of War went out of his way to pat Curtiss-Wright on the back for producing defective motors for the Army Air Corps, and he reprimanded the St. Louis Star Times for printing details of a scandal which took place at the St. Louis ordnance plant. This plant was accused of producing defective cartridges. Your Under Secretary whitewashed the company in face of affidavits secured by the St. Louis paper from 12 employees of the plant testifying that faulty ammunition had passed through Army and company inspection. The Army has plenty, also, to cover up in the Curtiss-Wright incident for many War Department officials are involved.

Bitter criticism has been heaped upon the Truman committee for its sensational report on the aircraft concern but the whole story has never been told. Some day patriotic citizens will demand that all the facts be made available for public inspection.

Today, a clever and highly paid propaganda campaign is being waged by these selfish industrial leaders in an attempt to befuddle the public and accuse certain congressional investigating committees of upsetting the whole war program and slowing down production because of their startling exposures.

In this campaign they adroitly contend that stricter inspection requirements are delaying speedier production and hindering our victory in the war. The facts are, however, that these greedy industrial czars make tremendous profits when they are allowed to go unhampered. They may even go so far as to stage a sit-down strike in order to force a return to their old selfish practices. What care they about those brave men dying on foreign battlefields.

How many of our soldiers are lying in their untimely graves because of lax war production inspection God only knows.

Yes, what kind of a war are we fighting anyway? Is this really becoming a money crusade and the devil with the pretended ideals and principles of the "four freedoms"?

Will any fair-minded person say that greed and selfish interests have been playing a minor role in this conflagration? Certainly not.

Too many supposedly human beings are more concerned with making money rather than in winning and ending the war in the quickest possible time. Profits are becoming the prime factor behind this war. These people obviously care nothing for the feelings and desires of our soldiers. They are money mad. They are actually prolonging the conflict. Events point to the maddening conclusion that this war might be over quicker if all financial advantage were completely eliminated.

Has anyone heard a single one of the abovementioned big businessmen demand that we get this war over as quickly as possible? Of course not.

But these businessmen are kicking like the devil over the renegotiation of their war contracts. They say that taxes and renegotiation refunds will eat up their incentive to produce war goods to win this war. Could it be possible that the only incentive they have in this war is to make profits upon profits?

Why not set an example by really punishing these greed-crazy scoundrels who are truly sabotaging our war effort, endangering the lives of our troops, and gambling with final victory.

There is being exhibited in high places a callous indifference relative to inspection of war material. The famous glider crash in St. Louis last month in which a number of high public officials were killed is a glaring example of what has been taking place on the production front.

Here is what the War Department had to say about the glider accident on August 11, 1943:

"The Army Air Forces has acted to prevent any recurrence of the parts failure which resulted in the fatal glider accident at St. Louis * * * the War Department announced today in making public a summary of conclusions reached by the Air Forces investigating groups. The summary indicated that faulty manufacture by a subcontractor, faulty inspection by the prime manufacturer and inadequate enforcement of inspection procedures, combined to produce a fatal hidden defect in a wing strut metal fitting."

Imagine such incompetency and stupidity. Who are responsible for such an unfortunate predicament? Why wasn't strict inspection enforcement undertaken originally? This writer has been pleading for a revamping of inspection methods for over 2 years. Top Army officials have been called before several congressional investigating committees and on each occasion they have proclaimed a "no interference" policy from legislators, that they had the situation well under control and in capable hands.

Then to the amazement of the Nation, on September 12, 1943, Richard DuPont and other Air Corps experts met death in another glider tragedy claimed to have been caused by the same factors that crashed the St. Louis glider, not to mention hundreds upon hundreds of other service plane crashes.

The necessity for rapid production of war goods is, of course, vital at this time but no decent American can condone a system which under the guise of pressure of production tolerates, in fact encourages, and even overlooks defective manufacture and assembly of war material. Such a system is reprehensible. It must be stopped by force if necessary. The lives of our fighting men are worth more than all the profits and gold in the entire world.

Freedom From Bureaucrats

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over radio stations KGFF and KADA on September 17, 1943:

My friends and neighbors, I am grateful for this opportunity to greet you through the facilities of KGFF and KADA. In our hearts tonight we are aware of the heroism, the daring and the sacrifice of those on distant fields of battle who preserve us our country. No nation in the history of the world has come even comparably near to the miracle of America's achievement in war production. No nation faced with the sad and tragic task of war has carried forward so well and so speedily a national war effort. And this fact I cite to you out of a considered judgment, in full recognition of, and in spite of, the elements of waste and dilatation that are evident in our industrial production.

In freedom's cause America has opened up a battle front that stretches round the world. Like one continuous chain the soldier and the gun make up one front that circles all the world. In many and different areas in several and sundry climes the sons of America are on the march against the Axis hordes.

The achievement of the American soldier is all and more than reason could expect or hope anticipate. The certain winning of the war is but a question of time—a time that, however brief it may be, carries with it the weight of the grim and tragic realities of

war. This is a solemn hour. Our emotions are turbulent with anxiety and care, the heartache from separation, the fear of what the dreaded casualty list might bring, and the intense anticipation of what the unavoidable tragic side of the day's news may be. I do pray for a speedy end of this war.

To those who have some loved one on the field of battle I can only say that it is my anxious hope and my earnest prayer that he will return home safe to you.

To those of you who have your fireside circle broken by a supreme sacrifice, I find no message with adequate power to convey to you the thought and feeling that abides in my heart and mind. I wish I knew how to say something that might in some small way comfort and sustain you, but I know that words are too weak and futile to beguile you from a grief so overwhelming.

I cannot restrain my thoughts at the moment from clinging to the memory of one of my friends. His hand was raised to hold the flag of freedom in the sky. His every heartbeat was a drumbeat of love for liberty. His every thought was fortification for the democratic way of life. He gave his life for the preservation of this country and for the perpetuation of human freedom. The lamp of liberty shines brighter because he lived and where he lies is sacred ground. Every time I look at my country's flag I see him, a symbolic star, one of the white stars in Old Glory's field of blue.

"Missing in action," that's what the telegram said. And even a boy of 2 can feel what that means.

"Missing in action." Mom says you must be brave. It's what your father would expect of us. "You must be brave," she tells you. Then it's bedtime and your chin starts to feel shaky. Then she kisses you extra hard and turns her head away so you can't see her eyes.

You've never let her see you cry, not once since that telegram came and she twisted it all up in a ball, then smoothed it and put it in the desk.

Lying in bed you play pretend. Pretend you can't hear his steps as he comes up to your room. Pretend you can't feel his touch as he tucks the cover over you. And sometimes in the dark you can almost smell a cigarette.

We, all of us, wish there was something we could do. And there is. We can resolve that the plans your father had for you shall remain within your reach. You, son, won't hear these words and if you did they wouldn't mean much to you now, but your father's friend is making you a pledge, a pledge that the things your dad valued and gave his life to preserve for you shall remain secure. You may never hear this pledge from our lips, but if you were older you would recognize it in our faces. We are determined to keep America the kind of America your dad gave his life for. We are determined to keep America free. To keep it a land in which government is the servant, not the master of the people.

My friends and neighbors, I hope you can carry on with greater zeal, with higher courage and stronger determination, determination because of this boy of whom I spoke.

If you are convinced that democracy is worth saving you will be eager to discover and embrace the means by which democracy can be saved. It is of this then that I desire to speak. The soldier is winning the battle of freedom on the battle front. It is yours to look after the struggle at home.

Just now we hear a good deal about "four freedoms," but what of a fifth freedom? Freedom from bureaucrats. In that freedom is lodged a whole library of titles to liberty. To mention a few of them I should cite free enterprise, freedom of economic opportunity, freedom from regimentation. And in freedom from fear I could mention freedom from the fear of what the Government might do to us instead of for us.

We are all conscious of the wrongs bureaucracy has inflicted upon us.

Our liberties are stricken and wounded one by one. It is too much to hope that liberty is only wounded and not dead? Is it too much to hope that courageous citizens will demand and defend the individual liberties our Constitution guarantees?

Let us give intelligent thought to the encroachment of bureaucracy on our rights and freedom. Let us face the challenging fact that this is our problem and we must solve it with action.

Bureaucracy is no longer an overdrawn departmentalism. It has become a new concept of government. A concept that rests on the pernicious doctrine of implied powers. A concept that envisions a government of men to supplant our government of law. A concept that holds that government should be master not servant of the people; that holds that the government should control the people instead of the American philosophy that the people should control the government. A concept that holds that men should have the power to regiment and regulate us. To control our every enterprise and activity at the behest of their own unguided judgment and unrestrained and capricious whim or will. Bureaucracy is a Frankenstein that smashes our institutions and with wanton recklessness violates the sanctity of our rights. We have fast been losing rights which are fundamental and without which the American form of government cannot endure.

Centralization, through stealth and pretense, has broken down State lines, and by invidious invasion has captured the counties and communities and chained and manacled the individual. We have permitted the destruction of the sovereignty of States and substituted for that sacred thing an incompetent, extravagant, un-American control radiating out of Washington's bureaus.

Bureaucracy is a maze of amazement, a jungle of jumbles. Tons of pamphlets from Government presses grind out the unsolvable puzzles from umpteen thousands of pee-wee minds of bureaucrats in the vast caboodle of bureaus

You can philosophize all you want to, but when you get down to it, the decisions of men who occupy administrative chairs is our current government. Ours is a government of men. Bureaucracy has become a tyranny that robs each individual citizen of his liberty.

The Federal squeeze put on the farmer is intolerable. Some little tyrant has said that the farmer cannot kill his own pig. A farmer came to me and said, "What am I going to do?" and I said, "You can surrender just like Czechoslovakia or you can resist." You have got to make one choice or the other, and then he said, "But it's against the law for me to kill my pig," and I inquired, "What law?" I have been in Congress four terms. Congress is the lawmaking body, and Congress never passed any such law. There is the meat in the coconut. One must understand the difference between the law and an edict issued from the tyrannical mind of a pee-wee dictator whom we have come to refer to as a bureaucrat.

Well, I can't speak for all the farmers in America, but I am a farmer in my private life, and I'm going to kill my pig, and I'd like to see the color of the so and so's eyes that can stop me. You know sometimes down on our farm when we get ready to butcher, we shoot the pigs, and sometimes people knock them in the head with an ax. Of course, I reckon if a bureaucrat got his head between the end of the gun barrel and the pig at the instant I pulled the trigger, he might keep me from killing that pig, at least with the first bullet.

Yes, a druggist told me that it was against the law to sell a 29-cent bottle of alcohol without a doctor's prescription, but I asked him "What law?" And, the filling station man told me that he couldn't sell me any gasoline 2 minutes after 8 o'clock because he said it was against the law, and again I inquired "What law?" Yesterday I saw a sign on the highway which said speed law 35 miles an hour. That sign is a lie. Congress never passed any such law, and neither did the State legislature. It may be a good thing but it is no law.

Everybody hates a coward, and one would be a coward if he submitted to such tyranny or surrendered to such aggression against American democracy. Maybe I'm just an unreconstructed rebel, but I can't understand how a self-reliant, self-respecting citizen could surrender to the absurdity of an autocrat regulating the intimacies that are our personal lives. The individual in America must never be the creature of any arbitrary power.

Bureaucracy is a tyranny ruthlessly stamping out every right and every liberty. Indifference, acquiescence, or surrender cannot conserve our liberty. We must resist. It is the plainest of our duties. Do not delude yourself with any false security. Do not depend on others to save your liberty for you. We ourselves, each and all of us, must save our liberty and safeguard our freedom and defend our rights. If you love America, if you believe in liberty, if you have faith in freedom, if you are devoted to the rights of man, then now is the time to resolve an eternal determination that freedom will be preserved; liberty protected, and rights retained.

This constitutes a test of our capacity for self-government.

To keep our American ideals of government, to preserve our American system of government, that is our struggle. It is the struggle in Congress, it the struggle for the States, and for the individual citizen; a struggle to keep what rights we have, and get back if we can, those that we have lost.

I plead for the right of every American to determine his own conduct and own mode of living and earning a livelihood as long as he does not wrong or hurt his neighbor, or injure or endanger society. For a long time we believed the best government was the one which halted, harassed, and hampered only the man of crime and wrong; a government that was a breastplate of armor to the good citizen and not a leaden burden on his back.

If our remonstrances against senseless regulations and our petitions to bureaucracy has availed us nothing, we are constrained to resort to more determined steps to preserve personal liberty.

We have got to invoke a new declaration of independence; independence from bureaucracy. Then let us denounce the curse of bureaucratic favoritism, of bureaucratic incompetence, of bureaucratic dictatorship. Let us unite against every attempt to convert bureaucratic authority into intolerable interference and excessive conrol.

Let us stand solid and unyielding against every denial of rights and liberty.

Let us reaffirm our inalienable rights.

Let us proclaim an emancipation from bureaucracy.

Regulation, regimentation, and coercion are unsuited to the minds of a free people. I hate tyranny. Be it fell foreign power or the home grown variety. I deplore the everlasting annoyance of Federal inspectors and investigators, often irresponsible and incompetent, prying into business which ought to be private and into affairs which are personal, exercising supervision and demanding reports of every conceivable kind. Bulldozing the businessman, harassing the farmer, and regimenting all mankind.

Are we in America to accept without resistance the rule of arbitrary edict and be ordered as bureaucratic whims may dictate without even a day in court? As a free people we must maintain our right to decide for ourselves whether we want these restrictions on our liberties or not.

Let us have an end to regimentation and bureaucratic control. Above all, let us not permit it to go any further. This as I see it is this hour's call to battle.

Let us adhere to the great truths that remain to guide us. Let us cling to the fundamentals of the American way of life. Let us halt the bureaucrat and drive him back lest he pervert all our ideals and destroy all our institutions. Let us pledge a new allegiance to our faith in the people's right to rule. and march out on a high resolve to restore to the people the right to decide the questions that determine their welfare and direct their fate.

Our Government is getting too big for us to control it. Government is the growingest thing in the Nation. Thousands of Government buildings cover hundreds of acres like vast monumental mausoleums, and millions of Government employees go in and out like great swarms of drones in their beehives. Bureaucracy demands a total war effort from everyone but its own 3,000,000 employees. The fact that winning the war is our first objective is no reason for us to tolerate this cancerous growth. The fact that winning the war is our first objective is no justification for leaving undefended the very principles for which we are fighting.

When a people permits the officials of government to forget that they are the hired hands of the people, permits them for one moment to depart from the principle that the people should control the Government, democracy is lost. Intolerance and tyranny, error, wrong and despotism have always resulted from the theory that government should control the people.

I do not know whether supine public indifference or sheer usurpation has been the chief factor in bringing us to our present plight, but our liberties have been progressively whittled down and steadily taken away.

We cannot afford to let the Government regulate our every endeavor. Regulate our economic moral and spiritual activity, yet we have a government of bureaucracy that would do just that.

We cannot afford to let government so interfere with business that it puts the cold hand of death on the creative initative and competitive inpulses of free enterprise.

We cannot afford to let government regiment agricultural endeavor, and bind and chain the farmer.

Bureaucracy is jeopardizing both our prosperity and our liberty. The bureaucrat has us all in a straight jacket. If his edict were law he would have succeeded in making criminals of us all.

All the money in the world wouldn't make a decent down payment on what bureaucracy has cost us.

You know what the farmer ought to plow up? He ought to plow up the Department of Agriculture. He ought to plow up the bureaucrats, plow them up and plow them under.

We do not side-step the duties of our personal lives. We do not straddle the issues of our family affairs. We do not dodge nor deny the responsibility in our homes. Then why is it that so many citizens shrug their shoulders and expect somebody else to preserve their rights, their freedom, and their liberty for them?

We need to have faith in democracy. I do not mean faith in the Democratic Party or the Republican Party. I do not mean faith in the House or the Senate or the court or the Executive; I do not mean faith in any group or clique, or man or men. We need faith in democracy as an ideal. We need faith in democracy as a principle. We need faith in the American philosophy of government. We need faith in the individual citizen and faith in the people as a whole, not just a talking faith or a passive faith, but a thinking faith and a fighting faith.

Let me tell you, my friends and neighbors, the crisis has come. The menace to our liberty makes necessary a common effort to protect them. I pray in an anxious heart that you can see this.

We have got to settle this question as to whether or not the people are going to control the Government or whether the Government will control the people. That's the greatest domestic issue that we have faced since the Civil War. You know what I'm for. I am for making it unpopular and unhealthy to be a bureaucrat. William Lloyd Garrison wanted to abolish slavery. I want to abolish this new form of slavery under bureaucracy. I want to rid this country of every bureaucrat. Stamp them out and tromp them under. I pray out of an anxious heart that you will see the importance of fighting the bureaucrat just as we are fighting the other enemies of our country, because I earnestly, anxiously believe that we must destroy bureaucracy or it will destroy our system of government.

Boondoggling on a Global Basis

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a most timely article by Mr. Henry J. Taylor which appeared in the August 1943 issue of the Reader's Digest:

BOONDOGGLING ON A GLOBAL BASIS

(Excerpts from Men in Motion)

(By Henry J. Taylor)

I have just returned home after observing the impact on European minds of American promises regarding what the United States will do for the people of the world after the war. In our deep anxiety to be helpful to the world, we are making promises and assuming superior attitudes which America and the world will deeply regret. We are speaking and writing glowingly about post-war matters concerning which we shall actually have little, if anything, to say.

The problems abroad are astronomical. They are deep-rooted in historic tensions, charged with local prejudices and ardors which date far back, and full of cross-currents and contradictions. Any one of these local problems—economic, social, political or military—is enough to baffle any European. Yet American words and pens are distributing promises everywhere.

Once you leave our shores, the only voices you hear speak about a better world order are either German, Japanese, or American. The American governmentalists in Washington are in strange company. And if our leaders were less vain they would see that, whereas the world resents the German idea of world influence as being repugnant to all free men, our own Government's idea of excessive internationalism is also unacceptable.

We cannot solve Europe's basic problems or "make the world free." The destiny of Europeans is within themselves. And so is the destiny of their world-wide colonial system.

Talking about colonial freedom is one thing. Insuring that freedom is quite another. Eighty percent of the colonials of the world could not, or would not, use freedom to maintain freedom. Eighty percent of the world's people simply are not ready for what we are talking about.

For a country whose own cities are in the most deplorable condition in their history, with vastly rich areas like Boston, Detroit, and Philadelphia facing financial crises in spite of maximum employment and maximum taxes, our Government planners go far afield in trying to solve the colonial problems for the world.

The attitude of some of our politicians and speechmakers concerning our allies' colonies, mandates, and dominions is already building up vast problems in these places. America's social theorists, tying themselves to our war effort in the colonies of our allies, are creating vast confusion and disturbance abroad. Their folly is working against every solution which our allies may find for their own problems in their own lands.

In support of stubborn schemes for America's better world order, the credit and substance of our citizens are being expended now and pledged for the future in the same irresponsible way which made a scandal of the W. P. A.

Having abused the sound principle of emergency public works at home by using public moneys to buy votes and political power and to stimulate political machines throughout the country, these same determined men have now put boondoggling on a global basis. Nothing restrains them.

We set wage scales for labor abroad which make it impossible for anyone else to hire a native man or woman wherever the American Boondoggling Corps operates—and they are everywhere. Authorities in these distant communities, who have the long-term responsibility for peace and safety, are outraged. It is one of the most deep-seated cleavages among the governments of the United Nations.

For example, the Eskimos in Labrador have always lived by fishing and trapping for furs. In this way an Eskimo family earns $8 to $10 per week. The work is productive and the community life has always been peaceful. In came the American boondogglers. They paid such high wages for labor and so much for furs that overnight the income of the Eskimo family became $80 per week. When an Eskimo got as much in a few days as he used to make in a month he quit work. The supply of furs decreased at once, there was a famine of fish, and the willingness of the Eskimos to work on American air bases disappeared. In order to get the Eskimos to work the boondogglers had an inspiration—they boosted their fur and fish prices and their wage scales still higher. They ran the Eskimos' income to $120 per week.

That soon stopped all trapping, fishing, and work for sure. So next they put the price down. And when they did that the Eskimos couldn't understand it. Serious dissatisfaction and unrest spread in Labrador. And then the American boondogglers turned to the local Newfoundland authorities to put the Eskimos in their place.

"They're out of hand," they said. "Control them. We're spending a lot of money here."

If you were mayor of Okkak, Labrador, or Governor of Newfoundland, how would you feel about that?

All the way from Bermuda to Sydney local administrators are asking themselves, "What will happen when the Americans leave?" Who would say that this is the path to peace in the world?

There is the same hodgepodge duplication of Federal offices abroad as in our own country. Nobody can make sense out of the swarm of United States Government employees. They are a mystery both to the natives and to each other. They conduct negotiations independently of our ambassadors or ministers. They pay American cash to local politicians who are in opposition to the governments of countries friendly to the United States. They put such opposition "leaders" on their pay roll and stage political vaudeville acts which they have thought out overnight. If their ideas run counter to the policy of our State Department or embarrass the friendly nation's president or prime minister, as well as our ambassador, that is just too bad.

"This is a smart man's war," I heard one of them say. "We've got to be plenty smart with these foreigners. The thing to do is play along with both factions. You know, play both against the middle."

Another brash young employee of the United States Government asked me one day, "What do you think of Steinhardt? Has he got anything on the ball, or do you think we ought to get rid of him?" This young whippersnapper was referring to the distinguished American Ambassador to Turkey, Laurence A. Steinhardt, who for 10 years has spoken for his country so ably in Stockholm, Lima, Moscow, and Ankara.

"Do you know Mr. Steinhardt?" I asked.

"No," he said, "but he's making it hard for the Office of War Information in Turkey, and I think he's got a hell of a lot of nerve. I'm for canning Steinhardt."

Anything may happen when the representatives of our various and sundry Government agencies show up. Take Bolivia. One-fourth of the world's tin is produced there. Tin is sorely needed in the United States now. The Bolivian contingent of the American boondoggling corps has a program in Bolivia which has so much politics and so little economics that it is doubtful whether Bolivia's tin will not stay in Bolivia for the balance of this war.

Coffee bulges all Latin-American warehouses. We have allotted to each coffee-producing country a quota for export to the United States. The reason we do not get more coffee is not because there are not enough ships. It is because no one in the Board of Economic Warfare has had gumption enough to authorize lifting the quota whenever an empty ship was in any port where the quota had been filled.

Meat abounds in Australia, for the shipping lane to England—formerly the market for Australia's mutton and beef—has been struck by the Pacific war. Because of this, American meat is sent to England. A constant flow of American vessels transports men and equipment to Australia, but for the most part these ships come back empty when they could bring Australian meat. The global boondogglers, planning the world, are too busy looking at the forest to see such trees.

The Government's policies abroad are undermining the morale of our troops. This is not the time to pay an American workman $1,000 a month to fix electric wires on the airfield at Accra while privates in the United States Army, working on the same field, are paid $50 a month. This is not the time to build immense bases such as we are building in Eritrea with an understanding that only union labor be sent abroad. This is not the time to play into the hands of labor racketeers who require that any skilled American civilian electrician working overtime in Algeria be paid more per month than General Eisenhower is paid. This is not the time for anything but victory.

What would you think if you were an American soldier in north Africa or Eritrea? Well, that's the way our soldiers feel about it everywhere. They believe that a great injustice is being done by our Government in permitting labor extortion in this war. They have no patience with the political ambitions of the men who make this possible. These soldiers will return bitter and mad, and they will demand a reckoning.

As for our devious plans for a better world order—whatever that may mean besides the impoverishment of the United States itself—our fatuous assumption that we can set all well with words and dollars and a police force is a thoughtlessly impossible undertaking, as misleading as Chamberlain's Munich statement of "Peace in our time."

Here at home we shall be faced by every sort of readjustment. We must provide jobs for the returning American soldiers and for our present war workers. We must work tirelessly to regain our solvency and to recover from the present huge drain on every resource we have. In this alone we face the greatest task in our history. We shall be in no position to lift the standard of living in China, in Russia, among 400,000,000 impoverished people of Europe, desirable as that is. There is no possibility whatever of our succeeding in such an attempt. There are a hundred places to start and no place to stop.

There is a limit to the failures Americans can absorb. At some point our statesmen failed, or we should not have suffered as we did in the depression. At another point our statesmen failed, or we should have been so strong on land, on sea, and in the air that there could have been no war. Now they fail again if they saddle our citizens with the astronomical burdens of all the world.

Our citizens cannot give to the world (1) freedom of speech and expression, (2) freedom of every person to worship God in his own way, (3) freedom from want, and (4) freedom from fear. The whole conception of giving or infusing the "four freedoms" universally is preposterous. It is not idealism. It is sheer political buncombe, and is so recognized abroad.

On the narrower question alone, the question of freedom from want, anyone must know that the politicians of every country in the world will be pulling on us in a tug-of-war to get the most out of America's international W. P. A., exactly as our local mayors camped in Washington to get the most out of our W. P. A. at home. We will be asked to provide freedom from want to at least a billion people, most of them in primitive surroundings and 400,000,000 of them in Europe. One hundred and thirty million Americans are in no position to do this. The promise of the United States is utterly fantastic.

Yet this airy approach to reality is promulgated at the very time when the solemn and high purpose of the United States should be to have the people of all the world believe in us—what we say, what we do, and what we intend to do.

By immodest promises and visionary plans many of our leaders immensely increase the possibility that the people of America will wash their hands of everything outside the 12-mile limit, good or bad, at the earliest possible moment, as they did after the last war.

If our leaders persist in their present course, we shall fail the world. We shall be unable to do what our leaders say we should do. In these circumstances we shall make enemies of our friends. No one will thank us for starting down the road, going as far as we can, and then chucking the whole business through the revulsion of our own people to a program which Americans know in their hearts is unsound and untrue.

The fundamental error of our theorists is that they have never understood the place which integrity has in all the ramifications of life. They believe that to say a thing is the same as to do it, as though speech were capable of modifying the tendencies, habits, and character of people, and as though verbiage were a substitute for will, conscience, and education. They proceed by bursts of eloquence or of lawmaking; they believe they can legislate the nature of impulses, and in so doing they produce disintegration.

The obligation to assist toward a better world and the value in doing so are obvious. Our duty, however, is to be useful, not according to our desires but according to our powers. We should recognize our own limitations and abandon the impertinent idea that a world is to be built in the American concept. We should put a limit on our total post-war aid, both in time and in dollars, and require that any aid should be restricted to whatever nations took certain elementary steps in their own behalf. Only thus can we make good our promises. Only thus can we maintain our own integrity and win the respect and friendship of the world.

The global concept, stimulated by the war itself and by the new idea of the world's size in the age of air, is one of today's basic developments. It is one of the great generating thoughts in the history of man. But how could anything be more evident than that the process of achieving universal freedom and prosperity must be slow, and that to promise it overnight is a great disservice to the world? Our policy of exaggerated internationalism is as dangerous, foolhardy, and destructive as narrow isolationism.

Our War Heroes Deserve the Best

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, we cannot at this time put too much stress and importance on plans and programs to aid and help our returning heroes who, some day in the near future (as we all hope and pray), will be coming home as victorious warriors.

It will be the blood, sweat, tears, work, sacrifice, and loyalty of these brave men that will save these United States, and thereby preserve the greatest Nation on the face of the earth.

We must see to it that every one of these brave souls who were willing to sacrifice everything at home, and even their lives abroad, shall have the opportunity to recover that which they lost when they left.

Most members of the armed forces will want a home more than anything else. I, for one, favor the setting up of the necessary legal machinery to provide each member with the opportunity to own a home with a very small down payment, if necessary, and 30 or 40 years in which to pay at very low interest rates, tax-free for the first 10 years.

Nothing but the best kind of treatment will be good enough for these heroes. Each member should have the opportunity of selecting a special training course in a special trade school or other school

to be set up by the Government in order that he or she can learn that particular trade they most desire.

Many youths were taken from high schools and from colleges. They, being more worldly experienced, will not want to go back to the same school and there mingle with students much younger in age and experience. Separate schools and colleges should be provided for those who want to finish their education.

Our present hospital facilities are not sufficient to care for all the wounded, sick, and crippled soldiers. It will be necessary for a great hospital program to be instituted so that every returning hero, no matter how bad his physical condition may be, will have the finest medical service and the finest hospitalization in order that everything humanly possible be done to mend his ailing body.

And above all else we must see to it that every returning hero has an opportunity to secure a decent job or be put in a position to earn a decent livelihood. The day of returning soldiers selling apples on the street corners shall remain a shameful thing of the past rather than of the future.

There are several bonus bills in Congress already. I have had the privilege of being the author of one of them. There will be many more introduced in the future and it will be up to this body to provide a fair, equitable, and decent bonus not 10 years after we win this war, but immediately after this war, in order that the members of the armed forces will receive timely the greatest good from that bonus.

While the big job and real duty of this country at the present time is to win this war and win it as quickly as possible, still we must not lose sight of the fact that one of these days our heroes will be returning. We must be prepared to help them as they have helped their country. This we must not lose sight of or overlook.

War Costs

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of an address delivered by me before Rotary Club No. 1 on August 17 at the grand ballroom, Hotel Sherman, Chicago, on war costs:

Mr. Chairman, Rotarians, and friends, it is indeed a pleasure to come back to the old Chicago town and to talk to a group of Rotarians and businessmen. Chicago has meant much to me because it gave me an opportunity to lay the foundation for the work which I have been trying to do. It was here that I received my education. I worked at night trucking boxes and trunks for the American Express Co. I worked Saturdays in Marshall Field's old store. I worked during the day and went to school at night. I worked at night and went to school during the day. It was a proud day when I stood on the platform of what was then the new Patton gymnasium with a degree of bachelor of laws in my hand from Northwestern University. There was no N. Y. A. or student-aid fund then, but we had something then that meant more than all the alphabetical orders of today. We gave a young man an opportunity to work and develop the best that was in him; to educate himself, and in working and educating himself he developed the qualities which might have never been discovered under a system of paternalistic aid and help. For the opportunities Chicago has given me, I am profoundly grateful. Whatever service I have rendered in the past or may render in the future could not have been and would not have been rendered but for the training I received during those days more than 30 years ago.

I want to talk to you today about war costs and war debt. Before I do so, however, and to avoid any possible misunderstanding and at the risk of repetition, I want to state my position clearly.

I BELIEVE IN THE PROFIT SYSTEM

I believe in the capitalistic and profit system. I believe in free enterprise. I believe a corporation or individual engaged in business, whether public or private, is entitled to a reasonable profit including an additional amount for reconversion to peacetime industry. I believe in a high standard of wages and a high standard of living. No nation ever was prosperous in peacetime which paid starvation wages to its workers or which insisted upon starvation income for the millions of investors who are depending upon corporate profits for a livelihood. On the other hand, I am opposed to excess war profits, whether those excess profits be corporate profits or individual profits, whether such excess profits are being made by industry or whether they are being made in the form of excess wages paid to labor. Congress has reduced the income-tax exemption as low as $500. This reduction of income-tax exemption applies alike to all, whether it be a worker in a factory, on the farm, or whether it be a widow whose only source of income is small dividends on stock or interest on bonds which she may have purchased with the lifetime savings of her dead husband and herself. No one can justify the taking of that tax and paying it to industry or labor in the way of excess profits. I am sure we can all agree on these principles.

WHAT WILL THE WAR COST?

What the war will cost the American people in terms of dollars and lives cannot be determined until the last soldier and the last dependent of the soldier has passed away. Until recently we were paying compensation to a dependent of a soldier of the War of 1812. America always has and always will take care of her soldiers and their dependents. The cost of such care must be considered as a cost of war. Calvin Coolidge once said that World War No. 1 would cost the American people what was then considered the tremendous sum of a hundred billions of dollars. Today we can only measure that cost in terms of expenditure of money and in debt. I want to give you a few of the facts which will give some idea of what the war is costing us. Before I do so, however, I want to give you a yardstick which will help us to understand just where we are going financially in this country of ours.

ASSESSED VALUATION OF UNITED STATES IS $150,000,000,000

I recently compiled a table giving the latest figures available on the assessed valuation of the 48 States and the District of Columbia. The total assessed valuation of the 48 States and the District of Columbia is just a few dollars more than $150,000,000,000. This valuation includes every piece of property, real and personal, tangible and intangible, which was placed on the assessment roll by the assessing officer of the 48 States and the District of Columbia. While I realize that it is not the actual value, it is the only case I know of, where an officer is charged by law with the duty of fixing and actually places a fixed value on a specific piece of property. That value may range from 40 percent to what some States contend is 100 percent. Value after all is a relative term. Million dollar apartment houses were torn down during the depression to make way for parking lots because the income was not sufficient to pay operating expenses and taxes.

THE PRESIDENT HAS $285,000,000,000 TO SPEND THIS YEAR

The President in his first message to the present Congress gave some revealing facts. He stated that he had on hand an unexpended balance of $170,000,000,000. This amount exceeded the assessed valuation of every piece of property in America by $20,000,000,000. He asked Congress for an appropriation of $109,000,000,000 for the present fiscal year. Subsequent budget estimates brought his requests to $115,000,000,000, which he was given. The President has therefore, for expenditure from and after January 1, 1943, the tremendous sum of $285,000,000,000 or a sum that is almost twice the assessed valuation of the country. On July 8, 1943, the national debt including $4,000,000,000 guaranteed obligations, exceeded $141,000,000,000, so when we consider these combined figures, a $300,000,000,000 national debt is not only a possibility, not only a probability, but is almost a certainty.

EXPENDITURES

(a) According to the latest figures furnished me by the clerk of the Appropriation Committee, the total appropriations made by Congress for the fiscal years ending June 30, 1942, 1943, and 1944, aggregate $319,000,000,000. This does not include reappropriations.

(b) Expenditures during the fiscal year ending June 30, 1943, totaled $78,182,348,000, and the excess of expenditures over receipts was $55,900,000,000.

(c) The public debt increased during the fiscal year from $76,900,000,000 to $140,796,000,000.

(d) The total appropriations for 1944, including reappropriations, exceed $138,000,000,000, of which the War Department received $71,507,000,000; the Navy Department received $32,422,000,000; lend-lease received $6,273,000,000; National War Agencies, $2,911,000,000 and supplemental Navy appropriations, $3,836,000,000, so we find, of the one hundred and thirty-eight billion, one hundred and seventeen billion is directly for war work, leaving twenty-one billion for other work, which includes some additional war work done by other departments, such as Conciliation Service, Treasury, etc.

UNITED NATIONS WAR EXPENDITURES

The latest available figures, according to the Legislative Reference Bureau of the Congressional Library, on war expenditures show the total amount expended by all United Nations for 1943, translated in United States currency, was as follows: Total expenditures last year, one hundred and five billion, of which the United States expended $67,534,000,000 up to June 12, 1943, or almost twice as much as the other Allied Nations put together, while the United Kingdom spent a total of $19,553,000,000. The United States figures are preliminary figures. The actual figures show that the United States actually expended, as I stated before, over $78,000,000,000, last year's figures.

YOUR SHARE OF THE NATIONAL DEBT

On May 29, 1943, I placed into the CONGRESSIONAL RECORD a statement giving the following information: Column 1, the name of each of the 48 States; column 2, the population of each State; column 3, the assessed valuation of each State according to the latest available figures; column 4, each State's share of the $300,000,000,000 debt on a per capita basis; and column 5, the percentage that that share was of the assessed valuation. The assessed valuation of the State of Illinois according to the latest figures then available was $5,240,430,000.

Illinois' share of the $300,000,000,000 national debt will be $17,989,914,000, or approximately 342 percent of its valuation. If the people of Illinois were compelled to vote upon themselves a bond issue of nearly $18,000,000,000, or nearly 3½ times the assessed valuation of every piece of property, real and personal, placed on the assessment roll by various assessing officers, would the people of Illinois be as apathetic toward waste and extravagance in the future as they have been in the past. The population of Chicago, according to the 1940 census, is 3,396,808. Chicago's share of the $300,000,000,000 national debt on a per capita basis would be $7,712,928,524. Would the people of Chicago be as apathetic toward waste and extravagance if they had to vote upon themselves a bond issue for this tremendous sum?

MR. ICKES SAYS WE ARE WORTH $12,000,000,000,000

According to Mr. Ickes, however, we have nothing to worry about. He stated, in a recent magazine article, that the United States was worth $12,000,000,000,000, that each person was worth $89,000. The population of Illinois, according to the 1940 census, was 7,897,000, so if each person in Illinois is worth $89,000, as stated by Mr. Ickes, then the State of Illinois is worth $702,833,000,000, so why worry about a mere $300,000,000,000 national debt, Mr. Ickes argues. In 1940 the population of Chicago was 3,396,808. According to Mr. Ickes, Chicago is worth $302,315,912,000.

I received a letter the other day from a man who has a wife and 10 children. According to Mr. Ickes, this man is a millionaire because each member of his family is worth $89,000 and this man is worth $1,068,000. Yet this man complained to me that he was getting pre-war wages with 25-percent war deductions and 30-percent wartime price increases. Mr. Ickes' trillions isn't helping him buy bread or pay his income tax or grocery bill. The fact is that Mr. Ickes has out-Longed Huey Long, out-Townsendited Dr. Townsend, and out-ham-and-egged the ham-and-eggers of California. There is, however, a serious danger that Mr. Ickes may be right in the future, if the present administration continues its spending policies. The country may some day be worth $12,000,000,000,000, but they won't be the same kind of dollars that you and I are using now. Germany, at the conclusion of the last war, talked of trillions of marks and they found it was cheaper to paper houses with German marks than with wallpaper. The Ickes dollar may have the same kind of value as last year's Sears, Roebuck catalog hanging on the side wall of the famous building referred to by Chic Sales in his Specialist. However, speaking seriously, it is a tragedy when a Cabinet member tries with methods such as these to blind the public to the real dangers of inflation and spending.

WASTE AND GOVERNMENT EXTRAVAGANCE

Not only millions, but literally billions of dollars have been wasted in the war effort. While war is waste and while some waste is inevitable in wartime, there comes a time when waste impedes progress. Waste can never win the war, but waste could help lose the war. I have taken the position that the taxpayer is entitled to value received for his tax dollar, that it is the duty of Congress not only to appropriate money, but to see to it that the taxpayers receive as nearly as possible a dollar's worth of value for any one dollar spent. It is impossible for any one individual to lay his finger on all sources of waste. With all the work I have been able to do, I was able to merely scratch the surface. I want to comment on some of this waste.

CANTONMENT WASTE

In October 1940 a clerk of the Appropriation Committee asked me to approve a $466,000,000 cantonment construction bill, without full committee action. This I refused to do. A few minutes later the House convened and the bill was brought to the floor under a unanimous-consent request. I stated that in view of the emergency that, inasmuch as housing would have to be provided for selectees, I would not object to the bill being considered in that way. I stated, however, that I would hold the Army accountable for every dollar of the appropriation that was wasted.

On January 16, 1941—13 days after the Seventy-seventh Congress convened, I made a statement on the floor of the House that the Army would have a deficit in this construction program of approximately $330,000,000. From the facts I was able to obtain then, I estimated that the building program was running behind about 71 percent. I had already made my tour of the cantonments when the Army came in with a deficiency bill for $338,000,000. This was long before the Truman, May, or Vinson committees came into existence. Some of you have undoubtedly read the story in the press. They called it a one-man investigation. Time will not permit going into detail. I do want to mention just a few of the many instances of waste and excess cost.

Camp Blanding

At Camp Blanding, Fla., I found 40 percent of the building area below the level of a lake. Building foundations were below the water mark on the nearby trees. Six hundred and fifty thousand cubic yards of black muck was removed and replaced with sand. One thousand five hundred tent frames were built and then had to be moved and the ground filled in before they could be used. The chief construction quartermaster admitted that more than $5,000,000 had been wasted because of the camp site which was chosen. Excess labor costs, excess road costs, a railroad with old 60-pound rails which are too light to carry modern equipment; these and many other excess costs were found there.

Camp Meade

Camp Meade, which is a few miles from Washington, was a World War camp where 40,000 World War veterans had been housed and trained. The old site was selected because of its drainage and sandy soil. Highway grades, railroad grades, building sites, warehouse sites were all laid out and graded and millions of dollars could have been saved, had the old site been chosen. A sewer system sufficient for a camp of 40,000 men was in excellent condition, 8 miles of concrete road and miles of gravel road could have been reclaimed at a small cost. However, instead of using the old site, they used an entirely new one on a location that had poor drainage and clay soil and which was not fitted for that purpose. They built a completely new sewer system, they built new roads, spent hundreds of thousands of dollars in grading, dug out stumps and trees; they built a hospital unit on one side of a hill and an antitank battalion unit on the opposite side and connected the two with a 1,200-foot tunnel. Forty percent of the building material of these two units had to be hauled on the site with a caterpillar tractor in mud boats. When I asked the engineer why they had not placed these two units on the old site, he informed me that they had recommended the old site, but the Army had refused to follow the recommendation. When I asked the camp construction quartermaster why the Army had rejected the site, he told me that he stood on the old site with the corps area commander, a Major General, and pleaded with him not to place it in its present location, but to use the old site. The corps area commander replied, "Not by a d— sight; over there is where I said it is going and that is where it is going," and that is where it went. I asked the engineer how much could have been saved had they placed the two units on the old site and he replied "$3,000,000." When I spoke on the floor of the House, I said that the officers who were responsible for this waste should be "court-martialed and kicked out of the army" and I meant just that. It cost the taxpayers an average of $17,360 to build a 63-man barracks at Camp Meade under the cost-plus-a-fixed-fee basis. It cost a little more than half that amount to build the same kind of barracks in the same climatic zone with the same material with a higher wage rate at Camp Dix where they had a competitive bid system.

Indiantown Gap

Camp Indiantown Gap in Pennsylvania was built at the foot of the mountains on solid rock where every trench, every post hole had to be drilled out of solid rock. It cost us $15,000 to put termite shields on buildings. I found a wooden building on the camp site that was built in the year 1690 and according to the construction quartermaster, no termite had ever attacked it. He told me that he recommended that the termite shields be left off, but the Washington office called him the next day and told him to put them on. It was easier to spend $15,000 for termite shields than to unwind the red tape. I cannot take time to continue. However, the whole story of my cantonment investigation can be told in one paragraph. The Graham committee appointed by Congress to investigate World War waste reported that there was great waste in the building of World War No. 1 cantonments, that it cost $206,000,000, waste and all, to build the cantonments where 4,000,000 men were housed and trained in World War No. 1; it cost the taxpayers of America $800,000,000 to build the cantonments where the first 1,200,000 men were housed and trained in this war. Succeeding cantonment construction was still higher.

PENTAGON BUILDING

At the beginning of the emergency, the War Department wrecked a $3,000,000 apartment house to obtain a new office building on Virginia Avenue in Washington. The project cost millions of dollars. The building was not yet completed when the Chief of Supply came back to our committee and asked for an appropriation in the amount of $35,000,000 to build an office building to house 40,000 employees. The committee was told that the $35,000,000 would cover the building cost with the exception of $1,000,000 for converting the airport into a parking lot. The last figure I had some months ago was that the project will cost $70,000,000. They spent more for landscaping, bridges, roads, and grading than the original project was supposed to cost. The original plans called for 5,600,000 square feet of gross space with 4,100,000 of net office space, the project to cost $35,000,000. The President ordered the building reduced. The plans as they were last September called for 5,600,000 square feet of gross space, 2,600,000 of net space—cost $70,000,000. More alterations were made later. The building consists of 5 rings of buildings each within the other; 3 rings had

4 stories, as I recall, 2 rings had 3 stories. The building was just about completed when they ordered the new roof torn off 2 of the 3-story rings, added another story and a new roof. It is my judgment that the Pentagon Building project when complete will cost $100,000,000, instead of $35,000,000 as represented to the committee. Where did they get the extra money that Congress refused to provide? From highway funds and from special funds given the President for other purposes.

WASTE IN WAR PRODUCTION

Perhaps the factor which has contributed more toward waste in war production has been the practice of measuring the progress in war production by the number of dollars spent. The industry which spent the most was given credit for having done the best work. News releases were issued and the people were educated to believe that the more money we spent, the more progress was made. We are bound to learn by the bitter experience that to be the arsenal of democracy means that we are the financial angel of democracy. The people are learning fast. Everytime they talk to the tax collector they are realizing more and more that after all the money which we are giving away and wasting, must be earned. I sincerely hope we can learn our lesson before we are committed to a program of international W. P. A.-ism.

Ever since I have been in Congress, I tried to make a study of costs. As you already know, I spent 44 days going through 47 defense plants engaged in war production during the past winter. I spent weeks more classifying and preparing the enormous amount of material I gathered. The factory pay rolls of the companies whose plants I visited and whose reports I was able to obtain, including General Motors, Ford, and Chrysler, but excluding Government arsenals, had an aggregate pay roll for the calendar year of 1942 of $2,316,041,747. The total number of employees working in the plants of these companies aggregate 850,522, while the companies themselves had more than 800,000 stockholders or a stockholder for almost every employee. The total number of hours worked for the calendar year was over 1,706,484,931. This will give you some idea of the extent of the survey I made. I was not able, of course, to visit all of the plants of each company, but I was able to obtain the pay-roll figures and other information for each company. I found companies operating on a shoestring making exorbitant profits. One company with $65,000 capital stock and surplus operating in rented plants and buildings and equipment owned by the Government took a net profit before taxes of 60 percent on over $50,771,000 sales of war materials to the Government after paying themselves $3,000,000 engineering and management fees through another small company which this little group also owned. After paying back over $23,775,000 under renegotiation, including 50 percent of the fee and paying $4,800,000 more in taxes, this company earned after renegotiation and after taxes $1,889,000 with only $65,660 invested.

Another company organized in November 1940, with $100,000 capital and paid-in surplus, showed earnings, after taxes, of $1,740,000. After paying 3 of the 4 principal owners $116,000 salary each and after giving $944,000 Christmas bonus to employees and after paying $6,000,000 income and excess profits, this company showed net earnings, after taxes, of $1,740,000 on $100,000 invested in October 1940. These cases are in the minority. From a study of 48 corporations which I surveyed, 20 earned less than 10 percent in 1942, 16 earned from 10 to 20 percent, 11 earned from 20 to 53.88 percent, while 1 made no report. There is no question in my mind but what millions of dollars are paid out in excess profits, some of which will be recovered through renegotiation and taxes, but much will never be recovered.

LABOR COSTS

Millions of workers are frozen at pre-war or nearly pre-war wages, while millions of others are frozen at many times pre-war wages—all by the same Executive order. I found machine-gun assemblers drawing as high as $8,740 a year; janitors making more than engineers; high-school girls, 18 years old, drawing more than majors in the Army. On the other hand, I found workers who are being paid pre-war wages with wartime deductions which, with the new withholding tax, will reach in some cases 25 percent, while they must face increased living costs of some 30 percent. I received hundreds of letters from all over the country informing me that the conditions I mentioned were found in their section of the country and verified everything I said on the floor of the House.

INFLATION

While we are talking about inflation, I want to read a few of these letters. From Chula Vista, Calif., come two advertisements from the Minneapolis Tribune:

"Wanted laborers for northeastern Canada, wages $300 per month guaranteed, no lost time due to inclement weather or sickness, plus overtime, board, room, and one issue of clothing furnished free."

Signed by the United States Employment Office, War Manpower Commission, 407 South Fourth Street, Minneapolis, Minn.

The other reads:

"Waiters, dishwashers, kitchen men. Wages $250, board and lodging. Olympic Commissary, 25 South Washington."

From another California town come the following advertisements:

"We are paid at least $214 a month while we learn to weld and soon earn over $270 a month as journeymen. Ten percent extra for the swing shift, 15 percent extra for the graveyard shift."

The second advertises for women 18 to 40 years and reads in part as follows:

"We will train you to weld and pay you at the rate of $214 a month during a short training period. Soon you will be equipped with knowledge that will win you promotion to pay $270 a month."

From a farmer in Dayton, Ohio, comes the following:

"My farm hand who has farmed my place for several years receives $25 a week and he doesn't live on the place. His son, whose best job had been an auto mechanic, works at ------ and makes $100 a week."

From a doctor in Tulsa, Okla., comes the following:

"There are many instances of people who a few weeks ago were working for $15 a week now make over $100 a week—young girls and boys with 2 or 3 weeks' training in riveting make more money than graduates from universities with a doctor's degree. It ain't right, Congressman, and something should be done about it."

From Ontario, Canada, comes this letter:

"I am an American citizen and live in Illinois. Last winter I was amazed at the unheard-of wages girls were making in ordnance plants—$50 to $70 a week for unskilled labor. In Canada a girl living here in the capital considers herself lucky even with a college education to be a grade 2 clerk with $90 a month to spend in a country where everything is high."

In one factory in the East, where I found machine-gun assemblers were paid as high as $8,741 a year, I asked for and obtained the annual earnings of 25 of a group of these workers, taking the highest and lowest worker alternately until I had obtained 25. I asked for these figures for 1941 and 1942 broken down into straight pay—that is, 40 hours a week—the amount paid additional each year for overtime and bonus. Out of the 25 machine-gun assemblers in this high-low group, 5 earned in 1942 from $8,000 to $8,741; 7 earned from $7,000 to $8,000; 7 more earned from $6,000 to $7,000; 4 earned from $5,000 to $6,000; and out of the 25, only 2 earned less than $5,000 during 1942—1 who earned $4,959.72 and 1 earned $4,788; 12 out of the 25 received more than $7,000; and 22 out of the 25 earned more than $6,000, all in 1942. These men assembled .50-caliber machine guns, each one assembled a certain part of the gun. The average number of hours worked per employee in 1942 was 47.9 per week. The $8,741 a year paid to the highest paid of these machine-gun assemblers is $241 a year more than the base pay to Lt. Gen. Brehon Somervell, the Chief of the Service of Supply of the entire United States Army, who is charged with the responsibility of procuring and furnishing and supplying on every front in the world what we are told may be an army of 9,000,000 men with clothes, food, fighting equipment, ammunition, etc.

Think of paying a machine-gun assembler $241 a year more than the base pay of Lieutenant General Stilwell, who commands the armed forces in the Chinese theater. The total earnings for these 25 employees for the year 1941 was $87,017.64. These same employees earned in 1942, $171,915.32, or approximately twice the amount they earned in 1941. Their straight earnings in 1941 for a 40-hour week were $71,926.47, and in 1942, $134,775.52. Overtime in 1941 was $10,954.94, and in 1942 overtime was $28,674.25. Other bonuses in 1941 were $4,236.23, and in 1942, $8,465.55. I also took the record in the same factory of 44 .50-caliber machine-gun filers. Of these 44, 2 were paid in 1942, $8,000 and $8,230; 5 between $7,000 and $8,000; 10 between $6,000 and $7,000; 18 between $5,000 and $6,000; 6 between $4,500 and $5,000; and 2 between $4,200 and $4,500; and 1 of the 44 was paid $2,928. Out of the 44, only 9 made less than $5,000 during that year.

I am also enclosing the break-down of the pay roll of these 44 men. This break-down shows that the aggregated total earnings in 1941 was $155,858.34, and in 1942 these same men earned $260,503.62. Their straight earnings for 40 hours per week for the year 1941 were $129,727.32, while their straight earnings for 1942 were $201,275.84. Their overtime earnings in 1941 were $19,500, and in 1942, $44,020. Their bonuses paid them in 1941 were $6,630, and 1942, $15,207. In case after case these people earned more than twice as much in 1942 as they earned in 1941—and then we talk about inflation! These are not isolated cases, as you will find similar cases in other companies. Let us take some of these facts into consideration when we talk of inflation, roll-back of prices, and subsidies. This gives us an illustration of inflation through pay rolls. We try to close the inflationary gap with bond purchases and taxes, while at the same time we keep open that inflationary gap by increasing the purchasing power through excess profits and doubling wages on factory pay rolls. No such policy can succeed.

Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. WHITTINGTON. Mr. Speaker, it is as essential in war to prepare for peace as it is in peace to prepare for war.

The pending concurrent resolution is not only brief but unique. It is the first

time that the House of Representatives has taken the initiative in promoting and maintaining peace. The initiative with respect to peace has heretofore been taken by the Senate, but both the Senate and the House must declare war. There is nothing to prevent both the Senate and the House from promoting peace.

The resolution is an expression by Congress in favor of creating appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world and as favoring participation by the United States therein through its constitutional processes.

The resolution is not only the first step but it is in the right direction to maintain peace. War has been the heritage of mankind in all the centuries. The United States has fought a war approximately every 25 years since the Republic was founded. The First World War was fought to end all wars. The United States cooperated with the Allied Nations to win the war, but the failure of the United States and the Allied Nations to cooperate after winning the war lost the peace. We must not repeat the mistakes of the First World War.

OBJECTIONS

The opponents of the resolution have asserted that the resolution is meaningless. Such is not the case. It cannot be idle or meaningless, as we wage the greatest of all wars, for the Congress to express itself in favor of the creation of machinery to establish and maintain the peace. It cannot be without meaning for Congress to express itself as favoring participation. The expression will stimulate our armed forces and will encourage the nations who fight with us. It will promote the morale of our home people, and it will aid in the buying of bonds, in the collection of taxes, and in the sacrifices essential to winning the war.

Again, it is maintained that the resolution contemplates an international supergovernment with power and authority over the people of the United States. There is no foundation for the view. If this objection obtained, there would be no common war by the United Nations. As has well been said, we are the masters of our destiny.

The resolution is neither a statute, a joint resolution, nor a treaty. It is an expression by the Congress that will bring hope and promote victory.

The details of the international machinery must be worked out later. The agreements must be subsequently negotiated. They must be approved by the Congress. The constitutional processes will obtain.

Those who maintain that the resolution authorizes or contemplates a supergovernment are logically forced to the admission that a supergovernment obtains now in war in the common cause of the United Nations. It is just as sound to assert that we have sacrificed our sovereignty by fighting in war as it is to claim that we would sacrifice our sovereignty by cooperating after the war.

LEADERSHIP

The United Nations are looking to the United States for leadership. The policy of the good neighbor obtaining between the United States, Mexico, Central and South America is being extended to other nations. We seek no territory. We disclaim all aggression either direct or indirect. It is time for leadership not only in war but in peace. The oppressed peoples and the United Nations are looking to the United States for leadership not only in the war but in the peace. The purpose of the resolution is to give to all peoples and to all nations who suffer from the greatest of all wars hope that a just and lasting peace will follow victory.

We fight to preserve America, but peace is essential to the preservation of the United States. Universal peace may be a dream, but if the peace of the world for a century or a half century can be promoted, the present war will not have been fought in vain. Nations are not perfect, but if wars can be ended for a century or a half century, the road to a just and lasting peace will have been constructed.

FORCE

Without the strength of the United States it would be difficult to conquer the Axis nations in the present war. Without the United States it would be difficult if not impossible to make or maintain an effective peace.

As police officers in the city are essential to preserve peace, international machinery is essential to outlaw aggressors and nations bent upon conquest. The people of the United States know that the United States must participate by cooperation and collaboration if peace following the war is to be established and maintained. They also know if provisions are made for police by cities, provisions must be made for force in which the United States shall participate to establish and preserve the peace. The United States must not only do its part in fighting, but it must do its part in cooperating and collaborating to enforce the peace. The passage of the pending resolution will encourage the armed forces of the United States and of the United Nations to greater efforts for a speedy victory. There can be no peace without power to maintain peace. Secretary of State Cordell Hull was right when he said recently that an international agency or machinery must be created which "can—by force if necessary—keep the peace among the nations of the future."

The Possibilities for Chemical Development of Our Natural Gas and Petroleum

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. HARRIS of Arkansas. Mr. Speaker, at a special meeting in El Dorado, Ark., during the recess, the Arkansas congressional delegation and other citizens of our State had the privilege of hearing one of the most interesting and revealing discussions by Mr. W. M. Carney, chief chemist of the Lion Oil Refining Co., on the subject The Possibilities for Chemical Development of Our Natural Gas and Petroleum. Mr. Carney is widely known and a specialist in this field. In order that everyone may have the benefit of this fine speech, under unanimous consent to extend my remarks in the RECORD, I include it herein as follows:

A discussion of the possibilities for chemical development of south Arkansas is considered synonymous with the chemical development of the petroleum industry. It should be considered in two phases: First, development and production of war materials and, second, the development and production of materials for peacetime consumption.

At the present time we have considerable production of petroleum and natural gas in Arkansas but more production is needed. We have refining facilities in this area designed for the manufacture of peacetime products, much of which has been converted to the production of the necessary materials required for mechanized warfare, and a large ammonia plant producing the vital products required for the manufacture of explosives. We have under construction in this area, and nearing completion, additional facilities for the production of aviation gasoline and butadiene. Butadiene is the principal ingredient used in the manufacture of synthetic rubber, Buna-S type.

We will first discuss the development and production of materials for war:

The art of war, since the birth of Christ has been changed and molded to entirely new patterns by only two great influences; namely, gunpowder and petroleum. There is no weapon of offense or defense in modern war that does not require petroleum. We have the evidence that two-thirds of all the entire tonnage consumed in expeditionary forces, including their transportation and protection is petroleum. Whichever side best supplies its armed forces with proper petroleum products, when and where they are needed and comes nearest to denying them to its enemies, when and where needed, will ultimately win. We have the greater part of the world's production of oil, as well as the facilities and "know how" for refining into the various vital products necessary for the successful prosecution of the war and the transportation necessary to place these products at the battlefront wherever it may be.

In this war in which our Nation is engaged there are four main fronts: (1) the fighting front, (2) the factory front, (3) the farm front, and (4) the home front. All are indispensable to victory and oil is indispensable on all these fronts. Ships are indispensable, but the battleships, submarines, or merchantmen would be but a mass of steel without oil. Aviation gasoline is the lifeblood of all aircraft, including bombers, fighters, transports, and trainers. When a plane takes off it uses a runway topped with asphalt furnished by oil industry, and it rolls on wheels equipped with rubber made from products manufactured by the oil industry. The synthetic rubber also serves hundreds of other war purposes on all the fronts stated above, being used on the trucks, tanks, and all other motorized military equipment, on ships, and in many ways in essential civilian activity. A tank without fuel is but scrap iron for the enemy.

Rear Admiral W. B. Young, of the United States Navy, recently stated that "strategically, the petroleum industry is one of the most important in our entire production

program, and it is handling its difficult assignment with outstanding success. The laboratories of the industry have succeeded in developing the finest products for ships, planes, and other equipment and the results in quantity and quality have been magnificent."

The participation of the oil industry in the prosecution of the war does not stop merely with helping to keep our ships sailing, planes flying, tanks rolling, and guns shooting. Upon the industry depends the critically needed lubricants that keep the wheels of war production turning. It supplies the indispensable cutting oils for the metal-working trades that fashion the tools of war. It furnishes petroleum-derived chemicals for various manufacturing processes, huge quantities of oil products for maintaining farm activity, transportation, and industrial operations. Virtually every normal petroleum product is now a war product.

Some of the vital products furnished by the oil industry and their uses are high-octane gasoline, a superfuel which makes it possible for our engineers to design faster and more powerful planes; toluene, the base material for TNT used in shells, depth bombs, and torpedoes; butadiene, for synthetic rubber, to be used in tires, balloon cloth, bullet-proof linings of airplane gasoline tanks; motor oils and fuels. In addition to these well-known products, we have solvents necessary for paints, primers, lacquers, and other protective coatings essential to the implements of mechanical warfare; asphalt for airplane runways and ordinary roads; waterproofing; rust preventives derived from petroleum to prevent deterioration of guns and other equipment exposed to the elements; oils developed by the industry for treating the wool used in blankets and uniforms; other oils used in the manufacture of rope and rope products, such as fiber conditioning oils, jute-treating and cordage oils; anti-slick grease for submarines, used to lubricate the fins without leaving oil spots, as the grease sinks instead of floating. The petroleum industry supplies various oils used in processing and packaging foods for shipment to our armed forces and allies, such as refrigerator oils used in the necessary refrigeration to keep food fresh; insecticides for control of mosquitoes, flies, and otner pests; salves and light mineral oils of many kinds are used in speeding recovery of our wounded; oils for soaps and toilet preparations to keep the men clean and healthy; low-temperature greases for aircraft which remain fluid at 60° below zero and yet function at 200° above; hydraulic oils for activating turret-gun mechanisms; a liquid is provided to impregnate shoes against war gases; a special emulsion has been developed to protect sandbags and tents against mildew; proper greases to lubricate and lengthen the life of wire rope; special turbine oils containing such petroleum derivatives as butylated paracresol, naphthenic acid salts, and sulfurized cracked hydrocarbons; veterinary medicines containing light oils and petrolatums; livestock sprays; lubricants for delicate airplane instruments; Diesel fuel for submarine and other Diesel powered boats; medicinal preparations for prevention of athlete's foot; oils for dust-laying; oils for large-gun recoil mechanism; lubricant for gun muzzle and oils for protecting shells; leather-treating and preserving oils for waterproofing leather. This is by no means a complete list of the products furnished by the oil industry but enough to show the important contribution to the war effort being made by the oil industry.

The ammonia plant is using natural gas as raw feed stock to produce anhydrous ammonia and ammonium nitrate, and all the important explosives being used contain ammonia as one of the principal ingredients.

In discussing natural gas produced in south Arkansas, we may mention that the gas as produced, contains from 1 to 4 tons of recoverable sulfur per million cubic feet. This sulfur is considered a valuable product in view of developments which have been made for its recovery and purification, and the decline in sulfur production in south Louisiana and Texas.

Looking beyond the war we foresee an abrupt drop in the production of some war materials, while others will find a peacetime demand. Toluene, so necessary for the production of explosives, will be converted to help make aviation gasoline blending agents. The peacetime volume of aviation gasoline capacity will be tremendous. There will be higher quality gasoline for the ordinary motorist, as well as plenty of aviation gasoline for expanded civilian use of air lines and private planes. It is predicted that soon after the war, new automobiles will be manufactured which will require 90–95 octane gasoline. Technical men say that automobile gasoline mileage can be increased 50 percent or power 70–100 percent by using the aviation-type fuel developed for war use. To get the most out of the new gasoline will require new motors which will be smaller and probably made of light alloy steel and the bodies made of plastics made from petroleum feed stocks. Some of the most revolutionary developments of research during the war period have been kept secret for military reasons; for example, one major oil company has been testing a new aircraft grease designed to lubricate at minus 100° F. which is expected to have useful post-war applications in refrigerator equipment.

The future, according to petroleum chemists, will see 100,000 mile tires, 20,000 mile lubricating oil, 50–70 mile-to-the-gallon gasoline and sealed cooling systems with petroleum product liquids in both cars and planes. A now unbelievable volume of crude oil and natural gas will be diverted to raw materials for plastics, for textiles that will replace linen and wool, as well as silk and for commercial solvents and synthetic resins. As both petroleum chemistry and the oil industry mature, conservation will become more important. No survey of petroleum chemistry's part in war and its prospective part in peace can overlook the role of gas, both natural and refinery gases. Natural gas, usually found in the search for new oil fields, is about nine-tenths methane. We have enough proven reserves at present rates of consumption to last from 30–60 years. The ammonia plant, using natural gas as feed stock can produce formaldehyde and methanol, among other things, and formaldehyde has become industrially important as feed stock for bakelite and urea resin plastics, Petroleum gas fractions are useful in making plastics, synthetic rubber, synthetic fabrics, such as rayon, solvents, explosive and aviation gasoline. Ethylene, a petroleum gas, can be used to make ethyl alcohol, plastics, styrene used with butadiene to produce rubber, as a surgical anesthetic, to produce aviation gasoline, and in many other ways. Methane gas heated with steam breaks down into carbon dioxide and hydrogen may be converted into oil. Paraffin wax, one of the by-products can be oxidized to make fatty acids for soap, or in combination with synthetic glycerin into edible fats.

Oil as an industry is rich enough and progressive enough to raise a large family of healthy new infant industries from the thousands of new products incubating in its research laboratories, to result in the modification of a large chemical company's slogan, to "Better things for better living through petroleum chemistry."

Double Taxation—Its Blighting Effects

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. CELLER. Mr. Speaker, "the present method of taxing corporate incomes is grossly unfair"; so declares a former Under Secretary of the Treasury. He is referring to the double taxation of corporate dividends, which he says, "should be stopped." He is right.

The great inequity in the corporate tax system arises from the double taxation of income paid out in dividends. Such dividends are taxed to the individual recipient like any other income, such as salary or interest.

However, salary and interest are deducted by the corporation or individual who pays them; hence, these items are taxed as income only once.

Corporate income today is subjected to a tax of 40 percent, composed of normal tax and surtax.

The surtax on corporate earnings is merely a subterfuge disguised to enable the collection of a tax on the interest on certain Federal bonds, which are subject to surtaxes only. The surtax is merely an addition to the normal tax. It is so admitted by those responsible for its enactment. In no other country, to our knowledge, is such a tax levied.

Corporations are permitted no deduction or credit for dividends paid. Hence, the dividend income which a common stockholder receives has already been reduced by nearly one-half by the heavy income taxes—40 percent—paid by the corporation. Upon these dividends he receives—already reduced one-half by the corporate income tax—the stockholder then pays the usual normal tax and surtaxes in his income brackets.

Dividends are thus much more heavily taxed than interest or salaries; with a long train of unfortunate consequences and blighting effects set out below.

Let us go back to the fall of 1913, when the first income-tax measure became law, following the adoption of the sixteenth amendment.

The scene is the floor of Congress. Members are confused by this new form of tax. A prominent member of the House Ways and Means Committee is answering questions. He solemnly assures Congress that "There will be no double taxation. Of course, if a corporation pays a tax on its income, there should be no tax imposed on the dividends received by persons from that corporation."

What has happened to that solemn promise? It has gone down the drain.

The British income tax has served as a pattern for much of our tax legislation. Since our fiscal experts so frequently refer to British taxes, it might be asked, Why have we not followed the British plan in taxing corporate earnings?

Under the British plan, the tax may be said, in reality, to be a tax on the stockholders, which is collected at the source.

Stockholders are given credit for taxes already paid on income distributed as dividends.

Stockholders who receive dividends pay no additional tax on these dividends, unless their total income, before exemptions, exceeds £2,000, $8,000. If their income exceeds that amount, they become subject to the surtax at rates ranging from 10 to 47½ percent.

On the other hand, if their total income, after exemptions, is less than £165—$660, they are entitled to a tax refund from the Government.

In Britain, a single tax is imposed—corporation profits in the United States are taxed twice. Is that justice?

The largest corporations in this country are owned by hundreds of thousands of stockholders—in some over 50 percent of the stock is held by individuals with average holdings of 1 to 10 shares each. Corporate taxes are paid indirectly by these stockholders—because of the 50-percent reduction in dividends.

The following are some of the blighting effects of our American plan:

First. The system, being unsound to start with, cannot distribute fairly the severe increases in tax burdens which corporations have been and will be required to bear.

Second. A tax which reduces dividends by half, is in substance a 50-percent tax on stockholders' income—a pretty high rate even under present conditions.

Third. No account is taken of the fact that corporate income has already been heavily taxed as such, and may have been subjected to excess-profits taxation as well.

Fourth. This discrimination against corporate income is perhaps the most serious offense against fairness in the present tax law.

Fifth. The present corporate normal income tax and surtax—40 percent—have nothing to do with individual capacity to pay, is justifiable only as an excise tax for the privilege of doing business in corporate form.

Sixth. So viewed, the rates are excessive for the privilege enjoyed.

Seventh. What is more serious, however, the tax rests with disproportionate severity upon stockholders with small incomes, and the inequity increases with increases in tax rates.

Eighth. Owners of small enterprises must weigh carefully whether the advantages of a corporate charter, chiefly limited liability, are worth the cost in Federal and States taxes. We do not believe that Congress deliberately intended to discourage the use of the corporate form by small business—yet that is definitely the consequence of the present tax method.

Ninth. This system encourages debt financing rather than stock financing. For tax purposes, bonds, notes, or debentures are altogether better as a part of corporate capitalization than stock. Interest on bonds, notes, or debentures are deductible expenses.

Tenth. This policy is in direct contrast with that enforced by such regulatory bodies as the Securities and Exchange Commission and State utilities commissions. They have urged the reduction of debt and have discouraged debt financing; they have encouraged equity financing by all possible means.

Eleventh. The publicly regulated corporation, therefore, is placed squarely in a dilemma. If it retires bonds and issues stocks, its financial position, from the tax angle, is much worse. It may come under an excess-profits tax liability which it would not otherwise have had to bear. It may even arrive at a point where further financing for new construction is almost out of the question, because of its low earnings ratio.

Twelfth. Finally, the structure, in its discrimination in favor of debt financing, fosters capitalization of a type generally agreed to be undesirable—a type which has been the major cause of the difficulties from which many of our corporations, such as railroads, have suffered.

The present scheme of taxing dividends twice and all other income once cannot be justified on any grounds.

What is the remedy? There are several—all very simple.

Why not follow the British plan? It has been tested and proved satisfactory. We have readily adopted other features of the British system.

Or, we can return to the original procedure, prior to 1936. Give a credit either to the corporation against its normal tax and surtax for the dividends it distributes, or to the individual against his normal tax for the dividends he receives.

If the former were adopted, much of the loss would be made up by additional dividends, subject to taxation in the hands of the stockholders, and made possible by corporate savings due to credit.

A corporation should be regarded as a conduit for transmitting earnings from the business to its owners, not as a tax-paying unit entirely apart from its owners. If the corporation has already paid a normal tax on its earnings, a second normal tax should not be imposed on the same earnings distributed as dividends.

If it is convenient and appropriate to collect a normal tax from the corporation on its earnings, stockholders should be credited with their pro rata shares of the taxes so paid. In this way, dividend income will not be discriminated against; it will be treated, in effect, like bond interest.

Corporations would be free to choose whether to issue bonds or stocks on the basis of good business—not tax—reasons.

Finally, with this tax reform put into effect, the present high corporate rates would not bear with such extreme severity on the small stockholder and the small corporation.

The present policy, if continued, will be very expensive to the national economy.

Former high Treasury officials strongly urge this reform.

A recent report of the National Industrial Conference Board, titled "Effects of Taxes Upon Corporate Policy," contains substantial evidence to support the foregoing statements.

Senator GEORGE, distinguished chairman of the Senate Finance Committee, in discussing recently the question of "double taxation," arising out of present corporation and individual income tax provisions, stated "it may well be considered in the tax simplification bill."

I commend to my colleagues of the House Ways and Means Committee their earnest consideration of these views.

The forthcoming tax bill should scrape off many of the barnacles that cling to our tax structure. Double taxation of dividends impedes the smooth flow of business. Removing such impediments from the tax structure would encourage and increase dividends and thus augment revenues flowing into the Treasury.

No one would be hurt. The Government would benefit. The smaller taxpayer or poorer member of society, for example, the laboring man, would not be penalized for the benefit of the more prosperous member of society.

You would not interfere with the principle of taxation in accordance with ability to pay.

A Letter

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, the following is a letter which I am mailing to some of the people of my State. The letter is as follows:

MY DEAR FRIEND: I am writing you this letter to ask you for your vote and your support in the coming Governor's election to be held on January 18, 1944.

You, of course, realize that I am far better known all over Louisiana today than in the last Governor's race. My backing is more substantial than ever before. Then, too, my service here in Congress has enabled me to demonstrate that I can be of real service to the people and leaves no doubt in your mind that I will make the kind of Governor you want. Even my worst political enemies praise my work here in the Nation's Capital. If I can assist you at any time I hope you will feel free to call on me.

This is not the time to burden you with my platform, possibly you have read it or will read it in the near future. It may be that I will not have the opportunity to see you and talk with you before election, so that is why I am writing you this personal letter asking for your vote and support in order that we will win a great victory on January 18, 1944.

With kindest personal regards, I am

Sincerely yours,

JIMMY MORRISON,
Member of Congress.

P. S.—If I can be of any service to you please write me either in Hammond, La., or in Washington, D. C.

Regards,

JIMMY.

Resolutions of the Livestock and Feed Conference

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. SCHWABE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include resolutions adopted by the livestock and feed conference, Thursday, September 2, 1943, Kansas City, Mo. Two thousand persons, representing all phases of the livestock and meat industries, were present and approved of the resolutions unanimously. The States represented included the West-Central and Southwest range States and the Corn Belt or feeder sections of the country. I am sure they will be of interest to every Representative in the Congress.

PREAMBLE

We have a dual purpose in this meeting:

First, to present the picture of the livestock industry to the country, in order that immediate corrective steps may be taken before further serious damage is done our industry and our country; and

Second, to acknowledge the major and direct interest the consumers of the country have in what we are seeking to accomplish here today.

We need the consumers—the consumers need us.

RESOLUTION 1

WAR MEAT BOARD

Whereas from the very beginning of the imposition of price ceilings on meat, the net result of confusing and conflicting orders and statements has been to bring chaos to one of our Nation's greatest and most necessary industries; and

Whereas the livestock and meat industry, at a conference held in Chicago early in April 1943, unanimously adopted a meat management program which, in its opinion, would go far in controlling black markets, encouraging maximum production, and insuring better distribution of meat available; and

Whereas the War Food Administration, the Office of Price Administration, and the Office of the Quartermaster General approved the general principles of the plan as submitted by the industry following the Chicago meeting, and by agreement set up the War Meat Board to administer the war meat management program; and

Whereas despite such approval, the War Meat Board has not been given an opportunity to carry on the program outlined but, instead, there have been continued threats of live animal ceilings, allocation of supplies, and even Government purchase of all livestock and meats: Therefore be it

Resolved by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we urge the responsible Government agencies dealing with the war food program to clear the track so that the War Meat Board can properly function, and in the meantime to see that threats of further Government controls which would hamper rather than help be immediately stopped.

RESOLUTION 2

CEREALS AND VEGETABLE PROTEINS AS MEAT SUBSTITUTES

Whereas provincially minded people, completely failing to grasp the importance of livestock in our national economy, and ignoring the detrimental effect of a reduced meat diet on our national health, have urged that we must turn from the long-established practice of feeding grain and protein concentrates to livestock, to a new national program which contemplates far greater direct use of cereals by the human population, and to some extent the substitution of vegetable proteins for animal proteins in the diet, utterly ignoring the fact that animal proteins are far superior to vegetable proteins in stimulating and supporting the human body processes; and

Whereas 55 percent of our national acreage is in grass and only through its use by livestock can it be efficiently processed into human food; and

Whereas the nutritional basis of Anglo-Saxon success is the reliance on a meat diet, the importance of which is attested by the demands of the Army for meat far in excess of normal civilian per capita consumption: Therefore be it

Resolved by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we strongly protest the loose thinking and loose talking of those who, in the name of the war emergency, would seek to make impractical changes which would be disastrous to the country as a whole and could only seriously hamper the war effort itself.

RESOLUTION 3

SUBSIDY ROLL-BACK

Whereas, in order to appease those whose buying power is greater today than ever before in the history of the country, the subsidy roll-back program applying to meats and butter was initiated some weeks ago; and

Whereas, as anticipated, this program was immediately reflected in the livestock markets with packers making strenuous efforts to buy on a substantially lower basis, and it is now clear that in many instances the price already has been rolled back on the producer and feeder; and

Whereas the use of subsidies for such purposes, necessitating, as they do, even greater taxation than the heavy burden now being borne, is frowned upon by the rank and file of the people of this country: Therefore be it

Resolved by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we urge Congress to take such action as would insure a discontinuance of the present subsidy roll-back program and put a stop to the efforts to expand it.

RESOLUTION 4

GOVERNMENT BY DIRECTIVE

Whereas there has been a decided trend toward government by Executive order, directives from the White House being issued in increasing volume and with the full force and effect of law; and

Whereas these directives are often developed by staff employees with little, if any, practical experience in the field of operation to be governed by such orders: Therefore be it

Resolved, by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we urge Congress, the direct representative of the people, again to assume the responsibility of lawmaking, and that there be a cessation of lawmaking by Executive order except in cases of extreme emergency.

RESOLUTION 5

CONGRESSIONAL JOINT COMMITTEE

Whereas we deeply appreciate the presence here today of many State Governors, United States Senators and Representatives, thereby attesting to the recognition of the seriousness of the meat problem confronting the Nation today; and

Whereas the recommendations of the livestock industry as to how to terminate the present chaotic condition have been largely ignored by the administrative officials in Washington and particularly by the officials of the Office of Price Administration: Therefore be it

Resolved, by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we urge the Senators and Representatives here today to take it upon themselves to form a joint committee, of which they will be the nucleus, and that this committee devote itself to the current problems of the livestock industry and demand that the administrative officials take immediate steps to restore confidence in the industry, and to assure maximum meat production during the coming feeding season. We believe this can best be accomplished by putting into effect immediately the meat management program which the War Meat Board was set up to administer.

RESOLUTION 6

CANCELING CONTRACTS FOR PROTEIN CONCENTRATES

Whereas the Commodity Credit Corporation, in recently announcing the new and substantially higher schedule of prices for protein concentrates for the 1943–44 crop, also arbitrarily canceled all existing contracts for old-crop cake and meal, although offering to resell the contracted product to the same users at an advance in price of $10 to $12 per ton, the profit resulting therefrom to go into the fund of Commodity Credit Corporation, and

Whereas such cancelation of existing contracts will cause many feeders of livestock to take substantial losses on operations planned months ago, without any chance to protect themselves from such losses, and

Whereas this action is resulting in many feeders emptying their feed lots and refusing again to assume the heavy risk of feeding livestock unless action is taken to reimburse them for losses suffered on bona fide contracts: Therefore, be it

Resolved, That we, the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, urge the Commodity Credit Corporation to honor claims filed by feeders for the amount of loss suffered under such bona fide contracts.

RESOLUTION 7

LOW BYPRODUCT PRICES

Whereas for more than a year rigid price ceilings have been maintained upon dressed-meat products, and in the case of beef these ceilings are relatively low compared with the long-time relationship between beef and other meat products; and

Whereas the cost of labor, grain, and protein concentrates has advanced substantially without a compensatory advance in the meat ceilings themselves being permitted; and

Whereas it is recognized that any move to decrease fat-cattle prices below levels existing today would inevitably further discourage feeders and retard beef production: Therefore, be it

Resolved by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That as a partial measure of relief the ceilings on hides and other by-products should be immediately raised to a reasonable level.

RESOLUTION 8

PROTEIN CONCENTRATES

Whereas during the past year there developed a serious shortage of protein concentrates not due to any decrease in supply but only to sharply increased demands and poor distribution; and

Whereas now all is confusion as to the program—if program there is—for the distribution of these protein concentrates during the coming season; and

Whereas it is of first importance that both producers and feeders should be able to plan now—immediately—for their operations

during the coming winter, in order to determine the size of the herds to be carried over or the amount of feeding to be done; and

Whereas unless producers and feeders are enabled to purchase these products in reasonably adequate supply within the next few weeks, it will of necessity cause substantial liquidation of breeding herds and reduce feeding operations: Therefore be it

Resolved, That we, the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, urge the Commodity Credit Corporation to make an immediate announcement of a program for the equitable distribution of protein concentrates from the 1943–44 crop, and that producers and feeders be allowed to buy the product in the customary form and protein content.

RESOLUTION 9

PACKER MEAT QUOTAS

Whereas the rationing of meat to consumers and the set-aside order to packers make entirely unnecessary the continuance of the packer quota system covering volume of meat to be made available for civilian use; and

Whereas the operation of this quota system has tended to encourage black markets and has unnecessarily increased the transportation burden because local packers in surplus livestock producing areas are not permitted to slaughter in volume sufficient to meet the local ration coupon demand, causing livestock to be shipped out, processed, and the product returned for distribution: Therefore be it

Resolved, by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we commend the War Food Administration for its action yesterday in suspending these quotas for 60 days and urge that the suspension be made permanent.

RESOLUTION 10

MEAT PRODUCTION

Whereas with so much publicity on the shortages of meat which developed this spring, it is not generally realized that the livestock industry has tremendously expanded meat production, setting a new record for total production in 1940, 1941, and 1942, with every indication that this year's total production will exceed the all-time record set last year; and

Whereas despite this record of great production, administrative agencies have resorted to charges that the livestock industry was responsible for the shortages so much publicized by hoarding livestock which should have gone to market; Therefore be it

Resolved, by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we protest this unfounded charge of hoarding, which was nothing but a smoke screen to cover up the bungling of the said administrative agencies.

RESOLUTION 11

LIVE ANIMAL PRICE CEILINGS

Whereas over a period of 50 years or more the livestock industry of this country has developed an intricate system of marketing which enables producers in any section of the country to make immediate spot-cash sales in public markets, auction markets, concentration points, or, in many instances, right on the home farm or ranch; and

Whereas the Office of Price Administration, unaware of the confusion that would result from disturbing this marketing system, has repeatedly threatened to impose live animal price ceilings which would completely upset this whole marketing structure, make necessary a complicated and unworkable system of allocating supply, and would in effect merely extend to the producing end of the industry the same confusion that has existed in the processing end ever since the imposition of the first price ceilings; therefore, be it

Resolved by the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, That we are unalterably opposed to any tinkering with our marketing structure and demand that the threat of live animal ceilings be removed from the livestock picture at once.

RESOLUTION 12

ADMINISTRATION RESPONSIBILITY

Whereas it has been clearly shown that both feeders and producers have made every effort to expand meat production; and

Whereas unfortunately, administration tactics have leaned largely toward the pyramiding of regulations instead of toward cooperative effort that would bring far greater results; and

Whereas there are in the country record numbers of livestock, and prospects are for production of fairly adequate supplies of coarse grains and protein concentrates; therefore, be it

Resolved, That we, the Livestock and Feed Conference, in session at Kansas City, Mo., September 2, 1943, desire to call the attention of the consumers of the country to the fact that if under these conditions there should develop, next winter and spring, an even more serious shortage of meat, and particularly beef and lamb, than was the case last spring—and such a situation now seems possible unless administrative agencies move quickly along the lines long recommended by the livestock industry itself—that the full responsibility for such a meat shortage must be accepted by the administration.

RESOLUTION 13

BLACKSTRAP MOLASSES

Whereas there is a definite shortage of proteins (cottonseed cake, soybean pellets, etc.), as well as grains (corn, etc.); and

Whereas blackstrap molasses is increasingly important as an ingredient in dairy, range, and poultry feeds: It is hereby

Resolved, To request the Secretary of Agriculture and the Chemicals Division of the War Production Board, Washington, D. C., to reconsider W. P. B. Order M-54, with the object of providing additional quantities of blackstrap molasses for general feed use, and permitting a more flexible administration of the order through increasing the use of molasses for feeding purposes.

RESOLUTION 14

SUGAR BEETS AND THEIR BYPRODUCTS

Whereas in the sugar-beet-growing sections of the country a large and very important livestock-feeding business has been developed by feeding of beet byproducts; and

Whereas the uncertainty of the sugar-beet program and the out of balance of prices fixed on sugar beets in relation to other farm crops have resulted in a curtailed acreage, thereby reducing the supply of our essential sugar and meat: Therefore be it

Resolved, That we urge upon the War Food Administration, first, that there be no restriction in the planting of sugar beets; and, second, that a price be set on sugar beets that will encourage a normal planted acreage.

The New Deal and Diocletian

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks, I include a speech delivered before the Rotary Club of Gulfport, Miss., by Mr. Clayton Rand, a country editor, on The New Deal and Diocletian.

I wish every American might have the opportunity to read this sound and thought-provoking speech. It contains the kind of material which should in this troubled world of ours give us assurance that the urge for liberty in the breasts of men cannot and will not be destroyed. It follows:

THE NEW DEAL AND DIOCLETIAN

(By Clayton Rand)

I preface these observations on the New Deal and Diocletian, with a cogitation on Caesar and the Third Term, written in August 1940.

"Caesar was born in wealth. His mother was of a distinguished family, and when his father died his mother trained him for a political career. Caesar was a pampered child, reared in the lap of luxury. He was noted for his extravagance and political intrigues. When the masses were enfranchised, Caesar played to the crowd and became a popular idol. He joined forces with radical parties, and as soon as he came into full power the Roman constitution ceased to exist.

"Caesar spent tax money lavishly. He provided public entertainment, like W. P. A. theaters, and sponsored many projects to 'relieve unemployment.'

"Caesar proposed a digest of all laws, founded libraries, drained marshes, built dams, enlarged harbors, and dug canals. He made financial proposals for the relief of debtors and in a 'great emergency' he took steps to restore agriculture. He even changed the calendar. As his spoils system spread throughout the republic, he became so popular with the people that the Roman Senate granted him the sole right of disposal of funds from the public treasury—blank checks as it were—and finally gave him the power to declare war and make peace.

"Caesar preserved his writings for posterity in a special vault. He feasted and feted the people with prodigal extravagance, until they called him the great humanitarian of his country. Caesar's 'person was declared to be sacred and, of course, he could not appear in public debate with any common mortal.

"In Caesar's fifty-seventh year, he aspired to be king in name as well as in fact. As Shakespeare described it: Antony set a crown upon his head. When Caesar put it by Antony offered it to him again, then he put it by again. But there was a columnist present named Casca who was keen-sighted, and Casca reported: "To my way of thinking he was very loath to lay his fingers off it. And then it was offered the third time and as he refused it, again the rabble shouted, and clapped their hands, and threw up their sweaty nightcaps.' And Casca went on to say that he, 'durst not laugh out loud'."

Under Julius Caesar the power of the Roman Senate declined—his followers so emasculated it that it became but a symbol.

PLANNED ECONOMIZERS

The past is the only criterion by which we may anticipate the future. The chaotic times in which we strive for a planned economy have many counterparts in history.

In the spinal column of my last sheet I made this observation on planners:

Sir William Beveridge, of London, with his womb-to-tomb post-war plans has been visiting in Mississippi. Congress has shelved Uncle Frederic Delano's cradle-to-grave scheme and has appointed a committee of its own to concoct a perfect world. And the more these planners blueprint the future the darker the present becomes.

The trouble with these planners and plotters is that they all appeared on the scene

too late. They should have started in the Garden of Eden.

It must be a great disappointment to God that He didn't have some of these experts on hand to help Him when He planned creation.

From the time the Lord created the earth, man has monkeyed with divine purpose. The Ten Commandments are rather comprehensive. They were so well planned that God has not seen fit so far to amend a single one of them. If they were ever adopted by a legislature or a Congress, however, some "planning economizer" would attempt to improve upon them.

There is nothing new in planned economy. From the time of which we have any record attempts have been made in every civilization and in every age to provide short-cuts to social security and perpetual prosperity.

I heard a businessman make a speech before the New Orleans Rotary Club on postwar planning. He threw out the fact that Louisiana, the twenty-first State in the Union in population, was second only to New York in bonded indebtedness.

He did not say it, but the $180,000,000 debt of Louisiana, and the staggering load in New York are largely the creations of Huey Long and Franklin Roosevelt, whose political careers and domestic ideas so closely coincide.

Huey Long and Franklin Roosevelt lifted a page from the Caesars and Diocletian. Neither of them, either on his own or with the aid of his economists, professors and experts, could have "thunk" up these things without the help of history.

It may be a pessimistic thought, but Augustus Caesar established a Roman peace, which was to be perpetual.

The Roman highway system began as a defense measure but ended in a W. P. A. project. The empire's colonization scheme began in an effort to create military outposts and ended in farm resettlement projects for indigent peasants and votes. Theater projects were staged to amuse the masses and then perpetuated to relieve unemployment.

The agrarian bill or resettlement project of Tiberius Gracchus in the second century before our era, like the corn law of Gaius Gracchus, which provided for the sale of grain below the market price to the needy, were paternal or vote-catching measures.

By the middle of the first century B. C., 320,000 persons in Italy were receiving doles of corn from the state. If one politician could gain votes by providing corn, why not free olive oil, free shows, and free baths?

There isn't anything in the New Deal's controlled economy that was not tried out first by the Caesars except Harry Hopkins' privy program. And the only idea promoted by the Romans not undertaken by W. P. A. was public baths.

DIOCLETIAN'S EDICT

For this occasion I call your attention in particular to one of the super-super planned economizers of all history. Diocletian became Emperor of Rome in 284 A. D. In an unprecedented depression and a great emergency he sprang a New Deal on the Empire in 301. Under him the Roman senate became politically impotent and the last traces of republican institutions disappeared. Diocletian was of the opinion that social security could be permanently established and the economy of the Empire forever stabilized by the creation of federal bureaus and commissions. Diocletian was vested with absolute authority and he fixed by decree, he thought for all time, in supposedly fair relationship, the intricate processes of society.

The prices of all commodities, wages, and other activities of the people were in complete control of the state. Price ceilings were engraved on tablets of stone and were set up in the market places. Even to this day fragments of this edict are being unearthed in remote places once embraced by the Roman Empire. In all, 800 articles were included in the edict: cereals, wine, oil, meats, vegetables, skins, leather, furs, shoes, timber, clothing, poppy seeds, snails, goat's flesh, underwear, and Numidian mantles were given a fixed selling price. Wages for services rendered from common laborer to dancing teacher and professional advocate, were determined by directive and a bureaucracy regimented everything from the number of acres a farmer could plant to the maximum hours labor could be employed. There was rationing, rent controls, and a kind of interstate commerce commission covered transportation down to the "rent for a laden ass, per mile," which in our coinage was 1.8 cents. Unless the transportation agency of the time carried more than two persons per ass, there was no chance of showing a profit. And the asses that they employed then could not carry more than two passengers.

Rome flourished, its population increased, with the multiplicity of bureaus and coordinators. There were as many stonecutters in Rome as there are stenographers in Washington. The law of supply and demand was repealed and the economic and social life of the people was so completely regulated that a perfect society flourished. A kind of Plato's New Republic or Moore's Utopia or Roosevelt's New Deal or Huey Long's Every Man a King was organized in the Eternal City.

WHAT HAPPENED?

What happened to this strange experiment, this effort to socialize and regiment an empire? We have the verdict in history. Diocletian and his new deal failed to reckon with one significant fact, that neither he nor all his legions could control human nature. Despite the fact that Diocletian punished by death or deportation all violations of his price-fixing agency, the scheme collapsed. Black markets flourished to traffic in meat. Overcharges made by merchants and the money changers who exacted usury were checked, but production also stopped.

Absenteeism became common with labor, merchants closed their marts and went on vacation. Competition disappeared and men neglected to manufacture, to buy and sell, to exchange commodities for services. Farmers ceased to till their land, moved to the cities and society became decadent.

What happened? Individual freedom was destroyed. The essential fires of enthusiasm were extinguished, individual and collective initiative perished. Diocletian took the fun out of work. Authoritative regulation crushed ambition in the masses. However good might have been the emperor's intentions, his attempt to regulate everything that could be controlled to meet a great emergency was disastrous, ultimately fatal, in its effect.

Diocletian stated, in part, in the introduction to his edict, "Inasmuch as there is only seen a mad desire without control, to pay no heed to the needs of the many * * * it seems good to us, as we look into the future, to us who are the fathers of the people, that justice intervene to settle matters impartially, in order that that which, long hoped for, humanity itself could not bring about may be secured for the common government of all the remedies which our care affords. * * *"

Writing of Diocletian's New Deal more than 1,600 years ago, Lactantius wrote, "He tried to fix by law the price of articles offered for sale. Thereupon for the veriest trifles much blood was shed, and out of fear nothing was offered for sale, and the scarcity grew much worse, until, after the death of many persons, the law was repealed from mere necessity."

The passing of Diocletian marked the decline of local self-government and the growth of a centralized system. Probably no Roman emperor proposed so many sweeping reforms. Diocletian completely reorganized the government, set up new systems of coinage and taxation and redivided the provinces. It is interesting to note that a New Dealer has recently recommended dissolving the States and subdividing the Republic into districts and departments. Out of the Emperor's experiments and those that preceded him, sprang the socialistic schemes of later times.

Diocletian ruled for 20 years. The New Deal has run its course for only 10 years, but at the pace it runs, give it 10 more years and it will outdo Diocletian.

TURNING POINT

The collapse of Diocletian's edict also marks an important turning point on the highway of history, for there followed in the wake of his experiments a thousand years of night. From the year 300 almost to the year 1300, that period in civilization is rightly called the Dark Ages. During that night of a thousand years, what was once the Roman Empire produced not a single poet, historian, orator, painter, sculptor, architect, or builder. The practical effect of the decree was to stop the flow of goods into the markets and suspend the activities of the empire. There were no banks, no insurance companies, no transportation companies, no mail service and no newspapers. During this long night society slipped into slavery, human nature became depraved, men became selfish, base, and dishonest. The world was managed by priests and police. They took charge of the taxing power and production. Famines were frequent and the status of the human race, in its fight for food, was little better than that of the beasts of the jungle.

The Roman Empire was built before the coming of the Caesars. For 750 years the Roman citizen had enjoyed more freedom than man had ever before experienced. Under the planned economies of the Caesars it took 150 years to accomplish the complete disintegration of the Empire's commerce and agriculture, and expose it as easy prey to the barbarians. We have been 300 years carving this Republic out of the wilderness. How long will it take the streamlined bureaucrats to destroy it with their regulation, red tape, edicts, and directives?

Despite this bitter lesson of experience, planned economies continued. Frequent upheavals on the European Continent are historic reminders of the countless efforts to regulate and regiment its peoples—authoritative attempts to destroy their freedom and build by a false economy of scarcity. Occasional economic recovery in Europe can be traced down through the centuries in terms of spasmodic freedom.

FREEDOM

I shall not burden you with any recitation upon humanity's periodic recoveries, which came with the Renaissance, political and industrial revolutions, the conquest of the New World, or the Elizabethan age during which the people of England enjoyed a little freedom and went forth with it to build an empire. For the purposes of this presentation let us rush on to the birth of this Republic, for despite England's Magna Carta, freedom, as we understand it, was reborn in the American Revolution against King George II, his planned economies, and his authoritative pressure on the nerve centers of a people determined to be independent.

For 170 years before 1776, the roots of a transplanted, newer freedom were spreading on the North American Continent. American liberty is the product of the soil and genius of the open spaces and open minds of a freedom-loving people who made a covenant with God to release themselves, body and soul, from the ancient bondages of bureaucracy.

Step by step the colonists had severed themselves from European concepts. Full expression was given to the individual's bottled up energy and potential initiative. There developed a new philosophy of government under the leadership of Benjamin Franklin, George Washington, and Thomas

Jefferson that found expression, first in the colonists' indictments against the King in our Declaration of Independence, then in the adoption of our Constitution and its Bill of Rights. I doubt if there is a problem of personal conduct that one will not find an answer for in Poor Richard's Almanac. I doubt if there is a problem of state, or of our relationship with other peoples, that we will not find a solution for in the writings of the Father of our Country. Did he not warn in his third address to Congress, "Be at all times prepared for war; leave nothing to the uncertainty of procuring of warlike apparatus in the moment of danger." If we had heeded that admonition have you any doubt in your mind that either Japan or Germany would have dared attack us? What will the gross negligence of our Government at Pearl Harbor cost the country in blood and treasure? Thomas Jefferson put our newer freedom into a pungent paragraph when he said, "agriculture, manufacture, commerce, and transportation the four pillars of our prosperity, are most thriving when left most free to individual enterprise."

OF THE SPIRIT

When we parted ways with European ologies and isms, we did much more than establish the 10 freedoms that are embraced in our Bill of Rights, the first amendment to the Federal Constitution. The all-comprehensive freedom born on these shores, under the leadership of American patriots, was primarily our freedom to venture. It was not in the letter of the law; the Bill of Rights was but the crystallization of some fundamental ideas. When this Republic was established, it was not in the letter but in the spirit of freedom that the American eagle spread his wings to a new destiny. The fires of freedom that were kindled on these shores were of a red, white, and blue flame glowing in the heart. Born of the emotions, it was a spiritual fire which became a great energizing influence in the releasing of man's latent initiative and creative ingenuity.

I do not believe that the American colonists or their immediate descendants were a superior people. We were of European extraction, but we were superhuman to the extent that we were free to act, to dream and build, to venture, to rise and fall. As free agents working together we built here on this continent more happiness, health, prosperity, and abundance than man had ever known before.

Under the Roman Empire, western Europe with its potential wealth was as much of an opportunity as the North American Continent. Western Europe was populated by barbarians, was rich in natural resources, but was undeveloped because the urge of freedom was nonexistent in the people. The European, under authoritative pressure, had never learned the sublime secret of taking command of himself and dominion over the earth. Bathtubs, plumbing, telephones, phonographs, sewing machines, automobiles, radios, motion pictures, and flying machines are products of the imagination of American genius, byproducts of the freedom to venture, generated by our forefathers who sought and found upon this continent a new freedom, our richest inheritance.

We hear a lot of loose talk about freedom in these times and actually have less of it than we have ever known before. There is more talk of security and less security than America has ever experienced.

"FOUR FREEDOMS"

More recently the catch-phrase of the "four freedoms" has been given currency. They were not all inspired by a people on fire with purpose. Freedom of speech and religion were bought with patriots' blood. Freedom from want and fear were voiced by a planned economizer who for 10 years has limped along the path where Diocletian stumbled. If we translated these "four freedoms" into their more practical application, under democracy's newer dispensation, they would more likely be freedom for politicians, freedom for spendthrifts, freedom for bureaucrats, and freedom for crackpots.

Certainly we shall not find freedom from want and fear along the path of a politically planned economy. Freedom from want and fear are the fruits of the freedom to produce. Every planned economy, from Diocletian to the New Deal, has ultimately led to poverty and fear. Educated fools who would build a fool-proof world, build instead a fool's paradise.

Inch by inch, if not leap by leap, freedom as our forefathers fought for and enjoyed it has been obviously passing out in this Republic. The Interstate Commerce Commission, the Reconstruction Finance Corporation, and many other commissions in our bureaucratic control paved the way, but planned economy came into its own under the New Deal. Bureaucracy reaches its fullest fruition under these modern Diocletians who believe that they can form a perfect society with edicts and directives. The regimentation now upon us was not born of the World Wa . Under the strain and stress of war, we expect regimentation and discipline to the limit of our endurance. But we were pretty well regimented before Pearl Harbor and there are planners and plotters in Washington in uncounted thousands who are looking to peace as another golden opportunity to completely socialize the Republic, destroy what little freedom there is left, and convert this dynamic Republic into a static state, just as the palsied hand of Diocletian reached out from Rome to paralyze and impoverish a rich empire.

Rose Wilder Lane, in her book The Discovery of Freedom, outlines some of the planned economies of the Old and New Testaments, tracing them on their way to poverty, to dictatorship, and to war. Anyone familiar with history can easily prophesy that this Republic will have a new birth of freedom or blood will flow again as it did in 1776 and 1861.

RESOLVE

I have striven to stay a jump ahead in my thinking. I am no alarmist—neither am I pessimistic, for I am determined to do something about the present situation and the threatening future.

Only the indifference, the apathy of the American people can destroy our independence and freedom. Given the facts, I believe the people will become aroused. Once in articulation, our animation and militancy will spread into a contagion and public opinion will salvage the Goddess of Liberty and our American freedom from what has become the Old Deal and the World War.

I light my torch at Runnymede, Concord, Lexington, and, as a southern Democrat, at Appomattox.

There is nothing fixed about freedom. Once gained, it is easily lost. Men and women have fought for it through the ages and will fight again. The crusade for the freedom of the individual will continue as long as there prevails the pursuit of human happiness. God not only made man in His image, He breathed into him the breath of life and kindled within him the infinite spark and he will be free—if he desires freedom above all earthly things.

Let us thank God for the unusual opportunity that comes to us—to keep the flame of liberty alive in a world in which millions are enslaved. The cardinal crimes in America are greed, cowardice, and indifference. First among us are they who have the courage of their convictions, the urge to serve and the will to act.

Thomas Jefferson wrote in 1787, "What country before ever existed a century and a half without a rebellion * * *? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure."

The little freedom man has enjoyed on the face of the earth he has gained by resisting autocratic authority and bureaucratic regimentation, and there is already evidence of a rebellion in the land.

Let us, then, on with the war to a victorious end—united and militant. And free from foreign invasion, let us resolve with peace to crush the sinister influences within that would destroy our individual freedom, our traditional independence, and our American way of thought.

The World War will be of short duration—the fight for freedom will go on into the generations, for liberty is easily lost and is only regained through great sacrifice and heroic effort.

Destroy Individual Ambition and Initiative and You Destroy This Nation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of J. B. Johnson, of Lorain County, Ohio, at a meeting reecntly held near the city of Elyria.

This memorandum represents this writer's personal opinion. It is presented to you at this meeting because it seems some Members of Congress are of the opinion that the basic premise upon which this country was founded and which we have followed in this Nation for more than 160 years should be abandoned and another one substituted for it.

The real function of government as it has been understood until recent times was to provide opportunity for the individual to develop according to his ability, to make him a free and individual man, not a part of a mass. Starting from this premise, we became the richest Nation the earth has ever known in a period of a little more than two men's normal life times. The idea seems to be growing that this scheme of things is all wrong and the function of government should be to provide security to the "masses" and have the Government assume the economic function of all the individuals. I submit for your consideration that such a program will destroy this Nation by destroying individual ambition and initiative, by destroying self-respect and freedom, by destroying its accumulated wealth and debasing its currency, by producing a dictatorship which will finish this Republic. It has well been said that "any society which cannot prevent the development of masses is irrevocably doomed." Certainly then, any society which encourages development of masses writes its own death warrant. You may recall that Benjamin Franklin once said something to the effect that anyone who would sacrifice freedom for temporary security did not deserve freedom and would lose the security.

In this room are a group of businessmen. Whether or not their business is successful depends upon the ability of its management and likewise, the conduct of a Nation's affairs depends upon the statesmanship of its leaders. Statesmanship is just another name for management. The management of business has the obligation to make it successful for the people who invest their savings in it and devote their lives to it, be it one or many, and successful also for the people who work as a part of it so they may have opportunity for

advancement and livelihood. The Nation's statesmen have the obligation to all the people which is contained in the preamble of the Constitution. I read it over again today and it doesn't say a thing about any Government obligation to support the people.

Bearing on this subject, let me give you a very brief quotation by former Premier Daladier, of France. "Actually that part of the French population which creates wealth, which labors for the future, is continually diminishing, while that part which directly or indirectly lives on the state is constantly growing. There is a steady fall in the number of Frenchmen who are ready to bear the risks of enterprise and creation." After it was all over and France had fallen, old Marshal Petain said: "The spirit of pleasure has prevailed over the spirit of sacrifice. The people have demanded more than they have given. They wanted to spare themselves effort Now, misfortune has come." I respectfully also call your attention to the Holy Bible, the fifty-fourth, fifty-fifth and fifty-sixth verses of the twelfth chapter of Luke, which read as follows: "When ye see a cloud rise out of the west, straightway ye say * * * There will be heat, and it cometh to pass. Ye hypocrites, ye can discern the face of the sky and of the earth; but how is it that ye do not discern this time?"

What I have been leading up to is this: The kind of planning which contemplates that the Government shall guarantee the care and support of the individual is fallacious and destructive to any kind of freedom. "Power over a man's support is power over his will." The function of government is to guarantee the right to work, not guarantee support without work.

Government made a hideous mistake in trying to take over the internal economy of our country in the decade of the thirties. It will make an even more hideous mistake in this decade if permitted to take over the individual economy of the citizens of our country. There is a sinister purpose back of any promise of something for nothing. We are being tempted to buy something without knowing what we may have to pay for it.

Respectfully yours,

J. B. JOHNSON.

A Great American

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. HORAN. Mr. Speaker, 39 years ago today—September 22, 1904—a great American, a native American, passed on to his happy hunting ground.

His life forms a part of our America and I am taking this occasion to briefly present this great character whose remains now rest in the cemetery at Nespelem, Wash.:

CHIEF JOSEPH'S LAST STAND—YOUNG JOSEPH, HIS PEOPLE, AND HIS MARVELOUS RETREAT OF NEARLY 2,000 MILES

(Foreword by Donald MacRae)

About 15 miles to the south of the Great Northern Railway tracks at Chinook, Mont., a historic battlefield lies almost forgotten among the ravines and gullies that line the high bluffs of Snake Creek near its junction with the Milk River in the Bear Paw Mountains. Its trenches and earthworks have gradually fallen into decay and the wild flowers and tall prairie grass have nearly obliterated the graves of its historic dead.

Few people today, save possibly those living close by or those interested in Northwest history, can tell you the name of this place or of those who so gallantly fought here; yet less than 50 years ago on this very spot the white man and the red were fighting one of their last great battles.

Chief Joseph and his band of Nez Percé warriors had successfully defeated General Howard's men on the Lolo trail, fought a drawn battle with General Gibbon at Big Hole and were rapidly retreating by a circuitous trail to join Sitting Bull in Canada, but the telegraph of the white man was working against him. Unknown to this Indian chieftain, Colonel (later General) Miles was rapidly marching to the Northwest to intercept him before he could reach the border. Had Chief Joseph known of this he could have easily escaped with all his people as he crossed the Missouri a full day ahead of Miles, but the Three Daughters of the Night decreed otherwise and the opposing forces met at this spot on the 30th of September, 1877.

Three days later General Howard arrived upon the scene and, on the 4th of October, Joseph surrendered with 87 warriors, of whom 40 were wounded, 184 squaws, and 147 children. This was the pathetic message of surrender he sent to General Howard:

"Tell General Howard that I know his heart. What he told me before—I have it in my heart. I am tired of fighting. Our chiefs are killed. Looking Glass is dead. Too-hul-hul-sote is dead. The old men are all dead. It is the young men now, who say 'yes' or 'no' [that is, vote in council]. He who led the young men [Joseph's brother Ollicut] is dead. It is cold, and we have no blankets. The little children are freezing to death. My people—some of them—have run away to the hills, and have no blankets, no food. No one knows where they are—perhaps freezing to death. I want to have time to look for my children, and to see how many of them I can find; maybe I shall find them among the dead. Hear me, my chiefs, my heart is sick and sad. From where the sun now stands, I will fight no more with the white man."[1]

This remarkable Indian had accomplished a feat that will be long remembered as a military exploit of the first magnitude. His small force, which at no time numbered more than 300 warriors, had retreated for nearly 2,000 miles through an enemy country, carrying with them their squaws and children. They had met United States troops 11 different times and had fought 5 pitched battles with them, of which they had won 3, drew 1, and lost 1, a feat that is more remarkable when you learn that the total force opposing them was nearly 2,000 men. But greatest of all is the fact that this campaign was conducted without the destruction of property and the murdering of settlers that usually was a part of Indian warfare.

CHIEF JOSEPH

Young Joseph—he bore this name for a long time as his father was also called Joseph—was the last of the great warrior chieftains. He was a wonderful specimen of the Indian, standing 6 feet tall, straight as an arrow, and wonderfully handsome, his features being as clear-cut as chiseled marble. The New York Sun of September 24, 1904—in commenting on his death—says he was a great orator and though he never spoke a word of English, some of his sayings, translated, have become famous. He is reported to have said, "Look twice at a two-faced man," "Cursed be the hand that scalps the reputation of the dead," "The eye tells what the tongue would hide," "Big name often stands on small legs," "Finest fur may cover toughest meat."[2]

Of his early life not much is known save that he was born in eastern Oregon about 1840. He was the eldest of old Joseph's two sons and the hereditary chief of the lower Nez Percé Indians. His early childhood was most likely spent learning the usual war and hunting arts common to his people, though he did spend some time at Reverend Spaulding's school—Reverend Spaulding was a missionary who spent many years among the Nez Percé Indians.

From his father he learned to be careful when dealing with the whites and to never sell or sign away the lands of his people. This he never did, and it was cause of his taking charge of the nontreaty Indians and consummating his marvelous retreat through the fastness of the Rockies and over the Montana plains nearly to the Canadian border; although he took no part in the massacres that were the immediate cause of the outbreak.

This retreat was a masterpiece of military strategy, his men often holding superior forces at bay while a small detachment of them slipped around one side and cut off the enemies' supplies. His warriors—although the Nez Percés had been at peace for years—were perfectly trained in all the arts of war; in fact, at one time he formed 40 of his men in columns of 4 and in the dusk of early night pulled a surprise attack on Howard's troops—the sentry thinking, by their orderly formation, that they were part of General Howard's cavalry. Gen. O. O. Howard, in his book about the Nez Percé and Joseph's retreat, says of this particular in-

---

[1] American Fights and Fighters, the Nez Percé War, by Cyrus Townsend Brady.

[2] In early years, when the young Joseph appeared before the Government commission to plead for his people and his lands, the commissioners were amazed at his wonderful oratorical powers. This seemed to be a natural gift among the Indians. At the Portage des Sioux (the point of land lying between the confluence of the Missouri with the Mississippi), where in 1815 a treaty was signed which pacified the western Indians, Standing Elk, the great chief of the Maha Nation, delivered his historic address over the grave of the Teton chief, Black Buffalo. "Do not grieve," said the red orator upon that occasion; "misfortune will happen to the wisest and best men. Death will come, and always comes out of season; it is the command of the Great Spirit, and all nations and people must obey. What is past and cannot be prevented should not be grieved for. Be not discouraged or displeased then that in visiting your father here you have lost your chief. A misfortune of this kind may never again befall you; but this would have attended you perhaps in your own village. Five times have I visited this land, and never returned with sorrow or pain. Misfortunes do not flourish particularly in our path; they grow everywhere. [Addressing himself to Governor Edwards and Colonel Miller:] What a misfortune for me that I could not have died this day, instead of the chief that lies before us. The trifling loss my nation would have sustained in my death would have been doubly paid for by the honors of my burial—they would have wiped off everything like regret. Instead of being covered with a cloud of sorrow, my warriors would have let the sunshine of joy in their hearts. To me it would have been a most glorious occurrence. Hereafter, when I die at home, instead of a noble grave and a grand procession, the rolling music and the thundering cannon, with a flag waving at my head, I shall be wrapped in a robe—an old robe, perhaps—and hoisted on a slender scaffold to the whistling winds, soon to be blown down to the earth; my flesh to be devoured by wolves and my bones rattled on the plain by the wild beasts. [Addressing himself to Colonel Miller:] Chief of the soldiers, your labors have not been in vain; your attentions shall not be forgotten; my nation shall know the respect that is paid over the dead. When I return I will echo the sound of your guns."

stance that, "At the Camas Meadows, not far from Henry Lake, Joseph's night march, his surprise of my camp and capture of over a hundred animals, and, after a slight battle, making a successful escape, showed an ability to plan and execute equal to that of many a partisan leader whose deeds have entered into classic story."

Even in his last battle he held out for 4 days against a force that out-numbered his two to one, and his quiet dignity and forbearance at the time of his surrender won him the respect and friendship of General Miles.

"Thus," says General Sherman, speaking of Joseph's surrender to General Miles, "has terminated one of the most extraordinary Indian wars of which there is any record. The Indians throughout displayed a courage and skill that elicited universal praise; they abstained from scalping, let captive women go free, did not commit indiscriminate murder of peaceful families, which is usual, and fought with almost scientific skill, using advance and rear guards, skirmish lines, and field fortifications." [3]

After his surrender, he and his people were sent to Fort Leavenworth and later to Baxter Springs, Kans. In these places many of the Indians died, but it wasn't until 1885 that the sorry remnant of this audacious band was sent to spend the remainder of their lives on the Colville Reservation, in northern Washington, a country similar to their beloved Valley of the Winding Waters and a place where they could live in peace in a climate that they were accustomed to.

For 12 years Chief Joseph lived quietly on this reservation; but in 1897, becoming alarmed by the encroachments of the whites in their reservation, he again took up the defense of his people, this time by going to Washington and pleading with the President. Again it was General Miles—the only white man that he believed and trusted—who promised him that his people would be unmolested in the lands they now occupied.

Returning to the reservation, he again settled down to enjoy the peace and quiet of old age, making only one more trip, this time a friendly visit to the President and his old friend General Miles—for a part of the time during this trip he took part in Cummin's Indian Congress and Life on the Plains during that show's exhibition at the famous Madison Square Garden—and a year after this trip he dropped dead in front of his tepee on September 22, 1904.

In speaking of his death, C. T. Brady, in his book about the Nez Percé War says: "The other day a gray-headed old chief, nodding by the fire, dreaming perhaps of days of daring and deeds of valor, by which, savage though he was, he had written his name on the pages of history, slipped quietly to the ground and fell into his eternal sleep. Peaceful ending for the Indian Xenophon, the Red Napoleon of the West." [4]

CHIEF JOSEPH'S OWN STORY

(With an introduction by the Right Reverend W. H. Hare, D. D., bishop of South Dakota [5])

I wish that I had words at command in which to express adequately the interest with which I have read the extraordinary narrative which follows, and which I have the privilege of introducing to the readers of this review. I feel, however, that this apologia is so boldly marked by the charming naivete and tender pathos which characterizes the red man, that it needs no introduction, much less any authentication, while in its smothered fire, in its deep sense of eternal righteousness and of present evil, and in its hopeful longings for the coming of a better time, this Indian chief's appeal reminds us of one of the old Hebrew prophets of the days of the Captivity.

I have no special knowledge of the history of the Nez Percés, the Indians whose tale of sorrow Chief Joseph so pathetically tells—my Indian missions lying in a part at the West quite distant from their homes—and am not competent to judge their case upon its merits. The chief's narrative is, of course, ex parte, and many of his statements would no doubt be ardently disputed. General Howard, for instance, can hardly receive justice at his hands, so well known is he for his friendship to the Indian and for his distinguished success in pacifying some of the most desperate.

It should be remembered, too, in justice to the Army, that it is rarely called upon to interfere in Indian affairs until the relations between the Indians and the whites have reached a desperate condition, and when the situation of affairs has become so involved and feeling on both sides runs so high that perhaps only more than human forbearance would attempt to solve the difficulty by disentangling the knot and not by cutting it.

Nevertheless, the chief's narrative is marked by so much candor, and he is so careful to qualify his statements, when qualification seems necessary, that every reader will give him credit for speaking his honest, even should they be thought by some to be mistaken, convictions. The chief, in his treatment of his defense, reminds one of those lawyers of whom we have heard that their splendid success was gained, not by disputation but simply by their lucid and straightforward statement of their case. That he is something of a strategist as well as an advocate appears from this description of an event which occurred shortly after the breaking out of hostilities: "We crossed over Salmon River, hoping General Howard would follow. We were not disappointed. He did follow us, and we got between him and his supplies and cut him off for 3 days." Occasionally the reader comes upon touches of those sentiments and feelings which at once establish a sense of kinship between all who possess them. Witness his description of his desperate attempt to rejoin his wife and children when a sudden dash of General Miles' soldiers had cut the Indian camp in two. * * * "I thought of my wife and children, who were now surrounded by soldiers, and I resolved to go to them. With a prayer in my mouth to the Great Spirit Chief who rules above, I dashed unarmed through the line of soldiers. * * * My clothes were cut to pieces, my horse was wounded, but I was not hurt." And again, when he speaks of his father's death: "I saw he was dying. I took his hand in mine. He said: 'My son, my body is returning to my mother earth, and my spirit is going very soon to see the Great Spirit Chief. * * * A few more years and the white men will be all around you. They have their eyes on this land. My son, never forget my dying words. This country holds your father's body—never sell the bones of your father and mother.' I pressed my father's hand, and told him I would protect his grave with my life. My father smiled, and passed away to the spirit land. I buried him in that beautiful valley of Winding Waters. I love that land more than all the rest of the world. A man who would not love his father's grave is worse than a wild animal."

His appeals to the natural rights of man are surprisingly fine, and, however some may despise them as the utterance of an Indian, they are just those which, in our Declaration of Independence, have been most admired. "We are all sprung from a woman," he says, "although we are unlike in many things. You are as you were made, and, as you are made you can remain. We are just as we were made by the Great Spirit, and you cannot change us; then why should children of one mother quarrel? Why should one try to cheat another? I do not believe that the Great Spirit Chief gave one kind of men the right to tell another kind of men what they must do."

But I will not detain the readers of the Review from the pleasure of persuing for themselves Chief Joseph's statement longer than is necessary to express the hope that those who have time for no more will at least read its closing paragraph, and to remark that the narrative brings clearly out these facts which ought to be regarded as well-recognized principles in dealing with the red man:

1. The folly of any mode of treatment of the Indian which is not based upon a cordial and operative acknowledgment of his rights as our fellowman.

2. The danger of riding roughshod over a people who are capable of high enthusiasm, who know and value their national rights, and are brave enough to defend them.

3. The liability to want of harmony between different departments and different officials of our complex Government, from which it results that, while many promises are made to the Indians, few of them are kept. It is a home-thrust when Chief Joseph says: "The white people have too many chiefs. They do not understand each other. * * * I cannot understand how the Government sends a man out to fight us, as it did General Miles, and then breaks his word. Such a Government has something wrong about it."

4. The unwisdom, in most cases, in dealing with Indians, of what may be termed military short cuts, instead of patient discussions, explanations, persuasion, and reasonable concessions.

5. The absence in an Indian tribe of any truly representative body competent to make a treaty which shall be binding upon all the bands. The failure to recognize this fact has been the source of endless difficulties. Chief Joseph, in this case, did not consider a treaty binding which his band had not agreed to, no matter how many other bands had signed it; and so it has been in many other cases.

6. Indian chiefs, however able and influential, are really without power, and for this reason, as well as others, the Indians, when by the march of events they are brought into intimate relations with the whites, should at the earliest practicable moment be given the support and protection of our Government and of our law; not local law, however, which is apt to be the result of special legislation adopted solely in the interest of the stronger race.

Revised Text of Draft Agreement for United Nations Relief and Rehabilitation Administration, Draft of September 20, 1943

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. BLOOM. Mr. Speaker, the Secretary of State has provided members of the Foreign Relations Committee and

members of the Foreign Affairs Committee with copies of a revised text of the draft agreement for a United Nations Relief and Rehabilitation Administration. I understand that the draft agreement has been considerably modified during the last 3 months as a result of restudy of the text by this Government and negotiations with other governments. The Secretary has informed the members that this revised text is now being presented to the other United Nations and the nations associated with them in this war with an expression of the hope that all of these nations will wish to join in signature of this agreement in the near future.

The text of the draft agreement is as follows:

REVISED TEXT OF DRAFT AGREEMENT FOR UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION—DRAFT OF SEPTEMBER 20, 1943

The Governments or Authorities whose duly-authorized representatives have subscribed hereto,

Being United Nations or being associated with the United Nations in this war,

Being determined that immediately upon the liberation of any area by the armed forces of the United Nations or as a consequence of retreat of the enemy the population thereof shall receive aid and relief from their sufferings, food, clothing and shelter, aid in the prevention of pestilence and in the recovery of the health of the people, and that preparation and arrangements shall be made for the return of prisoners and exiles to their homes and for assistance in the resumption of urgently needed agricultural and industrial production and the restoration of essential services,

Have agreed as follows:

ARTICLE I

There is hereby established the United Nations Relief and Rehabilitation Administration.

1. The Administration shall have power to acquire, hold and convey property, to enter into contracts and undertake obligations, to designate or create agencies and to review the activities of agencies so created, to manage undertakings and in general to perform any legal act appropriate to its objects and purposes.

2. Subject to the provisions of Article VII, the purposes and functions of the Administration shall be as follows:

(a) To plan, coordinate, administer or arrange for the administration of measures for the relief of victims of war in any area under the control of any of the United Nations through the provision of food, fuel, clothing, shelter and other basic necessities, medical and other essential services; and to facilitate in such areas, so far as necessary to the adequate provision of relief, the production and transportation of these articles and the furnishing of these services. The form of activities of the Administration within the territory of a member government wherein that government exercises administrative authority and the responsibility to be assumed by the member government for carrying out measures planned by the Administration therein shall be determined after consultation with and with the consent of the member government.

(b) To formulate and recommend measures for individual or joint action by any or all of the member governments for the coordination of purchasing, the use of ships and other procurement activities in the period following the cessation of hostilities, with a view to integrating the plans and activities of the Administration with the total movement of supplies, and for the purpose of achieving an equitable distribution of available supplies. The Administration may administer such coordination measures as may be authorized by the member governments concerned.

(c) To study, formulate and recommend for individual or joint action by any or all of the member governments measures with respect to such related matters, arising out of its experience in planning and performing the work of relief and rehabilitation, as may be proposed by any of the member governments. Such proposals shall be studied and recommendations formulated if the proposals are supported by a vote of the Council, and the recommendations shall be referred to any or all of the member governments for individual or joint action if approved by unanimous vote of the Central Committee and by vote of the Council.

ARTICLE II

Membership

The members of the United Nations Relief and Rehabilitation Administration shall be the governments or authorities signatory hereto and such other governments or authorities as may upon application for membership be admitted thereto by action of the Council. The Council may, if it desires, authorize the Central Committee to accept new members between sessions of the Council.

Wherever the term "member government" is used in this Agreement it shall be construed to mean a member of the Administration whether a government or an authority.

ARTICLE III

The Council

1. Each member government shall name one representative, and such alternates as may be necessary, upon the Council of the United Nations Relief and Rehabilitation Administration, which shall be the policy-making body of the Administration. The Council shall, for each of its sessions, select one of its members to preside at the session. The Council shall determine its own rules of procedure. Unless otherwise provided by the Agreement or by action of the Council, the Council shall vote by simple majority.

2. The Council shall be convened in regular session not less than twice a year by the Central Committee. It may be convened in special session whenever the Central Committee shall deem necessary, and shall be convened within thirty days after request therefor by one-third of the members of the Council.

3. The Central Committee of the Council shall consist of the representatives of China, the Union of Soviet Socialist Republics, the United Kingdom, and the United States of America, with the Director General presiding, without vote. Between sessions of the Council it shall when necessary make policy decisions of an emergency nature. All such decisions shall be recorded in the minutes of the Central Committee which shall be communicated promptly to each member government. Such decisions shall be open to reconsideration by the Council at any regular session or at any special session called in accordance with Article III, paragraph 2. The Central Committee shall invite the participation of the representatives of any member government at those of its meetings at which action of special interest to such government is discussed. It shall invite the participation of the representative serving as Chairman of the Committee on Supplies of the Council at those of its meetings at which policies affecting the provision of supplies are discussed.

4. The Committee on Supplies of the Council shall consist of the members of the Council, or their alternates, representing those member governments likely to be principal suppliers of materials for relief and rehabilitation. The members shall be appointed by the Council, and the Council may authorize the Central Committee to make emergency appointments between sessions of the Council, such appointments to continue until the next session of the Council. The Committee on Supplies shall consider, formulate and recommend to the Council and the Central Committee policies designed to assure the provision of required supplies. The Central Committee shall from time to time meet with the Committee on Supplies to review policy matters affecting supplies.

5. The Committee of the Council for Europe shall consist of all the members of the Council, or their alternates, representing member governments of territories within the European area, and such other members of the Council, representing other governments directly concerned with the problems of relief and rehabilitation in the European area, as shall be appointed by the Council; the Council may authorize the Central Committee to make these appointments in cases of emergency between sessions of the Council, such appointments to continue until the next session of the Council. The Committee of the Council for the Far East shall consist of all the members of the Council, or their alternates, representing member governments of territories within the Far Eastern area, and such other members of the Council representing other governments directly concerned with the problems of relief and rehabilitation in the Far Eastern area as shall be appointed by the Council; the Council may authorize the Central Committee to make these appointments in cases of emergency between sessions of the Council, such appointments to continue until the next session of the Council. The regional committees shall normally meet within their respective areas. They shall consider and recommend to the Council and the Central Committee policies with respect to relief and rehabilitation within their respective areas. The Committee of the Council for Europe shall replace the Inter-Allied Committee on European post-war relief established in London on September 24, 1941 and the records of the latter shall be made available to the Committee for Europe.

6. The Council shall establish such other standing regional committees as it shall consider desirable, the functions of such committees and the method of appointing their members being identical to that provided in paragraph 5 of this Article with respect to the Committees of the Council for Europe and for the Far East. The Council shall also establish such other standing committees as it considers desirable to advise it, and, in intervals between sessions of the Council, to advise the Central Committee. For such technical standing committees as may be established, in respect of particular problems such as nutrition, health, agriculture, transport, repatriation, and finance, the members may be members of the Council or alternates nominated by them because of special competence in their respective fields of work. The members shall be appointed by the Council, and the Council may authorize the Central Committee to make emergency appointments between sessions of the Council, such appointments to continue until the next session of the Council. Should a regional committee so desire, subcommittees of the technical standing committees shall be established by the technical committees in consultation with the regional committees, to advise the regional committees.

7. The travel and other expenses of members of the Council and of members of its committees shall be borne by the governments which they represent.

8. All reports and recommendations of committees of the Council shall be transmitted to the Director General for distribution to the Council and the Central Committee by

the secretariat of the Council established under the provisions of Article IV, paragraph 4.

ARTICLE IV

The Director General

1. The executive authority of the United Nations Relief and Rehabilitation Administration shall be in the Director General, who shall be appointed by the Council on the nomination by unanimous vote of the Central Committee, the Director General may be removed by the Council on recommendation, by unanimous vote, of the Central Committee.

2. The Director General shall have full power and authority for carrying out relief operations contemplated by Article I, paragraph 2 (a), within the limits of available resources and the broad policies determined by the Council or its Central Committee. Immediately upon taking office he shall in conjunction with the military and other appropriate authorities of the United Nations prepare plans for the emergency relief of the civilian population in any area occupied by the armed forces of any of the United Nations, arrange for the procurement and assembly of the necessary supplies, and create or select the emergency organization required for this purpose. In arranging for the procurement, transportation, and distribution of supplies and services, he and his representatives shall consult and collaborate with the appropriate authorities of the United Nations and shall, wherever practicable, use the facilities made available by such authorities. Foreign voluntary relief agencies may not engage in activity in any area receiving relief from the Administration without the consent and unless subject to the regulation of the Director General. The powers and duties of the Director General are subject to the limitations of Article VII.

3. The Director General shall also be responsible for the organization and direction of the functions contemplated by Article I, paragraphs 2 (b) and 2 (c).

4. The Director General shall appoint such Deputy Directors General, officers, expert personnel, and staff at his headquarters and elsewhere, including field missions, as he shall find necessary, and he may delegate to them such of his powers as he may deem appropriate. The Director General, or upon his authorization the Deputy Directors General, shall supply such secretariat and other staff and facilities as shall be required by the Council and its committees, including the regional committees and subcommittees. Such Deputy Directors General as shall be assigned special functions within a region shall attend meetings of the regional standing committee whenever possible and shall keep it advised on the progress of the relief and rehabilitation program within the region.

5. The Director General shall make periodic reports to the Central Committee and to the Council covering the progress of the Administration's activities. The reports shall be made public except for such portions as the Central Committee may consider it necessary, in the interest of the United Nations, to keep confidential; if a report affects the interests of a member government in such a way as to render it questionable whether it should be published, such government shall have an opportunity of expressing its views on the question of publication. The Director General shall also arrange to have prepared periodic reports covering the activities of the Administration within each region and he shall transmit such reports with his comments thereon to the Council, the Central Committee and the respective regional committees.

ARTICLE V

Supplies and resources

1. Insofar as its appropriate constitutional bodies shall authorize, each member government will contribute to the support of the Administration in order to accomplish the purposes of Article I, paragraph 2 (a). The amount and character of the contributions of each member government under this provision will be determined from time to time by its appropriate constitutional bodies. All such contributions received by the Administration shall be accounted for.

2. The supplies and resources made available by the member governments shall be kept in review in relation to prospective requirements by the Director General, who shall initiate action with the member governments with a view to assuring such additional supplies and resources as may be required.

3. All purchases by any of the member governments, to be made outside their own territories during the war for relief or rehabilitation purposes, shall be made only after consultation with the Director General, and shall, so far as practicable, be carried out through the appropriate United Nations agency.

ARTICLE VI

Administrative expenses

The Director General shall submit to the Council an annual budget, and from time to time such supplementary budgets as may be required, covering the necessary administrative expenses of the Administration. Upon approval of a budget by the Council the total amount approved shall be allocated to the member governments in proportions to be determined by the Council. Each member government undertakes, subject to the requirements of its constitutional procedure, to contribute to the Administration promptly its share of the administrative expenses so determined.

ARTICLE VII

Notwithstanding any other provision herein contained, while hostilities or other military necessities exist in any area, the Administration and its Director General shall not undertake activities therein without the consent of the military command of that area, and unless subject to such control as the command may find necessary. The determination that such hostilities or military necessities exist in any area shall be made by its military commander.

ARTICLE VIII

Amendment

The provisions of this Agreement may be amended as follows:

a. Amendments involving new obligations for member governments shall require the approval of the Council by a two-thirds vote and shall take effect for each member government on acceptance by it;

b. Amendments involving modification of Article III or Article IV shall take effect on adoption by the Council by a two-thirds vote, including the votes of all the members of the Central Committee;

c. Other amendments shall take effect on adoption by the Council by a two-thirds vote.

ARTICLE IX

Entry into force

This agreement shall enter into force with respect to each signatory on the date when the Agreement is signed by that signatory, unless otherwise specified by such signatory.

ARTICLE X

Withdrawal

Any member government may give notice of withdrawal from the Administration at any time after the expiration of six months from the entry into force of the Agreement for that government. Such notice shall take effect twelve months after the date of its communication to the Director General subject to the member government having met by that time all financial, supply or other material obligations accepted or undertaken by it.

A Proposed Supermilitary Highway

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. HARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a speech I delivered at a meeting of the Great Lakes-Cincinnati Supermilitary Highway Association in Asheville, N. C., September 10, 1943. It is as follows:

Mr. Chairman and friends, H. R. 56 introduced in the United States House of Representatives January 6, 1943, and now before the Committee on Roads, provides for the construction of a military highway running from the Canadian line near Minot, N. Dak., southward to points near Chicago, Cincinnati, Knoxville, Birmingham, thence to the Mexican border near El Paso, Tex., thence northward through New Mexico, Arizona, Nevada, Utah, and Montana to the Canadian line near Glacier Park. The idea is to extend the Alaskan Highway from near Minot, N. Dak., to connect with the Pan-American Highway at or near El Paso, Tex., and from there west of the Rocky Mountains, but not nearer than 150 miles of the Pacific, to the Canadian border with the hope that the Canadian Government will extend the highway from there to Templeton, Canada, where it would connect with the Alaskan Highway.

In addition to the main road it is contemplated there will be at least three auxiliary highways, possibly more on the east; one running from near Cincinnati, Ohio, to Boston, Mass.; another from near Knoxville, Tenn., to Charleston, S. C.; and a third from near Birmingham, Ala., to Pensacola, Fla. On the west there would be three, one running from Los Angeles, another from San Francisco, and a third from Seattle, all connecting with the main highway. It should be noted that two will touch the Atlantic, one the Gulf, and three the Pacific, with possibly a number of other auxiliaries.

One of the objectives in this proposal is not a new idea. After the War of 1812, when our Navy had given a surprisingly good account of itself, both Army and Navy experts were of the definite opinion there was an outstanding military necessity for a better transportation system leading from the grain fields and industrial cities of the Midwest to the southeastern seaboard, and it was considered sufficiently important to warrant construction at the expense of the Federal Government. Andrew Jackson, hero of the battle of New Orleans, and later President of the United States, felt about the matters the same as the experts, although he was of the opinion that such a transportation system should run from the Great Lakes to the Gulf or from Canada to Mexico and was very definite in his conviction that this same system should touch some outstanding and improved port on the Atlantic seaboard.

Charleston, S. C., being the most prominent port in that section at the time, he suggested the system should run from that port first to Cincinnati, Ohio, and from there to Canada or the Great Lakes. He felt the military necessity for such a transportation system so strongly that when he became President he appointed Army engineers to make surveys with the idea of constructing a double-track railroad system from Cincinnati, Ohio, to Charleston, S. C. A number of routes were considered but Colonel Long of the Engineer Corps recommended that the most feasible and strategic route would

be from Cincinnati direct to Knoxville, Tenn., thence to Maryville, Tenn., and from there via Walhalla, S. C. to Charleston, S. C.

Both military experts and national leaders felt that such a system would insure the Government the necessary materials for the manufacture of munitions and implements of war, a supply of coal and equipment sufficient for our Navy and the transportation of an army from one section of the country to another. Naval experts insisted shortly after the War of 1812 that if this country should again become involved with any of the countries of Europe it would probably be a naval fight and the scene of action would be along the Atlantic seaboard. Our experience for the last 12 months has shown their prophecy was not far wrong, for the progress of our defense in the present war has probably been interfered with by enemy U-boats and submarines more on the Atlantic seaboard than any other section of the world.

It is considered by many that if it becomes necessary to defend the Monroe Doctrine our South Atlantic and Pacific coasts will certainly furnish the rendezvous for our military activities, the loading place for our Navy supplies and the storehouse for every implement of war, and that there should be no delay in providing transportation facilities to the scene of operations, for speed, distance, and direct transportation are extremely vital factors in any defense program. But regardless of where the attack may be the proposed superhighway will mean extraordinary service from every standpoint in meeting the enemy anywhere on the Western Hemisphere. It will facilitate the transportation and concentration of many essentials that will be indispensable should an attempt be made to attack the United States from any direction; it will afford easy access to those sections where, on account of climatic conditions, our soldiers are trained in peacetime and assembled in wartime; it will afford better connection with munition plants, iron and steel plants, storage plants, aircraft plants, and other supply centers of war implements; it will furnish quick service in the delivery of coal, iron, and other materials to plants engaged in the manufacture of implements of war; it will furnish an outlet for transportation from every section of the country to the Atlantic and Pacific coasts and solve the highway problem of transportation to Canada and Alaska on one end, Mexico, Central America, and South America on the other. It will mean that all the steel mills, munition plants, airplane factories, packing plants, grain elevators, cheese factories, garment factories and every other industrial and essential enterprise will all be nearer the base of concentration of our Army and Navy. In addition to facilitating transportation, it would make a tremendous contribution to the efficiency of our air forces by having runways or landing fields thereon at points at regular intervals to accommodate the landing and taking off of any type of airplane.

Well designed and constructed highways have always been considered an essential factor in war or a military campaign. History discloses that such highways have proven to be as effective in prosecuting and winning a war as other outstanding factors. The construction and maintenance of such roads date back to ancient and medieval days. They contributed much to the development and history of ancient Babylon, which was famous for its numerous military roads. One of the most celebrated paralleled the southern boundary of the Assyrian Desert between Persia and Media as far as the Caspian Gates and then down the Parthian Mountains to Bactria. It is referred to by Greek historians as "The great military road" and is said to have been used by Alexander the Great in his expedition against the Bactrians.

Although stone-paved roads were constructed in Egypt, Cyrene, Crete, and other countries, the first system of paved highways for either commercial or military use was built by the Carthaginians when they developed a scientific constructed road system which was so complete and well arranged for military purposes the Carthaginians were able to defend themselves against all enemies for a period of more than 400 years, and it was here that the Romans learned both the art and the value of paved roads in time of war.

Probably one of the greatest engineering accomplishments in highway construction is found in the Inca Road of Peru which extended from Quito in Ecuador to Tucuman in Chile, a distance of over 4,000 miles in length. It traversed some of the most mountainous areas in the world, scaling mountain ranges 14,000 to 15,000 feet in height, crossing canyons thousands of feet deep and traversed vast and burning deserts. Like the highway system here proposed, there were a number of branch or auxiliary roads leading off from the main line; one of which paralleled the western coast of South America for a distance of over 2,000 miles. Historians tell us that this remarkable system of highways was used primarily by the ancient Peruvians for military purposes. It may be interesting to observe that throughout the system, sentry stations, watch towers, and forts were established. In addition there was a system of signal fires and lights located in such a manner that they could be used in transmitting messages from one end of the system to the other in an incredibly short time. Army supplies were stored at irregular intervals along the main road. To illustrate the rapidity of commercial traffic over this road, even before the use of wheeled vehicles, it is said that fresh fish could be caught in the Pacific and delivered in the Incan capital of Cuzco within 30 hours, a distance of more than 300 miles and over mountains 15,000 feet high.

Napoleon I is credited with inaugurating the modern system of military highways in France and in countries conquered by him. Perhaps the most famous road to be constructed is what is known as the Simplon Pass over the Alps into Italy, which was constructed primarily to overcome the difficulties in leading his armies over the St. Bernard Pass in order to attack the Austrians nearly 150 years ago. It is reported that over 30,000 men were employed at one time in the construction of this road, which necessitated upward of 600 bridges and ascended a height of more than 6,500 feet. It was one of the great engineering accomplishments of modern days and contributed immeasurably to the success of his invading armies. This was well recognized by his enemies, and after his downfall they attempted to destroy this highway lest it might prove a monument that would outlive the fame of his military victories.

One of the first outstanding programs undertaken by Adolf Hitler in preparing for the Second World War was the inauguration of a program providing for the construction of highways designed to meet the needs of speed of 100 miles per hour or more over long distances. His original plan called for a little more than 4,000 miles of roadways suitable for fast military transportation purposes, but the program later was expanded to cover upward of 6,000 miles. These roads were separate and distinct from the long-established road-building policy of the Imperial Government and were designed from the standpoint of location to be of strategic military value; the standard width for such roads was 80 feet and constructed so as to carry the heaviest possible load at the highest possible speed. There are in Germany what is known as the Autobahn or motorway highways, and, according to Roger Shaw, over 3,000 road workers representing the state organization known as Autobahn met in Berlin in December 1938 to celebrate the completion of the first 3,000th kilometer in the superhighway system of the Third Reich, and he points out that the principal object in building these roads was purely military, and the roads are "designed to shuttle troops here and there at dizzy speeds." He says that this "system enables motor vehicles to travel at high speed from north, south, east, or west across Germany without passing through a single village or meeting a cross road."

According to the Infantry Journal, 250,000 men were employed on or for the Autobahn in 1935, and by 1939 Germany was extending its military road construction into Czechoslovakia and thence through Rumania to the coastal city of Odessa, in the Soviet Ukraine.

From a standpoint of European military highways, R. M. Smith points out that some of the construction requirements by the German trunk roads were the following: (1) Separation of opposing traffic streams, accomplished by the construction of dual one-way traffic ways with grass boulevards between them; (2) total exclusion of pedestrian, cycle, and animal traffic; (3) separation of all grade crossings by the use of over or under bridges; (4) suppression of all advertisements, poles, and other objects near the highway which might distract the attention of drivers; (5) installation of a clear, simple system of road signals. The construction of these roads was financed by gasoline taxes and funds from the general levy which might otherwise have been used for the dole or relief.

In a speech before the German Reichstag September 30, 1942, Hitler referred to the inadequacy of roads in Russia and boasted of the work being done by the German Organization Todt in constructing gigantic roads in Soviet territory overrun by the Germans, and in June prior thereto the head of the Todt organization acclaimed that a network of super highways had been constructed to carry supplies to every possible front on the western European coast.

THE ALASKAN HIGHWAY

The construction of a highway from the United States to Alaska was discussed for quite a number of years, but no definite proposal for a route was made until about 1928, when Donald MacDonald, associate engineer of the Alaska Road Commission, proposed a road from Hazelton to Fairbanks. Mr. MacDonald organized an international highway association and obtained official support for the project from Mr. Hoover, President of the United States, and Premier Tomlie, of British Columbia, in 1930. In 1933, the first American commission was appointed to study the proposed highway to Alaska and report estimates as to cost of construction. It appears that the road was on the verge of construction when it was lost to the general uncertainties of the depression existing at that time.

But in 1938, the President, under authority provided for by an act of Congress, appointed five men to the Alaskan International Highway Commission to cooperate with a similar commission appointed by the Dominion of Canada to study, survey, and locate what is now known as the Alaskan Highway.

With the bombing of Pearl Harbor and the invasion of the Aleutian Islands by the Japanese, the necessity for the United States to build a military road to Alaska became evident.

On March 6, 1942, the Canadian Government announced its approval of the recommendation of the Permanent Joint Board of Defense—United States and Canada—that a highway be built, and accepted the offer of the United States to construct it. On the same date Maj. Gen. Eugene Reynolds, Chief of Engineers, United States Army, addressed a request to the Federal Works Agency that the Public Roads Administration cooperate in the location and construction of the highway. An agreement was reached under which the Public Roads Administration was to make reconnaissance and loca-

tion surveys, prepare plans, award contracts, or otherwise arrange for construction, and supervise construction.

The War Department was to construct a truck trail road, following as near as might be practicable the route selected after reconnaissance surveys.

Largely by the use of aerial reconnaissance, a route was quickly determined to serve the dual purpose of a supply line to Alaska and a feeder road to a chain of airports established in 1941 through Canada and Alaska by the United States and Canadian Governments. Covering vast stretches of unmapped wilderness, the 1,671-mile international highway from Dawson Creek, British Columbia, to Fairbanks, Alaska, was opened within about 6 months, an engineering feat of first magnitude. Begun in March 1942, the road was ready by October for truck traffic over its entire length.

Seven Army engineer regiments comprising about 10,000 men, two topographical engineer companies, two light pontoon companies, and several other smaller service units were employed in the construction of this road, besides a varying number of civilian employees, probably running to a maximum of 6,000, under the direction of the Public Roads Administration.

Bridge building presented peculiar problems including the construction of one bridge 2,400 feet long, and another over the White River which, contrary to the usual custom of rivers, freezes upward from the bottom. The difficulties of building along the mountainous coast according to the first plans were avoided, however, by the adoption of a route inside the coastal range, such a route being, furthermore, much more easily defensible from invasion.

Altogether the construction of this road in so short a time in spite of varied difficulties has been one of the most brilliant achievements of the Corps of Engineers.

In July 1943, Fergus Hoffman wrote in the Christian Science Monitor: "It may be years before the Alaska Highway is the answer to the tourist's dreams, but even now it is the answer to the Army's dream—a usable supply route to Alaska."

About the same time, Hon. George Black, K. C., M. P., wrote in Industrial Canada, regarding the future economic value of this road: "Contractors for Public Roads Administration of the United States are now following up the preliminary work of the American Army and making it a permanent highway.

"That highway and the piping of Canadian oil from Fort Norman to Whitehorse, where an oil refinery is being built, and piping it thence to Fairbanks, Alaska, will develop that vast unprospected, unexamined northern country, some of it as not yet mapped, faster and more thoroughly than we have ever dreamed of it being done."

THE PAN-AMERICAN HIGHWAY

Writing in the Geographic Review in January 1943, Mr. William E. Rudolph said of the Pan-American Highway: "Most important of all strategic highways, from the long-time point of view, is that connecting the United States with Latin-American countries." This system of routes designed to connect all the countries of the Americas will be, when completed, a means of knitting together these countries, facilitating the interval exchange of commodities and otherwise developing national economy.

The first suggestion for a pan-American system of highways was made at the Fifth International Conference of American States which met in Santiago, Chile, in 1923. A resolution of this conference called for an official Pan-American Highway Congress. This congress, comprised of engineers from 19 Latin-American nations, met in Washington in 1924. The Pan-American Highway was the inspiration of the group. A series of conferences, resolutions, official visits, and reconnaissances have followed.

Until 1942, that part of the Pan-American Highway which is located in Mexico and Central America, known as the Inter-American Highway, was being financed and built mainly by the countries through which it passes, but with some technical and financial assistance from the United States. Each affected country had constructed some part of the road. Three-fifths, or nearly 2,000 miles, of the approximately 3,400 miles of road from Texas to the Panama Canal had been opened for all-weather travel in unconnected sections.

In 1942 negotiations were completed and construction was started which will open an emergency truck road largely on the final line, but with some alternate sections, through Central America to the Canal Zone. It is expected that a $29,000,000 construction program will be fully under way in 1943, and that by June 1944, continuous main-line or alternate sections of the Inter-American Highway in Central America will be in shape for emergency trucking operations on a scale that is expected to meet probable demands.

On May 1, 1941, President Roosevelt commended to the favorable consideration of Congress a report from the Secretary of State and a draft of proposed legislation to enable the United States to cooperate with the governments of the American republics in Central America in the survey and construction of the proposed Inter-American Highway within the borders of those republics. The report pointed out the value of such a highway as an aid to national defense, and called attention to other desirable outcomes such as (1) improved transportation within and between the several countries and the United States, (2) development of new lands and new natural resources, and increased consumption of American imports, (3) increased employment and maintenance of economic structure, (4) increased tourist traffic, and (5) increased market for American automobiles, parts, and garage equipment.

A considerable part of the funds needed to close gaps in Central America was made available through the Inter-American Highway Act passed by the Congress of the United States in 1941. This act authorized the appropriation of $20,000,000 to be used in closing gaps in the section of the highway from the southern border of Mexico to Panama. Because of the importance of the Inter-American Highway in giving access to raw materials and tropical products, as well as for continental defense, our War Department is spending more than $20,000,000 in building 600 to 800 miles of pioneer road along other Central American sections of the highway which could not be immediately built under the cooperative program.

The completed highway will open up a large area of the North American continent capable of producing many commodities for which the United States has been dependent on the Far East—rubber, wool, hard rice, tea, cinnamon, camphor, quinine, copra, oils, varnish gums, abaca hemp, and others. Together with lateral roads that are developing from it, the highway will greatly stimulate the productive capacity of Central America and facilitate an exchange of production among the various Central American countries.

In the Panama Canal Zone the Inter-American Highway connects with the Trans-Isthmian route between the terminal cities of the Canal, Cristobal and Balboa, and also between the two Panamanian cities of Colon and Panama. Working day and night, the United States Public Roads Administration completed, in 1942, two highways of great value to the defense of the Panama Canal, namely, the Trans-Isthmian Highway and the Chorrera-Rio Hato Highway, a section of the Inter-American Highway leading to important air defense for the Canal.

In 1941 about three-fourths of the South American section of the Pan-American Highway system was passable at all seasons. Although the mileage added to the system in fiscal year 1942 was not impressive, a firm basis was laid for more definite future progress.

Over the completed portions of this highway system a growing commerce has already developed. This intercommunication has caused a meeting of minds and the beginning of a common culture, and has made possible an extraordinary solidarity against aggression.

THE BURMA ROAD

Probably no strategic highway of today has so captured the public imagination as the Burma Road. Built within 14 months by about 200,000 Chinese men, women, and children, using only the crudest of tools, the road extends from Lashio, Burma, to Kumming, China, over a distance of 726 miles. After the Japanese cut off China's sources of supply from the China Sea, this road was constructed to serve as a munitions supply artery from the outside world.

Known as China's lifeline, the road was officially opened in March 1939. Except while closed by the British from July to October 1940, it was used as a truck route until again closed, this time by the invading Japanese, in April 1942.

Following the outbreak of the war in eastern China in July 1937, the Chinese Government determined upon the construction of a military road to Burma. The difficulties, however, seemed insurmountable. Two routes were considered, both necessarily crossing a number of mountain ranges separated by some of the deepest canyons in the world. The longer route was chosen because it could make use of about 263 miles of provincial road already constructed. The new sections were built through rugged mountain country. Within one 40-mile stretch the route dips from 7,200 feet to 2,500 feet and rises again to 7,500 feet.

With a subsidy amounting to less than $2,000,000 from the Central Government of China, the Yunnan provincial government took charge of the construction of the road. Most of the work was done by the people of the province, each country being responsible for building its section of the road and furnishing its own quota of workers. The completion of the task was the more remarkable because of the lack of modern machinery. An American engineer studying the construction is said to have exclaimed, "My God, they scratched these roads out of the mountains with their fingernails."

The wisdom of a planned international highway system as a basic part of a war program has been exemplified by the Burma Road. However, observers who have compared this road with finished sections of the Pan-American Highway, such as those in Peru and other American republics, rate the Burma Road as really a back-county, grade-D highway. Yet in 1941 the Burma Road provided 20,000 tons of vital military and hospital supplies per month for the fighting Chinese armies.

When the Burma Road was first opened its capacity was limited to about 5,000 tons a month. Despite lack of machinery and equipment, lack of organization, technical difficulties, lack of fuel, inadequate surfacing, and an unremitting rain of Japanese bombs, this artery continued to function until Burma was conquered by the enemy. Over this road moved strategic materials

such as tin, antimony, tungsten, wolfram, lead, quicksilver, tung oil, mica, acids, and TNT. Other items reported to have been trucked over the road included heavy and bulky material such as iron, steel, railway parts, shipbuilding parts, and copper.

The favorite jibe at the Japanese by Chinese humorists on the road was that a Jap bomb cost $1,000—the hole it made in the road cost 8 cents to repair.

Leaders of the United Nations have continually stressed the fact that the present world conflict is basically a war of transportation. Every medium of transportation is included in this battle line. These lines of communication are the very fiber of world strategy. And in the vast interplay of movement of men and machines on the global battle fronts, military highways, long and short, are playing a significant wartime role.

Our final victory over Japan will be made possible by the long survival of war-torn China at the end of heroic supply routes such as the Burma Road and the reconstructed Silk Route.

On the other hand, a North American Newspaper Alliance war correspondent from the southwest Pacific has pointed out that largely because of their failure to construct adequate military highways, the Japanese have recently been compelled to yield territory which they conquered, saying that during the major part of the ground fighting in Guadalcanal the Japanese had great superiority in both manpower and firepower, but for lack of useful roads through the jungle they were never able to deploy and maneuver effectively, and were unable to bring their superiority to bear upon the point of attack.

The Alaskan Highway and the Pan-American Highway would prove to be of inestimable military value to the United States should an invasion of any kind be attempted, but so long as the connecting link between the two roads is not constructed they cannot reach maximum military importance, nor can they be of the greatest commercial value in peacetime. The proposed highway from Minot, N. Dak., to El Paso, Tex., or a road serving the same purpose, is indispensable, and our failure to construct it would be nothing less than an exhibition of bad faith in light of the interest we have manifested up to date in the construction of the two roads through our neighboring countries to the north and south of us.

Congressional Tactical Experts With No Tact

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. PLUMLEY. Mr. Speaker, one who comprehendingly reads history must repeatedly be struck by the analogy between all old wars and this, the biggest of all wars, insofar as congressional interference with the military and naval authorities is involved. We are running true to form.

There are those today in Congress, as there always have been in every war, who assume to know much better how to run the war more efficiently from a naval and military and strategic standpoint than any or all of those military and naval experts who have given their lives to the study of how to meet and to solve such problems as now confront us.

If war in itself were not such a terrible tragedy, this effort, so often indulged in by those so absolutely incompetent, to try to direct the strategy for the determination of our destiny would be funny. As it is, it is a sad commentary on the lack of good judgment shown.

Those who have the burden and responsibility of determining how and when and where, at the least cost in sweat and blood and treasure and tears the war may be quickest won, should not be embarrassed by those whose superficial knowledge, exploited, has only a nuisance value. For example: For anybody to suggest that powerful interests—meaning the British Prime Minister—are trying to get rid of and to demote our Chief of Staff, General Marshall, by having him promoted to the head of a unified command as the commander in chief, to assume responsibility for, and to directly control the strategy and the operation of the war, world-wide, is about the silliest thing I ever heard to come out of any war as yet.

It is not true, which is obvious, and for that reason there is no occasion to prove an axiom.

As Walter Lippmann so well said this morning, "Did anyone ever before hear of a plot to remove a general by giving him supreme command?" And he goes on to say, "It has been bad enough to drag the name of one eminent American general into partisan and factional politics during this war, and that any attempt to drag General Marshall's name into politics also will be strongly resented and resolutely resisted," which is equally as true.

There is too much politics already in this war. Why not let the competent military and naval leaders determine the strategy, and then hold them responsible?

I have the greatest confidence in General Marshall, General Eisenhower, Admiral Leahy, Admiral King, and others in the high command. I know them to be brave and fearless and wise. I know they will not hesitate to insist that their plans for operations shall be carried out if they are to be held responsible to the American people therefor.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. LAMBERTSON. Mr. Speaker, our greatest fear or dread is what Russia might do or fail to do—it is not so much what Germany or Japan plans.

O'HARA, of Minnesota, gave the perfect vote of "present" on the resolution. A goodly number felt just that way.

The chances of the Senate's even considering the Fulbright resolution at this time are about 10 to 1 against it.

The message from the White House was presented to Congress on Constitution Day without the slightest reference to the day.

After reading every word of the Churchill speech we are again convinced by his penetrating conception and his wholesome frankness.

The three home-front heroes of this war are Harry Byrd, Harry Truman, and Westbrook Pegler. Their fight has been to hold the runaways.

We take off our hats to the four silver stars on Generals Marshall, MacArthur, and Eisenhower, eternally. We wish they could be given the "four freedoms" to lead our fighting.

There are 800,000 civilian men between 18 and 38 in the War Department and over 400,000 in the Navy. Surely, General Marshall, all the single ones are not essential there.

One thing we forecast at the kick-off on the Wendell Willkie personal campaign: If he is not renominated by the Republican Convention he will support F. D. R. for his fourth term.

C. B. Baldwin, recently Farm Security Administrator, who promoted the bringing of the hillbillies to the plains is now Area Director of Economic Operations for Italy. He knows his hills.

If the House Foreign Affairs Committee put in play the Fulbright resolution all by itself as they said, it was the first time in 4 years that the quarterback had not passed them the ball.

Our first deficiency appropriation was $18,500,000 and is to take care of the underestimated war babies of last spring. The estimate for the year is 700,000. The national average is 2,200,000, but next year it will be 3,000,000.

The Functions of Congress in Today's and Tomorrow's Problems

EXTENSION OF REMARKS

OF

HON. CHARLES M. LaFOLLETTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. LAFOLLETTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include a speech in favor of House Resolution 19 which I made before the Rotary Club of Evansville on August 3, 1943:

It is very difficult for a person holding a political office to speak before a nonpartisan group without being charged with wrongfully abusing the privilege either to promote his personal political welfare or to intrude the philosophy of the political party which he represents into his discussion. I think it is true that some people really do not attempt to avoid this danger, but welcome the opportunity afforded them to advance their own interests and therefore abuse the hospitality which has been extended to them. Please believe me when I say that it is my

earnest intention to avoid using this occasion either to enhance my own political fortunes or to intrude matter which is peculiar to the philosophy of my party into this discussion. I shall leave it to you to judge from my remarks whether I have acted in good faith.

Certainly I think you will agree with me that this is not the time or the place for me to discuss specific legislation or my votes as an individual upon the legislation which was acted upon during the time that I have been a Member of the National House of Representatives. Therefore, I have selected as the title for this talk The Functions of Congress in Today's and Tomorrow's Problems. In treating this subject it will be necessary for me to ask you to re-examine with me the historical function and purposes of the Congress of the United States in our political system, including also the evidence of that function which is expressed in the written Constitution of this country, which sets out in writing the machinery for implementing the political philosophy under which this country operates.

The men who were the delegates to the convention which created the Constitution of the United States were men who were well grounded in the philosophy of the eighteenth century and educated by the system of classical education of that century under which they had all developed. They agreed almost unanimously in the proposition that the policies of government should be created by elected representatives of the voters. They definitely believed in the philosophy that the power to govern should be vested as closely as possible to those who were to be governed. They understood that the magnitude of a national government, even for their time, presented problems too great and that difficulties of travel which were likewise too great to permit the creation of any pure democracy, such as was then exemplified by the New England town meeting. They created the nearest thing to this pure democracy, namely, the choosing of representatives by the voters who were to be Members of the National House of Representatives to serve for a term of 2 years, at the end of which time these representatives were to appear before the voters again and submit the records which they had made for the voters' consideration, in order that the people, who were being governed, could then pass upon those records and approve or disapprove of them by the election or rejection of their Member of the House of Representatives, upon the record which he had made as such a Member.

It would be a perversion of history if I did not point out, however, that all of the members of this Convention did not have complete confidence in the capacity of the people of that day to govern themselves through representatives of their own choosing. Indeed, they did not have a complete understanding of the nature of democracy, in that they provided that the electors for representatives should have the same qualifications as the electors for the most numerous branch of the various State legislative bodies; but in many of these States, the ownership of property was a qualification upon the right to vote. It was not until a short time prior to the election of Andrew Jackson that these qualifications had been sufficiently removed by the various State governments to broaden the electoral base so that it became much more closely representative of the thinking of the masses of the people. It is also true that in providing the manner of the election of Senators, the majority of those who wrote our Constitution felt that the people of their time were not qualified to choose directly their legislative representatives of that branch of the Congress.

Nevertheless, and subject only to these limitations, it is manifest that it was the belief of a great majority of the delegates to our Constitutional Convention that legislation should be initiated in the Congress of the United States; that the legislative body was the most important body of our Government; and that freedom of the people depended upon the proper functioning of that body and that it should continue at all times to be closely connected with the people so that they might, by the exercise of their ballot, veto, in effect, or override within a period of 2 years, the national policies of our Government which our founding fathers assumed would be created, not by the executive branch of the Government but by the legislative branch of the Government—the Congress of the United States. Indeed, we find written evidence of this philosophy in the instrument itself, for immediately following the preamble to the Constitution the first article of that document deals with the legislative branch of the Government and the first section of that article declares:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives."

In other words, those who created our Constitution clearly placed first things first.

Six months in Washington convinces me that we, as a people, have fallen into the grievous error of assuming that simply because we have declared in writing in an instrument, known as the Constitution of the United States, that the policy and lawmaking power—that is, the power to create policy through the enactment of laws to which the people must conform—shall be vested in the Congress, we need to do nothing more about the matter. The error is the obvious one which always exists when people forget the injunction that "Eternal vigilance is the price of freedom." Today freedom, which can only exist under law—the freedom, which can only exist when the laws are created by the regularly elected representatives of the people—is more fully in danger than at any time in the history of this Government.

Now I think I shall surprise you, for I am going to place the bulk of the blame for this danger to our freedom squarely upon the Members of the Congress of the United States themselves. I shall develop my thinking upon this subject more fully in a few minutes. Before doing so, I shall point out that today there are many persons; yes, there are too many organized groups both in government and without government, who do not believe or fail to understand that freedom can exist only under law; who are impatient with democratic processes and who would gladly see the legislative branch of the Government destroyed or rendered ineffective either by direction or indirection. If I were to deny this, I would merely be closing my eyes to the things which I have thought were going on over the last half dozen years—things which I now have seen and observed in the last 6 months.

But, if the people lose their freedom, it will be because of the failure of the Congress to effectively perform its functions and it is only the Congress, the representatives of the people, who are now elected directly by the people in both branches of the Congress, which can save itself, and thereby preserve democracy in this country. To me it is both futile and cowardly for the Congress of the United States to yelp about bureaucrats, to protest against the growth of policy-making power in the executive branch of the Government when the only effective way of meeting this encroachment is for the Congress to equip itself to perform its functions in the complicated society which now exists in America.

Do not be misled by propaganda which stigmatizes the caliber of the men in the Congress of the United States. The Congress of the United States is still a rather representative cross section of the people of the United States; generally it is equipped with men capable of constructive thinking, capable of analysis, and capable of effective action. But the problems of policy which confront the Members of the Congress are so numerous and complex that no one man, even though he be an expert in a certain line, can find the time, today, to gather the factual data and to give the intensified study necessary to work out by himself and on his own time, a completely coordinated piece of legislation, even upon a specific policy of government. I think I may be entitled to personalize this talk to the extent of saying that I have never worked more intensely or under greater strain than I have during the time which I have spent in Washington.

Yet, despite a very earnest effort upon my part to acquire information, I do not believe that I have ever been completely satisfied that I had all the information that I desired upon any subject upon which I had been called to vote. Perhaps this feeling is due to the fact that as a practicing lawyer I had standards, acquired from experience, whereby I could pretty well tell whether or not I had exhausted the research material available upon any legal question. As a Member of the Congress, to date I have never felt that same feeling of security which comes from a firm conviction that you had had before you all the available material upon the subject which you are called upon to decide.

I have been told by people who are friendly to me that it would be political suicide to come back to Indiana and make a confession such as I have just made. I do not believe that this is true. If I may personalize again—generally I have attempted to be frank with people most of my life, and I see no reason for abandoning that policy and substituting for it one of political expediency.

What, then, is the solution to the problems which confront the Congress of the United States and the individual Members thereof? The problem is not incapable of solution. Representative government and individual freedom under law can be preserved if we, as Members of the Congress, will act promptly, courageously, and forthrightly upon this problem. What is needed is to provide the Congress with a set of tools to perform its duty of equal caliber and efficiency as those now possessed by the executive branch of the Government. When I speak of providing the Congress with tools, I mean this: There must be set up as an agency of the Congress a body of lawyers, who can be called upon to thoroughly brief questions of law; a body of economists, who can be called upon for impartial information; a body of statisticians, engineers, and other experts, solely employed by, and answerable to, the Congress and instructed to render to the best of their ability their impartial, factual, expert opinions upon any questions submitted to them by the Congress, its committees, and its Members.

Fortunately there is pending in the Congress of the United States a resolution known as House Resolution 19, introduced by Representative DIRKSEN, of Illinois, which has as one of its purposes the ultimate creation of just such a staff of men which I have been discussing. Among other things, this resolution takes note of the fact that the Congress of the United States has authorized the reorganization of the executive branch of the Government and the agencies thereof. And it points out that "the expansion of Federal functions and the magnitude of the operations of the Federal Government (which prompted the reorganization of the executive branch) make it desirable and necessary that there shall also be a survey

and study of the structure, functions, and procedures of the legislative branch of the Federal Government for the purpose of determining in the light of present and future problems and responsibilities how the structure, functions, and procedures of the Congress may be modified, revised, augmented, or strengthened."

This resolution also calls for the appointment of a special committee which shall do many things, with all of which I am in agreement, but specifically, the committee is authorized and directed "to investigate and study the structure, functions, and procedures of the legislative branch for the purpose of determining * * * and provide for a means by which the Congress may better equip the legislative branch with facilities and information requisite for the initiation of legislative policies."

Ths resolution has been before the Rules Committee of the House since January 6, 1943. It is my positive opinion that it should be favorably acted upon by that committee. Eventually this action must be taken and since the need is so great, I am convinced that eventually this action will be taken. I am convinced of this because it is inconceivable to me that the people are incapable of ruling themselves through their own representatives. I refuse to believe that representative government is destined to disappear from this continent, and thereby from the face of the earth. I do not condone the actions of those, whether taken openly or surreptitiously, who would destroy and do away with the Congress of the United States or the philosophy of checks and balances which is inherent in our theory of government. But I must admit that the Congress of the United States cannot stand idly by and permit itself to be destroyed by its refusal to understand that it is being overwhelmed simply because the perplexities of this civilization are too great for any one intellect to harness; that it is being overwhelmed because it is being fought by an adversary with better tools and equipment, when at the same time it has the means within its power to equip itself with similar or superior tools.

The struggle which is going on in America between the Congress and the Executive and his departments, commissions, and bureaus can well be likened to the battles which are taking place in the world. It is as futile to pit human flesh and bones against superior weapons of steel as it is for a body of men of tremendous inherent capacity and earnest patriotism to pit themselves, without a source of expert information available to them, against an executive branch of the Government which, if anything, is overequipped with such facilities. As a matter of fact, it is rather asinine for the Congress to appropriate millions of dollars, yes, even billions of dollars, for the staffing of the executive branch of the Government with lawyers, statisticians, engineers, and economists, and fail to have the courage to set up a similar body for themselves and to appropriate ample funds for obtaining the best impartial body of experts in America upon any and all legislative subjects.

If Congress takes this step, then article I, section 1, of the Constitution, which I have read to you, will again become a living, vital section of the Constitution. If it is not done, you could chisel the words of that article and that section in letters a hundred feet high and 20 feet deep across the face of the greatest mountain in America and they would no more preserve the constitutional mandate that laws and policies shall be made by the Congress than if they had never been expressed or written into it.

The philosophy expressed in article I and section 1 is immutable. If it should fall, then some future generation of America, eventually becoming aware of the tragic effects of the loss of freedom inherent in personalized government, will redeclare those principles and restore them. Of this I am as certain as I am of life itself. But it would be tragic if we of this generation should permit the eternal truth expressed therein to die because of our failure to provide the means by which it may live. The duty of the Congress to act in this matter transcends any idea of enhancing its own stature. Its failure to act will destroy the people's right to the certainty of freedom, which can only exist in a government of laws, not of men.

Judge Julian W. Mack

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. SABATH. Mr. Speaker, in the passing of Judge Julian W. Mack, I lost a friend whom it was my pleasure many years ago to nominate for the circuit court of Cook County, where he demonstrated his ability and fearlessness. Later, appointed to the Federal bench, he was recognized as one of the greatest jurists who ever served in that branch of the judiciary.

It was my pleasure to have worked with Judge Mack during the year of 1917 on soldier insurance, compensation, and similar legislation, he possessing great ability in that field. I could dwell at length on his career and the humanitarian contributions that he made to help the underprivileged. Therefore, I take pleasure in inserting as part of my remarks an article appearing in the Washington Post which pays him splendid tribute and which, in a measure, portrays the life of this great, patriotic, and sincere public servant. Yes, in him I lose an old and devoted friend, and the country and the Congress an outstanding citizen. The article is as follows:

JUDGE MACK

The great judicial career of Judge Julian W. Mack began almost 40 years ago when he was elected to the circuit court of Cook County, Ill. Because of his known interest in social problems and child welfare, he was soon asked to preside over the newly established juvenile court in Chicago, the first juvenile court in the world. Before that he had taught law at Northwestern University and the University of Chicago and had acquired a reputation as a teacher who knew not only law in books but law in action. Previously, while still a student in Harvard Law School, he with Beale, Williston, Wigmore, and McKelvey were responsible for the establishment of the Harvard Law Review, a review managed by student editors, which ranks with the case system as an outstanding contribution to legal education.

In 1911 he was appointed to the Federal Circuit Court of Appeals for the Seventh Circuit. A few years later he was assigned to the short-lived commerce court and after its demise he would accept assignment to any circuit where he was needed. Although one of our ablest appellate court judges, he has a fondness for trial work, and as a trial judge he probably had no equal. It became the practice to request him to preside over the trial of particularly long and difficult cases. He had the rare gift of being able to deliver his charge orally to the jury, even in the most complicated case, with scarcely a reference to a note.

In view of his interest in social welfare, his assistance was sought when we entered the First World War, in framing security legislation for the soldiers. He was largely responsible for the drafting of the bills introduced into the Congress and subsequently passed providing compensation for the dependents of servicemen and enabling servicemen to obtain war-risk insurance. He was also a member of the board of inquiry on conscientious objectors. A young farmer from Tennessee who had difficulty reconciling fighting with his religious belief asked one evening to talk with Judge Mack. They talked long and seriously. The next morning he reported he did not wish to claim exemption. The young farmer was Sergeant York.

Few men gave themselves so completely to good causes as Judge Mack. His kindliness, his helpfulness to others whose capacity for good works he liked to esteem more highly than his own, obscured his own very great accomplishments. While Judge Mack was active in behalf of the downtrodden of all races, as a Jew he was particularly affected by the plight of the Jews and labored incessantly to secure equal justice for them in all countries and a homeland in Palestine for those who wished to go there. He was chosen to act as chairman of the Jewish delegations at the Peace Conference in 1919. Those who really knew Judge Mack will cherish his memory not because of any opinion he wrote or any position he held, but because of the time he took out of a busy career to give help and sympathetic understanding to others to get their start and to have their chance for a good life.

The O. W. I. Boys

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Morning World recently, entitled "The O. W. I. Boys":

THE O. W. I. BOYS

Poland's Foreign Minister, Tadeusz Romer, delivered his exposé before the National Council in London.

The world, especially Poland, is entitled to know Poland's aims and rights, the world, especially Poland, is entitled to know what Secretary Hull has to say about America's war and peace.

Mr. Romer's address contained the following passage:

"We see no adequate reason why, after a common victory, Poland should make any further sacrifices, either in territory or in population, in addition to those she has already made and is still making in her steadfast defense of her own freedom and that of the whole world. Such a course would be immoral and alien to ideals, for whose triumph we are fighting. Therefore, the Polish Government stands firm for the integrity of the Polish territory."

Mr. Romer spoke in the name of our ally—Poland.

When a Polish representative of the Ministry of Information in New York attempted to read the above quoted excerpts from the Foreign Minister's address over short waves to Poland, quoting from the New York Times,

a censoring official of the O. W. I. stopped him, explaining that the statement may be misinterpreted by —— —— our allies!

What does this mean?

We fail to understand it.

Since when and why does O. W. I. impose silence? Why are public statements, made by the foreign minister of an allied country, suppressed by an office so closely connected with our Government?

How should we classify such methods?

Was it done in the name of our Government or is it merely a whim of displeasure of the omnipotent hirelings of the O. W. I.?

We protest against it and shall insist that this contemptible underground work of the O. W. I. boys be stopped.

We demand a thorough investigation and appeal to our readers to write to their Congressmen requesting that the whole bunch of O. W. I. stooges and meddlers be chased out before they grow Gestapo feathers and cause irreparable damage.

P. Y.

Dr. Ales Hrdlicka

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. SABATH. Mr. Speaker, I announce the passing of Dr. Ales Hrdlicka, world renowned anthropologist, and former curator of the Division of Physical Anthropology, Smithsonian Institution, who served in that capacity since 1910. It was my pleasure and honor to become acquainted with this fine man shortly after his arrival in this country. Born in Bohemia and coming to this country as a boy he, through his own efforts, achieved the highest recognition in his field. It was with pleasure that I read in one of the Washington newspapers a short sketch of his life and I am glad to insert it as a part of my remarks in tribute to this great man. The article is as follows:

DR. HRDLICKA, SCIENTIST, DIES AFTER ILLNESS—ANTHROPOLOGIST OF SMITHSONIAN INSTITUTION WAS BORN IN BOHEMIA

Dr. Ales Hrdlicka, world renowned anthropologist, who entered America a penniless boy, by his own wish, throwing the equivalent of 15 cents in New York Harbor as his ship docked, died yesterday at 3 a. m., following a week's illness brought on by a heart attack. He had been curator of the Division of Physical Anthropology, Smithsonian Institution, since 1910 and was vice curator 7 years before that.

Born the son of a cabinetmaker in Humpoletz, Bohemia, part of Czechoslovakia before the war, he was mainly self-educated in this country and began in 1898 to lead yearly expeditions to far places where he unearthed and studied skeletons of prehistoric men and the higher primates. He visited American and Asiatic Arctic regions, China, Japan, Pacific isles, Egypt, Central and South America.

In 1937, he also landed on Nicolosky Island, Russian possession in the Bering Sea, off the Alaska coast, after being first refused entry by Russian officials.

Entering the business world at 13 and studying English and business subjects in his spare time, the tide of his life was turned when illness brought to him both the ministration and friendship of a medical doctor, who helped him to enter the profession. He was graduated from the New York Eclectic College in 1892 and 2 years later from the New York Homeopathic College.

STATE HOSPITAL INTERN

He practiced medicine for a short time and then as an intern in the New York State Hospital for the Insane, where he was permitted to engage in research, began to interest himself in anthropological science.

His researches and publications brought Dr. Hrdlicka to the attention of the head of the State commission on lunacy, Dr. Carlos MacDonald, then organizing the Pathological Institute of the New York State Hospitals. Dr. Hrdlicka was invited to join the institute as an associate in anthropology, which he did after first going to Europe for further studies.

He spent a year at the medical school and school of anthropology, the Sorbonne, in Paris.

Dr. Hrdlicka maintained that prehistoric man did not exist on the American Continent, but migrated here from Asia via Alaska, and frequently presented his views to Washington audiences from the lecture platform.

INDIAN DESCENT PROVEN

Commenting on his collection of 16,000 skulls and skeletons 2 years ago, he said he had definite proof that American Indians were descended from Asiatic tribesmen in the remains he had collected on both continents.

While in Russia and Siberia, Dr. Hrdlicka not only was impressed with the scientific results of his expedition but with his discovery of the Russian attitude toward Americans.

Some weeks after his return in 1939 he told of the love the Russian people bear America and all things American.

"They look at us as apart from the rest of the world, inhabitants of a vast country like their own. Everywhere you go you hear, 'Make room, make room; hurry, here is an American!'" he said.

"I thought—I heard I would be watched," he added, "but all the time I was in Moscow I saw just one policeman."

A PROLIFIC WRITER

A prolific writer for scientific publications, he founded and edited the American Journal of Physical Anthropology. He was a member of many scientific and scholarly organizations and was an honorary and correspondent member of many foreign academies and societies as well. He was president of the American Association of Physical Anthropology, 1928-32.

His writings were responsible for establishment of the division which he headed at the time of his death. An article stating needs of American anthropologists for an institution where material might be officially deposited, a research laboratory and reference library, caused Smithsonian officials to enlist his services in setting up such facilities.

Honored abroad as well as at home, the Huxley Medal was awarded to him in 1926 by the Royal Anthropological Institute of Great Britain and Ireland for his "great services to anthropological science not merely in America but throughout the world."

In 1924 Mme. Veverka, wife of the then Minister of Czechoslovakia, painted his portrait to be hung at the University of Prague, in his native land. Dr. Hrdlicka had assisted the university with gifts.

Dr. Hrdlicka considered many questions in connection with man's behavior and physique. In 1939 he announced that the potential criminal does not differ in physical appearance from the noncriminal, that crime is not physical but mental.

Importation of Intoxicating Liquor

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. JENSEN. Mr. Speaker, during the past few days I have received numerous letters and petitions from many good people in my district urging Congress to pass House bill 2082, which was introduced by our respected friend and colleague the distinguished gentleman from South Carolina, Hon. JOSEPH R. BRYSON.

The American people everywhere are concerned and disturbed about the great quantity of liquor now being made too easily available to workers in our war plants to the end that production of war materials is being noticeably affected by inefficiency and absenteeism because of it.

Will someone please explain to the American people why all this intoxicating liquor is permitted by the administration to come into our country from all over the world when the Congress found it necessary almost 2 years ago to stop the manufacture of alcoholic liquors by the American distilleries, except for industrial and medicinal purposes?

Must we, Mr. Speaker, permit cargo after cargo of intoxicating liquor to flow freely into this country almost duty free in order to keep friendly trade relations with other nations especially at a time like this? If so, I shudder to think of the final consequences, for certainly the threads of the "ties that bind" such a relationship with any nation of the world most certainly will not stand the test, either in peace or war.

This thing is becoming a serious matter and we, the Congress, should take effective action to remedy this scandalous situation once and for all and do it now.

World Police Force Can Insure the Peace

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial, World Police Force Can Insure the Peace, which appears in the September 22 edition of the Toledo (Ohio) Times:

WORLD POLICE FORCE CAN INSURE THE PEACE

The House of Representatives yesterday went on record as favoring a cooperative peace.

The House Members, by a vote of 300 to 29, voted to enforce the peace.

This is a new and encouraging attitude. While the Fulbright resolution is broad in its aspects there can be no mistake about the application of its principle.

House Members voted their sentiment in favor of working out a joint peace to be maintained after the war. What is really meant is that the House Members favor policing the world.

While the resolution now goes to the Senate Foreign Relations Committee, along with other similar resolutions, there is no doubt about the attitude of the American people. They want peace, and they want the privilege of seeing that it is respected.

If the United States follows this policy, as it probably will, it means that we shall keep a large navy, air force, and army in readiness.

The House resolution would put the United States, along with other victors, in the position of maintaining a fair peace by force if necessary. If any nation upsets the peace, the police force of the peaceful nations will be obligated to step in and restore order.

This is all right. Everyone knows that if the peace agreement made at the end of the last World War had been enforced, there would have been no Second World War. Germany would not have been permitted to rearm.

A combined police force maintained by several nations does not assure peace. It must be administered fairly, and there must be complete and permanent unity. Combined strength often divides and destroys itself. We cannot let that happen.

In these days the only way to keep order seems to be through the maintenance of a respected authority which has the power to put down disorder. That is the way communities maintain order. That is the way all organized groups maintain order. It is the best way to maintain order after the war.

The Senate should adopt a similar resolution. The whole world will be much better behaved if it knows there is a cop on the corner ready to enforce the laws of good international conduct.

The Capitol's Dome Should Carry the Stars and Stripes—No Other Flag

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. HOFFMAN. Mr. Speaker, to me, as a Member of Congress, has been put the question, "Should Congress vote now to join in world collaboration?"

Collaboration means joint action. If the question is as to whether we are, in the war effort, to work jointly with those nations which are at war with either Germany or Japan, then the answer is an emphatic "yes."

If the inquiry is as to whether we are, during the war or afterward, to act jointly with, engage in joint enterprise with, become a partner of, all the nations of the world in a program of world reformation, of remaking the world along financial, educational, industrial, governmental lines, then the answer is an equally positive "No."

It must be assumed that the advocates of world joint action wish Congress to commit itself to a policy, not of talk, but of action, and that that action by Congress means not only joint action in war efforts, but in all other activities in which nations and people engage. In short, establish and become a member of Union Now or some similar organization.

Until this war has been won, until every armed enemy has been decisively defeated, we have neither the time, energy, nor the resources to waste on a program of either world reformation or world rebuilding.

Whatever may be the advantages or the desirability of educational, economic, or financial collaboration, this war covers so much territory, involves so many millions of men using such great quantities of munitions, that its successful prosecution demands our every thought and effort.

For 8 long years, our forefathers fought to give validity to the Declaration of Independence and, from that day to this, every American worthy of the name has proudly boasted of his independence as a citizen of the United States of America.

What are we now asked to do?

We are now asked by financially and politically powerful organizations to join in immediate world collaboration—world joint action.

One, Federal Union, Inc., by petition in January of 1942, asked Congress to pass a resolution requiring the United States to join with other nations, both in the Old World and the New, unite on a world federal basis, surrender our independence, adopt a declaration of interdependence—the antithesis of the Declaration of Independence—form Union Now and become a member of a superunited states of the world.

About the same time, the other well-financed group, World Fellowship, Inc., requested every Member of the Congress to give to President Roosevelt, as a birthday present, $100,000,000, to be spent at his discretion in forming a council of internationalists to draw up plans for a united nations of the world. It also asked that an additional billion dollars be given the President to be passed on by him to finance the council's activities.

Each of these plans, as every other plan for a similar purpose, involves a surrender of our sovereignty, that is, of our independence, of our national existence. That surrender is the meat of world collaboration.

The overwhelming majority of our people today, as in the past, sincerely believe, and have acted upon the conviction, that the Constitution outlines the best form of government ever devised.

Experience has shown, and the people of the world, by their migration to this land of ours and its form of government, have demonstrated that under it men can and have obtained for themselves more of freedom, happiness, and prosperity, than in any other land, under any other form of Government.

So, I ask you, it being admitted, as it must be, that we have here the best there is in the world, why should we, even for the laudable objective of helping others, surrender what we have, when the result, as we know, will be but a lowering of our own standards; a weakening and undermining of the foundation upon which the advantages which we now possess securely rest; and which we must keep if we are to help either ourselves or anyone else?

As well might the seed wheat brought by our forefathers from across the seas have been made into flour to be consumed in the first winter of their famine, and thus have prevented the growing of subsequent crops, as for us to now surrender our independence, the keystone in the arch of our security.

A greater degree of freedom of action as well as of religious liberty, a free press and free speech, more of prosperity and happiness for the individual, a greater advance in intellectual attainments; more people sharing in more of the luxuries, as well as the necessities of life, are the fruits of our national independence, our adherence to our constitutional form of Government.

As well cut down the fruit tree and expect a subsequent crop as to surrender even a part of our independence, of our national sovereignty, to a super united states of the world or any other form of world government in which these United States of ours would be but a part.

If the advocates of Union Now, of United Nations are sincere—and let us assume that they are; if they believe in America and her institutions—and they must; otherwise they would not assume the position of lending a helping hand to less fortunate peoples and nations—then let them adopt the plan of Colonel McCormick, and, with the United States maintaining its independence, invite these other nations which wish to be helped and aided, to come into the United States of America as States.

The advocates of a superworld government base their plea upon the proposition that, to have peace throughout the world we must act jointly with all other countries.

The plan is to make Uncle Sam the Santa Claus of the world. Our resources, our money, our men, are to be used to rebuild the ruined cities of the world when comes the peace.

The plan includes the proposition that the United States of America, 133,000,000 people, are to feed, clothe, and furnish homes for some 400,000,000 people who will be in need.

Already we have constructed throughout the world harbors, docks, warehouses, airports, railroads, highways, and factories, at a cost of billions of dollars, for which we will have no use and which we will not be permitted to use after the war is over. All these, together with billions of dollars worth of food and clothing, are to be given freely to the people of other lands. To speak lightly, we are to pay the fiddler while others dance to the music.

The planners would give us international boondoggling. And our men—your sons, brothers, and husbands—are to join in policing foreign lands, while the men of other countries keep order here. Not a pretty picture.

The adoption of the plan means that the American worker, the American farmer, and the American taxpayer will,

for countless years to come, be paying for the gifts which we make to others.

Why, in addition to those gifts which we have made, and which we will make, should we surrender our sovereign right to keep our own independence—work out our own destiny?

If we are to pay the fiddler, if we are to act as Santa Claus, if we are to establish throughout the world a world-wide W. P. A., if we are to build in other lands industrial enterprises, wherein the laborers of those lands, living on a pittance, will compete with our own workers, then let us be the head of that superworld organization and let those who want to join come in as States.

Our people are not yet ready to pauperize themselves, to become industrial slaves, agricultural serfs, in order to carry out the plans of those who dream of world government.

This is true, not because our people are not sympathetic or charitable but because they are practical, because they realize that the task is an impossible one, because they know that they cannot build a superstructure of that size or weight without breaking down and destroying the foundation—which is our independence—our Constitution.

Even if this idea of world cooperation were practical, there is another reason why it should not now be adopted by the Congress. The executive department has demonstrated that when Congress gives it an inch it will take a yard. Congress should not give to the executive department—to the dreamers and the visionaries—any possible excuse for unconstitutional and detrimental action.

If Congress at this time formally announces that we should collaborate with other nations of the world, that action will be seized upon by the wasteful, extravagant, experimental, visionary New Dealers as an unlimited license not only to spend billions of American money—most of it borrowed from our taxpayers through the sale of bonds or by the printing of fiat money—on a glorified world-wide W. P. A., but as a directive to educate and control people everywhere—Indians, Hottentots, and Bushmen—in what these dreamers conceive to be the better way of life.

Our men are fighting under the Stars and Stripes. That is the flag which on the battlefield cheers them on to action and gives them courage and determination. That is the flag under which they fought in the First World War. That is our flag.

Our men are fighting for the principles for which that flag stands, for the homes over which it waves.

They are fighting for the United States of America, and, while six or eight million of them are in the service, it is unfair to adopt a policy which means the hauling down of the Stars and Stripes, the substitution of an international flag, the loss of the freedom and the liberty for which so many of them are giving their lives.

Let us wait until the boys come home, when they will have an opportunity by their votes to aid in determining the form of government under which they and their children shall live.

Stalin and the Church

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun:

STALIN AND THE CHURCH

The Nazi propaganda ministry and the American saboteurs of cooperation with the U. S. S. R. have reason to be disturbed—as they clearly are—by the rapprochement between the Russian Government and the Orthodox Church.

Since the German invasion of Russia there have been successive steps—including the suppression of the Militant Atheist League—toward religious toleration. Now an accord between Stalin and the Orthodox leaders has been followed by the first election of a church primate since the revolution. Further expansion of church work is predicted in Moscow dispatches. The Communist Party remains officially atheistic, and much remains to be done if full religious liberty is to be enjoyed in Pussia. But an impressive beginning in liberalization certainly is under way.

Why? Some propagandists interpret it as a mere Stalin trick to win pan-Slavic backing in the Balkans. Doubtless the Russian Premier believes it will strengthen Soviet diplomacy in that region. But there is no law against his seeking good will in the Balkans.

Simplification in Reverse

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waynesboro (Pa.) Record Herald:

SIMPLIFICATION IN REVERSE

If there is not a revolt, when the people come to prepare the first of their quarterly income-tax estimates between now and September 15, it will mean that the American citizenry has become a race of mice, not men.

Since the first income-tax return began harassing a few of the most prosperous in our population, nothing like the current orgy of statistical complication has been inflicted upon us as a people.

There is almost certain to be a bitter revulsion. So let's clear up the record right now in advance, and see that anger is directed against those who deserve it. These quarterly estimates, followed each March 15 by a final return, arise out of the pay-as-you-earn tax law adopted by Congress this summer in response to demands for the Ruml plan. Attempts will be made to blame the confusion and trouble on the Ruml plan. Don't be misled.

The almost unconceivably intricate collection system probably cannot be simplified under the statute enacted. But the tax law was not the Ruml plan. It was a compromise modification which, whether deliberately or through ineptitude was made a caricature of what it purports to be.

There is about the law no slight vestige of scientific construction except for that trace of the pay-as-you-earn principle that was left after Congressmen, bedeviled and misled by Treasury "experts," had swept the pantry shelves into a pot of dishwater and labeled the product soup.

When you and all your neighbors go berserk trying to comply with the requirements of the new income-tax law, and you get out the trusty old ballot box to go looking for victims, keep one thing clearly in mind:

Your troubles are not inherent in the pay-as-you-earn tax principles. They were tossed in by those who couldn't bear to see a simple, workable, scientific tax law minus a lot of and/ors, whereases, wherefores, and notwithstandings—by those who weren't willing to concede that a sound, practicable tax law might come out of a nonbureaucratic mind.

Don't vent your spite on the pay-as-you-earn principle. Vent it upon the men who betrayed that principle when the existing law was written.

Under Cover and What One Organization Thinks of It

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. HOFFMAN. Mr. Speaker, the National Workers League, founded in 1938, expresses its opinion of one of the latest smear efforts as follows:

The book Under Cover, written by the refugee Derounian, alias Pagnanelli, alias Carlson, and who was financed by the magazine Fortune, which in turn as shown by evidence presented to Congress by United States Senators in 1940 was financed by Thomas Lamont, international banker, to promote war propaganda, bears the familiar pattern of intolerance usually associated with internationalism.

By and large, the type of Americans interviewed by this author were those who believe in a return to constitutional ways of government in America, and who believe that the trend of the past 10 years can only lead if unchecked to some form of totalitarianism with its accompanying loss of democracy in everything but name.

It is a simple matter for that small minority known as international bankers to find hirelings in any walk of life, who will utilize the unlimited channels of publicity open to wealth for the purpose of discrediting those who resist their schemes to fasten upon our country policies that are intended to progressively restrict our sovereignty, and of course primarily benefit themselves. They have coined the term "isolationist" to make odorous any American who opposes their plans in any degree. They have not hesitated to finance the basest moral charges against prominent elected representatives of the people who dared to thwart their immediate wishes. Their true natures are revealed by these attempts to fasten upon their opponents the one crime which they must, at any cost, keep the public from associating with themselves. They must, to be successful, convict

their opponents of the crime to which they themselves alone are guilty—treason.

We have heard the Vice President of the United States smear as Fascist any American who chooses to sit with the administration's opponents. It matters not whether he is loyal to his country—he is un-American. Fools and morons may succumb to this totalitarian approach, but any true believer in democracy will recognize that such statements by any public official reveal the same quality of intolerance as practiced by nazism and communism. He realizes such a mind is trying to use democratic processes to destroy, through officially created terror, the deepest foundation stone of American democracy—free speech.

It is an easily established fact that the majority of American smeared in this book are individuals who have, without hope of financial gain, devoted their lives to the thankless task of selling America to Americans. They consider it the highest type of Americanism to love their country more than they love themselves or the almighty dollar. The percentage of crackpots (yes, and anti-Semites), in their midst is probably no greater than found in our two major political parties.

I can think of no greater aid to the cause of American nationalism at the present time than placing this book on the market for a fraction of its present cost. It is my hope that the forces financing Under Cover will accept the challenge.

Address of Hon. Arthur H. Vandenberg

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Senator ARTHUR H. VANDENBERG, of Michigan, on the National Radio Forum, conducted by the Washington Evening Star WMAL, Blue Network, Inc., Wednesday, September 22, 1943:

My fellow citizens of the United States, thanks to the public-spirited facilities of the Washington Star, I am permitted to report to you upon the vitally significant foreign policy recommended to America by the unanimous action of the Republican Advisory Council in its recent epochal meeting on September 6 and 7 at Mackinac Island, Michigan.

In all my long experience, I am proud to say that I never knew a political group to labor in more earnest, devoted, and impersonal dedication solely to the common welfare of our country in this tragic hour of crashing worlds; I dare to believe the day will come when the sturdy decisions of this council—conveniently referred to as the Mackinac Charter will be viewed as another historic landmark in American foreign policy, and as the creation of a pattern which invites united America to her right place in effective world relationships when this global war has brought the United Nations to conclusive victory.

The Republican Advisory Council is frankly a partisan political oracle in the first instance. Our system of representative government requires the vigorous maintenance of these political mechanisms. But partisan politics, as such should stop at the water's edge; and I can assert, with total truth, that this Mackinac Charter, in respect to foreign policy, was framed with complete disregard for partisan considerations, and with precisely the same devoted hope, as expressed 1 week later by the eminent Secretary of State, that it may substantially invite the allegiance of all Americans, regardless of party, so that partisan bitterness may be eliminated from foreign policy discussions, and we may move forward as the United States in fact as well as name.

I think I should say that this Republican Advisory Council was appointed by National Chairman Spangler purely as an advisory body to counsel with the ultimate platform makers of the next Republican National Convention in 1944. It consists of all the Republican Governors, representing practically half our States and two-thirds of our people; 15 representatives of the House and Senate, appointed by the respective minority leaders; and 10 members of the official Republican National Committee. When such a thoroughly representative group—representative not only of our national geography but equally representatives of widely differing foreign points of view—when such a group can unanimously recommend a general foreign policy, I submit it is a profoundly significant and prophetic phenomenon in the life of the Republic, and deserves the open-minded consideration of all Americans.

The Mackinac Charter vigorously covers many domestic issues as well. It is by no means confined to foreign issues. But I discuss only the latter tonight because it is the point at which we so sadly need enlightened American unity; and because I happen to have served as chairman of the Foreign Policy Committee, along with Senator Austin, of Vermont, Governor Martin, of Pennsylvania, Governor Green, of Illinois, Congresswoman Bolton, of Ohio, and Congressman Eaton of New Jersey. The well-known pre-Pearl Harbor divergence of views among this group is the conclusive answer to any petty, cheap, and groundless snarl, by an occasional external critic, that the committee was "stacked." It was the exact opposite of "stacked." Yet if it had been "stacked" it could not have finally been more enthusiastically unanimous nor more spiritually unified. That its report should have similarly won the practically unanimous approval of the Nation's editorial opinion is the final, spectacular endorsement of its creed.

It is my view—and you will understand that these are personal reactions not binding upon my colleagues—that the Mackinac Charter has done one basic, superlatively important thing—which is sadly needed if we are to have any sort of common national vision in foreign policy. For the first time, it has plainly been put down in black and white the indispensable doctrine that Americans can be faithful to the primary institutions and interests of our own United States and still be equally loyal to the essential post-war international cooperations which are required to end military aggression for keeps and to create a post-war world in which organized justice shall protect freemen. By the same token, it has put down in black and white the basic truth that Americans can constructively contemplate their world duties without sacrificing their American allegiance. Indeed, their appropriate world duties can become part of their American allegiance when the result is a body of international law and practice which bless us fully as much as they bless others.

In my view, this is what the average American has been waiting to hear. He is perfectly willing and anxious to accept his proper international responsibilities in the peace to come. But he wants to feel that legitimate American interests shall be preserved; that independent American institutions shall be protected; that the Constitution shall be impregnable, and that the Stars and Stripes will stay on the dome of the Capitol. He does not want us and our resources to be overpromised to the post-war world, as some of our more extreme "do-gooders" constantly conspire. With these reliable assurances—such as Churchill never fails to give the Britons, nor Stalin, the Russians—this average American will faithfully take his full share of organized international responsibility to stop military aggression forever and to find some better way than force to bring justice to this torn and distraught earth. He will do his full part in a foreshortened world which denies isolation to any of us, whether we like it or not. He will do his full part so long as he knows that America is to remain America.

These parallel and simultaneous objectives are not incompatible except in the agitated confusion of those who have an ulterior purpose to serve. Our chief trouble has been that we have tried to make them so. Their dual authority is the true key to American unity—as the enthusiastic reception given the Mackinac Charter proves.

If it be argued that men of seemingly divergent minds must have expediently sacrificed their principles in order to have unanimously agreed at Mackinac, I reply that no principles are sacrificed when there is candid and mutual recognition of basic validity in principles which cease to be divergent when honestly and fairly analyzed.

Yes, there will still be degrees of difference in ultimate interpretations—a phenomenon, by the way, not confined to Republicans. But, I repeat, I believe the Mackinac Charter has performed a national service which transcends any partisan service, when it proves that men of good faith can agree (1) that American interests and institutions—and, above all, her due constitutional process—shall be scrupulously preserved; and then (2) that America shall participate in full vigor to help put and keep the post-war world in responsible order.

And now, my fellow Americans, I read the Mackinac Charter and I am happy to let it speak for itself:

"The members of this council are aware of the gravity of the problems our Nation faces. We are fighting a desperate war, which must be won as speedily as possible. When the war is ended, we must participate in the making of the peace. This puts upon the Nation a triple responsibility.

"(A) We must preserve and protect all our own national interests.

"(B) We must aid in restoring order and decent living in a distressed world.

"(C) We must do our full share in a program for permanent peace among nations.

"At this time a detailed program for the accomplishment of these great objectives will be impossible and specific commitments of this council of the Republican Party, or by the Nation, would be unwise. We cannot know now what situation may obtain at the war's end. But a specific program must be devolved in the months to come as events and relations unfold.

"Therefore, we consider it to be our duty at the beginning of our work as an advisory council of the Republican Party to declare our approval of the following:

"1. Prosecution of the war by a united Nation to conclusive victory over all our enemies, including—

"(A) Disarmament and disorganization of the armed forces of the Axis.

"(B) Disqualification of the Axis to construct facilities for the manufacture of the implements of war.

"(C) Permanent maintenance of trained and well-equipped armed forces at home.

"2. Responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world.

"In making this recommendation we ground our judgment upon the belief that both the foreign policy and domestic policy of every country are related to each other so closely that each member of the United Nations (or whatever cooperative organization perpetuating existing unity, may be agreed upon) ought to consider both the immediate and remote consequences of every proposition with careful regard for—

"1. Its effect upon the vital interests of the Nation.

"2. Its bearing upon the foreseeable international developments.

"If there should be a conflict between the two, then the United States of America should adhere to the policy which will preserve its constitutionalism as expressed in the Declaration of Independence, the Constitution itself, and the Bill of Rights, as administered through our republican form of government. Constitutionalism should be adhered to in determining the substance of our policies and shall be followed in ways and means of making international commitments.

"In addition to these things this council advises that peace and security ought to be ultimately established upon other sanctions than force. It recommends that we work toward a policy which will comprehend other means than war for the determination of international controversy; and the attainment of a peace that will prevail by virtue of its inherent reciprocal interests and its spiritual foundation, reached from time to time with the understanding of the peoples of the negotiating nations.

"In all of these undertakings we favor the widest consultation of the gallant men and women in our armed forces who have a special right to speak with authority on behalf of the security and liberty for which they fight.

"It is determined that this Council make complete examination of the means by which these ends may be fully achieved with due regard for all American interests and responsibilities.

"The Council invites all Americans to adhere to the principles here set forth to the end that our place among the nations of the world and our part in helping to bring about international peace and justice shall not be the subject of domestic partisan controversy and political bitterness."

This ends the quotation. I submit it is the vibrant voice of a confident America which intends to maintain for itself all of its own self-determination and its own benign domestic standards in the post-war world. But equally it is the wise voice of American intelligence and enlightened American self-interest which understand that a bad world for others cannot be a good world for us, and which reliably intends to do its full cooperative share in helping to sustain peace and progress in a happier world. So long as both of these objectives remain inseverably linked we can unite America on foreign policy. When they are divorced we inevitably fall apart.

It is the same spirit in which our own sons have gone to war again. They fight to free the world from a global curse; but they fight first to preserve their own America. In long-distance analogy it is the same spirit which moved General Pershing, in World War No. 1, to maintain the independent integrity of his own American fighting units while throwing them into total and brilliant cooperation for our common allied cause. I remind you also that Secretary Hull did not hesitate to speak specifically for sovereign nations in his last speech, delivered a week after Mackinac.

There are those who are striving to prove that somebody got plowed under at Mackinac—either the so-called interventionists or the so-called noninterventionists of yesterday. The answer is that nobody got plowed under. There was a rational, tolerant meeting of patriotic minds upon wholly compatible philosophies of action which complement each other That spells dependable unity. It is the only source of unity. Only those who have their own reasons for fearing unity will distort this enormously invaluable conclusion.

I emphasize this point again and again, because it is of such vital importance in the thinking of all our people. We can maintain continuing, organized post-war cooperation with the United Nations to permanently curb international pirates by cooperative force—and then to seek the sanctions of justice as a substitute for force—without sacrificing our essential independence and without, for an instant, giving up the captaincy of our own American destiny or the mastery of our American fate. We can go far forward in our deep anxiety to help others without any necessity for agreeing with those quixotic and irresponsible spendthrifts who promise the world infinitely more than we can deliver and who thus invite the world to an ultimate disillusionment which will beget the bitterest of hates. Mr. Walter Lippmann bluntly warned the President the other day that, while our people "will almost certainly endorse a policy of limited liability," they "most certainly will not endorse a policy of general and unlimited liability." We can believe wholeheartedly in international aid to those who help themselves without believing in a gigantic international W. P. A. at our expense. On the other hand, we can believe in our own America; we can believe in the maintenance of our own high American standards, the Vice President to the contrary notwithstanding; we can live forever under our own flag and still discharge every obligation which we owe to civilization and humanity. And that, my fellow countrymen, is, in my humble personal opinion, the message of the Mackinac Charter. It will not satisfy extremists at either end of the line. But it charts the great middle course of sanity and reason to which 95 percent of our people can subscribe not only with their lips but with their hearts and souls.

Some say that the Mackinac Charter is too indefinite in details. Let them hunt for details in the so-called Atlantic Charter. Let them hunt for details in the exposition of the Secretary of State 1 week ago Sunday night. Let them hunt for details in the well-known Fulbright resolution. Let them hunt for greater details in any pronouncement by any other great political party. They will hunt in vain. Details are impossible, among prudent statesmen, until we know the precise nature of the post-war world; until we know the undisclosed minds of Mr. Churchill and Mr. Stalin in respect to peace; yes, and until we know what 10,000,000 American soldiers and sailors think about these global relations of which they are now an integral and deadly part.

Why is America alone—or Mackinac—expected to produce the premature blueprints of the hereafter? Mr. Raymond Moley, once a high prophet in this administration, wrote the other day: "Those who complain that the resolutions adopted by the Republicans at Mackinac are too general might try a little exercise; they might try themselves to write a statement of foreign policy." Yes; and then try to get a unanimous approval from some thoroughly representative and responsible parliament like that at Mackinac.

Yes; as the famous Mr. Pitt once put it in the British Parliament: "Accept these ideas if they are worth your notice; strengthen them with your wisdom; mature them with your experience; or, in their room, establish a more adequate formula."

Remember, too, that this was only the first meeting of the council. It is a continuing body. It can proceed subsequently with more details as time and events may warrant. Meanwhile, I think I am entitled to say that all responsible statesmen among the United Nations have warned our Senate Foreign Relations Committee against contemporary specifications lest we disunite the war effort by premature attempts to unite the peace effort.

Blueprints today are impossible. Details depend upon events. But the Mackinac charter is specific in its ideals and its objectives. It bespeaks the promise and the aspirations of a free people who intend to remain free but who are prepared, within simple reason, to be good neighbors to the world. The New York World-Telegram summed it up when it editorially said:

"We like the unanimous foreign-policy declaration of the Republican post-war advisory council at Mackinac. We think most Americans will like it because it points in the direction they want to go. They want a strong and free America, taking full part in the cooperative building of future world peace and justice. * * * We are convinced that the people will support vigorously the general aims of the Mackinac declaration, which are exclusively neither Republican nor Democratic, but American."

The Washington Star editorially declared: "The President and those disposed to ridicule what the Republicans have done would be well advised to consider the importance of removing the question of this country's post-war international stand from the realm of purely political debate. Instead of belittling the Republican program, it might be better for them to concentrate on persuading the Democrats to do as well."

The New York Times did not hesitate to say: "The Republicans who met at Mackinac have made a contribution to the unity of the Nation on questions of foreign policy and to the cause of post-war reconstruction."

The Detroit News added:

"The resolution itself invites all Americans to adhere to the principles here set forth to the end that our place among the nations of the world and our part in helping to bring about international peace and justice shall not be the subject of domestic partisan controversy and political bitterness. That invitation—as good an evidence as any of patriotic sincerity—should be accepted in the spirit inspiring it."

I could quote countless other editorial endorsements. These typical samples suffice. The Republican advisory council has pointed the way to national unity on a foreign policy which neither deserts America nor neglects her unescapable part in the creation of a better world. God helping us, we can do no other.

The O. P. A. Undertakes To Supersede the Courts and To Suspend Democracy

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include excerpts from a newspaper clipping relating to a statement made by me:

Referring to the fact that the judges of a United States district court in Illinois found themselves helpless to afford relief

because jurisdiction over O. P. A. is specifically withdrawn from the established courts by the act itself, Representative PLUMLEY of Vermont said: "I told you so." I opposed the original act to establish the O. P. A. and what I said about it being un-American is a matter of record, and more true today than then.

Among other things, under one of its provisions, no court, Federal or State, has power to consider the validity of any regulation of the O. P. A., or any price schedule.

I agree, as you must, that there never was a more cunning device contrived to deprive the citizen of his rights in court.

It is vicious and un-American; it defeats the purpose of our fighting to win the war; suspends democracy, and is a flagrant and arrogant violation of the traditional Constitutional American right of the individual to "petition the Government for a redress of grievances." It should be repealed.

This provision should be wiped off the statute books at once, and Prentiss Brown, O. P. A. Administrator, should back wholeheartedly the proposal to do that very thing.

The Wheat Situation

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. HOPE. Mr. Speaker, wheat is the one important agricultural commodity, the price of which is below parity at the present time. Wheat prices are below parity by reason of the fact that the Office of Price Administration, in defiance of the expressed provisions of the Price Control Act, has imposed a ceiling on flour at a price which will not permit wheat prices to rise to parity.

The board of directors of the American Farm Bureau Federation has recently approved a report submitted to that body by a special committee appointed at the last annual convention of the American Farm Bureau Federation to make recommendations on a wheat program. The chairman of this special committee was Dr. O. O. Wolf, president of the Kansas Farm Bureau Federation and a member of the board of the American Farm Bureau Federation. The recommendations of this special committee and the statement on wheat adopted by the board of directors of the American Farm Bureau Federation are constructive in their nature and offer a sound and practical program. Under permission to extend my remarks, I am herewith enclosing a copy of the statement and the recommendations of the special committee:

This Nation is blessed at this critical hour with a great backlog of food supplies. In addition, our Nation's farm soil fertility is at a high level. We take pride as a Nation-wide farm organization in the fact that both the food supplies and our production facilities have been brought to this high state largely through the functioning of the Agricultural Adjustment Act and companion laws which we have helped to formulate and have consistently supported.

The present policy of the Government in holding the price of wheat below parity through the device of ceilings on flour at a time when all other basic food commodities are at or above parity, is grossly unfair to the wheat producer. Wheat constitutes a most vital part of the food supply of the Nation, of our allies and of occupied territories. This food supply is being hazarded by impractical and arbitrary controls.

The American wheat grower jealously guards his right of private initiative and free enterprise and is willing to sacrifice on either of these principles only insofar as it is necessary to maintain a program compatible with the broad general interest of agricultural activities and of food production.

We do not regard incentive or subsidy payments as sound where parity can be achieved in the market place, especially when the cost of food constitutes the lowest percentage of industrial workers' income of any time in history.

With these thoughts in mind, we recommend the following 7-point program:

1. We favor the retention of the basic principles of the Agricultural Adjustment Act, and particularly class as essential the mechanics of the act to adjust production upward in times of need for greater supply, and to adjust acreage downward in times of excess reserves. We support needed changes and modifications to meet increased needs of the war effort, with consideration for necessity of recognizing long-range soil-conservation principles.

2. We favor a program for wheat which will yield producers parity prices.

3. We oppose price ceilings on any food commodity processed from wheat having the effect of forcing the price of wheat below parity.

4. We favor releases by the Commodity Credit Corporation of limited amounts of wheat for feed purposes, at a figure not less than corn parity or not less than the market price of corn, whichever is higher.

5. We urge provision of adequate appropriations to continue the crop-insurance program on wheat, with the request that studies be made as to needed amendments, and changes in the operating plans, as will put crop insurance on a more practical and self-supporting basis.

6. We urge that every measure be taken to effect all practical industrial uses of wheat through proper research to the end that wheat and its products will occupy their proper place in war industries and in post-war economy.

7. We recommend continued cooperation with other wheat producing and consuming nations in an international wheat agreement.

A Message to the Italian People

EXTENSION OF REMARKS

OF

HON. LOUIS J. CAPOZZOLI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. CAPOZZOLI. Mr. Speaker, under leave to extend my remarks, I desire to include the text of an address delivered by me in the month of August 1943 in New York City, in cooperation with the Office of War Information, and broadcast short wave to the people of Italy.

The address is as follows:

I speak to you, people of Italy, as an American who loves your country, the land of his birth. Italy must be saved, and the Allied Nations cannot stand by and watch it die. That is why they are in Sicily now.

I, LOUIS J. CAPOZZOLI, represent the people of New York in Congress. I came to America from Cosenza, where I was born.

In America, I have seen true freedom, the freedom you yearn for and do not have. As long as you ally yourselves with Germany you can expect nothing but slavery and dishonor. Hitler takes all from you and returns nothing but false promises he cannot hope to fulfill.

The Allies wish you no harm. They ask and want nothing of you. But for you they desire liberation and peace. Their soldiers have invaded Italy only because the Fascist government threatens democratic freedom. It is your government, not your people, they seek to destroy. If you will deny the Axis we can live again in harmony, as God meant us to do.

Lack of Coal and What the People Think About It

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. HOFFMAN. Mr. Speaker, the following is a resolution adopted by the Hastings (Barry County, Mich.) Chamber of Commerce. It is typical of the feeling throughout the Fourth Congressional District. It is as follows:

HASTINGS CHAMBER OF COMMERCE,
September 15, 1943.

Newspaper and radio publicity starting early last spring urged all coal users to get in their coal early. Many heeded the warning and ordered their coal as early as last April for the coming winter; nevertheless even all their orders have not and cannot be filled. Do not blame the local coal dealers—they have been and are doing their best. This is a situation beyond their control.

The recent cold spell has focused our attention on the local situation: There is no coal to be had from the local dealers. Their yards are empty. Such coal as they are receiving is prorated amongst their customers. By all means do not let this situation lead you to order coal from all the dealers and then cancel them later, thus adding to the confusion. Stay with your regular dealer. One dealer has orders for 11 carloads; another for over 18 carloads; and another for over 350 tons. Some of these orders are for churches and schools.

This situation started with the coal strike. The strikes and chronic absenteeism of mine workers caused the shipping schedules to become badly delayed. The following are quotes from letters received by local dealers from various mining companies: June 30.—"Uninterrupted production of coal from here through the rest of the year should provide enough fuel for householders, and the industry is, of course, making every effort to conduct its affairs in such a way that the difficulties of rationing may be avoided." September 1.—"Under order No. 4 of the Solid Fuels Administration, schools and domestic dealers are last on the list, lakes, byproducts, etc., taking priority over everything. This order is mandatory and there is no way by which we can evade it." This means shipping to lake ports will continue while the Lakes are open before rail shipments will

start. September 9.—" * * * The Solid Fuels Administrator for War has issued some very rigid instructions governing the distribution of our entire production between September 7 and November 7. These instructions require that all lake and byproduct commitments be brought up to date immediately and kept there for the balance of the lake season, regardless of the urgency of any other orders on our books. We are further required to restrict shipments to retail dealers to not more than 5 percent of our screened-coal production during the September 7–November 7 period. This means that we will have practically no screened coal available for shipment to rail accounts prior to November 7; we cannot estimate a shipping date. We are booking no new business." September 8.—"It is not for us to question the wisdom of governmental wartime regulations issued in an effort to level stocks, utilize water-borne transportation while available, and service existing shortages."

So again, may I say—do not blame your local dealer. But, if I may make a personal observation, I strongly question the motives of a certain labor leader whose truce ends October 31 when industrial and consumer use of coal will be at a peak. At that time the coal mine operators will be most vulnerable to another strike, and the Nation's homes will want coal to such an extent that Washington politicos will capitulate in the face of angry demands by their constituents for heat for their home, churches, schools, and hospitals.

CHARLES R. ANNABLE,
Secretary.

Mr. Speaker, when will the O. P. A. and the W. P. B. begin to think of the winter, which is coming in Michigan?

War Department Must Not Become Global Political Organization

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. SHAFER. Mr. Speaker, I am deeply disturbed. With the lives of millions of our boys at stake in this global war, there are those in Government today who would play politics with the War Department.

I have seen a blueprint of a plan which would presumably streamline the War Department, but in reality its intent is to convert that great department into a New Deal political organization. In my opinion the activities of the men behind this plan are nothing less than treasonous.

I know nothing about what authority Gen. George C. Marshall will have as global Chief of Staff. All I know is that he has built up a General Staff that has functioned well and, on its record, should, with one or two exceptions, remain intact. I feel that General Marshall is a great leader, and I do not believe that he is the type of man who will permit himself to be jockeyed into a phoney position.

Congress cannot and should not attempt to interfere with the proposal to make General Marshall the global Chief of Staff. Such a move should not be criticized until it is shown at least that he is not to have full authority in that position. I prefer to think his promotion is a fine recognition of his ability.

Congress, however, is in a position to prevent the conversion of the War Department into a New Deal political W. P. A. It is in a position to prevent the appointment of a political general to succeed General Marshall as Chief of Staff and thus thwart the carefully laid plans of the administration's fourth-term strategists.

Congress should see to it that those generals who have so ably served under General Marshall are retained and that the new Chief of Staff shall be one of those best qualified to serve in that important post.

I make this statement merely to serve notice as a Member of Congress and of the House Committee on Military Affairs, that I do not intend to sit idly by and permit the Hopkins-Niles-Rosenman regime to turn the War Department into a global political organization.

The Petroleum Situation

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. GOSSETT. Mr. Speaker, for many months now, the best brains in the petroleum industry, as well as the best-informed men in Government, have been warning this country of an impending petroleum shortage. A subcommittee of the Interstate and Foreign Commerce Committee of the House has investigated the petroleum situation. The Small Business Committee of the House has investigated the petroleum situation. Mr. Ickes, as head of the Petroleum Administration for War, has investigated the petroleum situation. All congressional committees investigating the situation, as well as the Petroleum Administrator for War, have strongly urged an increase in the price of crude oil as the best possible means of stimulating increased production. Still nothing is done.

In April of this year the Office of Price Administration, in refusing the recommendation of the Petroleum Administrator for War for an increase in crude oil prices, stated that a program would soon be announced to relieve the petroleum shortage. Five months have passed and still nothing has been done.

In order to forestall a petroleum famine, and in order to save the small independent oil producer from bankruptcy, something must be done.

The following editorial appearing in the Fort Worth Star-Telegram of Sunday, September 12, graphically states the seriousness of the problem:

FACTS ABOUT THE OIL PRICE

In recent months, it has been shown that even more people outside the oil industry than had been imagined either know little about how oil is found and produced or what they do know is terrifically wrong. This astonishing ignorance of the country's most vital resource—and doubly vital in wartime—extends even to high Government officials and to ranking industrial experts and business economists, who ordinarily would be expected to be reasonably well-informed as to an industry upon which depends not only victory in this war but the continued welfare of virtually every form of private enterprise.

But the fact seems to be that a great many important and powerful people in the Government and elsewhere still regard the oil business as a sort of fabulous realm which operates in Alice-in-Wonderland fashion, having no relation to such prosaic matters as prices and costs which they realize govern every other business. Recognizing the fact that all other industries must possess a certain degree of parity with respect to one another if they are to live, these otherwise realistic experts apparently still imagine that oil is produced by the stroke of a pen or, at least by no more effort than pushing a button to start some sort of machinery.

Because of this strange obtuseness on the part of so many who apparently have the power to direct Government policy according to their delusions, this Nation in the midst of war is facing a paralyzing shortage of oil which is as necessary to war as gunpowder and fighting men. At the same time, we are facing a colossal disruption of our production and transport in this country, since both are based on a plentiful supply of oil.

It is presumed that leaders in business and government have not risen to their positions of prominence and power without the ability to read and understand figures: For the benefit of these, the following basic facts pertaining to the present condition of the oil industry are offered:

Since January 1, 1938, we have consumed 7,575,741,000 barrels of crude oil, while in the same period our discoveries of new oil amounted to 4,631,000,000 barrels.

In other words, our potential oil supply for all the future has decreased nearly 3,000,000,000 barrels in 5½ years, and since our present annual consumption is about a billion and a half barrels, the result is that our expectation of oil for the future has been shortened by about 2 years.

Today our total oil stock—crude, gasoline, distillate, fuel, and lubricating oils—amounts to 515,132,000, as against 689,166,000 barrels in 1929. In other words, in 14 years our stock is down 174,034,000 barrels.

Our reserves are being drawn upon this year at the highest rate in history, and, because of the essential nature of oil in war, the rate of withdrawal must continue to increase. The danger that we shall overdraw our oil account before we win the war is no longer something imagined; it is looking us right in the eye and from a very narrow distance away.

Admitting that oil is the one commodity we cannot do without, what are we doing about the situation in which we find ourselves scraping the bottom of our gasoline tanks?

There are two ways to make our oil supply last longer. One is to cut down on consumption, which we cannot do without hurting our chances of victory in this war. The other is to go out and find new oil to add to our reserve supply.

We are not doing the last. The new reserves found in 1938 amounted to 1,894,000,000 barrels. That was the last year in which discovery exceeded or equaled consumption. In 1942 new oil found amounted to 260,051,000 barrels, and in the first half of 1943 the figure was 171,000,000, less than one-fourth of the amount taken out through the wells.

There is a direct relation between decline of discovery and decline of drilling. In 1937 the number of new wells drilled was 31,106 and 22,143 of them were producers. In 1941 the number of wells drilled dropped to 29,070; in 1942, to 17,934; and in the first half of this year the number was 7,823. The percentage of failure in 1941 was 24, in 1942 it was 31, and in the first 6 months of the present year it was 34 percent.

In 1937, the peak year of recent drilling, 1 productive well was completed for each 57,868 barrels of oil produced. In 1941 the ratio was 1 well to 73,052 barrels produced, and in the first half of 1943 it was 1 well to 164,880 barrels produced.

It is obvious that in every way our petroleum account is dwindling. We are taking out more and faster than we are putting in.

The key to the whole situation is the "wildcatter," which is the industry's term for the man who goes hunting oil where it has never been found before. War emergency officials who have to date opposed a price increase for oil assert that the wildcatting program is normal. But normality is not enough in wartime. No other industry—and none of them is so important in war as oil production—has been held to normal. A normal number of ships, normal food production on the farms, normal output of coal, iron, copper, would not win the war, and steps were taken to raise all above normal. All except oil.

Wildcatting, of course, is not the sole answer to the oil shortage. The output of currently producing fields can be stimulated in several ways, all costing money. Here, again, price is the thing.

Costs of producing oil have mounted since the United States entered the war, as have costs of all other kinds of production. Material costs are higher, wages are higher, taxes have increased. Everything the oil producer does in the normal course of his business costs more money. His income has not increased.

In 1939 the cost of discovering oil, expressed in terms of barrels, was 12 cents; in 1942 it was 40 cents. Average weekly wages of labor in oil production now stand at $48.25, an increase of $7.95 since 1942 and $11.88 since 1941.

These figures show how the oil producer is being squeezed on the cost side. On the price side, the Department of Commerce's index, on July 17, showed all commodities at 102.9, all raw materials at 113.4 and wages at 170.4, with crude petroleum at 62.2 and petroleum products at 62.5, all these figures being percentages with 1926 prices taken as 100. Thus, in relation to other prices, the oil producer must trade two-thirds more oil for his dollar in 1943 than in 1926 and his 1943 dollar buys for him one-sixth less materials and one-third less labor than in 1926.

These are the factors on which informed people in the oil industry 2 years ago warned of the shortage impending. Correction then would have averted the shortage and removed the danger to our military effort and to our domestic economy. Now the shortage is here, and correction has not yet been made.

The O. P. A. has stood in the way for 2 years and seems determined to continue to stand in the way. If Congress does not awaken to the danger, we shall inevitably sustain irreparable damage even if we manage to get through to victory with enough oil to move our planes, tanks, and ships.

Address to American Bar Association by Robert M. Hutchins

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. THOMAS of Utah. Mr. President, since the words of the presidents of our great universities are always of general public interest, I ask unanimous consent to have inserted in the Appendix of the RECORD the address delivered at the last meeting of the American Bar Association by President Robert M. Hutchins, of the University of Chicago.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since war is for the sake of peace, the success of a war depends upon the kind of peace which follows it. Though brilliant military operations may be necessary to success, they by no means guarantee it. It would be hard to say who won most of the major wars that have afflicted the world in the last 150 years. It would be as hard to say who is winning this one.

In order to fight a successful war, you have to know what kind of peace you want, and you have to wage the kind of war that is likely to give you that kind of peace. As far as appears on the surface the American people simply want peace, which they think of as the absence of disturbance. Fascists are disturbers. If we can get rid of them the chances of quiet will be improved. Mussolini was one of the three symbols that we were fighting against. Now, Mussolini has disappeared and we are still fighting Italy. This suggests that we are not entirely sure what, or whom, we are after.

The notion that you go to war to put a period to the ambitions of disturbers has been popular for many years. Napoleon and the Kaiser were discussed in the same terms as the Fascists today. It may be that one reason why we have the most vicious of all disturbers in our own day is that previous generations thought of nothing but getting rid of disturbers in theirs. If we think of nothing but getting rid of disturbers now, future generations will not thank us for the tremendous effort we are making in their behalf. We shall destroy Hitler; we may set the stage for one far worse than he. And yet when anybody suggests that we ought to try to figure out the kind of peace we want, the answer is: "Let us get on with the war." The reply might be: "Get on where?"

We must fight for something and we must know what it is. We may here disregard the "four freedoms" and the Atlantic Charter. Their inadequacy is revealed by the fact that nobody has thought of mentioning them to Italy. No, the word to Italy is unconditional surrender, the most direct expression of naked power.

We have a mystical notion that all the issues that perplex us are going to be settled by improvements in transportation. They will give us one world. A colleague of mine has asked, one world, but whose? We may also inquire, one world, but how long? And one world, but what kind? One world which brings in closer contact the sparks of greed and ambition is sure to be in constant explosion. One world under one tyrant, or one association of tyrants, would be worse than many. In many worlds there is at least the chance of escape from one to the other.

But let us suppose that by one world we mean one good world. Will we stop to ask what one good world involves? It involves, unless we propose to kill them all, the Germans, Japanese, and Italians. If we are to fight a war for one good world which will include the Germans, Japanese, and Italians, we ought to conduct the war in such a way that their incorporation in one world will be as painless and complete as possible. If this is what we are aiming at, the words unconditional surrender, as the sole, exclusive, and final offer to the people of Germany, Italy, and Japan, seem an unpromising beginning. Mr. Churchill's talk of searing and scarring Italy does not automatically lead to the conclusion that the United Nations are dedicated to the brotherhood of man. The bombing of Hamburg may hasten unconditional surrender, but it is likely to have other consequences unfavorable to the formation and duration of one good world. And the present excitement about so-called war criminals has melancholy connotations for those who remember Lloyd George's disingenuous slogan, "Hang the Kaiser."

In the last war we said we were fighting against bad governments, not against the peoples who happened to be suffering under them. We have made no such distinction in this war. The Russians have; we have not. yet the distinction is not only fundamental to one good world. It is simply common sense. Governments pass; peoples remain. If you say that the peoples of the Axis must be incorrigibly bad because their governments desire world domination, I answer, first, that if we can associate only with peoples who have never had governments desiring world domination, our contacts with Europe will be limited to the Swiss; and second, that we may well recall in this crisis what Edmund Burke said of us in another: "I do not know the method of drawing up an indictment against a whole people."

One good world involves tremendous sacrifices. Mr. Churchill says to his people, "We will keep what we have." Queen Wilhelmina says to hers, "Our empire after the war will be greater than ever." These statements are appropriate to belligerents fighting to keep what they have or regain what they have lost. They are hardly harbingers of one good world, unless we assume that the status quo ante bellum portrays the ideal toward which we should strive.

One good world will demand the sacrifice of the political independence of every sovereign state. A world at peace must be politically one. A world that is politically one may not be at peace, for it may be afflicted with civil war. But if it is not politically one it cannot be at peace. Sovereign nations must have disputes, and disputes among sovereign nations must be settled by war. If they are settled in any other way, the nations are not sovereign.

It is possible for victorious nations to get together to hold down the conquered by force. This has always been tried and has always failed. It has, at any rate, nothing to do with one good world. A very bad world may be obtained in the same way. It may be supposed that an international police force has some connection with one good world. It has none in the absence of world law and world government. In the absence of world law and world government the armed forces of the conquerors assert their right to maintain an order acceptable to the conquerors, and that right is based on power and power alone. Conquerors asserting a right based on power alone are no more entitled to the name of police than Himmler's men in Czechoslovakia.

Every American schoolboy knows why the Articles of Confederation did not work. It may be said that even the Constitution of 1789 did not work, because a great and bloody war was necessary to establish that this was one Nation and not a collection of independent States. Union Now, regional confederations, or a world confederation cannot work any more than the Articles of Confederation did, and their sole usefulness would be that of the Articles of Confederation, namely, to demonstrate to the feeblest intelligence the necessity of a more perfect union. The American States were fairly homogeneous and very remote. Both their enemies and friends were too preoccupied to bother them. They had the safety valve of a new country and the western lands. More than all, they had completed a successful war against a common enemy, not against one another. Everything was on their side except one thing, and that was the form of political organization they had selected. No organization which contemplates the continued existence of independent sovereignties can produce a lasting peace, and to assume that it can is to deceive ourselves and suffer a disillusionment proportionate to our hopes.

In one good world every man is our neighbor, because every man is our fellow citizen. The commands of the political community supplement the demands of charity. One good world is a world of free trade and free immigration. The goods and the people of China, India, and Japan must have the same right to enter this country as the goods and people of Illinois have to travel through it. Two weeks ago the council of the American Federation of Labor, in response to the suggestion that China was our ally, voted to reaffirm its support of the Chinese Exclusion Act. Mr. William Green took the occasion to announce that "A Chinaman is still a Chinaman." If this is so, the one good world at which Mr. Green doutbless aims is still far off.

Our traditional attitude toward the rest of the world has been expressed in the old question, "Should foreigners be abolished—or should we save some to sell things to?" We have been dedicated to a policy of high tariffs and no immigration. Fifteen years ago we regarded national relief of the unemployed as revolutionary socialism. Our system of social security is only 8 years old. We are not yet ready to give national aid to the education of underprivileged American children. And yet, in one good world, we should be called on to support, to educate, to buy from, and to receive as fellow citizens, men of every race, creed, and color, at every economic level, and at every stage of ignorance or enlightenment.

One good world requires more than the sacrifice of ancient prejudices. It requires the formulation and adoption of common principles and common ideals. It requires that this be done on a world-wide basis. A world organization cannot be held together simply by fear. Not transportation but communication lies at the foundation of any durable community. Transportation hastens consolidation; there is no doubt about that. In the last century it has hastened consolidation of the most unstable and disagreeable kind, consolidation by conquest. One good world presupposes that the moral, intellectual, and spiritual foundations of the community have been laid. Otherwise the improvement of transportation must simply mean more frequent and terrible wars leading to the despotism of that power which discovers how best to apply the latest inventions in transportation to the destruction of its neighbors. In the absence of general agreement on the purpose of the state and the terrestrial end of man the world must be literally at cross-purposes.

I do not want to exaggerate the role of common principles in producing a durable community. We all know that there is an interaction between institutions and attitudes. This is what the Greeks meant by saying that law is an educational force and that the city educates the man. The Constitution of the United States has educated the people of this country to believe in and support the Constitution of the United States. But the Declaration of Independence and the Constitution itself show that common ideals animated our forefathers and made it possible for them to bring e pluribus unum. The different fate of the French Revolution is to be explained in part by the drastic revisions which separated the ranks of the people in France, who were united only by a desire to throw off absolute rule, and who, when it was thrown off, could be brought together again only by the despotism of Napoleon.

The ultimate goal is world democracy, for only democracy recognizes the humanity of man, his destiny on earth, and the state as the servant of that destiny. The principle is that all men are equal before the law, and that all men, because they are men, have the right to participate in selecting their governors and in framing the laws under which they and their governors shall live. Any limitations on this principle must be temporary, and they must be uniform. If, for example, it is felt that nobody should vote for a representative in the parliament of the world unless he can read and write, then free schools must be established in every part of the world, and the illiterate in Alabama must suffer the same disqualification as the illiterate in the Congo. If you ask why I insist that any durable world society must be a democratic society, I reply that a durable world society must be a just society; for people will fight until they get their rights. Only a democratic society is a just society, for only a democratic society acknowledges those rights which human nature carries with it.

It is this view of a democratic world community, and not my professional bias, which makes me attach overwhelming importance to education. Education is the chief means by which the community seeks to work out and clarify its principles and make them common to its members. If every person in the world is to be free, then he must be educated for freedom. The virtue and intelligence of every man must be so trained that he is prepared to rule and be ruled in turn for the good life of the whole community.

The mere mention of these as the aims of education shows not merely what great financial sacrifices but also what enormous intellectual and moral effort they will demand. In our own democratic country these are not the aims of education. In three words the aims of American education are health, wealth, and recreation. We may admit the importance of all three and still assert that the American educational system is not educating our own citizens for freedom and is not prepared to play a leading part, as Mr. HENRY WALLACE has proposed, in the reeducation of the Germans and the Japanese. The Germans and the Japanese already have educational systems adequately directed to health, wealth, and recreation.

One may be permitted to doubt whether America is in any sense prepared for world democracy. Though we are the most democratic of nations, we have yet to get rid of certain beams in our own eye that must distort our view of democracy on a world scale. The divisions among us between those who work and do not own and those who own and do not work; the poll tax; racial discrimination, from which the American Bar Association is not free; government by pressure groups rather than the rule of all for the good of all—these things must go far to thwart any commitment on our part to a world society in which they must disappear, a society which cannot emerge in even embryonic form without our aid.

These things also militate against the most effective use of America's greatest power, the power of example. Other nations cannot be forced to be democratic, much less to remain peaceful members of a democratic world society. They must be persuaded. Surely the most persuasive argument, the argument which proves that democracy is not an unattainable or an undesirable ideal, is the practice of democracy in one great country and the justice, the unity, the peace, and the happiness which it brings with it. This involves a series of very painful operations, the removal of the beams from our own eye.

If we must give up our political independence, if we must suffer a threat to our material well-being, and if we must alter our habits of thought and action to obtain one good world, can its early arrival be expected? Certainly not. We are not prepared for these sacrifices. But we may as well face the issue. If we mean to have one good world, we must make these sacrifices. If we do not mean to make these sacrifices, then let's stop talking about one good world. Let us look forward to centuries more of carnage, each made more terrible than the last by the greater and greater power which technology will place in the hands of him who is ready to grasp and to wield it. For even if we and our allies and our enemies were all committed to a peaceful, unified, democratic organization of the world, even if we had the ideals and institutions calculated to create and sustain it, those institutions would have to pass through many long, distressing years before our dreams could become reality. The reformation of the world's political system and the renovation of its moral, intellectual, and spiritual atmosphere cannot be accomplished in 2 or 3 months around a peace table or 2 or 3 years in a palace at Geneva. We can expect no miracles. But we can decide what we want. We can fight the war in terms of that decision. We can make a peace that takes us some short distance along the path to permanent peace. We can refuse to join in the enforcement of any peace that is unjust, undemocratic, or unlikely to lead us toward our ultimate goal. And, above all, we can prepare ourselves. If we can become convinced and comprehending citizens of a country that understands and practices democracy, it may be—who knows?—that our children's children, or perhaps their children's children, will be loyal Americans and at the same time citizens of one good world.

World-Wide Conditions Today

EXTENSION OF REMARKS

OF

HON. FREDERICK VAN NUYS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. VAN NUYS. Mr. President, on Friday, September 10, 1943, Associate Justice William O. Douglas delivered an address before the Commonwealth Club of San Francisco on the subject World-Wide Conditions Today. I have received several requests that the address be printed in the Appendix of the RECORD, and I now ask that it be so printed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are living in an era of fundamental change. One age is giving way to another. The process of change was set in motion before the present war began. The war is indeed a violent chapter in its history. But this war—huge and disturbing as it is—is hardly the last chapter in the transition.

The war is a challenge. It is a challenge not only to our ability to produce guns and tanks and planes, and to use them in the field. If that were all, we would not be talking and thinking about the future as we all are doing today. But the war is more than the immediate challenge of military might which we are meeting so triumphantly. It is part of a continuing challenge to our whole way of life.

Military victory will not automatically provide a solution to those problems. Something more will be required of us Our moral stamina as well as our fighting strength is being tested. For it is up to us to prove that our democracy can adapt itself to new circumstances, yet carry with it the values it has achieved in the past. This war is a test—a test of our wisdom, and our strength, and our faith.

China, Britain, Russia—each passed the test of survival. Their successes were not lucky accidents. They were genuine victories, earned by millions of people. They demonstrated a basic principle of history. Each battle proved that national integrity is a prerequisite of national survival. The cases of China, Britain, and Russia show that, in time of supreme national crisis, when a people have only their faith left to fight with, they can—if they feel they must—convert and transmute their national integrity into a decisive weapon of national defense.

We need not be concerned when the minds of the American people are in a ferment of doubt. Trial by doubt is an ordeal from which nations, like men and women, gain both wisdom and stamina. Nor should we be frightened when a world crisis provokes a mood of self-questioning among us. This doubt, this self-questioning, is not mysterious nor humiliating. On the contrary, it is a challenge which a vigorous and healthy people must always welcome. It is a challenge which should make us glad to be living at a time when so much is demanded of us, when entire nations can rise to heroic heights. In the history of mankind turbulent years are more nearly normal than placid ones. Societies either advance or they disintegrate. That is, perhaps, the first law of life.

Any era of transition or change provokes uncertainties. The old dogmas are no longer sure. The old truths seem to have been refuted. At such times—and especially when the climax of a great and bloody war is approaching—the whole basis of life is invariably altered. We cannot know what will come to take its place. But we may all be sure that the end of this war will be the signal for the beginning of a new struggle * * * a struggle of a different kind. It will be on the moral and social front.

Upon our skill and wisdom in that endeavor will depend our chance of building successfully a new America; of shaping her to our historic ideals; of making her new stature a guaranty of freedom, of strength, and of promise to the world; of saving a new generation from the terrible necessity of having to fight another World War.

We cannot escape the test nor evade the issue by pretending that the familiar world of the past 60 or 70 years is more than a memory and a tradition. We were brought up to live by its facts and ideals. We honor our past, and we propose to live by our traditions, not blindly, but selectively and intelligently.

America has never stifled life; it has always grown. America has never worshipped any imaginary absolute of perfection. As a people we have understood that a gulf must always separate what men have from what men want. That is why we are tireless in our pursuit of the better.

America has endured, America has remained true to herself because she has changed many times. The men who created this country knew that empires and eras, like people, grow old, become feeble, and die. The men who have spoken for this country in every chapter of her growth have known it, too.

In the same spirit of reverence for our dynamic past, with the most profound determination to use the great American tradition as a living guide to the world about to be created, we must admit frankly that the world into which we were born has died. We will dishonor our past if we deny the challenge of today. We, the generations now living, have a great historic chance to preserve the ideals we inherited. It is the same chance our fathers had. But it is also up to us to discover new goals, to find the new truths which the new age we are moving into will need, if the Americans of the future are to be proud of their history and traditions.

The task will not be easy. We'll have to make up our minds to live with our doubts and with our worries, with the problems to which no one today can give a simple or positive answer. While we must not underestimate the job, neither must we let its complexity * * * its immensity * * * appal us. This is not a country of men who are refugees from the past. This is not a nation of men and women who cling to the past because they do not understand the present and because they fear the future. Nor is it a country of men who are willing to sell their souls for a promise of security. This is a country of men and women who will accept the challenge of what lies ahead—all of them ready to do their part; all of them living with a sense of responsibility to their children and to the American creed they want to hand on to their children's children.

The last great period of change and growth which America went through, some 80 years ago, was more like our own than we have been brought up to think.

The 1840's and 1850's were a time of social ferment and intellectual probing. People were beginning to reexamine the values that their parents and grandparents had lived by. New religious groups sprang up just as new political ideas did in our day. And the period was climaxed by a war as bitterly fought and as fundamental in the changes it brought about as any in history.

Abraham Lincoln was not only the protagonist of his age. He was the symbol of all its inner meaning. No man could have been more tortured by doubt. No man could have felt more deeply the consequences of the action he knew he must take—action that he was sure was right—and yet which destroyed a way of life and meant death for thousands of young men.

Lincoln met the challenge of his own time successfully. But no one knew better than he that there would be new challenges to meet, new periods of change and doubt, new ages of transition and revaluation. Some of the problems of his age still face us. Lincoln left us no panacea, no lifeless and entire peace. He handed down to us, rather, an opportunity to preserve America in its own image, an opportunity to build anew. What he felt and thought and suffered is a barometer of all the spiritual striving and search of his era and a measure of its heritage for us.

Out of the confusion and disorder of that day came one of the most vigorous and lusty periods the world has ever seen. The age of crude growth and ruthless strength is not one that we want to repeat. But the vitality and the promise of our post Civil War life were as real as its crudeness. There is no reason for us to think that America cannot experience such growth again. Out of our own experience can come a spirit as powerful but wiser, a purpose equally determined but even better fitted to the world of tomorrow.

The decision of the Civil War that all labor in America would be free labor ushered in the greatest, most dynamic of all industrial revolutions. To some, looking back today, it is a golden age of enlightened self-interest and free enterprise. To others, it is the dark story of the marauding barons of high finance, of exploitation, and nothing more.

Neither of these views tells the story, which is far more dramatic than any special pleading can make it. The last 80 years saw us grow from a sprawling adolescent, importing economy to an industrial power greater in many ways than all the rest of the world put together. Our wilderness became farm land; our frontiers were transformed by blast furnaces and machine shops and factories of every kind. We were needlessly wasteful of our resources, and we left problems and evils in our path. But we made more things than any nation had ever made before and we gave more of them to more people. We were America. We were the trail blazer of the world. We pictured abundance to succeed scarcity. And we groped toward that goal.

But what we gave to our people—what our people made and took for themselves—was not just wealth and material things. We also made new liberties. No nation has ever been free as we have been free. Nor did any nation ever dare dream of growing as free as we did. The immigrants from Europe who came to our shores had heard stories—incredible stories—of gold in the streets, and shoes for everyone. But it was the other stories they heard, the stories that had the word liberty in them, that also brought them across what was then the wide Atlantic. It was the news that you could say what you wanted, and think what you wanted in America; that you could worship your God or argue about Him as your conscience told you to; that you could become a citizen and vote for the people who governed you; that you did not have to cringe before officers in uniform, that your children could go to school, free school, and learn to read and write and grow up to be somebody. They learned that civil liberties meant not only their right to say what they liked and the other fellow's right to say what he liked. They learned that the true meaning of those liberties was the right of the other fellow to say what they did not like.

Because of these things they learned to live together with other people whose fathers their fathers had always fought in the Old World. They and their children became Americans. They came, and they worked, and they fought as they are fighting now. They learned how to speak their minds and make their needs and desires felt while accepting the equal right of people of different views to do the same. They made themselves a place alongside the descendants of the older waves of immigrants. Because they could do this, because it was the freest land in the world, America became the richest.

That is the primary lesson we can learn from the earlier era of American development. Our people won new liberties. They did not reach utopia. No one ever will. But within the wide framework of those new liberties we were able to produce the good things of life more abundantly than any other nation. Our wealth and our power have been a direct outgrowth of our freedom.

In that connection let us not forget that in the last century we offered the common man something few other nations did—opportunity. He was not bound by inherited class distinctions. He could make money, win professional distinctions, acquire political power within the framework of a republic, or simply pursue his own idea of

happiness as he wanted within the bounds of a reasonable penal code.

Those are the ideals of freedom and liberty that have made us the inspiration of the world.

Those are the ideals of liberty and freedom for the individual which we must never lose.

Now that our position in the world—our very existence as a nation—is being challenged, all Americans are considering what our policy toward the rest of the world should be when the war is won.

Some say the rest of the world is no concern of ours, that we ought to let it stew in its own juice while we devote ourselves to solving our own problems. Others feel that our problems are merely a part of international issues and that we must take on the responsibility for solving those international problems before we can expect to get anywhere with domestic questions.

Each group is convinced that only the attitude it advocates will protect our liberties, and that to follow the rival course would ruin democracy in America.

If we look at the influence on the world that this country has had in the past, we may get a clue to how we ought to behave in the future. It is perfectly true that our domestic problems are part of a larger picture. All that we do to solve our problems at home is immediately radiated out to the rest of the world.

At the same time, we should not forget that every other nation knows more about its own troubles and problems than we do or ever can. No matter how high our ideals or motives, we can hardly qualify as managers of the affairs of other nations. What may be good for them may be anathema to us or vice versa. The history, the traditions of people vary throughout the world. Each must work out its own destiny. We should let others have the same free choice which we reserve for ourselves.

Even if we wanted to, we could not assume sole responsibility for solving international problems.

Moreover, we must not disparage and underestimate other peoples' ability to help themselves.

But there is a great deal we can do. We cannot force other countries to act as we wish or to emulate our way of life. But if America continues to be a country worth following, she will be followed. If our standard of life and our respect for the individual and his freedom are still vital and inspiring, they will inevitably awaken similar desires in other lands.

But other peoples must feel that our attitude toward them is friendly. We must show them that we are more than a great tutor; that we can learn as well as teach.

Above all, our word must be good.

The world is going to need—and it will welcome—as much competition as the people of America have always insisted on at home.

Liberties cannot be forced upon people. But we can kindle the imagination of the citizens of other continents with the idea that they would do well to achieve such liberties for themselves. After all, nothing succeeds like success.

We cannot expect our prestige throughout the world to rise above the level of our own accomplishment at home. Our world problem, far from conflicting with our domestic job, should stimulate us to do it better. If we want the security of friendship with like-minded neighbors, we will show the world that our democracy can outperform any other system. No counterpropaganda can stand against that.

In the era now ending we have been the inspiration of the world, the symbol of progress to even the most progressive countries. To keep the American tradition alive, we must continue as the trail blazer of the world in the age now dawning.

During the crisis of Lincoln's day, the political party in power in England was ready to enter our Civil War against the North. It was the common people of Britain who stopped the move. The war meant hardship to the textile workers of Manchester, thrown out of employment because the northern blockade was cutting off supplies of cotton. But although the British Navy might have broken the blockade and put them back to work, although gentlemen across the sea who were supposed to be so wise were for war, the textile workers protested. America was not just the country that sent them their raw material. America was a dream in their hearts. They would not fight her. They would not let their rulers make war upon her

Those people are allies worth having. They are the ones who said in England 4 years ago, "We will have no more appeasement. We will honor our obligation to Poland." They are the ones who 3 years ago stood up when hell rained on London and Coventry, on Bristol and Portsmouth.

They are the Chinese farmers who turn soldier by night, who keep Japanese rifles hidden in their huts and blow up bridges with home-made hand grenades and risk torture that China may live.

They are the Russian people who held at Stalingrad and today roll back the Nazi hordes toward Berlin.

Those silent millions are our real neighbors in the world now being born. They are taking the place of the decadent and irresponsible castes that traditionally controlled old-world politics. They have moved closer and closer to the council tables where power politics has always flourished.

Those silent millions—the common people of the world—are paying for the war, as they have paid for all wars, with their blood and their suffering. They insist that the world of tomorrow offer more to youth than the creed of cynicism. They insist that the world of tomorrow not make a mockery of those killed and sacrified in this war.

We failed in 1918. We must be wiser this time. We must attain new maturity if we are to make our victory in this war a fitting end to the struggle that achieved it. Our chances of success increase with the ascendancy of these silent millions to a greater position of power.

To fight in the manner of the Allies, a nation must have more than a fine army and good equipment. There has to be an idea in the hearts of the people, soldiers and civilians, that will give them something to balance against the supreme sacrifices of war.

The fighters and the working men and women of the Allied Nations are not waging war on the basis of lies and deceptions and false promises. They have ideas about what they expect their world to be at the end of the war and how they want to improve it. Those ideas are largely private and unexpressed, but they are there. You might call them individual war aims. But they are private and personal only on the surface. Underneath they are so widespread and universally held that they point to fundamental change in the shape of the world, to more freedom and better material conditions for all.

That combination, that determination to gain new liberties and higher standards of living at the same time is very American. If the fiery hope for freedom is the heart of the dream, the material gains are its outward symbol. Today that American dream is burning all over Europe and Asia. It burns brightly in the lands successfully closing in toward victory. It burns sullenly and obstinately in the hearts of the conquered who await a new day. It has now been kindled anew in Italy. With the end of the war it will shape itself into a drive of such force that it can be ignored by none.

On the material plane we see first of all irresistible pressure for a universal rise in living standards. There will be a demand for material necessities and luxuries of life even from the most backward economies. To meet that demand new industrial areas will appear and old ones will grow larger. What happened in America 60 and 70 years ago will begin to happen in other nations throughout the world.

That new industrialization need not be a threat to us. The increased productivity of one nation can profit all its sisters. A higher standard of living in Europe and Asia and Latin America will mean enormously increased markets for our goods.

Nothing could be more fallacious than the ancient theory that backward peoples can be exploited as outlets for industrially produced goods. Even if backward peoples want such goods, they do not have the money to pay for them. Profitable trade can exist only between countries on a fairly equal footing economically.

We should not be disturbed if the other nations of the earth begin to grow more like our own. In fact, America can expect to profit from the economic gains other continents are sure to make in much the same way as our industrial East is bound to gain from our development of new productivity here in the West.

With more and more things in common with other nations we can come closer and closer toward a real and functioning community of nations. And we must not forget that any real community of nations can exist only among equals. Our own history proves that.

Some think our period of leadership in the world is ended. Some say we shall have to yield our position of trail blazer to some other more dynamic power. But I cannot agree. I believe that we will go on to realize a way of life better than has ever existed before. America is not decadent. It has never been so strong. Its truly great achievements lie ahead of it.

The future will be strange to us. Its problems will be new. They will be more difficult than any we have had. None of us knows what new thing we shall make together here in America during the years of trial and struggle ahead.

But of one thing I am sure. What we make will not be a denial of our past. America will reverence freedom as it always has We shall not surrender or compromise our ideals of liberty and freedom for the individual. We shall not lose the basic civil liberties guaranteed at the birth of our country in the Bill of Rights and supplemented during the years of our growth by Congress and the courts. Those rights are the touchstone of what we must demand from the future. As long as our citizens are free to think, to write, to speak, to vote as they please, we can never be untrue to ourselves and our past—and we can never fear to compete with any nation for a position of moral leadership in the world.

Address by Mayor Walter Chandler at the Dedication of the Kenneth D. McKellar Airfield at Jackson, Tenn.

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in

the RECORD an address delivered on the 5th day of July, 1943, by Hon. Walter Chandler, at one time a Member of Congress from Tennessee, and now mayor of the city of Memphis, Tenn., on the occasion of the dedication of the Kenneth D. McKellar Airfield at Jackson, Tenn.

At this time I desire to call attention to one or two observations which were made by the speaker on this occasion concerning my colleague with respect to air mail service in the United States. I quote from a portion of the address of Mayor Chandler as follows:

One of the earlier and most important acts of Senator MCKELLAR, after becoming a member of the United States Senate, was to sponsor the first air mail service in the United States. And that became the first scheduled air mail service in the world. It took a fight on the floor of the Senate to carry this measure. In the course of the debate Senator MCKELLAR said: "I have no doubt that the time will come when we will use them (airships) for a hundred different purposes, and that the world will feel that it could hardly get along without them."

Since that time, Senator MCKELLAR has never relaxed his interest in and support of aviation in all its branches, including legislation for the development of landing areas, and air navigation facilities, as military necessities and for civil uses.

I ask unanimous consent that the entire address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The arrangements committee for this occasion is most courteous to invite me to return to my old home and take part in the dedication of this splendid airport named for a distinguished citizen of my present home. Those who made the decision to honor Senator KENNETH D. MCKELLAR in this most appropriate way have recognized not only the outstanding public service of one who has represented the State of Tennessee in the United States Senate longer than any of her other illustrious sons, but whose unexcelled record for the promotion of aviation in all its phases richly deserves permanent acknowledgement such as you are beginning today.

The suggestion of one of your leading citizens, Mr. Clarence E. Pigford, that this airport be named for Senator MCKELLAR was not intended just as a compliment to a loyal friend and faithful public official of high accomplishments. It is timely recognition of the extraordinary leadership of Senator MCKELLAR in the development of military and commercial aviation, and domestic, insular, and foreign air-mail service—a record not equalled by any Member of Congress at any time.

As early as 1917, while a Member of the House of Representatives, and on the Committee on Military Affairs, Senator MCKELLAR advocated and secured an appropriation of $9,000,000 for aviation. At that time, he said significantly, "Regardless of cost, we ought to have planes. We ought to build up this service. It is an instrument of warfare we must have, and we must never be found without it."

One of the earlier and most important acts of Senator MCKELLAR after becoming a Member of the United States Senate was to sponsor the first air-mail service in the United States. And that became the first scheduled air-mail service in the world. It took a fight on the floor of the Senate to carry this measure. In the course of the debate, Senator MCKELLAR said:

"I have no doubt that the time will come when we will use them (airships) for a hundred different purposes, and that the world will feel that it could hardly get along without them."

Since that time Senator MCKELLAR has never relaxed his interest in, and support of, aviation in all its branches, including legislation for the development of airports, landing areas, and air-navigation facilities as military necessities and for civil uses. All the great appropriation measures dealing with military and civilian aviation during the last 10 years have passed through the Senate Committee on Appropriations, and Senator MCKELLAR, as the ranking majority member of that powerful committee, has had the responsibility and satisfaction of carrying those measures to success.

Moreover, Senator MCKELLAR is entitled to high praise and unlimited commendation for his untiring efforts in the development of our foreign mail service. American mail planes have spanned the Atlantic and Pacific in the extension of our international postal service, and as chairman of the Senate Committee on Post Offices and Post Roads, Senator MCKELLAR has been in the forefront of every effort relating to the transportation of foreign mail by aircraft.

Thus, not only this truly fine airfield but airports throughout America very properly can carry the name of KENNETH D. MCKELLAR.

To me, it is a matter of genuine pride to see the city of my birth, which I still love, with all the recollections of my childhood, go forward in every way. You already have a strategic rail center and a favorable industrial situation. The city is large enough to take care of very substantial expansions. You are situated where you can derive fullest benefits from the T. V. A. program. You have excellent water facilities, and as fine people as can be found anywhere. Jackson is located in the heart of a farming territory which is bound to become a dairying, trucking, and livestock section. You pioneered under the leadership of Sam Lancaster in the building of farm-to-market roads, and now you are entering the field of aviation.

You have taken time by the forelock. You have not waited until the post-war era, which the prophets are prophesying will be the air age. You have recognized presciently that the aviation facilities of a city and county will be a true criterion of the enterprise of that community. An airport like this is the hallmark of a city.

Your municipal and county officials; your Congressmen, Herron Pearson and TOM MURRAY; the members of the airport committee; your most progressive newspaper, the Jackson Sun; and your chamber of commerce are entitled to heartiest congratulations and lasting gratitude for their foresight and intelligent persistence in going forward with this most comprehensive aviation program. No one can foresee all that will take place with aeronautic progress, but it is safe to predict that the most optimistic viewpoints will prove to be conservative and realistic even in the generation in which we are living, not to mention the coming generation of young Americans, all of whom already want to learn to fly.

In the air lanes between earth and sky miles become fractions of a minute. Winged engines purr us onward, demolishing time and space and reducing the globe to a community. Young in years is mankind's air life, but it is saving years and is the "solvent of our geography as well as the disturber of our complacency and the defender of our security."

In such a scheme of things Jackson must not be in second place. With this auspicious beginning you have thrilling opportunities for the future. Today the Kenneth D. McKellar Airport is doing its part toward winning the war. Tomorrow you will see air mail and air passenger service for foreign as well as domestic ports. Local and express aircraft will link the cities of America into one great network. Areas adjacent to airports will become industrial sites and freight depots for air cargo users, and the rates of express and passenger travel will be lowered to meet automobile, truck, and rail transportation costs. As air traffic does not follow sea lanes, but chooses the shortest distance between points, the great commercial centers of the world can be reached from this port.

Yes; this is only the beginning. The ultimate will depend on the courage and determination of those who now and in the approaching years have the destiny of Jackson in their hands. Boldness of action is necessary. No timid, creeping advances will suffice. Experience already has developed safe and sound principles of aviation, and the Federal and State Governments are attacking the problem of aviation planning so efficiently that the advice and guidance of the Civil Aeronautics Administration and the Tennessee Bureau of Aeronautics should be sought at frequent intervals. Keep abreast of the most progressive developments. The race for commercial and industrial supremacy is already on, even in the midst of the most terrible war in history. Men of action in all lands are vying for position in international trade, well knowing that all through history the means of transportation have had marked effects on the economic and cultural living within nations as well as among the countries of our earth.

To you who are receiving your training on this field for the purpose of serving our country, may the lessons received and the experience gained equip you well to meet and defeat the enemy. Make certain that he dies for his country rather than you for yours. Thus far, advocates of victory by air have proven their case. While I still believe that the last great battle of this war will be fought on land by tired men, the Air Corps will furnish not only aerial observation but the flying artillery support that is essential to success in modern warfare.

In this picture we cannot overlook the Navy—the mistress of the seas—but we must recognize the arrival of the master of the air; and, henceforth, world peace will depend preeminently on the power of military and commercial aviation to reduce the size of the world so that those who may design to conquer will have to look to other worlds than ours.

So we dedicate this airfield to the promotion of aviation and all its possibilities; to the future—with ever more speed—five to six hundred miles per hour, daily planes to Europe with hundreds of passengers, safe flight, weather regardless, and little planes for you and me.

May this investment of the people of Jackson and Madison County pay big dividends in success and progress; may its name be written high in the sky, and may the new horizons to be seen from the air open for us all the vision of a better world for mankind everywhere.

In Defense of Freedom

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an address entitled "In Defense of Freedom," delivered by State Senator Robert E. Brokenburr, at the dedication of a plaque to men from Highland Place neighborhood in the armed forces of the United States, at Indianapolis, Ind., on September 4, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At least 116 young men of our neighborhood have joined the armed forces of our great and good country. They have thereby become a part of that larger body called the armed forces of the united powers of the world.

Finer young men were never born. They are among the best products of ages of progress of the human race. They are the pride of this good, patriotic neighborhood. They have gone forth to make our great and good State proud of them. They intend to make our illustrious Nation an expanding, vigorous Democracy glad that they are hers. They have left behind them loved ones with whom they would delight to live forever, but these very loved ones, their neighbors, their neighborhood, State, and country are in danger and they have gone forth to save them by crushing their ruthless foe. Although we hope that this will not come to pass, it may be that in the fight they will lay down their lives. Be it remembered that greater love hath no man than this, that he lay down his life for his friends, his neighborhood, and his country.

These are our boys in a very personal sense. We have contacted many of them daily. We have made many suggestions to them about their personal affairs and they have done the same to us. We have received from many among them a smile that has set us right for a hard day's work. Often at eventide a joke has come from those among them, the effect of which has lingered long and made us happier and better neighbors. Their voices, their whistles, their style of dress, and their mannerisms were and are the common property of this neighborhood.

By their conduct these young patriots will be cumulative evidence supporting the thesis of those who brought forth upon this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal, and therefore equality before just and righteous laws, equality of opportunity to make the best possible man, woman, or child of him or herself; equality in freedom of speech, freedom of movement, freedom from fear, freedom from want, and freedom to accumulate according to will and capacity, shall not be denied anyone.

These young men are now giving their lives solely that this Nation and freedom shall not perish from the earth and that freedom and righteousness shall prevail all over the world. In doing this they answer the call of the world's greatest Nation and the call of the God of the universe. It is altogether fitting and proper that we should have this dedication.

However, we must not go away from here feeling that dedicating this plaque is a sufficient expression of our pride and interest in and appreciation of these boys. We must make this an occasion of rededicating our lives to a continuing all-out fight of everybody to win this war and thereby defeat forever our enemies, the enemies of progress and of our God. Then will our Nation have a new birth of freedom and righteousness. It will not perish from the earth, but will cooperate with the nations of light against the forces of darkness and lead the world to peace and good will.

Lest We Fail Again

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. THOMAS of Oklahoma. Mr. President, last Memorial Day Hon. John Brett, assistant district attorney for the western district of Oklahoma, delivered an address at the city of Bristow, Okla. The subject was Lest We Fail Again. Because of the outstanding character of the address, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are assembled here to wreathe the graves of our soldier dead with garlands of flowers. We come not in tears—to do so would detract from their courage, and would be a manifestation of our weakness which they did not possess. These men and women of our military forces were not afraid. They met the end, not with cringing fear but wrapped the mantle of death about them like one who lies down to pleasant dreams. Gladly did they live because they had eternal values for which to live—gladly did they die because they had eternal values for which to die. They loved life because they enjoyed their freedoms. They embraced death to preserve and perpetuate the freedoms for others. They did not falter in defense of the things they believed to be bigger than themselves—the things without which life is not worth living. They demonstrated that they were worthy of life—its liberty and its happiness—by being willing to die to preserve the principles upon which these things might be perpetuated. When the time came for them to choose, they did not hesitate or measure their sacrifice in terms of their own personal loss. Who knows, had they not been cut down by the vicious and indiscriminate hand of war, they might have scaled the heights to fame; they might have made rich contributions to science and invention; they might have revolutionized the trends of human thought. Yes; they might have ruled the destinies of men and nations. But what are the incidents of time and of place, of fame and of fortune, when duty demands its rendezvous with death. All these material things, as well as the sacred ties of love and affection for those closest to them, meant nothing to them when measured by the priceless rights of men and the eternal verities of life.

It was this appreciation of values that endure, and this sense of honor and of devotion to duty, that inspired all our military heroes to erect their altars of sacrifice. Thus it has been throughout all of human history, with men who fought for the principles of democracy. It was so with those Englishmen who died on the field of Runnymede. It reaches in our own history in golden links of achievement from Valley Forge to Chateau Thierry; from the carnage of Bataan to the battle of the Coral Sea; from the conquests of the Solomons to the bloody heights of Tunisia. It is this sense of honor and devotion to duty which will drive others on to victorious sacrifices. It is from such sacrifices that the fruits of victory are wrought. It is because of this thoughtlessness of self that wars are won.

But too often the ideals of those who sacrifice and fight and win are laid aside by conniving statesmen, as tarnished and outworn tools. In the last war we found it so. We veterans of that conflict who still live made small sacrifices; but those who died made the immeasurable sacrifice, to make the world safe for democracy. Both the living and the dead sacrificed, only to find their ideals had been forgotten by erring statesmen. Yes, forgotten before the broken bodies of some of the wounded had mended, and before the bodies of our dead comrades had returned to earth. Forgotten by statesmen who considered peace—the fruits of victory—with all the pettiness of selfishly spoiled children playing a game of anagrams, each drawing from the common pool—a letter to complete the spelling of their national aspirations.

France was the first to draw her letter, necessary to the spelling of her national aspirations. She drew the letter "S" and spelled out the word "security."

Germany next was permitted to draw the letter "U" and spelled out the word "unity," the thing she craved most.

Italy next drew the letter "I" and she spelled out "imperialism" and sought restoration to the grandeur of the Caesars.

Russia drew the letter "C" and then completed the word "communism."

The United States drew the letter "I" and spelled out the word "isolationism."

England drew the letter "D" and then proceeded to complete the word "divide" and conquer.

Japan, the last to draw, drew the letter "E," and then completed spelling the word which expressed her national aspiration in "expansion." And when they had finished drawing in this game of international anagrams, they had succeeded in spelling out the word s-u-i-c-i-d-e—suicide. And while both we who fought, and you who held the home front, slept in the Garden of Gethsemane, a little band of international traitors sold the peace of the world into crucifixion. And thus those who died in the First World War shall have died in vain, unless we who once slept in that Garden of Gethsemane are awake to prevent its repetition. Unless we awake, peace will again be crucified at the conclusion of this war. If we sleep again when this war is ended, a new band of conspirators who place personal profit above peace will again sell for a mere pittance the world's security. Unless we determine now, as the little band of Spartans of Thermopylae, that they who seek to steal the peace shall not pass.

Oh, that those who died in the last World War, and those who will die in this, might rise from their silent dust and cry out, "You shall not again lose in selfish ignorance what we died to achieve! You shall not crucify our sons and the sons of the future upon the cross of political expediency!" Oh, that their cry may haunt you—you who would destroy the hopes of men; you who would tear down the temple of faith in the hearts of men; you who would seek to close the portals of freedom of speech and freedom of worship, freedom from want, and freedom from fear, to all but yourselves; you who would deny the world our weight in the scales of international justice; you who would establish yourselves as superior nations, and defeat justice with intolerance.

God grant that the soldier dead may haunt you, you who would follow the Prince of Peace—follow Him afraid and afar off, and place your individual hatred above the welfare of men. If those who died could but speak, they would ask you, "What is a name, whether it be Roosevelt, Willkie, Smith, or Jones, but a mere incident when measured in terms of eternal things?" Do you not know, that regardless of their names, that men are

but instruments in the hands of God, through whom He must move and manifest Himself? Men like Washington, Lincoln, and Wilson. Do you not know that men die but that the principles they advocate may be eternal? Do you not know that God's plans for humanity may be delayed but not destroyed? Do you not know that His plans can only be delayed through people who are blind to enduring values? Again, let these dead heroes rise to haunt you, again and again. Let those who yet live, rise to challenge you, you who say you profess Christian convictions, but at the council tables deny us the ideals of the Prince of Peace.

My friends, I fear for the future when I think, after this war—then what?

I fear, because recorded history makes me fear. I fear when I remember that Caesar had his Brutus—just when he had concluded his will—a document most favorable to the Roman people.

I fear, when I read that America had her Benedict Arnold at a time when our independence hung in the balance. I fear, when I recall that Woodrow Wilson had his traitors who knifed him when the most noble soul sought to lead America to assume her righteous responsibility in the establishment of governmental machinery for the enforcement of world peace.

Yes; I fear, when I remember that even the Prince of Peace had His Judas Iscariot when He sought to teach men the way of life.

But then, my hopes are rekindled, with the afterthought, that none of these failed; that it was not He who died on Golgotha's bloody cross that failed, but only those failed who refused to follow in His footsteps. I would remind you today that the end of men's dereliction toward the Prince of Peace and His precepts has not been written. It will not be written, until countless millions shall lie beneath the sod in unmarked graves. It shall not be written until the hosts of error that visited upon us this carnage have been beaten from the earth. It shall not be written, until men grow big enough to banish from their hearts the littleness which blinds them to the truth. It shall not be written, until mankind becomes worthy of the privileges of life and of freedom from war, and is willing to share them with his neighbors. It shall not be written, until men are able to see through the mists of hate and can see that the ideals of those whom they would assassinate are bigger than the assassins themselves. It shall not be written until dreamers cease to make dreams their master. It shall not be written until idealists learn to temper their idealism with the stark facts of reality.

Thus, let those who sit in the next parliament of nations to consider peace approach their tasks. Let those who send them demand that they not assemble like selfishly spoiled children, but that they meet like deeply moved men of destiny. And, when the second game of international anagrams has been ended, let us trust that France may have drawn the letter "F" and then let her complete spelling the word "faith." May she find that though she has been broken upon the cross of internal corruption, in her resurrection may she find incorruption. May she learn that salvation comes through faith in the values that endure. May she find that morality is a necessary spring of popular freedom and that morality cannot prevail in the exclusion of religious convictions. May she find reconsecration in the faith of her fathers—the faith without which in others she would have been crushed never to live again.

May Germany draw the letter "R" and then spell out the word repentance, repentance that comes from deep conviction of sinfulness, the first essential to salvation. May she realize that salvation comes only through self-purification, and a break with the past. Let her forsake her false philosophies, and forget Nietzsche and his doctrines of a superior race. Let her put her faith in the Nazarene and in His examples and precepts of peace. May she be made to remember that superiority of race cannot be attained through ideologies, but only through the attainment of superior concepts of service. May Germany cease to worship the false god of conquest. May she be reminded of the fact that though the conqueror may strut on his stage for a fleeting hour, in the end he is scourged like the quarry slave to the dungeon of remorse. Remorse which she will experience for the atrocities which she has permitted a false leadership to perpetrate upon innocent conquered and defenseless people. In remembering the mass murders of the Jews and other innocent people because of race and creed, let her conscience kindle and burn her perverted philosophical concepts before her eyes. May she realize that these crimes have not been committed because of superiority but rather because of inferiority. May she remember that as there is a law of compensation regarding righteousness, there is also an inexorable law of retribution exacting its penalties by way of vengeance. Vengeance which though the exclusive prerogative of God will be visited upon her by Him through the tolerant and just peoples of the earth. Thus having endured the immutable penalties of nature and of God, may she turn in worship to the true God, and seek after righteousness and she shall find all other things that endure shall be added unto her.

Next, may Italy draw the letter "E" and spell out "equality." May she have found from bitter experience that there is no gain in subjugation of weaker nations. May she realize that the grandeur of the Caesars is dead. May she find that the only imperialism that pays is that which springs from peace, where every man, regardless of race, color, or creed, wears the crown and wields the scepter of democracy. May she have learned that kingship is not to be found in the tawdry robes of imperialism, but through kinship of equality. May she have discovered that there is no inequality among nations except for those who would break the peace.

May Russia likewise choose the letter "E" and then finish the word "equity." May she come to know that equity is the mother of tolerance, and, knowing this, may she remember that the virtue of tolerance is in allowing one to hold beliefs different from her own. May she have learned in her hour of travail that fear by others of her own intolerance may have cost her millions of stalwart sons and caused their mothers to have suffered much. May Russia remember that he who would have equity must do equity.

Then let England select the letter "D" and then complete the word "divine." Thus choosing, let her recall that forgiveness is divine and though she may have been bombed mercilessly, may she remember that the "quality of mercy is not strained. It falleth like the gentle rain, from heaven," whence also, came her strength to bear her cross. May she write her destiny in the language of Divinity, and in terms of righteousness.

Then let America choose the letter "O" and spell out the word "opportunity." Let us thus remember the great moment of leadership we missed in the last war. Let us approach the problem of peace with the determination that it shall not be said of us again, "You failed to help establish the mechanism of international justice." Let us write on the scroll of time an achievement which shall stand out in eternity like a mighty peak above the rest, second only to the name of Him who taught the way of peace.

Last, let Japan meditate much upon the selection of both her letter and her word. Let her remember the misery she visited upon herself and her sister nations. Let her remember that she, too, must endure the penalties of the inexorable law of retribution—that as she has meted out misery to others it shall be returned unto her. Then let her choose the letter "M" and spell out magnanimity. Thus, she may lift herself from the bog of an inferiority complex and littleness. May she find a new state of being marked by greatness of spirit and of mind. May she assume a loftiness of spirit and of ideals which will enable her to look up, and not down. May she thus acquire self-respect. May she be able to disdain injustice, forget littleness, abhor revenge, and learn to act and sacrifice to noble objects. With the acquisition of magnanimity, may she find a new concept of honor and a new sense of integrity.

Thus in the world's next game of international anagrams may the nations of the earth succeed in completely spelling out freedom—freedom in all its enabling aspects.

Thus may the nations of the earth approach the peace table with faith in the future, repentance in their hearts for the wrongs they have committed; may they sit together in equality, endeavoring to promote both political and economic equity among men and nations, invoking divine guidance—seeking to find opportunity for service to mankind; may they magnificently, in truth and in fact, spell out freedom and thus give life to peace everlasting.

God grant that in memory of our honored dead, our statesmen, regardless of party labels, may lay aside their personal differences and political hatred—lay them aside regardless of whomsoever the people may have elevated to the Presidency of the United States—and grant that they may prove themselves worthy of the trust reposed in them; that they may write on the tablets of time, at the end of this bloody commentary on war, "Never again—it is finished."

In this way we will prove ourselves worthy of the heritage which was handed to us by those who have died in the cause of justice, freedom, and democracy. In this way we may prove ourselves worthy of kinship with those who shall yet die to preserve that heritage. In this way alone shall it be written of us, "They, too, did not fail."

Handling of Camp Followers

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Handling Camp Followers," published in the Shreveport (La.) Times of September 19, 1943. The editorial deals with problems surrounding the various Army camps throughout the United States. The subject is very well presented, and the editorial is very informative.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HANDLING CAMP FOLLOWERS

It is unfortunate that some national publicity has pictured Leesville, La., as the horrible example of failure of civilian communities to provide various facilities which might be desirable for Army camps suddenly thrust upon them by the exigencies of war. It is especially unfortunate because, when the war is ended and the whole story is told, it is doubtful if many towns in the United States will be able to show a per capita record of greater improvement or more determined effort to face the problems produced by army camps than will Leesville, La.

There have been two particularly regrettable instances of national publicity along the line that Leesville is the last place in the world for either a soldier or a member of his family to go. One was a full-page article in the Washington Post by Mrs. Agnes Meyer. The other is a recent spread of pictures in Look magazine, in effect telling any who care to read that Leesville is afflicted with something in the nature of a leper's touch—or worse.

Mrs. Meyer spent a matter of hours in Leesville and either failed to get or failed to understand the vast amount of information that certainly was available to her from the military authorities at Camp Polk, particularly concerning results obtained on venereal disease control as a result of close cooperation between Army and Leesville civilian authorities She took conditions which Leesville frankly admits existed at one time and presented them as a continuing environment, failing completely to recognize that past evil of which she wrote had been or was being remedied as rapidly as was humanly possible.

No one questions Mrs. Meyer's motives. But throughout most of a page of type she failed to see that the past was not the present, and only a line or two mentioned success and achievement attained by both the Army and the civilian leaders in meeting Leesville-Camp Polk problems. She wrote on a small foundation of past fact, with no thought of the existing structure and of the additions to it that were under way. Probably she did not mean to isolate Leesville as the only place of the kind she thought it to be, for Mrs. Meyer and the Washington Post have conducted a vigorous antivice and housing-conditions drive in their own city of Washington, D. C., the Post describing the Nation's Capital as "infested with rats and syphilis."

But, Mrs. Meyer completely missed the story of Leesville, which is the story of a small and economically lethargic town awakening, with Army assistance which its people readily acknowledge, to launch an all-out battle against obstacles and problems seemingly impossible to defeat. Success has come on many sectors—but neither the Washington Post nor Look recognized that even an effort was being made, much less that tremendous success had been attained.

Leesville concedes that conditions were bad and almost got beyond control in the early days of the Army influx. It couldn't have been otherwise. Leesville was a civilian town of 3,000 population with an economy as cut over as the one-time lumber land surrounding it. Suddenly some forty thousand to fifty thousand hale, hearty, husky, young American males were dumped at its doors. That is the equivalent of a city with a total population of perhaps 750,000 persons—men, women and children, old and young. (Maneuvers periodically jumped the soldier total by tens of thousands.) There probably isn't a city in the United States—much less a small lumber town—that could have handled such an influx of young male humanity, with the inevitable advent of families also in many cases, and done it in a manner that would be considered fully successful.

Error lies not so much in unpreparedness to meet such problems, but in failure to try to meet them.

That is where both Look and Mrs. Meyer missed the story completely. They built up the unpreparedness for a problem no one ever dreamed would come, and forgot both the effort to meet it and the extent of success of that effort. As well say that we lost this war because its unexpectedness caused our forces to surrender at Bataan as to say that because a town of 3,000 civilians wasn't ready for 50,000 soldiers when mobilization came 3 years ago means that it has done nothing since to meet problems thus created.

As for the picture spread in Look: We have, over the personal signature of Col. J. K. Boles, Camp Polk commander, his statement that some of Look's pictures were not even taken in Leesville and that in other pictures people were recruited to make up scenes that did not actually exist. That is fake, reprehensible, unfair journalism; and it could come pretty close to having a sabotaging effect—even though perhaps unintended—on some parts of the war effort.

There is one angle in all of this problem of small towns and Army camps that many recognize but few seem willing to discuss. That is that if people insist on being camp followers, they must take what they can find and not expect towns and cities already overrun with their own war effort to be able to provide especial conditions on demand. By camp followers we mean the wives and relatives of men in uniform, for that is the Army designation for them and is in no way personal reflection.

When a man is called to uniform in time of war he is at war from the moment he walks out of his own home to go to camp. He should be looked on as probably sacrificed, so far as personal association is concerned, the minute he leaves home—whether he is to be stationed in this Nation or overseas. This may seem a cruel viewpoint; no one can help but sympathize with the desire of a wife to be with her husband every possible minute before he goes overseas, or with the desire of a mother to be with her son. But war is cruel throughout every minute of its existence and its cruelty extends from the battle line to the family and home left behind. If wives and relatives wish to be camp followers, they have the right. But, they must not expect someone always to be looking after them. That's their own job—while the men of the house are in uniform. They must take what is available if they elect not to stay at home.

That applies to housing, social life, recreation. So far as vice conditions go, the Army is seeing to that and in most cities and towns—including Leesville—rarely finds occasion now to complain. No humans can end sin. They can only reduce or alleviate it.

The problems that have been Leesville's have been those of camp towns and camp followers everywhere—New York, Maine, California, Florida, Oregon, etc. There have been many successes, many failures. We hold no brief for those who try to alibi failure with "we're no worse than the others."

The point is that Leesville makes no alibi and needs none It has won a lot of battles and is moving right ahead to new fields. Only citizen complacency could lose for it now. If it can continue to bypass that obstacle the story of Leesville at the end of the war will be what its people actually are writing now—not the story of horrible example, but of splendid achievement. That should be recognized by all.

The Value of a Job

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "The Value of a Job," delivered by State Senator Robert Lee Brokenburr on September 19, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A job is to be held, cherished, prized, and appreciated as one of the most important possessions. Any kind of a job should be thus regarded. A man without a job and needing one is in an awful fix. This situation is bad enough if he has only himself to provide for. If he has a wife and children dependent upon him, such a man faces tragedy. Every man should pledge allegiance to his job and to the things for which it stands, and keep that pledge. To neglect or do violence to a job is not wise. It is foolish. This does not mean that a man should not better himself. It does not mean that he should never be justly reprimanded, disciplined, or fired on a charge of incompetence, dishonesty, or failure to make good. It does mean that he will habitually report for work on time and not watch the clock, but watch and do his best work for a full day every day. It does mean that he will not be guided or influenced by bad leadership. Yes; it means that he should treat his job so well that he doesn't need a boss even though one is present; that the boss will always find him a source of delight and high inspiration, and only parts with him at the end of the day because he has the joy of expecting him tomorrow. Such an attitude reduces waste to a minimum and makes unnecessary a strike for higher pay, better working hours and conditions, because the rank and file of employers will show their appreciation of and respect for an efficient, good man by voluntarily giving him every possible advantage. Such an attitude will raise one from the dead level of a hireling to the living perpendicular of a coworker with the boss and to the security of a spiritual partner in business.

It is difficult to picture such a man being fired if there is any possible way to keep him. I have heard of jobs being made for men like him because the boss knew that such creative workers would make them pay.

The proper love for his job will cause a man to always seek intelligently to know all about it. There is no job so simple that a casual attitude toward it will result in much knowledge about it. One can't expect to hold a job against a man whom his employer believes will take more interest in it and thereby learn more about it than he. He can't learn all there is to be known about the simplest job unless he rests when he should and lives a sensible wholesome life because he won't have the energy to do it. Always in the long run the best man wins if he has the patience and intelligence to make every opportunity count. With every job goes many opportunities to prove one's self. Most people pass them up because of impatience, stubbornness, and pride and

charge their failure to a prejudice that could have been overcome.

When the lights go on again all over the world their glare will show up many a worker who has just gotten by during the war because of labor shortage. Don't be one of them.

Fear Versus Faith

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fear Versus Faith," written by T. E. Murphy and published in a recent issue of the Saturday Evening Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEAR VERSUS FAITH

(By T. E. Murphy)

The tie that binds the United Nations together, in the minds of many people, is a temporary one: The simple wish to defeat the enemy. But if the tie is to endure after the war, when the strength of all the Allies will be needed in the rebuilding of the world, that tie must have the toughness of common understanding and common purpose.

It is not enough to say now that we are fighting to save democracy or that this war is a fight of good against evil. The term "democracy" has no common meaning among those who fight with us, and the conception of this conflict as a fight of good against evil is an oversimplification. Deeper than evil is fear. Deeper than goodness is faith.

The wellspring of all evil is faithlessness. If you have known the hardened criminal, the cruel, the hateful and the depraved, you will know that more basic than their badness is their faithlessness. They have no sense of dignity, of individual worth, and they have no faith in themselves or in others.

The fountain of all goodness is faith, in oneself, in one's personal dignity, in the dignity of all living things. When you think of St. Francis of Assisi, you do not conceive of him as merely good. In addition, he had an intuitive sense of the value of all life as the work of an Omnipotent Being. To him, even the wolf could be brother.

This, then, is the great fundamental difference between the countries now at war, the two great camps into which the human race has been split. The split has not come on the basis of dogma, race, or skin color. The Filipino and the Chinese fight on the same side as the Dutch, the English, and the American. The German and the Italian are comrades in arms with the Japanese.

One group has a fundamental faith in the human race; the other believes that people cannot be trusted—must be ruled by the force of fear.

Faith defeated Germany in the skies over England, and faith created the miracle of Dunkerque. Fear has reddened the soil of the earth from Amsterdam to Hong Kong with the lifeblood of innocent men, women, and children.

Fear is the main motive power of the Axis, not only in the control of subjugated countries but in their homelands as well, and because fear is a negative thing—the abnegation of creativity—it carries within itself the germ of destruction. That is why Germany must lose—has lost—the war.

Since the last war the record of Sweden, Norway, Switzerland, England, and the United States—nations that honor human beings—has been one of honest notable achievement. Most were not endowed with either wealth or empire. They earned their wealth the way millions of honest, frugal men have earned their substance—through work and faith in the future.

Meanwhile Germany had been draining dry the resources piled up by its brief republic, ruining its universities, prostituting its scientific brains, and poisoning the intellectual and moral wells from which it bade its young to drink.

But these things were obscured by the vast armaments piled up by Germany, demonstrating an ostensible strength that made the democracies look weak and decadent by contrast. We did not realize our strength—nor do we yet.

This country was founded on faith. Men came to the wilderness of America more than 300 years ago to found this country because they had faith, and to our shores have since streamed millions of human beings who found fulfillment of their dream—a world in which the human being was a creature of dignity and worth. These founders were deeply conscious of this irrefutable truth—that faith shall conquer fear; a philosophical truth, a psychological truth, a theological truth, a military truth. The whole history of the world and of every great man who ever lived gives strength to its credibility. Each of us at some time has proved it in his own life.

And yet, this is the sword not yet unsheathed, the weapon still unused. Somewhere along the tortuous road traveled by this generation, the vision has dimmed, the flame has flickered. People in a country such as ours do not fight savagely, die willingly, sacrifice graciously merely for words or phrases or shibboleths, or even for the hatred of an abstraction. This country has been builded on affirmation, not negation. We fight better for something than against something.

What that something is, curiously enough, can be seen with startling clarity by those who have received least from America. The wonder is that those of our country who have been batted from pillar to post by discrimination, injustice, and prejudice have stuck by their country as well as they have. Logically, as Hitler predicted, we should have broken up into a dozen warring groups.

We did not, and we shall not, because Hitler, in surveying the internal tensions of this country, overlooked the important fact that those who founded this country set a goal. It has not been reached, but it is starkly clear for those who will see. Millions of those who are farthest from it have faith to pursue it. This faith sustains them now, and will help win the war for all of us.

Mr. Willkie's Program

EXTENSION OF REMARKS

OF

HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. TUNNELL. Mr. President, on behalf of the junior Senator from Pennsylvania [Mr. GUFFEY] and in his absence, I ask unanimous consent to have printed in the RECORD an editorial entitled "Has Willkie Signed His Own Death Warrant?" published in the Philadelphia Record of September 22, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAS WILLKIE SIGNED HIS OWN DEATH WARRANT?

Wendell Willkie has crossed the Rubicon of Republican politics.

His declaration of intention to run for the 1944 G. O. P. Presidential nomination is far and away the most progressive and liberal statement of policy and principle to come from any major Republican leader since Theodore Roosevelt.

That declaration, published in Look magazine, excerpts of which appear elsewhere in The Record today, shows that Willkie has grown these past 3 years. He is one of the few Presidential candidates to gain rather than lose stature in defeat.

Yet this statement, by its very liberalism, almost certainly means Willkie has lost any chance of gaining the Republican nomination in the old-fashioned way—by winning blocs of delegates here and there.

In turn that means Willkie's only chance for the G. O. P. nomination is to get it the hard way—by building up popular sentiment so strong it will virtually force the G. O. P. professional politicians to accept him.

The prospects of that—despite his strong showing in Gallup polls—are not much better than the prospects of Mussolini reconquering Africa.

If "that man in the White House" makes the G. O. P. Old Guarders sob and shiver, at least he's a Democrat. Guess for yourself what they are thinking and saying after reading Willkie's statement that—

"We must distinguish between enterprise and private ownership. A corporation may be privately owned and still be the worst enemy of free enterprise. Unfortunately, some of our big corporations are in this class, and the Democratic Party, despite noisy proclamations, has done nothing about it."

Figure how that would set, say, with a Joe Grundy.

"We must prevent the further misuse of the word 'enterprise' by those who wish merely to preserve their idle capital and their vested powers."

Can't you hear 'em saying in the Union League: "Is that damn Willkie guy the same one that was head of Commonwealth & Southern?"

"Absolute guaranties must be provided by our society against unemployment and against want because of old age, injury, or incapacity."

The groans are from Hoover. That thud is TAFT passing out.

More's the pity that in making this forthright statement and giving the G. O. P. really sound advice, Wendell Willkie probably has signed his own political death warrant.

What he's talking about is not what the G. O. P. band of brothers have in mind for 1944.

Willkie's program seems blithely indifferent to some of the political realities, even those of his own 1940 campaign. For example, he says:

"The Democratic Party is now a coalition of two major groups, neither of them liberal in outlook. One group consists of southern Democrats, professional officeholders who completely control the South's political machinery by denying the vote to a majority of its citizens, white and colored. The other group is composed of the big-city political machines, such as the Kelly machine of Chicago, the Hague machine of Jersey City, the Flynn machine of the Bronx."

As a newspaper which has fought the Hague machine when the Republican Party

wouldn't, we feel free to ask Willkie who he thought rolled up those 22,000,000 votes for him in 1940?

Who did his work here in Philadelphia but the Pew-Harris machine, which was a veteran organization when Hague, Kelly, and Willkie all were in diapers.

What's more, it is likely to be the Pews and their ilk, the Republican machine bosses, who will keep Wendell Willkie cooling his heels at the G. O. P. convention doors while they cast about for a candidate who won't annoy them with ideals or principles.

The big difference between the Republican and Democratic Parties is that in the Republican Party the political machines keep the liberals in their place.

And in the Democratic Party the liberals keep the political machines in their place.

The Rich Get Richer

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "The Rich Get Richer," published in the New Republic of September 20, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The fat cats of American war industry are not satisfied with their cream ration. They have raised such a howl about the beating they are taking from present excess-profits-tax rates and from the present Contract Renegotiation Act that the House Ways and Means Committee came back to Washington a full week in advance of the rest of the Congress to open hearings on this whole question.

When you look at the corporate-profits figures for last year and the years just before, and at the estimates for this year, it is hard to see what kind of argument industry could offer in support of decreasing its share of the general financial burden of this war. But a look back at the flimsy arguments that have recently been camouflaged with a twist of a statistic or the turn of a phrase to present the American worker's pay envelope as our one inflationary threat makes it easier to guess what arguments Congress will hear on its tax policies during the new session from one section of industry at least.

A large-scale and subtle program of tax propaganda has filled the press and the air for months now. It soaks into your skin if you don't watch out. American industry—the private enterprise your soldier wants to come home to—if you believe the tax-exempt ads—is taking a beating. It gets the stuff there on time, but Uncle Sam takes no notice of that when tax-collection days come round, and in spite of 90-percent tax rates on excess profits industry is not allowed to pile up the reserves it wants to use to guarantee a job for your boy when he comes marching home again. It is subject to renegotiation of its contr..cts without allowance for reserves and before taxes are deducted.

The facts do not exactly jibe with this propaganda. Take profits, for instance. Authoritative estimates indicate that corporate profits for 1943, before taxes, will amount to approximately $23,000,000,000; 1942 profits were slightly over $19,000,000,000. That increase does not seem to be any signpost to the poorhouse. Profits for all corporations in the previous peak year of 1929 were $9,300,000,000. After taxes, 1943 corporate profits are estimated at $8,500,000,000, as compared with $7,500,000,000 for 1942. Nineteen twenty-nine yielded $8,100,000,000 in corporate profits after taxes. Thus this year, in spite of the terrible "beating" industry has been taking, its profits will be $1,000,000,000 more than last year and $400,000,000 more than 1929 profits.

Propaganda aside, it is not too hard to understand how this can be. Last year's tax law prohibits taxing a corporation more than 80 percent of its total profits, and in the many cases where a company's profits are 6 to 10 times the normal rate, even an 80-percent tax leaves a healthy margin. One special study of 29 big corporations made recently showed that all but 6 at least doubled their normal peacetime profits, after taxes were paid, last year. Several of the companies studied multiplied their earnings 4 or 5 times, and 1 reached the stupendous figure of almost 100 times its normal prewar (1936–39) level.

When we entered this war we remembered all the cases of profiteering from the last war which had been aired through the twenties and resolved to prevent their recurrence this time. We would not have the war millionaires and the public scandals our former wars produced, or so Congress told the people. That was no new resolve. Between February 1919 and 1942, some 170 bills and resolutions aimed at preventing war profiteering were introduced in Congress. Only two inadequate measures had been passed before the Renegotiation Act became law on April 28, 1942. The statute gives authority to four executive agencies to renegotiate their contracts and subcontracts whenever it appears that excessive profits are being realized under present terms. There is great flexibility in the method. Each case is determined on its own merits, and there is no standard yardstick. Price adjustment boards of the War and Navy Departments and the Maritime Commission conduct investigations and make decisions. Up to May 31, 1943, the War Department board alone had recovered or adjusted in prices on contracts $2,100,000,000. The members of these boards could not by any stretch of the imagination be accused of a New Deal bias, or even of progressive prejudices. The chairman of the War Department Board, which handles much the highest percentage of cases, is the president of the Jewel Tea Co. (Lehman Bros.). These three agencies and the Treasury testified to the extent of thousands of pages of records before congressional committees last session that the present renegotiation system is equitable and workable and that any industry plans for amending the present law to provide for including post-war reserves as costs before renegotiation and for deducting taxes before renegotiation must be considered as unworkable and inadequate.

Yet industry is going forward with these very plans and will present them and urge them at the Ways and Means Committee hearings now going on in the House. One Representative, HAMPTON FULMER, of South Carolina, respected on both sides of the House for his integrity, has already exposed this pressure play: "War contractors and war industries are operating under a guaranteed plus-profit contract. When the war ends they are guaranteed against any losses. The only safeguard that the Government has in connection with plus-profits contracts is the renegotiation provision passed by the Congress. Those who operate under Government contracts, especially the large, monopolistic groups, are now flooding Congressmen and the country with tons and tons of propaganda urging the repeal of the renegotiation provision, having in mind being in a position to get away with untold profits."

The groups referred to by Representative FULMER are not putting all their eggs in the congressional basket. While they are waiting for revision or repeal of the nonprofiteering law, they are using other techniques for evasion of their full tax responsibilities. Dividends are very low, less than in 1936 or 1937, for instance. Earnings thus retained become additional invested capital either in the form of reserves or as the basis for mergers with companies short on resources but long on unused excess-profits credit; that is, companies which earned more in the normal profit years 1936–39 than they are earning now. Automobile-finance companies are especially good subjects for this kind of deal. For instance, the west coast auto-finance company, Pacific Finance, was recently purchased by Lockheed Aircraft, a heavy profit maker, for $3,750,000. The large excess-profits credit Pacific brings with it as dowry will greatly decrease the amount of taxes Lockheed will have to pay this year.

The estimates Government representatives are planning to bring into the congressional hearings as to corporate reserves should knock the props out from under the industry case for modification of the Renegotiation Act to provide additional finances for reconversion. The figures show that by the end of this year $20,000,000,000 in undistributed profits will have accumulated as reserve in the war years—a record amount of "seed corn"—almost four times the total accumulated reserve for the 1936–39 period. But record reserves are evidently not enough for record profiteers. The National Industrial Conference Board, sophisticated sister to the N. A. M., has recently brought out a study on reserves and reconversion which supports the position that reserves should not be considered as excess profits in renegotiation proceedings. Tom Girdler's Consolidated Aircraft Corporation is leading an aircraft drive for this proposition. The N. A. M.'s journalist friends are grinding out copy, and the push for repeal is steaming along in spite of the present generous allowed reserve of 10 percent of excess profits.

The 1942 tax law has a tremendous loophole for reserve-minded taxpayers. It permits corporations to claim refunds for 2 years after the war for post-war losses—that is, earnings below normal peacetime profits. Pay now; collect your refund when you are up against reconversion later. Some companies have gone in for the less imaginative device of special pension funds for executives—setting aside undistributed profits with which to buy large annuities for their top men after age 65, when their income tax will amount to far less than the one based on their full compensation now. (The Treasury now frowns on this procedure.)

Representatives of the men and the organizations who want repeal of the Renegotiation Act and drastic slashes in even the present weak tax program are already swarming over Capitol Hill, though the session is only begun. Talk of a Federal sales tax is current. The Treasury is shy about revealing what its program for next year is to be—if any. The C. I. O. has issued its statement on tax policy which, among other things, calls for increasing corporate-profits taxes from 40 to 55 percent, controlling the various tax-evasion devices now in practice and especially for wiping out the refund provisions of the present tax law which would in some cases return $140 or $150 for every $100 paid in.

The tax fight is certain to be one of the major battles of this new session. The trend of this first series of House Ways and Means Committee hearings will be a good indication whether or not a few weeks with their constituents have made Congressmen change their tax views in any major respect.

Transfer of Victory and Liberty Ships to Foreign Countries

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. BLAND. Mr. Speaker, so much interest has been manifested, and very properly so, with reference to the transfer to foreign countries of some of the Liberty and Victory ships that, on behalf of the Committee on the Merchant Marine and Fisheries, I addressed a communication to Admiral Land asking about the situation. There follows a letter from him to Senator BAILEY, chairman, Committee on Commerce, and to me as chairman, Committee on the Merchant Marine and Fisheries, which explains the situation, and was considered of such importance that it was printed for the benefit of the committee as Committee Document No. 29. The letter follows:

WAR SHIPPING ADMINISTRATION,
Washington, July 27, 1943.

Hon. JOSIAH W. BAILEY,
Chairman, Senate Commerce Committee, Washington, D. C.

Hon. SCHUYLER OTIS BLAND,
Chairman, House Committee on the Merchant Marine and Fisheries, Washington, D. C.

MY DEAR SIRS: The size of the American fleet has increased by 250 percent since Pearl Harbor. It will continue to grow at a rapid rate during the next 12 months. So far, we have been able to man this fleet, but it is clear that we can expect an increased strain on our training facilities during the coming months.

The nature of the problem can best be presented by saying that in 1940 there were approximately 65,000 seamen and licensed personnel required to operate the coastal, intercoastal, and overseas American-flag merchant fleet. At the end of June 1943 approximately 85,000 were required. We calculate that this number will increase at the rate of about 7,500 each month over the next 12 months, to a total at June 30, 1944, of about 175,000. To meet this demand will stretch the resources of our far-flung training program, especially in respect of licensed personnel.

While our fleet has been growing and is expected to grow further, the fleets of some of our maritime allies have been shrinking; indeed, they have dwindled in size by many millions of tons. As a result, each of these nations has a pool of unemployed, experienced seamen and licensed personnel. Because the British losses have far exceeded the losses of our other allies, they have the largest pool. It numbers about 10,000.

It is evident that manpower will be conserved and that we will be provided with a sorely needed insurance against excessive burdens upon our ability to provide an adequate supply of trained men through the employment of these pools of skilled seamen.

Great Britain, by the fall of 1941, had laid out a greatly expanded shipbuilding program. After Pearl Harbor one of the general arrangements made by the President with the Prime Minister was that we, the United States, would be the merchant shipbuilder for our cause, while the British yards would be devoted largely to the construction of naval vessels. In accordance with this scheme, the British merchant ship program was very substantially reduced. A number of persuasive and compelling considerations dictated this arrangement: First, we had the raw materials; second, we had the manpower; third, we had developed a technique which enabled us to produce in mass and with unbelievable speed a vast tonnage of merchant ships; fourth, the cargo was here in the United States to be moved to the various theaters of war.

Any other arrangement would have meant a costly wastage of ship time, for it would have been necessary to move the raw materials across the Atlantic, there to fabricate them into steel structures and other essentials. There finally, after a great lapse of time because of a slower technique, the finished ships would be dispatched westward in ballast to our shores to pick up the cargo that was waiting for them.

For all these reasons—first, to conserve manpower and to provide us with an insurance against overtaxing our capacity to man our expanding fleet; second, to carry out in good faith an advantageous wartime arrangement that had been made during the early weeks of our participation—the President has instructed us to bareboat, for the period of the war only, tonnage to the Norwegians, to the British, and to others of the United Nations. Title in each case will remain in the United States Government.

We have to the Norwegians already bareboated 80,000 dead-weight tons, and may bareboat more. These ships will be under the Norwegian flag and will be manned by Norwegian crews. Title will remain in the United States Government. Their employment will be subject to our control. Thus no carrying capacity has been sacrificed; indeed, actual carrying capacity may have been increased as a result.

We are contemplating bareboating to the Dutch Government three vessels on similar terms. Title will remain in the United States Government.

To the British, arrangements have been made to bareboat for the duration of the war only from 15 to 20 ships a month for the next 10 months. Five ships have already been bareboated to the British. All these vessels will be manned by the British and will fly the British flag. Title will remain in the United States. Their employment will be subject to the control of the Combined Shipping Adjustment Board. The great bulk of these ships on their initial voyage will be employed in long turn-arounds in lieu of our ships that have been employed in these services. No carrying capacity will be lost by this arrangement.

To the Greek Government in due course two ships will be bareboated. The provisions of the arrangement will be similar to those made with other governments. Title will remain in the United States Government.

Very truly yours,
E. S. LAND, *Administrator.*

Later, and since the recess, my attention was called to the fact that other ships would be delivered in addition to those covered by the preceding letter, and again I acted in my capacity as chairman and addressed a communication to the Chairman of the Maritime Commission making the following inquiry:

I shall be very glad if you will supplement your letter of July 27 by a comprehensive statement of all types of ships that are presumed to be delivered to any foreign government.

The answer to that letter follows:

UNITED STATES MARITIME COMMISSION,
Washington, September 18, 1943.

Hon. S. O. BLAND,
House of Representatives, Washington, D. C.

DEAR JUDGE BLAND: The receipt is acknowledged of your letter of September 15, 1943, with regard to allocation of ships to foreign governments.

As you are aware, the No. 1 point to bear in mind is the fact that title does not pass but remains with the United States Government.

As a matter of general policy, allocations of the character under consideration will be made from Liberty ships insofar as new ships are concerned. There may be exceptions to the foregoing when the merits of the case justify and, as an example, two C–1 ships with Diesel-engine installations were allocated to the Norwegians because their crews are particularly expert in motor-driven vessels.

With reference to the C–1 ships on the west coast, you are advised that this allocation was made on the basis of high military strategy, at the direction of high military authorities, and conforms to strategic military requirements.

Sincerely yours,
E. S. LAND, *Chairman.*

I submit further, as an extension of these remarks, a release of the War Shipping Administration dated September 7, 1943, disclosing the release to the Chinese Government of two Liberty ships. This release is as follows:

Completion of arrangements for the assignment of two Liberty ships to the Chinese Government, placing the Chinese in the trans-ocean-shipping trade for the first time in history, was announced today by the War Shipping Administration.

Bareboat charters of the vessels, which will be named the *Chung Shan* and the *Chung Cheng* in honor of Dr. Sun Yat-sen and Generalissimo Chiang Kai-shek, were signed by Dr. T. V. Soong, Chinese Foreign Minister, and by Admiral Emory S. Land, War Shipping Administrator.

The vessels will be manned by Chinese seamen and operated under the Chinese flag for the duration of the war. In view of the present lack of Chinese merchant officers, American officers will be carried until the Chinese are able to train replacements.

The Chinese seamen will be recruited in the United States from among those who have survived sinkings in the United Nations war service.

The ships, which were chartered to the national government of the Republic of China through China Defense Supplies, Inc., will be employed in carrying supplies for the war against Japan, and particularly supplies for China.

Catching Up With the American Radical

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an address by Julian S. Myrick, second vice president of the Mutual Life Insurance Co. of

New York, delivered at a meeting of the Boston Chapter of Chartered Life Underwriters, entitled "Catching Up With the American Radical":

I certainly appreciate the privilege of talking with you today, particularly because the subject I'd like to discuss with you revolves around a challenging article by Dr. Conant, president of Harvard University, which appeared in the May issue of the Atlantic Monthly. The article is called Wanted: American Radicals, and I think you will agree with me that it gives a rather alarming preview of the kind of people who may run this country of ours from Washington in the years to come. In considering what I have to say, however, please remember that I am speaking as an individual.

Here are two paragraphs from Dr. Conant's article. Listen to them carefully, because if Dr. Conant's American Radical takes over the reins of government, it will seriously affect every one of you in this room. Here they are, and I quote:

"First of all, like all radicals and also all reactionaries, in his extreme moods he will be utterly impractical. In general, however, being rooted in the American soil he will be endowed with a considerable amount of earthly common sense and a certain willingness to apply to the changes which he effects the typical American question, Does it work? and to take up cheerfully another trial if the answer should be 'No'."

"No one needs to be told that the American radical will be a fanatic believer in equality. Yet, it will be a peculiar North American brand of doctrine. For example, he will be quite willing in times of peace to let net salaries and earnings sail way above the $25,000 mark. He believes in equality of opportunity, not equality of rewards; but, on the other hand, he will be lusty in wielding the ax against the root of inherited privilege. To prevent the growth of a caste system, which he abhors, he will be resolute in his demand to confiscate (by constitutional methods) all property onc a generation. He will demand really effective inheritance and gift taxes and the breaking up of trust funds and estates. And this point cannot be lightly pushed aside, for it is the kernel of his radical philosophy."

In other words, "You can't take it with you," as the saying goes—and you can't leave it, either. If such people as Dr. Conan describes actually should get control of our country, then we and our children and their children shall have to adjust our entire concept of thrift and of security for the family and find a substitute for the incentive and initiative which today are the mainspring of whatever success we may achieve.

But before discussing the possibilities of a new way of life in America under such a radical philosophy—a way of life that presumably would throw millions of citizens upon the state for their security—let me quote from another enlightening article. It appeared in a magazine called the New York Certified Public Accountant and quotes Dr. Joseph Klein, former president of the New York State Society of Certified Public Accountants and one of our leading tax authorities. This article deals in present-day facts—in a situation which exists today, not 5 or 10 years from now—and I think it shows us pretty conclusively that the hot breath of Dr. Conant's American Radical already is upon us. Here it is, and again I quote:

"The relationship of the current fiscal phenomenon to us may be illustrated in connection with the possibility of our clients or ourselves creating a competence. That's an old-fashioned notion, for as long ago as the turn of the last century Pope wrote:

" 'Reason's whole pleasure, all the joys of sense,
Lie in three words: health, peace, and competence.'

"Under 1943 Federal income and estate-tax rates, there is practically no longer an opportunity, starting from scratch, to create a competence by the standards of yesterday. Try some calculations for yourself on assumed earnings not subject to the capital-gains tax. How much would you have to earn annually for 10 years or for 20 years, after allowing for modest living expenses, to leave your heirs, net, $100,000 or $250,000 or $500,000, or, forsooth, $1,000,000?

"To leave net, after taxes:

	It would take—	
	Annual earnings for 10 years	Annual earnings for 20 years
$100,000	$85,000	$32,000
$250,000	600,000	190,000
$500,000	1,270,000	550,000
$1,000,000	2,130,000	1,075,000

"Obviously," Dr. Klein says, "some normal ambitions of yesterday have gone with the wind. But what of the morrow?"

Those figures are astounding, aren't they! If you want to leave $100,000, exclusive of life insurance, for the protection and security of your family 10 years from now—and remember, there are relatively few people who at some time in their lives haven't hoped or expected to accumulate that much money, which invested today will only produce an income of around $200 or $250 a month—you'll have to earn a total of $850,000 to do it!

Let's look at that picture a little more closely before we go back to that new way of life which Dr. Conant's American Radical would map out for us—or perhaps already has mapped out for us. Here are figures which show how much money a married man with two dependents must make each year to create a given general estate, how much he must save, and how much he may use for ordinary living expenses. For estate tax purposes the initial figure is the value of the estate after deductions for funeral and administration expenses but before exemptions and credits have been allowed. Let's assume that the 1943 tax rates will remain constant—and that's a pretty broad assumption!

CREATION OF A $50,000 ESTATE

Number of years to build estate	Net estate desired	Values of estate before payment of estate taxes	Annual earnings before payment of income taxes	Amount of income taxes	Amount required to create estate	Amount available for living expenses
10 years	$50,000	$50,300	$7,500	$1,502	$5,030	$968
20 years	50,000	50,300	7,500	1,502	2,515	3,485
10 years	50,000	50,300	10,000	2,387	5,030	2,583
20 years	50,000	50,300	10,000	2,387	2,515	5,098
10 years	50,000	50,000	15,000	4,537	5,030	5,433
20 years	50,000	50,300	15,000	4,537	2,515	7,948

CREATION OF A $100,000 (OR LARGER) ESTATE

10 years	$100,000	$107,000	$85,000	$58,000	$10,700	$16,300
20 years	100,000	107,000	32,000	15,000	5,350	11,650
10 years	250,000	320,000	600,000	538,000	32,000	30,000
20 years	250,000	320,000	190,000	153,000	16,000	21,000
10 years	500,000	700,000	1,270,000	1,149,000	70,000	51,000
20 years	500,000	700,000	550,000	491,000	35,000	24,000
10 years	1,000,000	1,530,000	2,130,000	1,928,000	153,000	49,000
20 years	1,000,000	1,530,000	1,075,000	972,000	76,500	26,500

Assumption that taxpayer is married with two dependents.
Income taxes include Federal income, Victory, and New York State income.

Well, there you have it. There's a picture of today's problem so far as leaving a competence for your wife and children is concerned. Of course, there's a war to be won and war takes money—astronomical amounts of it. And I believe in taxes and more taxes in order that we may pay as much of the bill as humanly possible as we go along. But I question the wisdom, economically and socially, of taxing a man's income and estate so heavily that it is impracticable or impossible for him to leave a fair competence for his widow and children; I seriously question whether or not it is economically sound, as we understand the meaning of the term today, in effect to confiscate all property once a generation, as Dr. Conant's American Radical would do.

I raise this question because I have always believed in the personal liberty of the individual—the God-given right to work, to save, to provide for one's family and for one's self. I have always believed in the initiative and incentive which personal liberty inspires and in the obligations to society which personal liberty demands. I believe in the equality of opportunity which since the founding of America 167 years ago has brought reward to the humble and to the proud alike and has provided the incentive to achieve personal success and security—attainments which in turn have contributed so largely to the progress of this great country of ours. If I didn't believe in these things I wouldn't be in the life-insurance business, which certainly has its humanitarian roots down deep in the fertile soil of personal liberty, personal initiative, and maintenance of the home.

There can be no denying the right to tax and to tax heavily in times of national urgency and for the purpose of raising necessary revenue. But, again, I question any tax which is levied for the sole purpose of social reform; which in effect denies to a widow the right to live in security as the result of her husband's personal initiative and thrift; which may deny to the children the right to an education and a helping hand at the threshold of their maturity.

Of course, if a man is in good health and otherwise insurable, he may create his entire estate through life insurance, rather than through stocks, bonds, real estate, or other property, and his life insurance estate at present will enjoy certain nominal tax advantages. Certainly life insurance is the obvious way to create an estate today; isn't it? There could be no more convincing reason for its use than I have shown you. But there again, what of tomorrow? No one

knows for certain what tomorrow's tax laws may provide, and if recent action may be taken as any criterion, then we may expect that the imposition of additional taxes upon a man's life insurance estate certainly will continue to occur to our legislators. Already we have seen the specific $40,000 exclusion wiped out.

At such time as the matter of further life insurance taxation again may come up, however, our tax experts should remember this: Life insurance is indemnification in character. Its purpose is to make no one rich; to reap no profits for the beneficiary, but simply and solely to indemnify a widow and children against the loss of income occasioned by the death of the breadwinner.

Happily, a few of our outstanding legislators realize this, and their testimony in behalf not only of life insurance but of the right to leave a competence for one's family lends encouragement to the hope that American traditions of personal liberty may continue to prevail in years to come.

One of these legislators is Senator STYLES BRIDGES, of New Hampshire, who says this:

"Frankly, aside from my home, a small farm in New Hampshire, my life insurance represents most of my life's savings. I have three boys; one is now in the armed forces in foreign service; two are in the public schools. The insurance I carry gives me assurance that my sons will be brought to manhood. It is my way of providing security for them, assuring them of an education, clothes, a home, and other necessities of life, regardless of what may happen to me.

"The protection which I have afforded them gives me comfort day by day as I go through the hazards of life. I am fortified by the realization that whatever tomorrow may bring I have done the best I could to safeguard the future of my children.

"Today with the world in the greatest chaos of all time what can a man cling to but the stable, substantial things of life? What greater comfort can any man have than the knowledge that come what may his family shall not suffer?

"Security and protection stretch beyond the grave and extend a helping hand to loved ones after the physical support of the family breadwinner ceases to be a functioning element. That is life insurance. But as great as life insurance is, it cannot be considered a thing mechanical. It is human in its entirety. There is the personal, individual understanding that must be reckoned with in the scheme of things * * * even for a factor as strong, as powerful, as complete as life insurance."

Another is Representative WESLEY E. DISNEY, of Oklahoma, member of the House Ways and Means Committee, who says:

"There was only one way I could provide for my wife in the event of something happening to me—so I started my life-insurance program; a too limited one, I realize now. It was the only way a public official dependent upon a small monthly income, could provide an estate. My chief regret is that I did not, in those earlier days, enlarge my program of insurance. I waited until later to do that, and in consequence I am absolutely compelled to carry for the protection of my family in its present station in life, an insurance program that is expensive. I am paying for my lack of foresight. Upon this experience, my advice to the younger generation is to start your insurance plans early and enlarge them to completion before middle age.

"As I have said, since those days the life of a prosecutor in Oklahoma has become less hazardous; but I moved on 10 years ago to Congress and then was elected to Ways and Means, the Tax Committee—so I might still be classed as living a dangerous life, particularly when taxes are the subject matter of conversation. But I'm still a policyholder and still interested in what happens to the life-insurance business. I am interested first because I have put my own money into it these last 30 years, and the future security of my family rests in the hands of the management of the insurance companies. That is almost literally true. Beyond that, I'm interested in life insurance because I've seen it in action, seen the part it has been compelled to play in the development and preservation of the governmental and business principles of our democracy."

Representative DISNEY speaks of "the future security of my family," and that brings me to the "so what?" of my talk here today. I started out by quoting from Dr. Conant's article on American radicals who would resolutely "demand the confiscation, by constitutional methods, of all property once a generation" (and remember that life insurance is property), then I showed you how impracticable or impossible it is adequately to provide for your family under today's tax schedule other than through the medium of life insurance, which itself certainly is not and has not been immune to increased taxation, but which today appears to be about the only way in which a fair competence may be passed on.

Now I don't necessarily say that the present tax situation points up a trend or holds a threat for the future; but I do say that you had better start thinking about how you are going to leave a fair competence for your family—whether through stocks, bonds, real estate, life insurance, or other property—and start talking with your legislator friends about the problem so that there may be no misunderstanding whatever when this war is over.

Furthermore, I believe that in order to guarantee that the family may continue to exist as the principal unit of our civilization from generation to generation, we must be prepared to oppose vigorously any attempt which might in the future be made to break up trust funds and estates of a reasonable amount, through tax means or otherwise. And in view of the obvious fact that today the amount of so-called "spendable funds" available for the creation of a competence for widows and children will go further in life insurance than in other forms of saving, I believe that a deduction for life-insurance premiums up to a reasonable amount should be allowed in calculating income tax; that the recent exclusion of $40,000 of life insurance from estate tax should be immediately restored; and that, in order to help families conserve whatever estate they may inherit and promptly pay their taxes on it—and this point is most important—life insurance specifically earmarked for payment of estate taxes should not be included in the taxable estate. This would not only benefit the family, but the United States Treasury as well, for it would definitely assure the Treasury of its estate-tax revenue, no matter what the structure of the estate might be.

The progress of this great and enduring country of ours ever since it was born on that glorious day 167 years ago has been based upon one thing and one alone: The will to work and to save and to provide security and freedom for the family. And freedom, gentlemen, is not only a right but a hard-won heritage which constantly must be fought for to be preserved. If we ourselves are to be denied by law the privilege of providing security for the family, then others must provide it. And every time people accept a guaranty of security from others they surrender an equal amount of freedom.

South Dakota Pheasants

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. MUNDT. Mr. Speaker, in the September issue of Outdoor America, national sportsmen's magazine published as the official organ of the Izaak Walton League of America, appears the following article, which will be of interest to hunters, sportsmen, and conservationists throughout the country. Along with bumper crops of corn, grain, hogs, beef, poultry, and sheep this year, South Dakota has a bumper crop of its official State bird—the South Dakota pheasant.

Anybody in America who loves the thrill of a day afield and enjoys the challenge of hunting upland game birds is cordially invited to South Dakota this year during the open season on pheasants, which started last Saturday, September 25, and runs until January 31, 1944, in many sections of the State. Bag limits this year are seven birds, three of which may be hens. Hunters visiting this sportsmen's paradise this year should bring their own shells, but local citizens will cooperate in finding ways for them to reach the hunting areas through share-the-hunt-and-save-gas clubs and other means. With an abundance of moisture the past 2 years, lakes, ponds, rivers, and streams are full of water, so duck and goose hunting are expected to be unusually good in addition to the unprecedented plethora of pheasants, which is attracting world-wide attention to South Dakota as a mecca for all devotees of dog, field, and gun:

SOUTH DAKOTA PHEASANTS

South Dakota leads the States in sale of nonresident licenses, and the pheasant is the cause of it. An estimated kill of 4,500,000 pheasants was chalked up for last year in South Dakota, and this represents in excess of 9,000,000 pounds of edible meat. That is a little item in the Nation's food supply that governmental agencies might well ponder before they permit restrictions in gasoline and ammunition to interfere with the taking of this year's crop. But the problem is even more involved: Unless hunters are permitted to crop the pheasant, the pheasant will crop an appreciable part of the farmer's grains, so you can add another 10,000,000 pounds or so to the Nation's food losses.

Abrogation of Cremieux Decree

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following petition to French Committee of National Liberation to set aside abrogation of Cremieux decree:

General CATROUX,
Gen. CHARLES DE GAULLE,
Gen. HENRI GIRAUD,
THE FRENCH COMMITTEE OF NATIONAL LIBERATION,
Algiers, Africa.

GENTLEMEN: On March 14, 1943, General Giraud announced "for the same purpose of eliminating all racial discrimination, the Cremieux Decree, which in 1870 had established a difference in the position of the Moslem and Jewish natives, has been abrogated."

Much water has gone over the dam since that deplorable action. The French Committee of National Liberation has been formed. Furthermore, there has been set up a new provisional consultative assembly which is to start its regular meetings on November 3, which assembly is to collaborate with your committee on national policies in the same sense that a parliament works with a cabinet. These are creditable liberal moves. Furthermore, recent appointments to French Committee of National Liberation indicate a strong desire to purge the French Empire of so-called collaborationists, Vichyites, and the underminers of the French Republic's Constitution, and all men of uncertain loyalty. We are given to understand that the "purge" generally means that the so-called Petain government and all its acts shall be deemed illegal.

All these steps have met with wholehearted approval in the United States and uttermost sympathy.

It must, therefore, seem pertinent to ask why the order abrogating the Cremieux Decree still stands. That order is quite inconsistent with the aims and aspiration of the French Committee of National Liberation.

As a member of the Congress of the United States, I, therefore, humbly petition that the Cremieux Decree of 1870 be reinstated with all possible speed.

It can readily be seen that the unwillingness of the Arab, who can upon request be admitted to French citizenship, to depart from his special status which includes such practices as polygamy, forced marriage, and the succession in the male line only, all incompatible with French laws and customs, and the deprivation of the Jew of his cherished right of citizenship in no ways serves the purpose of "removal of racial discrimination." What "racial discrimination" is there as a matter of actual fact when only approximately 30 Moslems have sought naturalization each year? The Arabs considered their own naturalization an offense to their religion.

When in 1870 it was decreed that "The native Jews of the departments of Algeria are declared French citizens," the Algerian Jews were reaping the benefits of their undisputed loyalty to the cause of France, from which loyalty they have never departed.

The loss of citizenship is one of the gravest punishments imposed upon a wrongdoer. Why are the Jews being punished?

Half the population of the three departments of Algeria is composed of hundreds of thousands of Spaniards, Italians, Maltese, the Syrians of Catholic, Protestant, Moslem, and Jewish religions. Since 1870 they have flooded into Algeria and have become naturalized. Surely, it is most unjust that of all these naturalized persons, only the Jews, on the basis of racial equality, are selected for deprivation of citizenship. Moreover, the abrogation of the Cremieux Decree was a violation and cancelation of the French law of nationality of 1927. You must surely take cognizance of the fact that the grandchildren and great grandchildren of the native Algerian Jews of 1870 who were collectively naturalized are today French, not because of the effect of this naturalization, but by all that is signified by "born of French parents in France," in the Nationality Act of 1927.

Thus, if the Arabs are unwilling to embrace collective naturalization, justice is not served by a reduction in the political status of the Jews. When, moreover, the illegality of the abrogation of the Cremieux Decree is clearly apparent, you will agree no reason exists, whatsoever, in permitting such abrogation to continue in full force and effect.

Very truly yours,

EMANUEL CELLER,
Representative, Tenth Congressional District, New York.

Resolution of the Chenango County (N. Y.) Board of Supervisors

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the Congress of the United States, in and by its act of September 20, 1941, effective October 1, 1941, section 3268 of the Internal Revenue Code, levied an annual tax of $10 on each pool table, billiard table, and bowling alley, contained in any place or room where such games are played, except in private homes, and

Whereas said act applies to and requires payment of said tax by various charitable and noncharitable organizations, clubs, and fire companies, any of which have or maintain a pool or billiard table or bowling alley in its meeting rooms for the recreation of its members, organized and existing without thought of financial gain, and

Whereas it is well known that practically all organizations, afore-mentioned, maintain and operate their necessary meeting quarters and clubrooms from funds supplied or donated by themselves, and that maintenance of such meeting places is necessary in order to maintain the morale and effectiveness of such organizations, and that such fire companies, fraternity orders, clubs, and similar organizations, maintain one or more pool or billiard tables, or bowling alleys, in their meeting rooms for the pleasure and recreation of their members: Now, therefore, be it

Resolved, That the Board of Supervisors, of Chenango County, State of New York, considers the said tax, insofar as it applies to volunteer fire companies, fraternity orders, clubs, and similar organizations, to be obnoxious, unwarranted, and un-American, and an improper exercise of the tax-levying powers of the Federal Government; and be it further

Resolved, That the Congress be and hereby is petitioned with all respect to repeal or amend the said act, insofar as the same applies to the afore-mentioned organizations and orders; and that a certified copy of this resolution be forwarded to the Honorable JAMES M. MEAD and Honorable ROBERT F. WAGNER, United States Senators; and to the Honorable EDWIN ARTHUR HALL, United States Congressman. Seconded by Mr. Brown and duly adopted.

Twenty-Two-Billion-Dollar Campaign Fund

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. SHAFER. Mr. Speaker, in connection with my remarks in the CONGRESSIONAL RECORD last Thursday, September 23, I desire to include the following newspaper article, written by William K. Hutchinson for the International News Service. The information contained in this article should motivate this Congress to investigate the contemplated reorganization of the Army's production front.

ARMY SHAKE-UP PLOT PERILS 16 COMMANDS

(By William K. Hutchinson)

A group of influential White House advisers are planning today to give Lt. Gen. Brehon Somervell personal control of the expenditure of $22,000,000,000 in the coming year by a complete reorganization of the entire Army production front.

This domestic coup d'état is the objective behind the cabal's efforts to oust Gen. George C. Marshall from his post as Army Chief of Staff and "kick him upstairs" to a glorified but powerless world command over Anglo-American forces.

Informed sources say the motive is to use the Army's vast production program, excepting aircraft, as a political weapon in the 1944 Presidential campaign. Aircraft production, now bossed exclusively by Gen. H. H. Arnold, Army Air Chief, may be included later.

Some observers believe the cabal also intend to build up Somervell as an Army running mate for Mr. Roosevelt on a fourth-term ticket to offset the possible Republican nomination of Gen. Douglas MacArthur.

There is no evidence whatever that either President Roosevelt or General Marshall has ever heard of the purpose or potential effect of the plot. Knowledge of it, however, has spread terror through the highest ranks of the War Department.

It can be stopped by the President refusing to oust General Marshall from his present control of the Army. Marshall's friends know he would prevent any political manipulation of Army affairs. That is why the cabal is determined to oust him.

It can be stopped by Congress regardless of Marshall's fate.

The group sponsoring this plan is composed of high-ranking civil and Army officials who are known to be the political protégés of Supreme Court Justice Felix Frankfurter.

The coup d'état is to be accomplished by abolishing all production activities by the seven highly skilled technical supply services and transferring their $22,000,000,000 purchasing power to the Army Service Forces, which Somervell now heads. All these technical services are now grouped under Somervell, but he has no control over their expenditures, contract negotiations, or production schedules.

Actual regulation of production will be turned over to the Army Service Command. But the present nine service commands are to be abolished and six new ones created in various production areas, with six political generals named to command the new areas.

The nine service command generals whose districts are to be abolished are:

Maj. Gen. Sherman Miles, Boston, Mass.
Maj. Gen. Thomas Terry, New York City.
Maj. Gen. Milton A. Reckord, Baltimore, Md.
Maj. Gen. William Bryden, Atlanta, Ga.
Maj. Gen. Fred C. Wallace, Columbus, Ohio.
Maj. Gen. Henry Aurand, Chicago, Ill.
Maj. Gen. Frederick Uhl, Omaha, Nebr.
Maj. Gen. Richard Donovan, Dallas, Tex.
Maj. Gen. Kenyon A. Joyce, Salt Lake City, Utah.

The present technical experts, heading the seven technical supply services, will be made "armchair generals," handling routine paper work. They are to be stripped of all authority over production of the war instruments in which they have specialized for years. The cabal made this certain by preparing a new form of contract, which eliminates the technical services from all contacts with construction matters. This elimination was made doubly certain by a notation on the new form itself, which reads, according to one person who saw it:

"No copies of these contracts will be sent to the offices of the chiefs of the technical services for review or any other action."

The heads of the seven technical supply services who will have their powers slashed: The Quartermaster General, Maj. Gen. E. B. Gregory; the Chief of Ordnance, Maj. Gen. L. H. Campbell, Jr.; the Chief of Chemical Warfare, Maj. Gen. W. N. Porter; the Chief of Engineers, Maj. Gen. E. Reybold; the Chief Signal Officer, Maj. Gen. D. Olmstead; the Surgeon General, Maj. Gen. J. C. Magee, and the Chief of Transportation, Maj. Gen. C. P. Gross.

Leaders of the cabal will defend their plot by contending that they propose to streamline "antiquated War Department production machinery" in order to speed up production. But their actual proposal is to eliminate the present commodity organization production system and substitute a functional organization.

Prominent industrialists long have derided any claim that a functional organization can outproduce a commodity organization. The Army's present commodity organization was drafted from the successful production practices of the Sears-Roebuck, Ford, General Motors, and du Pont de Nemours companies. Industrialists say most functional organizations have failed.

The greatest production failure of all time was that of the War Department itself in the First World War. It failed to get a single American-built airplane to France before the Armistice; no American artillery ever reached United States troops in France, forcing them to borrow French 75's; no American-made artillery ammunition ever reached them. And the War Department operated on a functional organization basis in production. It was because of the system's frightful failure that the Department subsequently adopted the present commodity organization system after long conferences with successful industrialists.

On top of this the seven technical supply services have been negotiating contracts locally through regional officers scattered all over the United States. This practice has served to eliminate red tape, delay, and bottlenecks, the result being a stupendous increase in production.

The cabal would eliminate this successful decentralized procurement program, centering final authority back in Washington and making six service command generals responsible for production in their own areas. This would be a complete reversal of General Marshall's conviction that—

"Decentralization of authority was an imperative requirement for the tremendous war expansion."

One nationally known industrialist, asked for his opinion as to the effect of shifting Army production from a commodity to a functional basis during wartime, replied:

"It will lose the war. It would be the most monumental mistake in the history of our country. Only fools or worse would advocate it. It would bring production to a state of collapse within 6 months. It would cost us the price of victory."

There is one fact that links the cabal's plot to give Somervell a $22,000,000,000 "kitty" during an election year and the cabal's plot to oust General Marshall as Chief of Staff.

It is a secret order, issued through Somervell, directing that the new production system be placed in effect on September 15 last. This order was issued after the Quebec conference, at which the President and Prime Minister Churchill agreed to make Marshall commander in chief of all Anglo-American forces.

That secret order was withdrawn before September 15, in even greater secrecy, with further action on it postponed from day to day after the fifteenth dead line passed. This delay in reissuing the order is attributed by responsible authorities to the President's failure to announce Marshall's removal as Chief of Staff and transfer to the glorified desk job in London.

There was one development right after Quebec that may only be a coincidence, but it may be the reason why both the Marshall ouster and the Somervell coup d'état have not yet been consummated. It is the fact that Prime Minister Churchill came to Washington from Quebec, spent a week end here, then went to Boston, and out of a clear sky washed his hands of any complicity in the Marshall plot. It may have been he learned the details of both plots on that friendly week-end visit to Washington.

Peace River Bridge

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. DIMOND. Mr. Speaker, on my return to Washington from my home in Alaska recently, I traveled over most of the Alaska Highway, constructed, under the supervision of the Army engineers, between Delta Junction, which is about 100 miles south of Fairbanks, Alaska, and Dawson Creek, British Columbia. The total distance from Fairbanks to Dawson Creek is approximately 1,631 miles. Later I expect to address the House on the subject of the highway, but at this moment I desire to present the remarks made by Brig. Gen. James A. O'Connor, commanding Northwest Service Command, and by Col. K. B. Bush, chief of staff of that command, at the dedication of the Peace River Bridge near Fort St. John, British Columbia, on the Alaska Highway.

This bridge is an integral part of the highway and is a monument to the sound judgment and the engineering skill and ability of all who participated in its construction. The opening remarks of Colonel Bush and the inspiring dedicatory speech of General O'Connor follow:

OPENING REMARKS OF COL. K. B. BUSH, CHIEF OF STAFF, NORTHWEST SERVICE COMMAND

I would be remiss if I did not open this program with a brief message of appreciation to the men, soldiers and civilians, whose efforts have made possible this magnificent structure over one of Canada's great rivers. It is their achievement which we honor today. The ceremony about to begin is merely symbolic of what they have accomplished.

I also want to thank the distinguished visitors of both Canada and the United States who have come long distances to attend this dedication of the Peace River Bridge. Their presence here together is further indication—if such indication were needed—of the solidarity and good neighborliness of our two nations.

The dedication of this imposing bridge marks a new era in the development of the far northwest. I believe it deserves to rank with that historic morning 45 years ago when Inspector O'Brien of the old Northwest Mounted Police led northward through this very region the detachment of scarlet-coated men who were to bring law and order to the Yukon.

In concluding these introductory remarks, I want to express the gratitude of the Northwest Service Command to the men and women of this section of Canada who have cooperated so wholeheartedly in the many undertakings for our joint defense and security which have been started here.

REMARKS OF BRIG. GEN. JAMES A. O'CONNOR, COMMANDING NORTHWEST SERVICE COMMAND

It is both an honor and a privilege for me to speak briefly on this historic occasion as the representative of the United States Army. This great bridge across the Peace River fittingly symbolizes the 1,630-mile highway of which it is a part. Beyond the northern tower of the bridge stretches the vast wilderness of the Canadian Northwest, and beyond that the strategic Territory of Alaska; and beyond Alaska lies the immense battleground of the North Pacific Ocean, where inevitably the armed forces of the United Nations will punish the Japanese aggressors.

Off to the south, beyond this span's opposite abutment, are Edmonton, Winnipeg, Minneapolis, Chicago, and countless other North American cities where the weapons of democracy are being produced in ever-increasing quantities. The Peace River Bridge, which we dedicate today, may almost be said to be a link between the productive centers of freedom and the battle front where freemen will at last bring the Japanese to book.

It is particularly fitting that today's ceremony should be attended by high officials of the two great countries of the North American Continent. We are honored by the presence of a cabinet minister of the Province of British Columbia. We also have the pleasure of being host to a delegation of leading businessmen from the great Canadian city of Vancouver. We are similarly honored by the attendance of a committee of distinguished Members of the United States Senate, who have come to see for themselves the results of American handiwork, tenacity, and resourcefulness.

A wise philosopher once said that history was made subconsciously. I wonder how many of the men, soldiers and civilians alike, whose heroic effort went into this bridge and the road it carries, actually realized that they were participating in events of historic magnitude? Who here can measure the future significance of the first land route to Alaska?

Perhaps this is the beginning of a network of roads penetrating the farthest reaches of the American Northwest. The highway on which we stand today is a military road. It was authorized under the impact of urgent military necessity. Its two-fold purpose is essentially military in nature—first, to supplement, supply and anchor the air route to Alaska, and, second, to provide an alternative thoroughfare to the North Pacific in case the sea lanes should be lost.

This road accomplishes that twin objective. Yet in the years to come, other objectives will surely be recognized. Alaska, the Yukon, the Northwest Territories, Northern Alberta and Northern British Columbia—who can estimate the natural resources which these immense domains hold in trust? Across the roof of the world a new artery of travel is in development, an artery which may link us more securely to our allies in Asia and the East.

Before I conclude these brief remarks, let me tell you a few facts about the imposing span we are about to open. The over-all length of the Peace River Bridge is 2,275 feet, nearly half a mile. It is thus one of the great bridges of the Dominion of Canada. The main span, from tower to tower is 930 feet long. The width of the roadway is 24 feet, ample for a constant flow of two-lane traffic.

This bridge cost $1,750,000. It was designed by the United States Public Roads Administration; the superstructure was built by John Roebling & Sons, and the smaller substructure was the product of the Dufferin Company of Canada. Construction was started in November of last year. Construction was carried on throughout last winter, when the temperature often dropped to 55 degrees below zero. This bridge represents not alone steel and concrete, cable and timber. It also represents human talent, skill, persistence, and heroism.

I think we may safely predict that this line on the Peace River Bridge, where soon the dedicatory ribbon will be severed, is a historic threshold in the development of our continent. And I believe we all owe prayer and thanks to God for making possible this advanced stage in our task. We pray to Him that this great bridge, spanning one of Canada's mighty rivers, will prove of use and benefit to mankind—now, in the stern job before us, and later in the peace to come.

Does Our Foreign Policy Require the President's Reelection?

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a speech made by H. Alexander Smith, Republican national committeeman from New Jersey, over the radio on September 19, 1943:

In the critical times through which we are passing there can be no place for petty partisan politics. We all need vision and statesmanship of the highest order if we are to unite our country and give our all for the war effort and post-war reconstruction. It is in this spirit that we must approach the answer to the question that is before us.

If we should take the position that our foreign policy required the President's reelection, it would logically call for the abandonment of all elections in time of war. At the darkest hour in her country's history Great Britain changed leadership. Under the responsible British system, Chamberlain resigned and Winston Churchill was chosen to lead the nation. We are all loyal to our President as Commander in Chief in time of war, yet, because of this fact, we are not precluded under our free American system from having minds of our own. The very cause for which we are fighting negatives the thought that Americans should be regimented and told to rubber stamp the leadership and policies of those who for the moment are in command.

We must not confuse the conduct of the war with foreign policy. Some people seem to feel that some way, somehow, the efficient conduct of the war will be impaired if we change leadership while the war is going on, or in the common expression, "if we swap horses while crossing the stream." No one for a moment can suggest that a change in the Presidency at this time would in any way impair the war effort, would in any way change our military, naval, and air force organizations, would in any way affect our cooperation with the other United Nations. We are all Americans before we are partisans, but at the same time we are free Americans and we reserve the right to determine whether the war effort and our post-war foreign policy would be strengthened by a change in our national leadership.

It is an unfortunate fact that the New Deal administration is using the war emergency and the indispensability of a single man as a disguise to bring into our American life a new form of government. Two fundamental philosophies are struggling for the control of the America of the future. The one is the planned economy under which the individual is subordinated to the State. The other is the free economy under which Government is the servant of the people and under which equality of opportunity for the individual is the keynote. This is a fundamental and important issue. Already, because of the threat of war, we have violated our Presidential two-term tradition. We are surely justified in being on our guard against any further challenge to our freedom.

The next President of the United States, elected in 1944, will undoubtedly be in office when the war comes to an end. If our foreign policy demands the reelection of the President at this time, it means that we, as a people, are willing to trust the New Deal leadership in the making of the peace and in determining the place of the United States in the new world.

To say that the present administration is indispensable is to ignore and brush aside the patriotism and the ability of millions of Americans who are outside of and not sympathetic with the bureaucratic domination of the New Deal. We of the opposition very properly are apprehensive of extending the New Deal philosophy into world affairs. We do not believe that the world can be brought back to sanity by international W. P. A.'s, or by the paternaltistic condescension of the stronger nations. Just as we oppose the planned economy at home with all its demoralizing effects on the morale of our people, we likewise oppose the attempts of a few intellectuals to plan for the whole world and to determine what kind of governments other people shall set up.

No; our American foreign policy does not require the reelection of the President or the continuance of the present administration. On the contrary, our American tradition insists that no man or group of men are indispensable. Our highest loyalty to our country requires us to demand the most efficient and businesslike prosecution of the war effort and the enunciation and carrying out of an American and not a New Deal foreign policy.

A very real danger in the fourth term of candidacy of the President is the certainty of bitter division throughout the entire country. It would mean much to us all if he immediately removed this divisive issue by withdrawing as a candidate and permitting his party to nominate his successor. Irrespective of who was elected President, Mr. Roosevelt would be a welcome and important member of the peace negotiators. Such an act would prevent misconstruction abroad of our election results. No greater contribution to the unity of America could be made at this time.

Question No. 1: Does the Republican Party favor a special post-war alliance with Great Britain?

My reply must be considered purely personal as I have no authority to speak for the Republican Party.

The question presents the interesting distinction suggested by such important commentators as Walter Lippmann and others between special alliances with friendly nations and some sort of world league. My own judgment is that we will ultimately move toward a world organization as distinguished from special alliances, but for the immediate future our logical course for positive, effective action and for our own safety lies in the further extension by alliance, if necessary, of the activities of the United Nations.

If hostilities were to cease tomorrow with unconditional surrender of all Axis Powers, it seems inevitable that we must continue the full cooperation of the United Nations and especially the United States, Great Britain, Russia and China in preserving the peace while we are endeavoring to bring some order out of the chaos that will inevitably ensue.

I like the Hoover-Gibson expression, "trustees of the peace," which suggests the principle of "trusteeship" during a "transition" period, evolving ultimately into a world organization to preserve the peace and to substitute the rule of law for the rule of force in international affairs.

Question No. 2: Do you favor letting the German people organize their own educational system after the war if they set up a democracy?

The statement of the question emphasizes my fear of a New Deal foreign policy. We have heard New Deal expressions implying that we should tell other nations what kind of governments they should set up, and that we should direct their educational systems. The New Deal philosophy of planning is here seen in its most dangerous aspect. Obviously, if the German people do not organize their own educational system after the war, some nation or group of nations, must select, train, and send educators to teach the German children. The very statement indicates the utter impossibility of any such proposal. We cannot and must not try either to organize or run other countries. We must do all that we can to help them help themselves.

There is a real distinction between the principle of "responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to obtain permanent peace with organized justice in a free world," as declared by the recent Republican conference at Mackinac Island, and the suggested New Deal foreign policy which contemplates a social and educational program imposed on a reluctant and suspicious world by force.

We will fail in the big objective of the war if we deny freedom of self-expression to any nation or group of nations.

The Great Books Are Being Closed

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

THE GREAT BOOKS ARE BEING CLOSED

REMARKS TO A HIGH-SCHOOL GRADUATING CLASS IN MAY OF 1943 [1]

I am glad to be able to come here on your graduation day to meet with you and your parents, your relatives, and your friends, because my friend and your board president, Mr. Schmidt, and your supervising principal, Mr. Wentland, asked that I do so. But I also have a selfish reason. I wanted to see a high-school class of 1943 graduate, and to make a record of certain facts I think should be said on such an occasion, in the presence of those whose tax dollars paid the costs involved. And particularly I wanted to witness this 1943 graduation and to make the record I want to make, in a school building paid for by local funds and directed by the local representatives of those whose money built it. Your handsome building happens to have been built with local money; your local representatives, let it be recorded to their honor, are at least attempting to direct what goes on within its walls.

Home community control displaced by non-local bureaucracy

Our early schools were so built. They were directed by the representatives of those who paid for them. The results appear the more attractive the closer we compare them with those of the methods and controls that have been substituted.

Your supervising principal suggested that I might appropriately bring you "a good definition of success in the true sense of the word." I could attempt to do that, but I hope that what I have indicated I want to say for the record before a high-school graduating class in the summer of 1943 will result in your framing for yourselves a sound definition of success.

Your supervising principal very kindly gave me three alternative subjects, moreover. The first was to tell you what chance you have of becoming famous. I am hoping that when I have made the record I want to make here, you will be able to decide soundly for yourselves about fame, also.

The next alternative subject suggested by your supervising principal was to tell you of "my observations of people and offer my judgment as to their value in society." While I shall not name names, I am hoping that nevertheless you will be able to make some excellent guesses in connection with this alternative when what I have to say is in the record.

Burn the great books—neglect them—close them: All three spell out the same tragedy

The final alternative suggested by your supervising principal is the one I have selected. It is that I speak to you on any subject "upon which I might like to enlarge."

When you have heard the statement I desire to place on record, here under the specific circumstances I have mentioned and believe to be peculiarly appropriate, I am confident you will agree there is urgent need indeed to "enlarge upon it."

Let us remember that in this summer of 1943 the great books are being closed

For this is that statement: This summer of 1943, the great books of learning are being closed to the average student in all the colleges, and even in some of the public high schools. Plutarch's Lives, Aristotle, Milton, the Gospels, Horace, Chaucer, Shakespeare, Ovid, the Old and New Testaments, Cicero, Plato—all down through that luminous list that measures our most priceless heritage—being closed for the duration only, perhaps, but being closed. Of course they are not being closed all over the world—in China, in England, in Russia, in Canada, for example, they remain open—but here in our schools and in our colleges, they are being closed. In Germany and in Italy they have of course been closed—and in some instances also burnt—ever since our enemies, the Fascists, seized those countries.

The liberal arts are being blocked out

This means the study of the humanities and of the social sciences—all that broadening education to which the liberal arts are the foundation—is being practically blacked out all over the land: History, literature, the fine arts, philosophy, religion, anthropology, economics, education, geography, international political science, psychology, sociology—all blacked out, except for a gesture here and there, elementary and perfunctory, in the direction of history and geography, and some indications of recognition of psychology.

The small privately controlled liberal-arts colleges are being starved out

As the great books are closed, different books are being opened in great profusion. These are the detailed books of how to do this and that—from how to weld to how to run drill presses—the technical books for training in skills. And the big colleges are to be training centers for the mechanical trades; the small privately controlled colleges, which have perhaps most effectively educated in those studies that prepare men to be free, are evidently not going to be given a chance even to survive as training centers.

Now it goes without saying not only that we must concentrate on winning the war, but that we must give first place to that concentration. It is as obvious that we must perfect ourselves in the skills necessary for the production and operation of the machines of war.

But certainly it is clear that it does not follow that it is necessary to close the great books of learning, to blot out the small liberal arts colleges in order to accomplish this necessary end.

Who among us are blacking out the small liberal-arts colleges?

This fact is so evident, indeed, that of itself it suggests there are among us some who wittingly or unwittingly are moving to black out the small liberal-arts colleges, practically to discard education in the humanities and the social sciences, and to intensify technical instruction.

At least we can discover whether or not a bit of consideration of the past so indicates.

Education with a purpose over and beyond mere technical training

First, we might profitably recall the education typical of the sixteenth and seventeenth centuries. It was education to give the strength necessary to live in a hard world. It centered in small towns, like your towns in this joint school district. It was under home control, the type of control your school board and its president, Mr. Schmidt, would prefer to be able to prescribe on your parents' behalf. And that it produced great leaders we all know.

Now it will be plain to you why I wanted to meet a 1943 graduating class in a school built entirely by local money, as these earlier schools were, and this school of yours is the only one of which I happened to know.

Education to increase the power of the mind, not merely the dexterity of the hands

There were no frills dangling to the educational program of the days to which we are looking back; and it was not vocational. The students studied, among other subjects, the old languages—but they studied them as a means to an end, this end being, first, the acquisition of a certain mental toughness under a learning process which was not easy; second, to be able to analyze the political wisdom of man's outstanding efforts to improve society.

They studied faults that they might acquire sufficient understanding to guard against them; they studied in order to train the mind to think and the tongue to speak; they studied truths in order to be able to apply them during their own lives to man's quest for truth and happiness. In short, they studied to increase the power of the mind, to gain for themselves the power to think and to evaluate, to focus the learning of the past on the present.

Yes, they studied homely virtues, but in terms that would aid them make the social relations of their lives more fruitful and just. Some of these virtues Aristotle handed down to them, it is true—prudence, justice, fortitude, temperance. And from Christianity they took several, there is no doubt—for example, liberality and courtesy.

No, their study of homely virtues and the accomplishments of the past was not to gain merely a superficial, useless, impractical veneer. Instead, its purpose was sound preparation for the assumption of leadership of their fellow men, if they happened to be called upon to lead; sound preparation for meeting individually the day's problems growing from the issues of man in relation to his fellow man and the State; sound preparation to acquire courage and control.

We black out as our boys fight the results of the same black-out overseas

There are disciplines in that sort of education — uncompromising disciplines. That, indeed, is why it creates ability to distinguish right from wrong, fact from fallacy; to say "No" when "No" should be said, and to say "Yes" only when "Yes" should be said. And it is liberal education, right education appropriate for freemen—men free in mind as well as socially free and economically prosperous—a type of education conceived by Plato and the Greeks, perfected by Cicero and the Romans, incidentally the type of education we are blacking out at home while our boys fight against what blacking it out has created overseas.

A temporary backsliding capitalized by the enemies of liberal education

But—as we all know—as the country's dollars-and-cents wealth grew, this sturdy type of education was frequently brushed aside. It became popular to make the educational process pleasurable. Discipline—doing something difficult—was now secondary. Students began to know so much less about so much more that they were quite convinced that they, like some of their teachers knew all the answers.

Frills and isms then of course blossomed from one end to the other of the educational field. Snobbishness characterized some of the large eastern institutions; mass-production methods marked the large western universities supported by public funds. Fraternity folderol, social goings-on, and hippodromic athletics were additional educational ab-

[1] The class of 1943, Arbor Vitae-Woodruff High School, joint school district No. 1 (Oneida and Vilas Counties, northern Wisconsin). F. J. Schmidt, president of the board; C. R. Wentland, supervising principal.

normalities of this passing period during which much of education admittedly fell to the level of mere supervised entertainment. As Woodrow Wilson observed at the time: "Side shows have taken the place of the main tent."

A corrective reform was already under way before the war

Yet, in fact, this was but a passing period. The awakening was apparent before the present war opened, and a steady trend of reforming improvement was already apparent. England had gone through a somewhat similar period, and was already coming to her senses. And while all of this was going on, day-by-day in the smaller liberal arts colleges many earnest students were being effectively trained in the abstract principles that underlie, and in the long run shape, the course of human existence.

What is more important, these small, privately owned liberal arts colleges had never wandered into devious bypaths. Year in and year out, these, the very institutions which are now marked for liquidation, continued to supply that liberal education which is necessary to produce citizens who are capable of clear, independent, disciplined thinking. Perhaps the explanation is that they neither had the money nor the leanings toward "isms" necessary to these educational aberrations, but I like to believe they resisted—and at any rate, the decisive fact is that they did not succumb.

Ever since 1852 the drive to implant the German educational system has persisted

This passing period of educational backsliding has, however, been energetically capitalized by those who seek to introduce the German educational system into this country. To achieve this end they have been, ever since 1852, endeavoring to black out the small privately controlled liberal arts colleges.

But it was apparently unsuccessful—until the war gave its instigators new opportunities

Six distinct drives have been made by these earnest believers in trained hands and brains educated in technology but not in thinking power; drives to wipe out the liberal arts colleges in order to clear the way for concentrating higher education in this country on purely scientific subjects and to pattern it after German intellectualism. And all six of these drives failed.

Indeed, when the present war broke, there were many indications that healthy reforms correcting the extremes of the backsliding period in liberal education, and a growing realization that a democracy requires citizens who are not merely technological experts, were combining at last to rout the powerful forces driving for the extermination of the small liberal arts colleges in order to replace them with mind factories for the production of specialists.

Our entry into the war, and the lowering of the draft age to 18, however, reversed the situation completely, and gave those interested in publicly controlled education or higher education along German lines, an opportunity to accomplish more in months than they had previously been able to bring about in decades. They could now, on the one hand, capitalize effectively the wartime need for technicians, and on the other adroitly provide for training in skills at Federal expense under set-ups which in practice eliminate the small liberal arts colleges while enriching the large educational institutions, particularly, in point of numbers, those supported by taxpayers' money.

How adroit schemers were now able to stack the cards against the small liberal arts colleges

They could even blandly suggest in one breath that higher education was at last to be provided for all in a truly democratic manner, while, in the next, warning that if the small liberal arts colleges were given assistance, doing so would amount to a subsidy ruinous to the democratic foundations they cherish. Rushing directly into the armed services' educational activities in officers' uniforms, while their fellows secured important civilian posts on the other side of the fence in Washington, opportunists among educational administrators and energetic representatives of the larger educational institutions were in a position to dominate the situation completely. The heads of the small liberal arts colleges had neither the time nor the money to move to Washington; they had no places in this wartime educational picture enabling them to do so at public expense.

Events now moved quickly toward the closing of the great books. The Army's and Navy's educators in uniform decided soldier and sailor students could only be instructed in groups large enough to justify a complete military or naval command set-up. Therefore, even though a gesture was made of qualifying small liberal arts colleges for use by the Army and the Navy, a convenient excuse for actually selecting mainly only large institutions was simultaneously provided. Nearly 600 universities and colleges were officially approved for supplying instruction at the expense of the armed service—by a group on which the armed services' representatives had two-thirds of the membership—but the armed service could decide which on these lists actually to use. Thus, the elaborate motions of "approving" became practically meaningless gestures, and those representing the armed services were placed in a position to follow their individual educational inclinations, which obviously evidently do not favor the smaller, privately controlled liberal arts colleges The approved list is long, in other words, while the list of small liberal arts colleges on it which have so far been selected for actual service is short, very short indeed.

Will the War Manpower Commission act in time?

The War Manpower Commission had—still has the challenging opportunity of both differentiating between man-power and brain-power needs—on battle-fronts and supporting home-fronts alike—and of providing logically for industrial and civilian brain-power requirements while at the same time enforcing induction programs truly selective according to the intentions of the Congress. The armed services have shown a curious obliviousness to the obvious dependence of the battle lines on the home-front lines, and the Commission has it in its power to cure this lapse.

The Commission, in the course of meeting this challenge, also could have afforded the small liberal arts colleges an opportunity to serve in wartime, and to survive for vital post-war service. So far, the Commission has failed to meet this challenge, a failure which, if not speedily rectified, must not be forgotten when the day comes for finally casting up the records of those who were in a position to act when action meant the preservation of the Republic.

The Army even called into active service students for whom it had morally, but not specifically in writing, assured completion of their educational programs as reservists. The Army also insisted on taking all students 18 years of age or older out of college and putting them through basic combat training, with a prospect of their returning to take the specialized educational program.

How the Army plan for specialized training helps along the black-out of the liberal arts

Strange as this procedure was on its face, it became grotesque when in actuality the specialized program emerged as a scheme under which only professors or instructors, high school graduates, those speaking a modern foreign language fluently, or college students who had concentrated on mathematics, physics, or psychology, could normally qualify.

In other words, not only were the male students taken out of the liberal arts colleges, but it was to all intents and purposes arranged that liberal arts college students would be denied the Army's specialized educational training made available to high school graduates, to sons of the foreign-born—fluent for family reasons in a modern foreign language—and non-liberal-arts college boys. Since the demand for officers is understood to be practically filled, the liberal arts college student was in effect made a living example of the alleged uselessness of the type of education which all-around experience has demonstrated to be the most effective for developing leadership qualities.

Courses for training mechanics sketchily become the order of the day

And the courses prescribed for the specialized Army training are essentially elementary, and of course principally consist merely of instruction in skills. The Navy's record, both in respect to its moral obligations to student reservists and the type of instruction prescribed, is better than the Army's, but hardly so in regard to utilizing the facilities available in the small liberal-arts colleges by organizing small units that do not require elaborate gold-braid-command establishments. In fact, the Navy has in effect evicted citizens and students needlessly from their quarters in order to use colleges located conveniently in respect to the elaborate command set-ups both it and the Army evidently make the deciding factor in selecting the colleges to be utilized. These quarters are then reequipped at the taxpayers' expense and with critical materials, despite the existence of thousands of furnished rooms under the control of small colleges.

We are following the pattern enforced in Germany by Dr. Robert Ley

So, in this summer of 1943, with their students uprooted—and all but branded mental outcasts under the Army's educational program—and apparently with no opportunities available to them hereafter for securing sufficient students to keep their doors open, it would seem that the liquidation of the small liberal arts college, so long envisioned by those public-pay-roll educational administrators who favor higher education along German lines, is practically an accomplished piece of studied, insidious educational perfidy and miscreance. The great books of learning are being closed; education of the individuality for self-reliance is being sacrificed to training in techniques exactly as in the Third Reich under Dr. Robert Ley, and our public schools are being turned into mere technological training centers.

We shall not go down the Nazi path

Yet there is sound reason for hope that these small colleges and liberal education may still be saved. But this is so only because elimination of them, while our public-school system is turned over to technological training, would surely mean that we had set about creating here in America the kind of society the Nazis envision. And hope can certainly be held—must be held to the last—that America is not going down that path.

For that is the path away from self-reliance; the path toward allowing ourselves to be told what to do, what we should hear, what we should read; the path toward idolizing, and supinely depending on, a man and his bureaucracy instead of following the elected leader of a democracy and his elected associates; the path Germany, Italy, and Japan followed.

What we want and intend to have

It is the path those would lead us down who argue that the basis of freedom is entirely economic and that therefore training for an occupation is the only justifiable purpose of education. But we know that a job—economic independence—merely implements freedom, and is not the source of freedom, for freedom is of the mind. We therefore intend to have not only the job and the economic independence that goes with it, but as well—and first, if need be—that freedom of the mind which comes from a sense of perspective and historical relationships, from a comprehension of the relation of man to society, which no amount of technical or scientific training will ever give, has ever given.

These dangers we know

For we are alive to the dangers along this path foundationed on the premise that equality is to be measured solely by incomes and application of skills. We have learned that true equality is instead measured by an understanding—not only of the present but of the past—which is a franchise of the mind, not of the pocketbook, and one independent of creed, color, or social status. We recall that Aristole said: "It is not the possessions but the desires of mankind that must be equalized, and this is impossible unless a sufficient education is provided by the state," and we know both that the great civilizations of history have been the best educated, and that education does not mean special training to do particular jobs.

And we have common sense enough to realize that it follows that if we must live alone in the terms of the applications of skills, our existence as a civilized nation has run its course. For we have seen what has happened in Germany, where a few are selected for leadership and all the rest trained as technicians.

And these are facts we do not forget

We do not forget that we have not had a great statesman who was merely a technological expert. We think it is therefore sensible to conclude that the survival of a democracy depends on the intelligence of the electorate, and not at all on the technical training of experts staffing a bureaucracy.

Essentials of democracy we intend to keep alive

In short, we intend to keep alive liberal education and the spirit of liberal learning—the liberal arts, those appropriate for freemen, men responsive to timeless values and to public responsibilities.

We so intend because of our conviction that our dominant need as a people is a unity of outlook and purpose so generally recognized it acquires authority sufficient to resolve the confusions and the conflicts endangering the Republic. Having seen the authority of theology, and later of science, fail to fill this need for us, we hold that development of this unity and adequate acknowledgment of its authority, both depend now on the disciplines of liberal education.

By so holding, we do not contend that study of man's ancient gropings in the past as such, of dead languages as such, or of any particular number of books—styled classics—as such, supplies the appropriate education. What we do contend for is a distillation, a sifting out of knowledge in the fields of the humanities into methods and applications meeting present-day problems and necessary to the development of ability to cope with the problems of the world today to the maximum satisfaction of student and society.

What opportunists among educational administrators are proposing

And we intend to reopen the great books of learning in our schools as well as in our colleges, for we agree with Louis B. Wright when he warns: "In the emergency, opportunists among educational administrators are proposing a scheme that plays diabolically into the hand of Fascist sympathizers. They propose to discard all pretense of humanistic education for the duration of the war and to turn the vast school system into training centers in subjects useful to the war effort—they betray either gross ignorance of the democratic needs of a democratic state, or a Machiavellian design to undermine the fundamental sources of democracy. Wittingly or unwittingly, they are seeking to place the kind of education necessary for leadership beyond the reach of the laborer's son who must attend public schools and cannot afford to enroll in a private institution where he might acquire fundamental knowledge necessary for intelligent citizenship in a democracy * * * attempting to persuade the American public to adopt the educational policies of Dr. Robert Ley and the German Reich."

This indeed would be a tragic paradox

And with Ernest M. Hopkins: "It would be a tragic paradox if, as the result of the war, we were to allow our system of higher education to be transformed into the type of education which has made it so easy for a crowd of government gangsters like Hitler's outfit to commandeer a whole population."

It would amount to losing the peace before we have gained it

And with Irvin Edman: "If the humanities, or the humanistic temper which they promote, are permitted to lapse now, we shall have lost the peace before we have gained it, and the real victory after the war will be to the way of life, inhuman, tyrannical, mechanical, of those whom we shall ourselves have conquered."

A crime comparable with the burning of the books by the Nazis

And with Wendell Willkie: "The destruction of the tradition of the liberal arts, at this crisis in our history, when freedom is more than ever at stake, would be a crime comparable with the burning of the books by the Nazis. And it would have approximately the same results. Burn your books—or what amounts to the same thing, neglect your books—and you will lose freedom, as surely as if you were to invite Hitler and his henchmen to rule over you."

There is a basis for hope, but without action it is groundless

These being intentions, there is indeed still good reason for hope. But if no action is taken, our intentions will not be realized, and our hope will become groundless. Those who, knowingly or unknowingly, plan to keep the great books closed are not now inactive, will not be inactive in the future. They already plan, for example, a supereducational post-war project for imposing the German educational system on the country—perhaps, indeed, on the world, for I understand it is to be called the University of the World or something like that—and to use for this purpose the buildings and housing built during the war.

The first necessary steps

The immediate steps for realizing our intentions, to the end that our democracy and the type of education upon which it depends may be saved, should be those necessary to preserve the smaller, privately controlled liberal-arts colleges.

One bit of assistance which can be given to the liberal-arts colleges

The large universities, public and private, should be concentrated on the heaviest educational demands of the armed services. They can support themselves handsomely at this remunerative task, and should be glad to have a few dollars flow to the small liberal-arts colleges, even if doing so involved carrying their own liberal-arts faculties as overhead for the duration, busying them with post-war planning. All other normal students would then become available to the small colleges, giving them at least an opportunity to pick up a limited amount of more or less usual income.

Another practical method for utilizing the liberal-arts colleges

A fund should be provided by the Congress—at the request of the War Manpower Commission if it elects, at last, to act, and otherwise at the suggestion of the new Office of War Mobilization—sufficient to defray the cost of educating suitable small units in the liberal-arts colleges to meet selected governmental, industrial, and civilian needs. The War Manpower Commission should be directed by the Congress to establish the procedure for the selection and education of these groups, in order that the elaborate command arrangements the Army and the Navy prescribe will not be involved, and wasteful induction misjudgments prevented. This fund will not be a subsidy, but merely a practical means of assuring the small colleges exactly the type of wartime income the large units are enjoying. Moreover, the legislation providing the fund should direct that contracts already made with educational institutions be renegotiated, to the end that no profit, direct or indirect, results from them, and that all recoveries be credited to the fund.

Charging on a per capita basis for educational facilities opens up big profit possibilities

Apparently the profits in wartime educational contracts given to the large universities have been so marked that voluntary reductions have seemed wise to some educators directing large privately controlled institutions—when dormitory rooms are rented to the Government for three times the annual normal rentals, classroom space charged for on a per capita basis, telephone service billed to the extensive uniformed command personnel put by the services, to fighting the war in residence on campuses, and even a levy made for each serviceman's use of athletic facilities, profits should certainly result, particularly if a considerable portion of the faculty pay roll has been shifted to Government pay rolls.

But the publicly controlled institutions have probably not yet offered to reduce their charges, and, because they have public money, anyway, to spend, it is their figures which offer peculiarly interesting renegotiation possibilities. And there is not only every reason to save all that can be saved in connection with these contracts, and by the same methods exercised in respect to commercial contracts for war materials, but there is the added attraction that any savings could, under the plan suggested, be used to the advantage of the smaller liberal arts colleges.

Another logical and helpful step

The Committee on Education and Labor of the Senate and the Committee on Education of the House of Representatives should, by a suitable resolution, be empowered, and provided with adequate funds, to conduct for the duration as a joint committee, a continuing investigation of all current educational proposals and practices for the purpose of keeping the Congress advised and placing it in a position effectively to control the administrative offices involved.

Still another step both sound and helpful to the war effort

The new Office of War Mobilization should at once implement methods for assuring the preservation of liberal education and, specifically, the utilization in wartime service of the facilities and the faculties of the smaller privately controlled liberal arts colleges.

These facilities and faculties in the aggregate are, both tangibly and intangibly, extraordinarily important. As physical assets, they mount into thousands of acres, tens of thousands of beds, and millions of dollars invested in useful buildings and equipment. The faculties represent an educational know-how invaluable in wartime. A Smaller College Corporation is certainly as appropriate in the wartime organizational picture as the Smaller War Plants Corporation, and obviously would erve as important national needs. The small colleges not only do not seek a subsidy—will starve before they accept one—but they do want to serve, and they possess assets needed in the war effort.

Failure means just this

These are specific steps necessary to realize our determination to keep the great books of learning open that our democracy may be protected from the very thing which has created the enemies we are fighting. Only education that is not merely technological training, and the sort of leaders which that type of education alone can provide, will save us now from destruction at the hands of our own people, misled by racial and religious intolerance, individual and group selfishness, widespread indifference to the basic principles of democracy, and politicians and bureaucrats willing to incite group against group, to the hazard of the Nation as a whole, in their lust for personal power.

Late it really is

That is how late it really is—victory will be disaster unless we preserve the opportunity to teach the principles of democracy and the philosophy on which it is based.

And that opportunity depends on keeping the great books of learning open; on halting the blacking out of our smaller liberal arts college; in providing more in our schools than a robot education in skills.

But time runs short.

A generation in terms of higher education is a few score months only.

Adults can easily and rapidly drift under current pressure into complete disregard of the humanities.

While it would be surprising indeed if the high-school age does not under present job and induction enticements become completely disdainful of all but the scientific and the vocational—perhaps, in fact, it has been so blinded already.

So the soil is fallow for the educational seeding which will produce a crop no different here than it has in Germany; this seeding is, as we have seen, already under way.

And what everything depends on now

Whether the baneful crop is harvested or plowed under and the good American soil reseeded for the salvation of the Republic hangs on the action of the moment.

Publisher, Who's Who in America.

First Lt. John Coffee Braswell

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article appearing in the Athens (Ga.) Banner-Herald regarding the posthumous award of the Legion of Merit to First Lt. John Coffee Braswell "for exceptionally meritorious conduct in the performance of outstanding service."

This splendid young man, by his months of research and experimentation, solely on his own initiative, made an outstanding contribution to aerial-ground force communications by developing a procedure and device to enable air observers to pick up written messages from moving ground vehicles.

While perfecting his procedure Lieutenant Braswell lost his life on April 29, 1943, in the crash of an airplane in which he was flying as an observer.

Lieutenant Braswell had the admiration and respect of each and every enlisted man and officer of his organization, as well as of all his associates in college and in his work before entering upon active duty in the United States Army.

His memory will ever live in the annals of a grateful Nation in whose service he paid the supreme sacrifice.

The article follows:

LEGION OF MERIT IS GIVEN FIRST LIEUTENANT BRASWELL

By order of the President, the War Department announces that First Lt. John Coffee Braswell, Athens, has been posthumously cited for the Legion of Merit award "for exceptionally meritorious conduct in the performance of outstanding service."

First Lieutenant Braswell was an officer in the Cavalry of the United States Army and was commander of Headquarters Company, One Hundredth Armored Reconnaissance Battalion, Twentieth Armored Division, under Maj. Gen. Stephen G. Henry, stationed at Camp Campbell, Ky. He was fatally burned April 29, 1943, while demonstrating an aerial communications device he invented.

An alumnus of the University of Georgia and a Reserve officer, First Lieutenant Braswell entered the service in January 1942, when he reported at Fort Riley, Kans., later transferring to Brooks Field, Tex., where he received his wings as an aerial observer. Following a brief period at Fort Knox, Ky., he was assigned to Camp Campbell in January of this year. Recommendation by his superior officers that he be advanced to the rank of captain had received favorable action and his new commission would have been conferred last June.

Prior to entering the armed services the young officer, only son of Mr. and Mrs. Earl Braswell, of Athens, was advertising manager of the Athens Banner-Herald. His wife, the former Miss Nellie Goldstein, and their two children, reside with her parents at Griffin, Ga.

ON OWN INITIATIVE

Official citation of First Lieutenant Braswell declares that "solely on his own initiative and beyond his assigned duties he gathered data and perfected a procedure and device, flying at low altitudes and working in collaboration with moving ground vehicles" which was regarded as an outstanding contribution to aerial-ground force communications.

Following his death, General Henry wrote the parents of the young aerial observer that "we will do all within our power to carry on what your son started and to see that he did not labor in vain." Continuing, General Henry said that it is the determination of the armed forces that victory shall be attained and that "when this hour of victory comes I have the firm belief that your son will stand with the top rank in receiving due credit for the contribution he made."

GENERAL HENRY'S LETTER

In a letter to Mr. and Mrs. Braswell concerning the award of the posthumous citation, General Henry wrote as follows:

"The posthumous award of the Legion of Merit to your fine son, First Lt. John C. Braswell, warmed the heart of every officer, every sergeant, every corporal, and every private in the Twentieth Armored Division, of which he was such a vital part. To each and every one of us the great honor that has come to him is a challenge to do our best.

"During our present training and in combat, the spirit of John C. Braswell will ever shine as a beacon of light and hope and courage. Our future record should be a promise to your son that we are keeping the faith. I like to think that we will be worthy of all he stood for."

The citation says that Lieutenant Braswell first began final testing of his communications device in February 1943 and in subsequent months, when not engaged in other duties as an officer, he carried on additional experimentation on his own time and "displayed outstanding initiative, ability, and resourcefulness."

TEXT OF CITATION

The full text of the Legion of Merit citation follows:

"First Lt. John C. Braswell, Cavalry, United States Army. For exceptionally meritorious conduct in the performance of outstanding service. In February 1943 he developed a procedure and device to enable air observers to pick up written messages from moving ground vehicles. In February, March, and April, 1943, solely on his own initiative and beyond his assigned duties, he gathered data and perfected a procedure and device, flying at low altitudes and working in collaboration with moving ground vehicles. During this period Lieutenant Braswell displayed outstanding initiative, ability, and resourcefulness in meeting the problems connected with the aerial pick-up of written messages from moving ground vehicles. On 29th April 1943, while engaged in perfecting his procedure, the aircraft in which he was flying as observer, at a low altitude crashed and burst into flames. Lieutenant Braswell lost his life as the result of that crash."

The pilot of the plane, Staff Sgt. George O. Cline, Charlevoix, Mich., died on August 7 from burns received in the crash. Last month Staff Sgt. Frank W. Patterson, Lewisburg, Tenn., was awarded the Soldier's Medal for rescuing Lieutenant Braswell from the plane in which he received the fatal burns. Other soldiers rescued Sergeant Cline from the burning aircraft.

Fair Play for Norway

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. KEEFE. Mr. Speaker, the part that has been played in the present war by the heroic seamen of Norway should command the interest and attention of every American. Norway's contribution to the war effort in ships, fighting men, and merchant seamen has been given scant recognition. How we are to compensate these brave and heroic people for the tremendous losses which they have

sustained should be a paramount consideration.

As bearing upon this question, I am pleased to incorporate in these few remarks a speech delivered by Mr. Erling D. Naess, Norwegian director of shipping and head of the Norwegian shipping and trade mission, delivered on August 10, 1943, over station WNYC, New York, Fair Play for Norway.

The part played by the Allied merchant fleets in this war is less spectacular than those of the armies and the navies, and has less news value. For this reason, the importance and performance of the merchant ships are apt to be subordinated to the other services, both in regard to volume of publicity and prominence of display.

But when the history of this war comes to be written, the merchant ships which kept the supplies moving to Great Britain in the dark days of 1940 and 1941, and to all the other fronts in the brighter days of 1942 and 1943, will be allocated one of the foremost places. I need only remind you how essential sea power and sea transport have been in this war—more essential than in any previous war in history. Looking at the first period of the war, which we might call the defensive phase—namely, 1940, 1941, and part of 1942—What would have happened to Great Britain, if her supplies across the ocean had failed? What would have been the outcome of the Battle of Britain, if an ample supply of aviation gasoline had not come forward across the submarine-infested waters of the Atlantic? Looking at the present period, which we might call the offensive period, we see a number of amphibious operations, in which the merchant ships are an integral part of the invading force itself. In stressing the importance of merchant fleets, the official Allied naval story of the Sicilian invasion, released a few days ago, said, "An invading army cannot live upon the country. Food, and even water, may have to be provided by sea. Even air force cannot operate without fuel carried in ships."

It has been stated that about 800 merchant ships participated in the invasion of north Africa, and even more in that of Sicily; but, apart from these figures, which derive news value from their spectacular size, we have heard precious little of the countless feats of heroism, perseverance, and daring displayed by the merchant ships and their crews. Furthermore, what little information has been given the public, quite naturally concerned almost exclusively American ships in the United States—just as, in Great Britain, it concerned British vessels. It is understandable that the American and British publics prefer to hear about the achievements of their own merchant navies, of which they are so justifiably proud; and it would be far from my intention to grudge the merchant seamen of the United States and Britain the slightest fraction of the publicity they receive. It is far too little, as it is.

I hope, however, that my listeners will bear with me for suggesting that the nature of the part played in this war by Norway has resulted in its being overshadowed by the more conspicuous services and, for that reason, its importance not being generally realized.

The reasons for this may already be clear to you.

Firstly, Norway's main contribution to the war effort is her merchant fleet, and the part played by the merchant fleets is generally being overshadowed by the other services.

Secondly, Norway's closest allies happen to be the two foremost mercantile shipping nations in the world—who, quite naturally, are chiefly interested in telling the story of their own fleets.

For these reasons, Norway has been thought of too little as an active belligerent ally, and too many people think of her only, or chiefly, as an imprisoned friend awaiting liberation.

The part played by the Norwegian merchant fleet in the defensive phase of the war is best described by reminding you that about 40 percent of the oil requirements of Great Britain was, in that crucial period, supplied by Norwegian tankers. If this is not an important and active contribution, I would like to know what is. I think it is safe to say that the Battle of Britain might not have been won, without that supply. When Sir Arthur Salter recently paid his dramatic tribute to the United States for having twice saved Britain, I am sure that there also passed through his mind a thought of the Norwegian fleet which rendered its service during the time while American ships were still forbidden to enter the war zone.

The part played by the Norwegian merchant fleet in the African war is illustrated by a news dispatch from the British Broadcasting Company's correspondent with the British Navy in the Bona area, which I will quote to you. He declares that "the battle of Bona was won by the courage of 13 Norwegian, 12 British, 5 Dutch, and 2 Polish merchant ships, escorted by units of the Royal British Navy, all of them fighting shoulder to shoulder and with superhuman courage and endurance." "The holding of Bona," he says, "depended upon the success of the merchant ships in landing sufficient supplies for the forces there. The Germans and Italians had supremacy of the air at that time, as well as bigger forces at sea. In the beginning, Bona was a hell on earth, the towns and piers being a sea of fire through which the ships had to carry their highly dangerous cargoes. The ships would have to fight their way in—continue firing at planes, day and night, while unloading—and then fight their way out again. Gradually, however, the Allies gained air supremacy." "When the history of the victory of Bona and the Sicilian straits is written," he concludes, "it will contain a long honors list of previously unknown ships, and high on this list will figure the names of 13 Norwegian ammunition ships which, for the moment, are known only under a number in the lists of the Norwegian merchant marine."

Now, let us look at the other side of the ledger. The achievement gained by any one service in this war is never without cost. The most active—or, rather, the most continuously active—service will almost unavoidably suffer the greatest percentage of losses.

The Norwegian merchant marine entered this war with a total number of Norwegian crews of about 23,000 men. So far, over 2,200—or about 10 percent—have lost their lives. One out of every 10 Norwegian seamen has lost his life—and still, those who remain carry on their hazardous but essential work of carrying war material to every fighting front.

Turning from losses of manpower to losses of material, we find that Norway's merchant fleet, when the war started in 1939, totaled about seven and one-half million tons deadweight.

What is left of this fleet now? Only about 500 ships, of about three and six-tenths million tons deadweight. You will see that the loss amounts to over 50 percent of the tonnage, but we—unlike you—have been unable to replace this loss.

What do you think this means to a country like Norway? Even if she had been a powerful country with large natural resources, this would have been a serious loss. To Norway as she is, the loss is staggering.

Norway is dependent on her merchant marine to a greater extent than any other country in the world. Before the war she raised only 25 percent of her grain. All of her sugar was imported, and nearly all of her coal. As for fats, she imported about 20 percent of her consumption. All these and other imports—vital for Norway's economy and not of the kind which can be easily dispensed with or cut down—have to be paid for; and it is the function of the merchant marine to pay for a large part of them. Before the war, earnings from the merchant marine paid for about 40 percent of these imports. This gives the merchant fleet a place of much greater importance in the national economy of Norway than in any other country. As Assistant Secretary of State, Mr. Breckinridge Long, so ably put it before a subcommittee of the Committee on Appropriations on March 5 last:

"Considering the relation of ships to Norway's wealth and the necessity of them to Norwegian national economy, we have considered Norway in a position different from any other government. They have contributed what is practically their entire national wealth, and we have agreed with them that we would consider, in the language that I wrote awhile ago, that they should be assisted in replacing ships lost in the service of the United Nations."

During the same hearings Senator NYE made the following statement:

"Mr. Secretary, it is unbelievable to me that the conditions under which we have had access to the Norwegian ships would find the Congress saying 'No' or anything other than an enthusiastic 'Yes' to any legislative proposal which would offer to make right any part of the losses the Norwegians have suffered and make ships available to them."

Thus, Norway has thrown into the battle her entire merchant fleet, without regard to risk and without regard to the fact that she has not, within her borders or otherwise under her control, the means to replace this fleet. While Norway loses ships, replacement facilities are concentrated mainly in the United States and have been made available to her only to an insignificant extent. So far, only eight vessels of altogether about 80,000 tons dead weight, have been placed at Norway's disposal, out of the mighty flood of ship construction emanating from the yards of her great American ally. At the present rate of output, eight vessels represent only 1½ days' output of these yards. It has given Norway replacement of about 3 percent of her losses.

This lack of replacements has created a great problem. Hundreds of highly skilled navigating officers and engineers have been deprived of their ships and thrown back on the maintenance pay of the Norwegian seamen's pools.

What will happen to these men, and to Norway's future, depends largely upon the understanding and cooperation of the United States and Britain, in the rehabilitation of the fleet, and upon the realization of the constructive peace aims, so well expressed by some of the leaders of the Allied Nations.

These men hope and expect that these aims will come true, since, otherwise, they will have fought this war in vain. I am sure that, when it is more generally realized what part Norway has played in this war, fair play will prevail.

The Country Talks Up to Its Congress

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. MUNDT. Mr. Speaker, under leave granted by the House, I am inserting herewith in the CONGRESSIONAL REC-

ORD an article written by me and appearing in the September 1943 issue of the Republican. While the Republican is the only Nation-wide magazine issued by, of, and for Republicans and has sometimes been referred to as the voice of the minority it does not limit itself to partisan discussions and its policy is to preserve self-government and promote the American way of life in this Republic.

Mr. Richard Nowinson is the editor of this magazine, which is published at 53 West Jackson Boulevard, Chicago, Ill. Upon the occasion of the eighth anniversary of the founding of this magazine nearly 500 congratulatory letters and telegrams were received from political leaders and public officials throughout America commending Richard Nowinson on his persistent progress in promoting better government in this country.

The article follows:

THE COUNTRY TALKS UP TO ITS CONGRESS

(By KARL E. MUNDT, Member of Congress from South Dakota)

With the passage of the so-called "lame duck" amendment, the country won a dividend in that it was no longer subjected to legislation passed by Members of Congress who had been defeated by the folks back home, but it also lost a significant feature of representative government in this Republic in that sessions of Congress became longer and opportunities for personal conferences by voters with Members of Congress became less and less frequent.

Since no formula has been developed as yet for adjourning or recessing sessions of Congress before the expiration of the full 2-year terms which they can run, there has been a growing tendency for sessions to conduct their business in leisurely fashion and for them to run on for month after month, with the result that members living more than a few hundred miles from Washington seldom have the chance to visit around their districts or to listen in at the grass roots in order to keep in tune with the desires and the attitudes of the folks for whom Congress, after all, exists and functions.

The Seventy-eighth Congress, however, decided to remedy this unsavory situation, at least to a small degree. It felt, and rightfully so, that the folks who pay the taxes should have an opportunity to visit with the folks who spend the taxes, and so a 6-weeks recess was declared, ending on September 14. Almost without exception, Senators and Representatives availed themselves of this development by returning to their homes and conferring there with as many of their constituents as possible, either individually or in groups.

Judging from the reactions of many Members with whom I have talked or corresponded since the recess was declared, the country has appreciated this opportunity to get first-hand information on Washington activites and to give first-hand recommendations to their Representatives at the Nation's Capital. It is likely to result in more frequent congressional recesses in the future, and it is probable even that some congressional formula will be developed which will set such adjournment dates in advance so that the country may know that, at specified times, its Representatives will be back home to report and to receive the reactions of the folks for whom, in America, government serves.

Due to a combination of circumstances, it happens that my own official duties during the recess took me not only into every section of the First District of South Dakota, which it is my pleasure to represent, but also into the following States of the great farming section of the Middle West—North Dakota, Minnesota, Wyoming, Montana, Nebraska, Iowa, Missouri, and Kansas. In each of these States I met with Members of Congress, with Senators and Governors, and with private citizens who were called together in meetings for one purpose or another. None of these meetings was political in nature and some were presided over by elected Democratic officials; it follows, therefore, that the reactions observed are probably typical of general sentiment in this nine-State area. If this deduction is accurate, and I think it is, it also follows that the New Deal and the administration of President Roosevelt have hit an all-time low among the rank and file of private citizens who comprise the bone and sinew of this Republic.

BUREAUCRACY IS DOOMED

First specific reaction one gets in conferring with the folks of the Middle West is that they seem more eager to get on with the war than is official Washington. Midwest Americans are realists. They realize that, once in a war, the only thing to do is to get it won with the least possible cost in lives, in money, and in human liberties. They are resentful over bureaucratic bungling, which retards the war effort, and with conflicting and confusing policies which disrupt the production activities on the home front and increase the ultimate cost of the war through prolonging its existence. They are willing to pay higher taxes and eager to buy bonds, but they bitterly resent governmental extravagance, whether it be in connection with the war effort or in the social planning stratospheres of the New Deal.

Efforts of the O. W. I. and other agencies to play politics with the war situation are readily detected, energetically scorned, and emphatically rejected. People with sons on the fighting fronts or in training camps en route to the war zones are impatient with rhetorical efforts to sugar-coat the sacrifices they are making and with unnecessary withholding of information concerning the progress of the fighting. Bad news is not wanted, but it is taken in stride and it is preferred to roundabout assertions and delayed dispatches which please for the moment but eventually rise up to plague their authors.

Second definite reaction—after a keen realization that, if there is any lack of awareness that there is a war to be won, it is in Washington and not in the Farm Belt—is the fact bureaucracy, run wild in the Capital City, has dug its own grave, and that Mr. John Q. Citizen is simply biding his time until the next election to change administrations and to issue the mandate that there be less bureaucratic bungling and less unnecessary interference with the business, professional and farming operations of this country.

Not since his election in 1932, have I heard so much direct criticism of the administrative ineptitude of Franklin Roosevelt, nor have I observed such a widespread realization that the only way to dismantle topheavy bureaucratic government in America is to dismiss from office the President, who in the final analysis appoints, directly or indirectly, the army of appointees who are today trying to impose upon this Republic a rule of directives, decrees and edicts rather than to govern it by traditional legislative measures.

The Office of Price Administration is perhaps the most unpopular Government agency in the Middle West. Strangely enough, there is general agreement that price regulation is desirable in wartime, and the public is ready to accept such regulations provided they are orderly, understandable and logical. Judging from almost universal reactions observed in nine States, however, the present procedures and administrators of O. P. A. are not considered to have either of these three qualifications.

TOO MANY LAME DUCKS IN SOFT NESTS

In too many States and in too many Federal positions, the administration's policy of appointing lame-duck Senators, Representatives, and defeated New Deal candidates for office has been so blatant and so widespread that even nonpolitically minded citizens are resentful about the effort to provide soft nests for lame ducks in positions where, above everything else, it is imperative that there be no politics.

Many who formerly criticized Leon Henderson while he was O. P. A. director now credit him with having refrained from appointing political favorites to large-salaried jobs, and they point to changes in personnel in administrative positions which have taken place since the resignation of Mr. Henderson and provide the political biographies of the new appointees to prove their point that being right politically has seemingly become an all-important qualification for a responsible position in the O. P. A. Constantly changing regulations, unworkable price schedules, nebulous and indefinite orders also confuse and confound the public.

With the labor situation in the Farm Belt as serious as it has become, many Members of Congress, including your correspondent, donned work clothes and spent some time working in the harvest fields. Our contribution to the Nation's food supply may have been unimportant, but such activities did provide a most significant opportunity to pick up unbiased and deep-rooted reactions from the food producers in America. My own experience and the reactions I have checked with others convince me that, if the farmers of America were the only citizens to vote in 1944, President Roosevelt would go down to defeat in his anticipated fourth-term bid by an emphatic majority.

The mishandling of farm-machinery production and allocations, the continued attempt to impose the unwanted and unworkable food subsidy and price roll-back scheme, the unsound relationships between price fixing on livestock and their food crops, the apparent disregard in Washington for the alarming shortage of manpower on the farms, the break-down of the rubber program (following the President's veto of the farm-products rubber bill well over a year ago), which in many areas has caused work on the farm to be stopped because of a lack of rubber tires for farm equipment, the coddling of strikes in war industries, and the President's veto of the antistrike bill—all these and many other conditions have caused the farmers to conclude that the forgotten man of 1943 is the farmer on his farm, and they have made up their minds to vote Republican in the next election, war or no war, fourth-term campaign or not.

In North Dakota, I spoke with Senator NYE and Congressman LEMKE; both Members of Congress recounted reactions very similar to those I have recorded as coming from the folks of South Dakota. In Montana, livestock raisers and businessmen demand an end to bureaucratic bungling and government by directives; they believe that if the New Deal will take the brakes off food production and abandon needless regimentation, the bread baskets will fill up, and the waste baskets will empty out. In Wyoming, I attended a meeting with well-liked and able FRANK BARRETT; here again, the demand is for action rather than adjectives, and the stockmen of Wyoming want to ride herd on steadily increasing numbers of cattle rather than to be herded by steadily increasing numbers of Washington political appointees.

In Iowa, popular and hard-working CHARLES B. HOEVEN, first Republican to represent the Sioux City District for many years, told me a similar story about the reactions of the farmers and producers of the Tall Corn State. In Iowa, especially, the memory of the killing of little pigs and the plow-under scarcity

program of HENRY WALLACE still galls bitterly as America begins to feel the short rations which inevitably accrue from a program of planned scarcity.

In Kansas, in Nebraska, and in Missouri I found the same refrain—give us the tools and we will do the work. And they say it with an emphasis which leaves no doubt about their sincerity in giving substance to the phrase. Midwestern America has its heart in the war and its hand on the plow; all it asks is for government to get off its back and to take off the hobbles. A fair price for a full crop and a sudden end to the steady stream of puzzling and perplexing administrative proposals are all that is needed for the Farm Belt to produce what is required to feed America and to provide vast quantities of foodstuffs for shipment to our allies across the seas.

FORMULA FOR FACT FINDING

Perhaps the most elucidating and informative experience this correspondent had during the congressional recess, however, came through attendance at what is likely to provide all Members of Congress with a new formula for fact finding in future recesses of Congress.

This was a public meeting, called under the leadership of experienced and far-sighted AUGUST H. ANDRESEN, of Minnesota. It was held in Minneapolis on August 16 and 17, in the Radisson Hotel of that city, and resulted from a call issued by Mr. ANDRESEN to to the Members of Congress and the farmers, businessmen, and professional people living in the States of Minnesota, Wisconsin, North Dakota, South Dakota, and Iowa. Sixteen Members of Congress attended the 2-day conference and nearly 3,000 private citizens availed themselves of this unprecedented opportunity to air their troubles and make their recommendations to those who represented them in Washington.

In Washington Congressman AUGUST ANDRESEN is considered by his colleagues on both sides of the aisle as one of the most articulate, active, and able Members of the House of Representatives. His nine terms in the House have taught him much about the procedures and practices of representative government, and his native ability has equipped him to provide his State and Nation with superior service. Early in August this year he detected a condition of affairs back home unparalleled in his long congressional experience—a great undertone of dissatisfaction with Executive edicts seemed to be sweeping through the professions, the business places, and the productive farms of southern Minnesota. After conferring with some of his associates in Congress, he decided to call a strictly nonpolitical conference, to which Members of Congress from the five-State area were invited without regard to politics and to which the general public of all political and of no political affiliations were invited to discuss their problems, to criticize or commend, to abhor or applaud, as their convictions and experiences indicated.

The 16 Members of Congress who responded to the call for a clearinghouse of ideas and an exchange of suggestions were Senator SHIPSTEAD, of Minnesota; Representatives AUGUST H. ANDRESEN, ANDERSEN, GALE, JUDD, KNUTSON, O'HARA, PITTENGER, and HAGEN, of Minnesota; Representative LEMKE, of North Dakota; Representatives CUNNINGHAM, GWYNNE, and TALLE, of Iowa; Representatives STEPHENSON and HULL, of Wisconsin; and Representative MUNDT, of South Dakota. The morning session of the first day was devoted to a discussion of the agriculture situation; the afternoon session to a conference with businessmen; the evening session to a meeting with the doctors, dentists, and druggists of the 5-State area.

The second day of the conference was devoted to the livestock and feed interests. Nearly 3,000 citizens attended 1 or more of the 4 sessions, all of which were conducted with a candor and courage which was refreshing in these days of double talk and evasive statements. Every man was given his opportunity to be heard. Some speakers represented organizations of merchants, farmers, or professional men, ranging up to memberships of 45,000; others spoke only for themselves and of their own specific problems as individual operators.

The conference was conducted after the manner of a congressional hearing. Each speaker stated his case or made his recommendations and was then interrogated by the Members of Congress. All meetings were entirely open to the public press. The whole affair was an encouraging demonstration of democracy in action. After the meetings, all agreed that the procedure developed by Congressman AUGUST H. ANDRESEN might well be emulated in every congressional district in America; it provided a welcome and unusual opportunity for the folks at home to confer with their Members of Congress in a frank and full discussion.

Probably no meeting in this country in 1943 has provided a better cross section of what the people actually think and want than did this Minneapolis conference. It did more to advise Members of Congress than 10,000 letters; it did more to enable private citizens to bring their recommendations to Congress than a hundred trips to Washington; it was a better reflection of the public attitude than a dozen Gallup polls.

To detail the discussions at this conference would require a complete edition of the Republican. Suffice it to say that the reactions and observations depicted in the first part of this article were all stressed and substantiated at this conference. Criticism of the administration was so vigorous and so pointed that, despite the fact that the meeting was open to all, that other than Republican Congressmen were present, and that numerous executive appointees were in attendance at the conference, the Democratic big-wigs of Minnesota woefully wailed that "a Republican preelection campaign meeting has been held in Minneapolis." It may be true that the sentiments expressed augured an ill wind for the Democrats in 1944, but, if so, such expressions came from the rank-and-file voters who will determine the election and not from officeholders or party workers in any political party.

Biggest criticism of the agricultural speakers was perhaps their attack upon the President's pet proposal for a food-subsidy and price-roll-back program to shift present-day grocery bills upon future taxpayers, including the returning soldiers who are now fighting at the front. Not even the most ardent Roosevelt follower at the conference dared to say a word in support of this proposal.

Businessmen condemned primarily the bungling in the administration of O. P. A. and the inattention shown by W. P. B. to essential civilian needs for materials and machinery in the food industries. The professional men and druggists concentrated on the growing menace of big government and collectivism, as did most of the other speakers. Doctors and dentists stressed the danger to public health encompassed in the President's "cradle to the grave" program of socialized medicine and collectivistic security.

What has happened in the nine great farm States herein enumerated has undoubtedly happened throughout America during the congressional recess. The country has been talking to its Congress. No official censor has sugar-coated the language. No O. W. I. rewrite man has colored the recommendations. The conversation has been face to face and straight from the shoulder. It has been made increasingly apparent to Members of Congress that the land of the free and the home of the brave is still the home of the brave and that it intends to retain or regain its freedom—whichever is indicated as necessary!

It is expected that as Congress resumes its activities on September 14 that its Members will respond to the desires of the country and insist upon functioning as a coordinate branch of the Government in fact as well as in name. If such an eventuality results, it is the opinion of this writer that the congressional recess of 1943 will have paid a great dividend to this Republic, and that it will provide a precedent for more frequent opportunities for the country and the Congress to meet each other face to face.

Address of Roane Waring, National Commander of the American Legion

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein an address by Roane Waring, the national commander of the American Legion, on September 17, 1943, to the southern and western Governors' Conference at Denver, Colo.:

Your Excellencies, the Governors of our sovereign States, as national commander of the American Legion I have had the unusual opportunity during the past year of traveling all over this country. I have spoken to many large groups of citizens, both Legionnaires and non-Legionnaires. I have had the opportunity of exchanging views with thousands of everyday Americans, coming from all walks of life. I have talked to many thousands of soldiers, both here in the training camps at home and on the fighting front in Africa. And so I feel that I have a pretty thorough understanding of what many Americans, both civilians and soldiers, are thinking about. I know their views about the problems of the war and the peace that will come after it and about what this America of ours should be like in the future.

The problem which concerns them most is the one that I am discussing with you tonight. It is the fear of the ever-accelerating and dangerous trend in this country toward paternalism and toward a centralization of power within the Federal Government. In the minds of many of these Americans there lies uppermost, this fear concerning the usurpation by the Federal Government of the sovereignty belonging to our sovereign States and of a definite and alarming drift toward rule by bureaucratic directives instead of legally enacted congressional laws.

They are frankly apprehensive also of the current tendency by Government to submerge the personal endeavor of the individual and to suppress the free initiative of the citizen and to make of him the recipient of a regimented life dictated and planned by Government bureaus.

Thinking Americans know that the proudest heritage of American citizenship has been its freedom from either government or private compulsion. They do not want that freedom swept away. Such a catastrophe would wipe with it their other freedoms. It would end representative self-government in these United States. These fears have been expressed to me privately, and I have

also heard them discussed publicly. There is no escaping the fact that a large segment of the thinking people of America is definitely uneasy over these sinister developments that are casting ominous shadows over the future of all of us.

These people to whom I have talked are fundamentally sound. They are courageous, they are seeking a means of checking this unhealthy growth of paternalistic philosophy that is so at variance with the faith of our fathers. They want to preserve and protect their cherished American heritage, the right of every American to live his own life as he pleases within the bounds of decency, law, and the consideration of the rights of others.

But these people need leadership. They need voices to express open and defiant opposition to this un-American tendency. To no group can these worried citizens turn with greater propriety and with more confidence than to you, the Governors of the sovereign States in which they live.

There is ground for their fears. There is justice in their indignation. The sovereign rights of their States are being invaded and that invasion is gathering momentum. With each State right that is lost, there comes an abridgement of the sovereignty of the American citizen.

This invasion of States' rights is but a part and parcel of a movement underway for more than a decade to convert our capitalistic system of government into a socialistic or a communistic one.

It is well that we recognize once and for all that ours is a capitalistic system of government. By capitalistic system I mean the system that recognizes free enterprise, the right of the individual to labor in his own behalf, and to take and use for himself the income from that labor. Under this system, the mechanic and the farmer, with their tools, are just as much capitalists living under the protection of our capitalistic form of government as the man who owns a railroad. Agitators and dreamers to the contrary, there is nothing terrifying about the word "capitalistic." It is the essence of Americanism. It is the recognition of the right of the individual to take and use for himself the fruits of his own labor in the furtherance of his own progress.

A capitalistic Government such as ours protects private enterprise. It encourages personal initiative. It rewards personal efficiency and it insures every man who wants to stand on his own merits a job, and not a dole. This system has made America great. It has made it a land of unlimited opportunities where every man can start with an equal chance and go as far as his own ability, his brain and energy can carry him. Under this form of government we have reached the unparalleled development and the industrial growth which makes America today the arsenal of the world, and this industrial growth is not a subsidized growth.

In the comparatively short life of our Government we have achieved this greatness. We have reached this industrial capacity. We have accumulated this wealth by the efforts of the individual citizen, protected by the law of the land, in the exercise of his freedom of action, of his liberty and of his property. Our people have always been the Government. Lincoln described it as a Government founded by the people, controlled by the people, and exercising its authority solely for the people.

In combating this problem of the ever-increasing encroachments of the Federal Government and its numerous bureaucracies upon the sovereignties of our States and our citizens we must ever remember that our Federal Government is one of limited authority only. It has only such control and authority as is expressly ceded to it in the Federal Constitution by the sovereign States.

Many of these encroachments have come about as the result of the depression, when the Federal Government began giving aid to State and local governments, in dealing with problems aggravated by the economic crisis. Unfortunately, this aid always carried conditions with it. Whenever the Federal Government helped out with a single dollar, there were demands for the surrender of certain State and local powers.

This story of Federal aid is the story of the rise of Federal bureaucracy. Year by year it has sunk its tentacles deeper into local control, until now it is reaching into almost every activity of the private life of the American citizen.

These bureaucrats call themselves planners. They are striving for a planned economy under which freedom from want, freedom from economic insecurity, and freedom from fear of the future will be achieved. These freedoms are the freedoms which the American citizen can achieve through his own individual effort. They are the freedoms that have ever been the incentive for honest, hard work. They are the freedoms that have enabled Americans in the past to take pride in the fact that they were self-made men.

These czars of a so-called planned economy would now guarantee to every individual these freedoms, without effort on his part, but in exchange for his individual independence. They would deceive the gullible and unthinking with visions of a Utopia. "This Utopia will be yours," they say, "If you will but let us plan for you, look out for you, and decide everything for you. We know better than you what is best for you." These planners seek to indoctrinate America with a false philosophy under which everything would come from and be controlled by the state, and the individual would have nothing then to worry about.

This is an un-American philosophy. It would destroy the spirit of our people. It would destroy ambition. It would wipe out their independence, sap their strength, and rob them of their God-given rights as sovereign citizens.

Ever must we remember that this planning requires powers. It will require more and more powers which come from directives and not from constitutionally passed laws. Eventually these so-called planners will be satisfied with nothing less than all power. If America is reduced to such a planned society, then freedom and liberty will be gone and we will have become a totalitarian state, by whatever name that state may be known. The surest road to dictatorship is the road to Federal paternalism.

This tendency toward regimentation and Federal power has been accelerated by the war. Everyone, of course, realizes that in wartime it becomes necessary for the citizen to cede many of his rights and for the State to cede some of its authority. That is all right, and no one can object in wartime. But our danger lies in the fact that power-hungry bureaucrats find in this war an ideal opportunity to extend and consolidate their controls. They will seek to carry wartime regimentation into peacetime planning.

It is urgent time that every good American and particularly that you, the Governors of your sovereign States, stand as a bulwark against these encroachments upon self-government; that you, the Governors, champion the recovery of lost States' rights. It is urgent that every State now clearly pronounce its unswerving adherence to the fundamental principles of our Constitution—that the State, in the proper exercise of its power is supreme, and limited only by the provisions of its own constitution. It is imperative that Congress assert its own authority and assume its proper constitutional responsibilities as the law-making branch of the Federal Government.

Our first job, when peace returns, is to return our Federal Government to its normal functions, to take it out of social work, out of private industry, and out of other fields of activity not contemplated by the Federal Constitution. It means that we the people, with our local and State governments, must reassume our responsibilities which we have shirked when the going was tough. If we expect to remain sovereign in our citizenship—to retain our rights and freedoms, we must assume and discharge the obligations that go with them. Only by being vigilant can we remain the masters, and not the slaves, of the Government.

Today we celebrate Constitution Day. Let us remember that under that Constitution we have rights, but that also we have responsibilities.

War Efficiency at Pacific Coast Ports

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. WELCH. Mr. Speaker, under leave to extend my remarks, I invite attention to the following editorial, War Efficiency at Pacific Coast Ports, which recently appeared in the San Francisco Examiner.

This editorial gives recognition to the ability of Maj. Gen. Frederick Gilbreath, United States Army, who has played such an important part in developing the outstanding service to our Nation now being rendered by Pacific coast ports.

WAR EFFICIENCY AT COAST PORTS

When the war struck at Pearl Harbor suddenly nearly 2 years ago, the ports of the Pacific States, north and south from the great central harbor at San Francisco, were found weakened by comparative idleness.

Immediately these ports had to be put to their fullest utilization. That was done.

It is with a feeling of satisfaction that the seaboard cities know that with the growing importance to war of these ports, the port facilities not only have kept abreast of the demands made upon them but have been ahead of the requirements.

True, they had natural advantages and traditions of efficiency, but the depression and the curtailment of oriental trade during the Chinese-Japanese war had kept them dormant.

But they awoke. Now, officially, all the various armed services use the Pacific coast ports as a yardstick of efficiency in the handling and shipment of men, matériel, and supplies. And the men in the front lines, on land and sea, on the other side of the Pacific are grateful to these ports and the way they are operated for the expeditious sailing of all these supplies the forces and the Allies need.

In fairness it should be realized that credit for the great accomplishments of these ports should go largely to Maj. Gen. Frederick Gilbreath, who had the vision to see what the needs would be, and the ability to assemble the engineering and planning skill needed for the job—the best in civilian and military talent required for the work.

The extent of the accomplishment cannot be described in detail, for military reasons. But even a casual comparison between conditions and capacities of 2 years ago and today shows a result in transport accomplishment

worthy of place beside the best examples of American wartime enterprise.

It is added satisfaction to the Pacific coast to know that General Gilbreath was a resident of this area long before he took over this particular job of logistic. That makes the achievement fully linked by Pacific coast men and resources.

Drafting of Fathers

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. MAY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address of Representative JOHN SPARKMAN, of Alabama, over station WTOP, Columbia Broadcasting System, September 14, 1943:

The question for discussion this evening is one of great concern to the whole country. We of Congress who have just returned from our constituencies have found it to be so. Pre-Pearl Harbor fathers are concerned, for they do not know how to plan for the future. Employers having to set up manning tables and replacement schedules likewise are left confused. There should be a clean-cut and well-defined policy to clear up the doubt and confusion now existing.

In the beginning let me say very definitely that I am not opposed to the drafting of fathers, if and when it becomes necessary. I believe the fathers themselves and the country generally hold that same view. Furthermore, with me it is not a matter of sentiment but purely a matter of logic and reason, remembering at all times that in successful warfare today there is more than just a war front. The production front must be preserved, and essential civilian needs must receive consideration.

Before fathers are taken, the necessity of taking them should be clearly shown. That has not yet been done. In fact, certain actions seem to negative such need. I have in mind, for instance, the stubborn refusal of the armed services to take persons with only slight physical defects. For a long time public opinion has shown itself clearly opposed to this attitude. At one time the Army started to take such persons and to put them on limited service. Later, however, when the Navy started procuring its men through the draft boards and insisted on its usual high physical standards, the Army actually raised its standards so that men in even greater numbers were rejected on physical examination. People throughout America wonder why men, for example, strong enough and sound enough to play professional football and baseball, are physically unfit for the armed services. No criticism is intended of such men, but of the unduly high physical standards demanded by our armed services. Recently the Army has announced the elimination of limited service altogether, and the discharge of many of those formerly so assigned.

This same condition applies as to illiterates, the test of literacy being a fourth-grade education. The armed services simply refuse to take more than a very small percentage of illiterates.

In recent weeks the Army has also announced the forced retirement of hundreds of able-bodied officers regardless of their physical condition or the excellence of the performance of their duties, just because they have become 60 years of age. Several weeks ago we saw press reports to the effect that boys who had been called after they had started senior R. O. T. C. training but before finishing the course were being sent back to college. All of these actions would indicate a plentiful supply of manpower.

The order to start drafting fathers October 1 was issued, unfortunately, while Congress was in adjournment. After all, draft policies are for Congress to assert. No one, surely, could be mistaken as to the attitude of Congress. The record speaks for itself. The House Committee on Military Affairs favorably reported and the House passed the Kilday bill which took into account occupational deferments and then placed all others in categories, with fathers at the bottom of the list. The Senate Committee on Military Affairs reported the Wheeler bill which would stay the drafting of fathers until the whole manpower problem could be studied. There had been an expression on both sides indicating strong disapproval of drafting fathers at this time.

As a matter of fact, the principal purpose of this draft-fathers order is not to get fathers into the armed services. This is clearly shown by the Baruch manpower report, according to press reports. I have not seen the Baruch report itself but news articles have given the findings. I quote from one of these:

"The War Manpower Commission's order authorizing drafting of fathers was required to give the Government some control over half of the 7,000,000 draft-age fathers engaged in nonessential jobs. In granting deferments, Selective Service should emphasize occupation rather than dependency."

The professed purpose is to do something never intended by the Selective Training and Service Act—that is, to use it as a club to force men to leave their jobs and go into so-called deferrable jobs. The Selective Service Act was intended as a means of procuring in a fair and orderly manner men to go into uniform for the armed services and nothing else. The effect of its presently proposed perverted use is indirectly to draft fathers within draft ages for work in certain designated jobs. And in thus drafting them we are denying to them the various benefits that we give to our other draftees—benefits under the Soldiers' and Sailors' Civil Relief Act, postwar job security, and many others. Yet we take them away from established businesses and out of jobs of long standing with no promise of restoration when the new job terminates at the end of the war. We make them give up all of the rights and security they have built up in their present jobs. If conditions are such as to require the drafting of men to fill jobs, let us meet that situation squarely and in an orderly manner by enacting a law legalizing such action and giving to such persons so drafted certain benefits and assurances under the law. If the time is here for national service legislation, let us tell the people so frankly and not try to avoid it through any such subterfuge as is now proposed.

The statement was made in the Baruch report, and has often been made, that the criterion of deferment should be occupation rather than dependency and it has been stated even further that dependency should be ignored. This is the effect of the draft-fathers order requiring fathers in nondeferrable jobs to be drafted by order number without regard to number or degree of dependency. Again I say it is the responsibility of Congress to set the policy, and time after time Congress has stated that dependency should be taken into consideration. The people back home, too, I believe, feel that dependency is a factor. They know the problems of family hardship, dislocation, and juvenile delinquency.

Let us take an example to show the inequity of this order. The example I use is purely casual and illustrative only. Many others of like nature could be given. If I recall correctly, some of the deferrable and nondeferrable jobs, a newspaper reporter 21 years old with one child under the present order would not be taken whereas a 37-year-old father of 6 children, all under 10 years of age, who happened to be the sole owner and operator of a grocery store from which the family made its living would be taken. To the average American this simply does not make sense, and all of the theorizing about dependency not being the proper gage will not cause it to make sense to Americans, who have been accustomed to and who expect fair treatment.

May I say again—I am in favor of taking fathers when it becomes necessary—and I am sure the fathers are, too. We are in this war to win and we are willing to do whatever is necessary to win. But let us be fair and frank with the American people. Let us not needlessly break up homes, step up delinquency and dislocate society, simply to avoid national service legislation. Let us not take fathers while hoarding manpower behind draft deferments, nor while allowing the armed services almost ruthlessly to waste manpower.

The whole manpower situation is muddled. A study of the manpower resources and needs should be made by Congress through the appropriate committees of the two Houses in order to see just where we stand. Such a study will require only a few days. The armed services will not suffer while that is being done. The people want to know the story. If it is found that some compulsory action is needed to get people in essential jobs we can then enact legislation for that purpose. If, on the other hand, it appears that fathers will have to be taken to meet the requirements of proper military needs, we can tell the American people so. A fair and equitable demand on them then based upon facts and not on merely an arbitrary order will meet with a response that will not be at all disappointing.

Silver Famine Hits Mexico

EXTENSION OF REMARKS

OF

HON. MAURICE J. SULLIVAN

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article on silver from the Reno Evening Gazette of September 18, 1943:

SILVER FAMINE HITS MEXICO; MONEY SCARCE—LARGEST PRODUCER CANNOT MEET NEEDS FOR DOMESTIC USE

Demand for silver by all the Allied Nations indicates that silver is gaining increased recognition as the money of the people. In Mexico the price of silver has reached 87½ cents an ounce.

Mexico is not producing enough silver to meet its own currency and commercial requirements and wants to borrow some of the United States silver under the lend-lease plan which it formerly sold to us at 45 cents an ounce.

To satisfy the popular demand for silver coins, Mexico is minting an average of 12,-

000,000 silver pesos a month, according to Eduardo Suarez, minister of finance.

Remelting of coins for industrial purposes and hoarding had placed such a heavy call on the Mexican mint that it was forced to suspend its silver shipments to the United States and use the metal for coinage purposes.

The finance minister estimated that on the basis of the first 6 months of the current year Mexico's silver production would be only 72,000,000 ounces but predicted that the traditional 80,000,000-ounce figure will be reached by the end of the year.

Financial interests in Mexico report that the peso coins have been either hoarded or melted down almost as fast as they are coined because speculators have been getting more for the silver bullion than the face value of the coins.

The Mexican Government, it is reported, has obtained from the United States Government an agreement to set aside temporarily the metal pact signed early last year until the present situation can be rectified. The pact provided for the United States purchasing Mexican surplus silver at 45 cents an ounce.

In a move to halt silver speculation the Mexican Government has decreed that all silver must be delivered to the Bank of Mexico for allocation to manufacturers, thus preventing direct purchase from producers by speculators.

The decree also imposed an export tax of $8.41 a kilogram on all jewelry and silverware, which previously was export-free.

The heavy tax is for the purpose of curtailing speculators from melting silver coins and manufactured articles, which in some cases have been melted and exported to the United States upon payment only of the 30 percent United States ad valorem duty.

Improper Government Controls Are Killing the Forces Which Make It Possible To Produce Livestock and To Distribute Meat

---

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I want all Members of Congress, and all officials in the Office of Price Administration and the War Food Administration to read and study the practical suggestions made by Mr. Jay Hormel, of Austin, Minn., to solve the chaotic meat situation in this country, largely caused by the application of improper and unwise Government controls. Mr. Hormel is one of the outstanding meat processors of the United States, and knows what he is talking about. He has submitted his suggestions to Hon. Marvin Jones, the War Food Administrator.

The statement of Mr. Jay Hormel follows:

As a war measure, a system of controls has been developed over meat and livestock.

These controls are killing the very forces which make it possible to produce livestock and to distribute meat.

While these same types of controls may work beautifully on hundreds of other items, they will not work on meat. This fact is difficult for many people to understand, because they may have seen these same controls work successfully on other products. But these controls will not work on meat.

Meats are not, never were, and cannot be handled like any other products.

Crackers or umbrellas, drugs or automobiles don't change prices very often. Their prices are planned for a period of time—a season, a year, or more.

The kind of controls that may work beautifully on such products will destroy the system for producing and distributing meats.

The demand for meat comes three times a day. It fluctuates with all the changes that come in our day-to-day living.

The supply of meat changes from day to day. It is affected by all the changes that come into the lives and businesses of 6,000,000 livestock producers, 1,500 meat packers and sausage makers, and 300,000 operators of retail food stores.

Both the supply of and the demand for meat literally change as often as the weather.

The umbrella manufacturer can set a price on his umbrellas, and if he doesn't sell them during the shower today, he can sell them when it rains next week or next month.

Not so with the meatman and the livestock producer. If he has to sell today, he has to sell today.

That's why the meat and livestock business has always been transacted on the auction block.

IN THE MEAT BUSINESS IT'S NOT MERCHANDISING, IT'S BIDDING

The butcher bids for the meat he wants. The packer bids for the butcher's business. The livestock producer sells on the basis of the bids he receives.

It is this constant bidding that adjusts the meat supply to the changing demands which take place in one meat market as compared with another, in one town as compared with another, and with the changes in the meat available in their various sources of supply.

BIDDING IS THE POWER THAT PRODUCES AND DISTRIBUTES MEAT—THE ONLY POWER THAT CAN

When you take away the fluctuating price differentials that are brought about by daily competitive bidding, you destroy the only system which will produce the meat this country needs.

When you tamper with or destroy this process of bidding, you destroy the only system that will distribute meat and provide the right shares of the available meat supply to the armed forces, to lease-lend, and among civilians.

Bidding has been destroyed.

That's why many meat markets are short of certain kinds of meat.

That's why many communities have not had their share of meat for months.

And that's why even our armed forces and lease-lend have been actually short of meat from time to time.

In handling the situation there are several things we must accomplish:

OBJECTIVE NO. 1. MAKE SURE THE GOVERNMENT GETS THE MEAT IT NEEDS

That means you and I use less meat than we would like.

Each of us is glad to do that. But how do we go about it?

Wrong way

Restrict the amount of meat each packer can sell into the domestic trade? No. That won't work, because there is no assurance that what will be left over will be enough to supply the Government needs each week.

The Army went short week after week while depending on the restriction order.

Require each packer to give a certain percentage of his production to the Government? No. That won't work, because again there is no assurance as to what quantity of meat will be produced each week. Such a system does not have elasticity.

Under any such rigid procedure the packer has less opportunity—and less incentive—to bid for the live animals. The Government, in turn, has no opportunity to bid for the meat. There is nothing to make the meat move to market.

Right way

You and I agreed that we would be glad to use less meat than we want in order to make sure the Government gets the meat it needs.

But how much less? Someone must tell us how much of each kind of meat each of us can use without taking some of what the Government needs.

Telling us how much is the proper function of a rationing system.

Each of us has only so many points to spend. If because of war needs we should buy pork chops sparingly, their point price must be set high. If we may buy spareribs more freely, their point price should be low. Up to now we have been able to have all the pigs' feet we want without interfering with the war effort, so pigs' feet have no point value at all.

In other words, we start by using ration tickets as a guide to tell us what we should not buy freely. The point value tells us the extent to which we should not buy each item.

If Uncle Sam is running short of something, the point value on that item goes up. When he has more than enough, the point value goes down again.

When you and I understand what point values mean and why, we simply do not buy those pounds of meats which Uncle Sam needs.

If we don't buy it the retailer can't sell it. If the retailer can't sell it he won't buy it. That means the packer can't sell it to anyone except the Government, because the Government is the only buyer left. That is the way it should work. That is the way we should sell to the Government the meat for Government needs.

Thus, through rationing—properly applied—you can know that the meat you don't buy is the meat which goes to the boys who are doing our fighting for us.

OBJECTIVE NO. 2. MAKE SURE EVERY CIVILIAN GETS ALL THE MEAT HIS RATION TICKETS CALL FOR

When dollars were our only ration tickets, the meat always went to the dollars. Since we got price ceilings all this is changed. A-town gets all the meat it needs. B-ville is short week after week.

Wrong way

Depend on ration tickets? No. Neither the retailer nor the packer nor the livestock producer can use a ration ticket for cash. So neither the consumer nor the retailer nor the packer can use the ration ticket to bid for meat or livestock.

Give each packer a civilian quota? No. Even if you gave higher quotas to those packers doing business in communities which are short of meat, there is nothing about a quota to say which dealer or which housewife has less than a fair share of the meat available.

Give a quota to each dealer or to each housewife? No. That is just another word for rationing, which does not guarantee anybody any meat because ration tickets won't make meat move.

The thing which makes meat move is money.

Today we are doing business on the basis of price ceilings, but the cost of doing business varies from town to town and even from store to store.

By the time the packer figures his salesmen's expenses, delivery expenses, and all the other costs of doing business, he finds that in selling in A-town he has as much money left as he could get by selling anywhere else. A-town continues to get plenty of meat.

In selling in B-ville, that packer always ends up with a little less money, not much less, perhaps, say, the difference is only one-quarter of a cent a pound. One-quarter of a cent a pound is more than the packer's average profit. So the packer stops selling in B-ville, and B-ville is habitually short of meat.

Of course, B-ville may develop a black market, but that's bringing money back into the picture again.

B-ville will never get its meat legitimately under any system of quotas, restrictions, or allocations, because the meat business moves too fast, and rigid plans just won't work.

Right way

Remember, the thing which makes meat move is money.

Nobody knows how much meat is needed in B-ville except the people in B-ville. The B-ville dealer has a pretty good idea how much his customers will buy with their ration coupons, but the only way the B-ville dealer can get meat for his customers is to bid a price which will cover the cost of bringing meat into B-ville and into his store.

You remember that, restricted by ration tickets, we in A-town simply did not buy those pounds of meat which Uncle Sam needs. That left meat in the hands of the packer. He had only two places to sell it, to the Government or to B-ville, where the people still have unsatisfied ration coupons. If the Government buys this meat at the ceiling price, at the same price the meat market in B-ville can pay, the higher cost of going to B-ville makes it unprofitable for the packer to sell it there, so B-ville continues short of meat.

Obviously, the Government can't control this situation by the quantities it buys from day to day because it has no way of knowing each day how much of each kind of meat each of the various B-villes need. But the Government can know that as long as it buys at ceiling prices, all the A-towns can get their meat, while the B-villes more or less go without.

If the packer's extra cost in going to B-ville is one quarter of a cent a pound, the Government can send meat to B-ville by the simple expedient of buying its own meat at one-quarter of a cent less than the ceiling price. That means the packer can get as much for his meat in B-ville as he can by selling to the Government. Most packers prefer to hold their domestic trade if they can. If the Government lowers its price so that B-ville's bid nets as much as the Government bid, the packer will sell to A-town first, to get the market profit there. He will sell to B-ville second in order to maintain his domestic trade. The Government will be the only buyer for what is left, and that is just the way it should work because the rationing point values on each kind of meat were set so as to leave the Government all it needs of each kind.

The answer, then, is to put dollars back to work as the force which makes meat move. This can be done only when we have fixed things so the ceiling price doesn't stop one from bidding dollars for the meat to which his red stamps entitle him.

As long as we have ceilings this can be done by having the Government bid less than ceiling prices for the meat it buys.

That is all there is to the problem of making sure there is always enough of each kind of meat so that each civilian can get all that his ration tickets call for.

OBJECTION NO. 3. HOLD THE LINE—PREVENT INFLATION

We are agreed that prices must be held in line, and that the price level from time to time must be that price which is set by the considerations of good public policy.

Wrong way

Establish retail ceiling prices? No. That doesn't really work, because the chiseler can cheat on price ceilings until the enforcement officials catch up with him.

Establish wholesale price ceilings? No. In the meat business, wholesale prices normally vary from place to place and from day to day—even from hour to hour. The demand for meat and the available supply of meat change with the weather. The thing which makes meat move is money. So if the price relationship from place to place can't change as often as conditions change, we won't ever have the meat exactly where we want it.

Livestock ceilings? No. That's worse yet. When a packer needs livestock to operate his plant, he has to bid for it. If ceilings stop his bidding, he doesn't get his normal share of the livestock. The packer who is shortest of livestock is often the packer who is located in a defense area. If he doesn't get livestock, he can't supply his area with meat. If he is short of livestock, his men have short hours. If a short pay check makes Bill and Joe hunt other jobs this week, Tom and Jim next week, that packer simply won't have the help to run his plant to capacity when the livestock runs start this fall. That, in turn, means there will not be enough packing house capacity to handle all the livestock coming to market.

Price ceilings are not the answer.

Right way

If you and I, guided by our ration tickets, do not buy the meat the Government needs, the packer has no other choice than to offer that meat for sale to the Government. If you and I don't take it, there is no other buyer than the Government.

The Government thus becomes able to buy that meat at whatever price it chooses.

If good policy is to hold prices steady, the Government simply buys at the existing price levels.

If good policy calls for lower prices, the Government simply bids the market down to the desired level.

Whether it be to put prices down, or up, or hold them steady, the national price level in meat can be set each day by the price the Government itself chooses to pay.

You remember that the packer didn't go to B-ville when the business there was showing him a loss. If the business in B-ville is showing a profit, the packers will want to sell there. Packers would bid for the privilege.

No one packer would permit his competitors to have the B-ville business as long as he, himself, could find an advantage of a fraction of a cent a pound in selling to the B-ville merchant instead of the Government.

Retail prices also would be held in line by price competition among the retail stores. Without ceilings, without quotas, and without restrictions, packers would be free to sell retailers all the meat for which their customers had tickets. The business of each retailer would be limited, not by the quantity of meat he could buy, but by the number of customers with tickets he could attract to his shop.

Price competition, as always, would hold prices in line—the actual prices people pay for meat—which constitutes the cost of living.

Price control by price competition really does hold the line.

NOTE ON MEAT MANAGEMENT

This system of setting national price levels in meat by the prices which the Government pays for the meat it buys has come to be known as meat management.

Meat management as contrasted with meat controls.

Meat management can be aimed at any single objective.

For example, the price which the Government pays can be made to control the retail price, the wholesale price, the price of livestock, or it could even be made to control the price of feed.

Neither meat management nor any other system can control all these prices, because if any one of them is fixed, the others must fluctuate around it.

Meat management can be aimed at any group of objectives which are not inconsistent with one another, but, for example, neither meat management, nor any other system, can hold the price of cattle down and at the same time encourage increasing production of beef. Where two possible objectives are in conflict, we must take our choice and use meat management only to effectuate the one which is most desirable.

OBJECTIVE NO. 4. MAKE SURE WE GET FULL PRODUCTION OF THE NEEDED KINDS OF LIVESTOCK

This Nation faces a beef shortage starting in January and lasting into July 1944—unless—unless we do the right things, and do them quickly.

This Nation faces the danger of a falling off in pork production which may begin to be felt in May and June, and which will become serious in the fall of 1944—unless we start doing the right things now.

We must make sure to maintain our livestock production.

Wrong way—beef

Set wholesale price ceilings on various grades of beef? No. Fixed-price differences on various grades of beef mean fixed-price differences on various grades of cattle. At present the difference in price between "fed" cattle and "grass" cattle is so small that the cattle feeders cannot afford to stay in business.

This fact is just beginning to show itself in the statistics. We now have fewer cattle on feed than we had a year ago. The situation is getting worse every day.

Range cattle must be sold when the grass dries up. If the feeder doesn't buy them, they go to slaughter. That is what is happening right today. Each 1,000-pound critter which goes to slaughter now means that much more beef available now. But it also means one less 1,250-pound animal available to us after the turn of the year.

After the critter has bypassed the feed lot and has gone to the slaughtering pen, there is no opportunity for the feeder to do any second guessing. If we want the cattle feeder to think he can afford to stay in business, to produce beef for us this coming year, we must act quickly.

Right way—beef

We have agreed that point prices on beef should be set so that you and I don't buy the beef the Government needs.

If restrictions were removed, each retailer would be able to get all the beef his customers would buy, and he would be able to get whatever grades his customers preferred.

Now, at present wholesale prices, A grade beef costs 19 cents, B grade 17 cents. This is not a natural price spread between A and B grades of beef at all times of the year.

Meat management means that these price differences between grades should be the natural differences—the competitive differences.

If the Government follows meat management, let's see what happens.

First, let's say that the aim of meat management in this instance is to maintain this wholesale price for A grade beef. That means the prices of other grades must fluctuate around that 19 cents according to the relative price you and I are willing to bid for these other grades.

The Government should bid less and less for B grade beef, until it has reestablished

the natural competitive price difference between the two grades of meat. The Government can't bid the B grade too low because you and I will bid, too, when the price difference interests us.

The cattle feeder has always operated on a basis of estimating the relative demand for various grades of beef. He plans his operations on his judgment of what the public will be willing to pay.

Meat management would reestablish operating conditions in which the cattle feeder has confidence.

One other thing.

The price of cattle is too low as compared with the price of hogs. This disparity must be corrected. It can be corrected in any one of several ways. One way would be to raise beef prices. Another way which was recommended by an advisory group of livestock and meat men is to permit a rise in the price of byproducts—hides, tallow, and so forth.

Wrong way—hogs

Establish a "support price" below which live hogs will not be permitted to go? That depends on how it is done.

Hogs will get down to the support price only when there are more hogs than the packer can handle. Who then will say which producer may market his hogs today when it is pleasant and which one must market his tomorrow when it is stormy? Who will say which producer may go to the nearby market and which must go to that which is farther away? The regimentation necessary to enforce a support price is unthinkable. The producers—particularly the marginal producers—who were unable to market their hogs when it was to their advantage to do so, would become discouraged. Hog production would be decreased.

Have the Government undertake to buy the hogs and resell them to the packers? No, that involves the same difficulties, but worse. If the Government should establish a contract price, the inferred obligation would be to provide a full market each day at that price. The ability of the packers to slaughter the hogs and process the meat would become an obligation of the Government, and, therefore, would become a matter for Government regulation if not for actual Government management. Certainly, the Government is not equipped to undertake such tasks as that, nor the tasks of allocating markets to farmers—and farmers to markets.

Right way—hogs

Meat management can be used to fit any single aim.

If the aim is to control the price level of each of the pork cuts, the Government can do that by setting the red-point value of each cut so as to control the volume of the civilian demand for it, and then buying what's left over at the price level it wants to maintain.

If the aim is to control the Chicago price of hogs, that, too, can be done by anyone who is experienced in the wholesale meat business. If the packers start bidding the price of hogs up, the Government will simply bid the price of pork meat down. An experienced man in charge of the Government pork buying should be able to hold the Chicago hog price.

But—by meat management or any other system, you can maintain only one in a group of price markets which normally vary in their relationship to one another. If you are going to maintain the Chicago price, you let the other markets find their prices around that Chicago base. If you would rather control the price at Des Moines, you can do that. But neither meat management nor any arbitrary system can fix the relationship between them.

And—all hogs do not normally sell at the same price, and no system will make them do so, on a satisfactory basis.

Normal price differences by normal weight ranges would retard any exaggerated marketings, which would rob us of pigs which should come to market next spring.

Normally, hog prices change by 10- or 20-pound weight ranges. The present support price range is 200 pounds to 270 pounds. At times this would be as much as 95 percent of all the hogs coming to market. There will be days when the market can't take all the hogs.

It is for this reason that, whether it be meat management or any other system, the support price must be applied to a natural and normal market weight range sufficiently narrow to give the farmer an option based on price as to which weight hogs he will market now and which weight he will market later; whether to market his hogs today or tomorrow; near at home or far away, etc.

If the producer has no price basis of choice, a black market will grow up to give him that choice and in the meanwhile the situation will present such difficulties as to discourage the marginal producer—even the good producer on his marginal numbers—and cause reduced pork production.

Only meat management can control price levels in such a way as to maintain normal price differentials, and only by maintaining normal price differentials can we avoid the disruption of this Nation's livestock producing and processing capacity.

OBJECTIVE NO. 5. ELIMINATE THE BLACK MARKET

It is said that 25 percent of the Nation's meat supply is now passing through the black markets. Certainly, this must be stopped.

Wrong way

Issue more ration tickets than there is meat? No. People are bound to think they are entitled to buy meat as long as their red stamps hold out. If they can't get what they want from their regular dealer, some of them will start shopping down the street. And when they get to the black market, they forget to ask the price.

Enforce price ceilings? That would do it, but we haven't enough policemen.

License slaughterers and processors? No. Again, we haven't enough policemen. We already have so many rules and regulations that most people in the business have not even been able to read them. But every time a new regulation comes out, the chiselers find a new way to cheat, and the black market goes merrily on.

Right way

Take the profit out of the black market.

How?

First. Be sure that point values on each kind of meat are high enough to leave all of each kind of meat which the Government needs.

Second. Let the Government bidding for the meat it buys be the means of controlling the price level.

This will leave the packers always bidding for the retailer's business. Each retailer will then be able to get all the meat he can legitimately sell. And he can get it at right prices. The black-market operator no longer will be able to get patronage by selling meats which a dealer needs in order to stay in business, or in order to satisfy the ration tickets of his customers. Thus much of the black-market's profit opportunity will have been taken away. This will not kill the black market, but it will make it awfully sick, because the black market can operate only at an abnormal profit.

This procedure will also make sure that every person can usually get all of any kind of meat he wants, as long as his red stamps hold out.

Third. Be sure the public understands that the only purpose of rationing is to tell each one of us what our fair share of meat is, in order that the Government may have the meat it needs.

We know we can't police every consumer or every retailer—nor even every packer. We don't intend to. We don't have to. Rationing is the fair means by which each of us gives up that which we should give up in order that our boys shall have meat.

When we understand that there will be be very little cheating on ration tickets.

When we restore bidding throughout the meat business, markets will not be short of meat—various communities will get their fair shares—and the supply for our armed forces and lend-lease will be assured.

Those Wartime Pennies

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. REED of New York. Mr. Speaker, the editorial in the Times-Herald entitled "Those Wartime Pennies" omits the reason why we'll just have to take the new wartime pennies and try to like them—the steel composition ones, we mean, which are almost the size of dimes and look much like dimes. Whether we like the steel-composition pennies or not, we can endure them far better than our soldiers can face the deadly instruments of death suffered and permitted to be shipped to the Japanese by the Roosevelt Administration under its appeasement program.

The shipment of refined copper from the United States to Japan during a period of 5 years fully explains our shortage of this very vital and essential war material, of which the United States is now desperately short:

Refined copper exports to Japan

	Pounds
1936	5,355,471
1937	10,838,709
1938	217,879,738
1939	249,277,000
1940	233,897,000
Total	717,277,918

Under leave to extend my remarks, I include the following editorial from the Washington Times-Herald:

THOSE WARTIME PENNIES

Mrs. Nellie Tayloe Ross, Director of the Mint, says we'll just have to take the new wartime pennies and try to like them—the steel-composition ones, we mean, which are almost the same size as dimes and look much like dimes.

THEY LOOK LIKE DIMES

It seems that it is impossible to allot the 4,600 tons of copper needed annually for normal United States copper-penny production; that all available copper is needed for the war effort.

So that would seem to be that. Nevertheless, the fact remains that these pennies are a nuisance to almost anybody whose eyes are not 20/20. It is rather embarrassing, for instance, to hand a taxi driver what you think is a dime tip, only to have him give you a sad and reproachful look because it's one of the ersatz pennies.

What would be the matter with punching a hole in the middle of the new penny? That

would not only make it instantly distinguishable from the dime but would also save a fair-sized wad of steel per year.

As we understand it, it is not practical to change the shape of the new penny, because of the chaos such a change would produce in numerous penny vending machines. But to drill a hole in it seems entirely practical.

Nor is this a novel, unheard-of idea. The Chinese for centuries have had coins with holes in them, and the custom has worked out well.

Mr. Speaker, our boys fighting in the jungles have had to take it. Why cannot we?

Centralization of Power in Washington

EXTENSION OF REMARKS

OF

HON. HOWARD BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a significant document. It is written by Dr. Robert A. Millikan, American physicist and Nobel Prize winner. As a great scientist, Dr. Millikan outlines for America the greatest danger that confronts us. Many people have looked for a scientific appraisal of the New Deal, free from political prejudice or emotional partisanship. Dr. Millikan has suplied it.

[From the New York Times of September 23, 1943]

On August 22, 1938, I wrote a brief statement for the Time Capsule. Since then the threatened storm has broken and mankind is now in the midst of the greatest crisis in human history.

But today there is every reason to hope that at least one of the two great threats to world freedom and world civilization envisioned by the great thinkers of the past, namely, the external threat arising from the attack of bandit nations bent on world conquest, is not this time destined to succeed.

However, the second, or internal, threat arising from too great centralization of power in Washington, and the internal corruption that it inevitably breeds, followed as in all Axis countries and some non-Axis ones by the replacement of a people's government by a party government indistinguished from despotism, that menace is certainly greater today than at any time in American history. It is devoutly to be hoped that the American voter has read the lessons of history better than have some college professors who have been recent administrative advisers.

Spinoza, whom history has shown to have been right more frequently than most philosophers, warned particularly, about 1670, against letting education get into the hands of the central government, for he held it to be inevitable that those in power would use the schools to perpetuate their control, i. e., to indoctrinate the rising generation with views which would inevitably be a reflection of the philosophies and interests of the rulers. Such indoctrination has been practiced in this century in Europe on a tremendous scale and with disastrous consequences to mankind.

SAYS MONTESQUIEU SAW DANGER

But it was Montesquieu who saw and stated most clearly in 1748 these dangers that now loom so threateningly on our horizon. His words, so influential with Jefferson and the makers of our Constitution, should be equally influential with us today. He wrote:

"If a republic is small, it is destroyed by a foreign power; if it is large, it destroys itself by an inner vice. So it is very likely that men would have been forced to live always under the rule of one man had they not imagined a constitution which combines the advantages of a republican government and the external force of a monarchy. I mean a federal republic. Made up of small republics, it enjoys the high political quality of each, and toward other powers it has, by virtue of a federation, all the advantages of monarchies."

Watchman, What of the Peace!

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include herein an excellent commencement address made by Col. Edward A. Fitzpatrick on June 8, 1943, at the Mount Mary College, Milwaukee, Wis.:

1914—AND AFTER

Would you end war?
Create great Peace.

* * * * *

But that which we call Peace?
This monstrous machine that weakens millions in factories,
This lust of money for its own sake: To swell one's social stomach larger than one's neighbor's.
This poor little personal strife and family pride,
This softness of muscle and cowardice of spirit.
Is this Peace?
Is merely keeping alive, Peace?
Better the young die greatly than live weakly.

Would you end war?
Create great Peace,
The Peace that demands all of man,
His love, his life, his veriest self;
Plunge him in the smelting fires of a work that becomes his child,
Coerce him to be himself at all hazards: With the toil and the mating that belong to him:
Compel him to serve.
Give him a hard Peace: A Peace of discipline and justice.
Kindle him with vision, invite him to joy and adventure:
Set him to work, not to create things
But to create men:
Yes, himself.
Go search your heart, America.
Turn from the machine to man,
Build, while there is yet time, a creative Peace.
While there is yet time!
For if you reject great Peace,
As surely as vile living brings disease,
So surely shall your selfishness bring war.

—*James Oppenheim.*

There will be a peace. That is the simple fact—and coming from unknown depths we approach clear mountain tops from whence we can see the promised land, all of whose ways are pleasantness, we hope, and all of whose paths are peace. It is a glorious picture that is in our minds against the terrible realities of war with its casualty lists, with its blood, toil, sweat, and tears, with its sacrifices and its losses. What rejoicing there will be when this is over. There will be rejoicing, but we cannot assume that all will be well. The brutalities and barbarism which Belgium and Holland and Norway know and have suffered, which Poland and Czechoslovakia and France have experienced would be our present fate were we not engaged in war. But our concern is that for our children and our children's children; the stupidity and barbarism of war will, we hope, be a thing of the past, and men, while growing in years, will grow in wisdom.

The lamps of reason were extinguished on the highways of the world. In those days we did not see, as a people, too clearly what was happening, nor did we realize at all adequately the world conspiracy against everything that America, civilization, and religion stand for. The war is no chivalrous gladiatorial conflict. It is the Junker's idea of a nation in arms. It had long and cunningly been prepared for. It was camouflaged by the phrases and devices of expediency and deceit. It is totalitarian war. Women and children are as much a part of it as men. There is no distinction between civilian and military. Hospital ships were to be destroyed. Mercy and fair play were taboo. This is the nature of the war in which we are engaged, and accepting the gage of battle, we match Coventrys and Londons and Pearl Harbors, with Dortmunds, Dusseldorfs, Essens, and Wilhelmshavens. In doing this we are glad to see the great spirit of freemen manifesting itself in the young generation who fight our battles on land, on sea, and in the air.

But even from totalitarian war waged by madmen with their visions of world conquest and world domination without any sense of international responsibility and without the remotest idea that they might be defeated as they trampled nations under foot, looted them of all their great cultural possessions, moved their populations to become slave labor, and perpetrated unspeakable crimes on women, on children, and on men too old, or too young to take up arms. Even from such war there must be peace, but what a vengeful retribution will follow in the immediate wake of that peace. But a peace will come.

There will be a period of transition when hostilities are over. There will be glad reunions of families all over the country, and there will be moments of recollection and of the sense of loss, for men young and old, who gave on some foreign soil, the last full measure of devotion. The Nation is already planning for the demobilized soldiers. We want them to return in an orderly fashion with separation pay and with unemployment benefits as far as possible; we want to provide opportunities for further special training along vocational lines and for the continuation of the education which service to their country interrupted. We want to take account of those other soldiers of the common good, men and women, who made the airplanes, ships and guns, bombs, and munitions of war who will also be demobilized. The demobilization of both the industrial workers and the armed forces must be carried out in terms of the actual social and economic condition at the end of the war so that new maladjustments will not be created, a new depression will not be in the making, and the men who fought and worked for victory shall not be denied its fruits.

This is the demobilization relating to things, and materials, aiming at an improvement of social and economic conditions and securing the physical adjustment of men to their environment. It is essential and it is important. It must be achieved, and the Governments of the United States and of the

States, and private industry will by a wholehearted cooperation bring it about.

But the demobilization has spiritual aspects as well as material aspects. We go back to our old habits and our old outlooks. We tend inevitably to return to normalcy. We do not always learn in the bitter school of experience. It is amazing that even in the midst of this holocaust that we offer to the god of war, we do not realize our idolatry. Certainly talk of stalemates, and negotiated peace, and a sentimental forgiveness of the sins of nations and their leaders indicates that we do not learn, nor do we read history. If you would understand Germany you must read—if you can read—its history. Read about Stein and Bismarck, or go back to him of the red beard, in the Black Forest, Barbarossa, if you would understand what has been happening in Germany since 1933, and what followed in 1940 in "die ganze Welt." It is not an excrescence or a temporary insanity of the German or at least the Prussian personality, but an expression of its dominant mood, its seemingly ineradicable spirit.

It was natural, therefore, that Hitler should engage in a vast scheme of education as Bismarck had done before him in his flank attack on the Socialists. Hitler devised the most comprehensive and effective scheme of national education that has yet been devised. It made over the nation. It is an echo of Fichte, but it is malevolent, more inhuman. It has been properly called an education for death. It dehumanized human personality. It robbed it of everything we called cultivated, humane, educated. It trained men as wild animals are trained. It subordinated mind and soul to body and a narrow brutal creed. With all its veneer it was a return to the jungle.

It is really about the spiritual aspects of the demobilization that I wish to speak. It has often been said that the war is an ideological war. It is a conflict between fascism or nazi-ism and democracy. Such labels are too simple and too vague. It is not merely a conflict of political creeds, it is a conflict of philosophies of life. It goes to the very heart of what we call civilization. It is a challenge to religion. It questions our concept which we got from the Greeks, of free human personality. We have set up the "four freedoms" as the essence of what we fight for—freedom of speech, freedom of religion, freedom from want, and freedom from fear. We declare our objectives as the Pope did for Christendom as—

(1) a respect for and a practical realization of the dignity and rights of the human person,

(2) a social unity, promoting the unity and cohesion of the family—that cell of the people,

(3) a recognition of the dignity and prerogatives of labor derived from the moral nobility of work, and including labor in a genuinely human and fraternally Christian solidarity,

(4) the creation of a juridic order which guarantees men a definite sphere of rights immune from all arbitrary attack, and finally,

(5) a conception of the State which makes it subordinate to the rights of human personality which regards the State as a means to an end, which teaches, even in matters of the world, that the deepest meaning, the ultimate moral basis and the universal validity of "reigning" is in serving. On this Christian basis there can come a renovation of society.

The general renovation of society must be brought about by Christian principles dominating the hearts and moving the wills of men. This is both a moral and intellectual achievement for men. It is not the easiest way whose end is the everlasting bonfire. It cannot be achieved by drifting. It cannot be achieved by avoiding responsibility nor by the acceptance of gods who will put upon us no responsibility which we do not like. What we must have is a peace of discipline, a hard peace, a peace that will meet every challenge of our higher natures, a peace that will make men and reveal their divine nature. That is the kind of peace Oppenheim describes:

"Would you end war?
Create great peace.
The peace that demands all of a man,
His love, his life, his veriest self;
Plunge him in the smelting fires of a work that becomes his child,
Coerce him to be himself at all hazards: with the toil and the mating that belong to him:
Compel him to serve.
Give him a hard peace: a peace of discipline and justice.
Kindle him with vision, invite him to joy and adventure:
Set him to work, not to create things
But to create men:
Yea, himself."

It has been our wont, in our easy way to say nonchalantly—our education system will achieve that—any social objective—then go about our private way seeking our private ends. We had a false idea that education was always good; that it could be an evil hardly entered our minds, and yet on a national scale, we said, in Nazi Germany, a thorough educational system achieved the national, and almost the world-wide malevolent design of evil men in a single decade. This was done not only by the education of the school, but by the education of the whole social life. We saw, too, in Soviet Russia, the transformation of a revolutionary state into a national state through an education in the school and in the social life.

We have done a tremendous job in our educational system in achieving literacy, even though we are shocked at the present extent of illiteracy as revealed by Selective Service. But literacy is not education. It is not the intellectual and moral formation of men. Without expressing a judgment on education prior to 1941, it may safely be said that it will not be equal to the responsibilities of a peaceful world of the "four freedoms," the Atlantic Charter, nor the Christian renovation of society.

The war has created new problems, and quite properly subordinated education to the cause of civilization in its death throes in 1941 and 1942. It has subjected educational processes to imperative narrow social ends; it has subordinated the training of free human personality to a specific task—which, however, would make the development of free human personality a possibility for others. Education was put to war work, and it was forced out of its ruts, to get, perhaps, into other ruts.

The great advantage of education of its wartime experience is that it is challenged in its traditions, its customs, and its trends. Its very philosophy is challenged, its objectives, its methods, and its curricula. This opportunity may be seized or we may take the easiest way and go back to the old rooms, the old texts, the old methods. If so, we shall be even less effective than we were prior to World War No. 2.

What are some of the things we must do?

The post-war education must meet the intellectual and moral challenge of a world that in losing its soul may have found it. It cannot go along dawdling. It cannot consume its precious time in the study of textbooks. It must not lose itself in verbiage, but find meaning and hope in life itself. It must make men and women disciplined, having highest hope and steady vision.

Post-war education must create universities that are the highest expression in our secular life of man's intellectual and moral aspirations. The university, as we have known it, has generally been a pathetic institution. The potpourri that the war is making of our universities only emphasizes the "intellectual cafeteria" aspects of its prewar condition.

It would be too radical a proposal to make the social order itself an environmental factor of tremendous educational force, emphasizing what is presumed to be going on in the school and the home. This will include a renovation of the family with a new conception of parental responsibility and new utilization of the home as a center of social contacts of educational value.

In the same spirit we may come to realize that the ultimate products of factories are men and women rather than shoes and autos or airplanes, and the human welfare as well as their economic and physical welfare may be a factor in determining the productive processes.

I need not labor any more over the function of a new daring education in the processes of making men and women. That is the only true educational objective—and it is the objective of vocational education as it is of liberal education. It is the end of the whole social process. The justification of the social process is not conveniences and comforts; it is the quality of the men and women it makes.

The education of women will feel more significantly even than the education of men, the new impulses, the new challenge. I like to think that here in Mount Mary we had been moving in the direction we must go, that we had conceptions of education more virile and which met, perhaps slightly, these new educational trends. You girls—young women who graduate today, had some picture of what was going on in the world presented with a frankness that was not too popular 2 years ago. The issue was presented clearly then when there was so much fog. The grave issues of this age were clearly placed before you. You have now to meet as few generations of college students have been required to meet, the social responsibilities of their age. In this fire your mettle will be tested. You have had here almost all that education can do for you. It is you that will be tested—and whatever you have gotten from your education.

Go into this world, be not overwhelmed by it, but bravely face it, bring to it the order of your mind and your life. The confusion is external and seeming; you are the reality and the world will take on the order of your thinking. Help your Nation, which means the men and women you come in contact with to accept the responsibility of upholding an international organization founded on realities, not excluding justice, and love, and sustained by an international law recognizing the unity of mankind and by a concert of power making what happened in Germany and Italy and Japan forever impossible. Let us make, too, the Latin-American countries and Canada our good neighbors because we are good neighbors. Let us not forget, too, to help the men or women we meet on the street or in our neighborhood or in our parish church, to give him consolation and solace, to enter his world to help men, to cheer him for the boy or girl who did not return from the war, to help him find a new job in the transition to peacetime.

We are taught in this college that the important world is the world of human beings. We want to help make better human beings. We want to make them worthy of redemption, knowing they are born not of flesh nor of the will of man, but of God. In that serene faith, in that hope, in the human charity which knows no distinction of men as to color or race or creed, I say to you Godspeed in a world you will make better because you lived in it. You, too, must search

your hearts and I conclude as I began with Oppenheim's words:

"Go search your heart, America,
Turn from the machine to man,
Build, while there is yet time, a creative Peace.
While there is yet time!
For if you reject great Peace,
As surely as vile living brings disease,
So surely shall your selfishness bring war."

Impressions of Jim Farley

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks, I am including the following article from the Minneapolis Morning Tribune of Tuesday, August 10, 1943:

MORE OR LESS PERSONAL

(By William J. McNally)

IMPRESSIONS OF JIM FARLEY

A large, bald, amiable man with quick, penetrating eyes, stood behind his chair for an hour or so last Saturday while a group of Twin City newspapermen tossed questions at him as rapidly as they could think them up. The occasion was a luncheon given by Tom Moore for a former cabinet officer who happened to be passing through town. And anybody who knew newspapermen could see that the attention they were according the guest of honor was in no sense perfunctory—for once they were having a thoroughly good time. There was something about the speaker that got them.

The man was Jim Farley, who is said to have more friends than any living American. No one in the room would think of doubting it. He had made a friend of every newspaperman present before he had talked 15 minutes * * * and most of them had never seen him before. Farley has engaging qualities of a sort which win sympathy for him universally and yet which are rather difficult to describe for all that.

What you meet up with in Jim Farley is a very extraordinary ordinary man. Everything about him seems ordinary. His vocabulary is ordinary, his dress is ordinary, his humility is ordinary. There is no touch of the actor in him. He likes to chat about prize fights and ball games, and apparently there hasn't been a world's championship prize fight or a world's series game in the last 30 years that he hasn't seen. He lacks any pose of the elder statesman, and lays claim to no special information. He is not even a hail-fellow-well-met. People call him "Jim" on very short acquaintance, but he is reticent about replying in kind. While he has poise, and talks up readily when questions are put to him, he is anything but forward, and you feel, if anything, a certain shyness in him. He neither smokes nor drinks, and the sense of personal dignity that he conveys is unostentatious, yet nonetheless unmistakable.

The ordinary things about Jim Farley are discernible at a glance; the extraordinary things seep into you in more leisurely fashion. In spite of his associations as political manager, he is curiously free from partisanship, from prejudice, or from rancors of any kind. He weighs his words carefully; he will not tolerate any indiscriminate condemnation even of an enemy; it is instinctive with him to be just. The whole bent of his mind is objective. Naturalness, directness, and simplicity are qualities which public men tend to lose as soon as they become institutions. With Farley naturalness, directness, and simplicity are so much a part of him that he wouldn't be able to lose them even if he wanted to; not, of course, that he would. The impact on you of such naturalness, directness, and simplicity as he possesses is to leave you a little startled. You feel like pinching yourself again and again to make sure that you are hearing him aright. It then dawns on you that Farley has made a tremendous political success mainly because, from beginning to end, he has remained an unpolitical animal. He is not a politican, in the commonly accepted sense of the word, at all. He is a man of principle. No matter how long he may have lived in the hurly-burly of politics, he has never lost his integrity as a human being. That is the secret of the incredible hold he has on individuals in every one of the 48 States of the Union. If it's true that they will go to hell for him, it's not because he's a mere good fellow; good fellows, after all, are a dime a dozen in any ward in any town that you can name, but that instinctively they size him up for a modest man, a good man, and a big man. It's respect for rare and unusual qualities that has won Jim Farley his legions of friends—that and nothing else. Farley's ordinariness is just one of the great myths of our age. What seems to be ordinariness is merely a cloak draped around a man of uncommon ability and uncommon fineness of character.

Resolution of Southwestern Oklahoma District Farmers Union

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

MANGUM, OKLA., *September 13, 1943.*

Hon. CLAUDE WICKARD,
Secretary of Agriculture;
Hon. ELMER THOMAS,
United States Senator,
Hon. VICTOR WICKERSHAM,
Congressman, Seventh District, Oklahoma, Washington, D. C.

DEAR SIRS: Resolution passed by the District Farmers Union Southwestern District of Oklahoma, at Warren, Okla., August 7, 1943:

"Whereas every item of expense in producing the 1943 cotton crop is the highest in the past 20 years; and

"Whereas the present price of cotton is far below the cost of production; and

"Whereas, the ceiling price on all manufactured products has been set high enough to give said manufacturers and distributors a handsome profit after paying the highest wages in the Nation's history; and

"Whereas more labor goes into the production of raw cotton per dollar value than any other farm product: Therefore, be it

"*Resolved*, That we urge the national Congress to pass legislation for parity prices which will include all labor cost in agricultural production; be it further

"*Resolved*, That a copy of these resolutions be sent to the Secretary of Agriculture and each Member of Congress of the Oklahoma delegation in Congress as soon as the Congress convenes."

R. L. THURMOND,
President, Eldorado, Okla.
S. F. LANCASTER,
Vice President, Grimes, Okla.

Attest:

HENRY WORTHINGTON,
Secretary, Mangum, Okla.
WOODIE SNIDER,
Blair, Okla.
WALT GOIN,
Crawford, Okla.
W. D. HARRIS,
Carnegie, Okla.
A. HERRON,
Mangum, Okla.
BYRON DACUS,
Gotebo, Okla.
Resolution Committee.

Farley Visit Recalls Secret Trip of 1931

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Minneapolis Morning Tribune of Saturday, August 14, 1943:

FARLEY VISIT RECALLS SECRET TRIP OF 1931

(By Charles B. Cheney)

One summer day 12 years ago, a stranger from the East dropped in to spend a few hours in the Twin Cities. He sought no publicity—avoided it, in fact, so well that it was not generally known he had been here until a long time afterward. That visit started the ball rolling for Franklin D. Roosevelt in Minnesota.

The caller was James A. Farley, then, as now, chairman of the New York State Democratic Committee. He was on a scouting trip to line up delegates for Roosevelt in 1932. Here he met, at a luncheon arranged by Joseph Wolf and given by Otto Bremer, of St. Paul, a dozen keymen of Minnesota Democracy. He sold them Roosevelt, and from that meeting stemmed the preconvention campaign that gave F. D. R. the 22 delegates from Minnesota in the national convention.

This was one of the first States to declare for Roosevelt. But for the 22 from Minnesota and the other western delegates lined up by Mr. Farley the year before, it is unlikely that Roosevelt would have won that 1932 nomination.

Jim Farley sold himself as well as Roosevelt, as he went from State to State. He was self-effacing to the point of sacrifice, but his fine personality and upstanding honesty, so well eulogized on this page the other day by William McNally, made warm friends for Farley everywhere.

He is still making them, as he did when in Minneapolis last Saturady. He was honored guest then at a luncheon given for newspaper men by his friend and busines associate, Tom Moore. This time it was not a political powwow. Much water has run over the dam since 1931.

After piloting the Roosevelt craft through two national campaigns, Farley felt that two terms were enough for anybody. With assur-

ance that his chief would not be a candidate again, Mr. Farley aspired for the 1940 nomination himself. We all know what happened. The third-term nomination came with Farley in the role of the defeated candidate. He quit the Cabinet and the national chairmanship to recoup his private fortunes in business.

Damon Runyon said the other day that Jim Farley was one of the few men who never told him an untruth. Such is Farley's reputation throughout the country, comments the Redwood Falls Gazette. "It could just possibly be that the very things that made that reputation for Jim, also made it difficult for him to continue his connections with the Roosevelt administration."

Bill of Indictment

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis (Mo.) Post-Dispatch of September 20, 1943:

BILL OF INDICTMENT

The State Department stands indicted in the eyes of the American people on the following counts:

Indicted because its chieftain, Secretary Hull, despite his good qualities, is unfit by temperament or by intellect to create the dynamic policies needed in these blazing times. His mind is closed to the fresh breezes of human thought that are blowing through the world today. This was pathetically obvious in his recent speech.

Indicted because the Department has not a single figure, since the dismissal of Sumner Welles, who has the stature and imagination to deal with the challenging problems of wartime diplomacy, and because the Department itself is tackling a job of twentieth-century diplomacy with nineteenth-century equipment and outlook.

Indicted because the Department, sometimes justifiably in the interest of military expediency and sometimes with no apparent justification, has dealt with Vichyites, with Franco, with Fascist ex-monarchs like King George of Greece—a booby in the bargain—while ignoring or snubbing men like General De Gaulle in whom the very hopes of oppressed Europe lie.

Indicted because the Department consistently follows a policy of refusing to take the people into its confidence. Unlike Woodrow Wilson, who published every note he sent to Germany in the First World War, Secretary Hull left the people unready for Pearl Harbor, though later publication of the diplomatic notes made it plain we had reached an impasse with Japan.

Indicted because the Department, set apart from the robustness of American democracy, and evidently afraid of democracy, refuses to formulate and make public either the country's war aims or its post-war plans, though the American public yearns for their precise definition. For want of such definition of aims and plans they turn in hunger to the speeches of Henry Wallace, to Wendell Willkie's book, "One World."

Indicted because, although military expediency first explained the deal with Darlan, we continued to play along with French Fascists and Jew-baiters, such as Peyrouton, until long after we had need to do so; because recognition of the French Committee of National Liberation was delayed and then only half granted; and because—if the State Department follows the same pattern it has in the past—it may even take to its bosom Marshal Badoglio and the moronic little king.

The State Department stands indicted because Secretary Hull and the State Department have permitted relations with Soviet Russia to deteriorate to a dangerous point. Russia suspects that the American State Department is so fearful of a strong Russia after the war that it is willing to risk antagonizing that comrade-in-arms which has made by far the greatest contribution to the defeat of Hitler.

Indicted because the whole bent and direction of State Department policy—with its Munich-minded pre-war appeasement of Japan, with its long courtship of Vichy, with its tenderness toward Franco, with its affection for royalty-without-portfolio like Peter of Yugoslavia and Archduke Otto of Austria—show a preoccupation with the world that was, not with the world that is to be.

Indicted because American foreign policy should spring from America's great and fiery tradition—the tradition of Samuel Adams, of Thomas Jefferson, of Thomas Paine, of William Lloyd Garrison. Instead, our foreign policy has tugged at the coattails of European Fascists and reactionaries to the amazement and consternation of the captive peoples of Europe.

And finally, the State Department stands indicted because, out of all this timidity, stupidity, excess caution, and reaction, we are hurting our war effort, we are failing to capitalize the great virtues of American democracy. We are failing to lay the groundwork for the brave new world that must come unless we are willing to face the monster of a third world war.

This is the case against the State Department. It is a case, too, against President Roosevelt. Cordell Hull and the State Department, are only his agents.

(From an N. B. C. program of yesterday, carried by KSD, entitled "The Editors Speak.")

O. P. A. Kangaroo Court

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Maumee (Ohio) Advance-Era, of September 24, 1943:

O. P. A. KANGAROO COURT

Last Saturday, at a Constitutional week dinner in Ottawa, Ill., Attorney General George F. Barrett denounced O. P. A. kangaroo courts. He said, "If the O. P. A. doesn't abolish its un-American kangaroo courts, where citizens are denied rights guaranteed them under the Constitution, Congress will do it for them. This is not true American justice as guaranteed by the Bill of Rights.

"An American citizen accused of a violation of law is entitled to a public trial in a court of law, to be informed of the nature of the accusation, to question the witnesses against him, to have his own witnesses heard, and to have the assistance of legal counsel.

"The O. P. A. theory is that those accused of violation of rules and regulations decreed by its bureaucrats are not entitled to rights guaranteed by the Constitution. The O. P. A. even denies the right of appeal from its bureaucratic decisions.

"It appears that the people, through their representatives in Congress, are about to perform a major operation on the O. P. A. body bureaucrats. It will not be long before the American people will rise up and hurl from their high thrones of usurped power the bureaucrats who are contemptuous of the people's rights and powers."

A few weeks ago we pointed out in these columns that United States District Court Judge John P. Barnes had disqualified himself from hearing a case involving milk distribution because he and his wife owned a small farm which sold some of its milk. He remarked at the time that he hoped no violations were taking place on his little farm. It was our observation that, where a doubt existed in the mind of a learned judge, it could be believed that the ordinary citizen was telling the truth when he claimed his so-called violations had been unintentional.

Last Thursday Judge Barnes rendered a highly important decision concerning proceedings under the administrative law used by the O. P. A. The O. P. A. regional counsel at Chicago had summoned a group of meat dealers to appear before an O. P. A. hearing examiner with all their records. The meat dealers demanded an open hearing and the benefit of counsel, which was denied to them by the hearing examiner, and the proceedings terminated in an appeal to Judge Barnes' district court.

Many times in these columns we have pointed out the unreasonable procedure under which administrative law operates today. The decision of Judge Barnes should go a long way to clarify these O. P. A. hearings, and, in the end, might prevent the collapse of the O. P. A., as predicted by Attorney General George F. Barrett in the speech from which we quoted several paragraphs above. Judge Barnes declined to compel the meat dealers to attend what the judge referred to as a "star chamber session." He decided that the hearing should be a public hearing, held in a public place.

Judge Barnes made it plain that the statute under which the O. P. A. hearing examiner was functioning did not allow the examiner to function under the secret powers of a grand jury. The judge pointed out that if it had been the intention of Congress to invest these grand jury powers in O. P. A., Congress would have said so. Congress did not say so, and the judge decided that O. P. A. should operate under ordinary court procedure in a public place in accordance with a tradition which is distrustful of "secret meanings and proceedings."

Judge Barnes' ruling in this case should be put into practice wherever administrative law requires the American citizen to appear for a hearing. This will eliminate the possible abuses which might result from the secrecy which these grand jury hearings afforded these O. P. A. examiners. It will also give to these hearings the character of an open court and guarantee to those being heard the benefit that might come to them from open publicity.

We believe that any procedure under which a defendant cannot be heard by his fellow citizens with a counsel to present his case cannot endure long in this country. Judge Barnes probably has saved the O. P. A. from joining the dead "blue eagle."

Railroad Employee Pay Increase Rejected by Stabilization Director Vinson

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. ENGEL of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to Hon. Fred Vinson, Economic Stabilization Director, and his reply thereto:

LAKE CITY, MICH., *August 11, 1943.*

Hon. FRED VINSON,
Economic Stabilization Director,
Washington, D. C.

MY DEAR JUDGE: I am writing you with regard to the request of the 15 nonoperating brotherhoods of railway employees for an increase in pay of 8 cents per hour.

As you know, I recently visited 47 defense plants and made a report to Congress which I hope you will have time to look over. On page A3697 of the Appendix of the CONGRESSIONAL RECORD, you will find excerpts from some 40 letters verifying the conditions I reported on. These are only a few of the hundreds of letters I received. Millions of workers are being paid pre-war or near pre-war wages with a definite increase in living costs which has been estimated as high as 30 percent. This is particularly true of the railway employees. I am informed that a section man in the Ludington, Mich., area has $22 a week left after wartime deductions, and that a yard clerk with 20 years' experience has $25 a week left after similar deductions. This was before the withholding tax became effective. A week ago today, I talked to a railroad conductor at Ludington. He has been in the service 28 years. I personaly saw his check after deductions. He had $96 left for half a month's pay. The engineer on the same train had $146 left after similar deductions for half a month's pay.

On the other hand, I found machine-gun assemblers who were being paid as high as $8,700 a year, and girls with little or no experience being paid $65 a week.

In the CONGRESSIONAL RECORD above referred to, I included two advertisements by the United States Employment Service which read in part as follows:

"Wanted laborers for northeastern Canada, wages $300 per month, no lost time due to inclement weather or sickness, plus overtime, board, room, and one issue of clothing. United States Employment Service Office, War Manpower Commission, 407 South Fourth Street, Minneapolis, Minn."

The other reads:

"Wanted waiters, dishwashers, kitchenmen, wages $250 per month plus board and lodging. Olympic Commissary, 25 South Washington."

From California I found two other advertisements from a local paper both signed by the United States Employment Service. Each has a picture of a young lady, who testifies:

"We are paid $214 a month while we learn to weld and soon earn over $270 a month as journeymen, 10 percent extra for the swing shift, 15 percent extra for the graveyard shift."

The second advertisement in the same paper advertises for women 18 to 40 years of age and reads in part as follows:

"We will train you to weld and pay you at the rate of $214 a month during a short training period. Soon you will be equipped with knowledge that will win you promotion paying $270 a month."

These advertisements were signed by the United States Employment Service.

All through the plants I visited I found unskilled labor being paid as high as $100 a month after 4 to 6 weeks' training with the approval of the Government. Here we find one Government agency advertising for unskilled labor at a wage as high as $300 a month, while the Stabilization Director rejects an increase of 8 cents an hour for employees of the railway who have as little as $22 to $25 a week left after wartime deductions to meet an increase of from 20 to 40 percent in the wartime cost of living.

I have known you personally as a Member of the House of Representatives. I have always admired and have had a great confidence in your good judgment. I am writing this letter in order that you may have the benefit of some of the facts as gathered first-hand, I sincerely hope you can find your way clear to allow this small increase for the 15 nonoperating brotherhoods of the railways of America.

With kindest regards, I remain,

Very sincerely yours,

ALBERT J. ENGEL.

OFFICE OF ECONOMIC STABILIZATION,
Washington, D. C., August 16, 1943.

Hon. ALBERT J. ENGEL,
Member of Congress, Lake City, Mich.

DEAR ALBERT: I received your letter of August 11, 1943, informing me of your interest in the nonoperating railway employees' wage-increase case.

Under date of June 22, 1943, I disapproved the recommendation of the emergency board. For your information, I am attaching herewith a press release which incorporates the order I entered and the opinion which I rendered.

With personal regards and every good wish, I am,

Sincerely yours,

FRED M. VINSON,
Director.

Walter M. Pierce on the Japanese

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting an article carried in the Salem Oregon Statesman, written by Walter M. Pierce. "Governor" Pierce, as he was commonly called by his colleagues, had the privilege of serving in the Congress of the United States for 10 years. He was a faithful member of my committee, the House Committee on Agriculture.

It was a great loss to his State and to the country when he was defeated. Although he has outlived his three score years and ten, he was alert, always on time in attending committee meetings, and you could rest assured he was occupying, during practically every session of the Congress, a front seat, where he would be able to take in everything that was said and done. This was because of his great interest in his people and his country.

He was not only a well-educated man, but he was a man of considerable practical experience, born with that qualification that means so much in private life and especially in Congress: common sense. He was one Congressman who did not worry about any type of propaganda that might come into his office, in a great many instances written by or at the request of selfish groups.

He did not lose any time thinking about playing politics, and during all these years never was there a time that you would find him sitting astraddle of the fence. He was always able to make up his mind, and he operated on a basis which was in line with his conscience and deep conviction, having in mind the best interests of his people and his country.

One of his major concerns was doing something about putting an end to the ruthless destruction of our forest resources—one of the greatest resources in his State, as well as in that great area of the United States. I would not be surprised if his defeat was not brought about because of his activities in connection with trying to remedy this serious situation.

He was the type of Congressman that should have been able to serve the balance of his days in the Congress. I know I speak the wishes of the Members of Congress on both sides of the aisle in wishing him many more happy years.

Because of the great distance between his home State and mine, it may be possible that we may never see each other again on this earth, but I am happy in this thought: We shall have the privilege of meeting each other again when we shall have answered the last roll call, in that I believe he has so lived and served his people and his Maker that it will insure his abundant entrance into that beautiful home prepared for those who love the Lord.

WALTER M. PIERCE ON THE JAPANESE—LETTER TO EDITOR, SALEM (OREG.) STATESMAN

MY DEAR MR. EDITOR AND FELLOW EX-GOVERNOR: I read with interest your column about my speech, before Salem Rotary, on the Japanese. I thank you for the opportunity to place my reply before those who have read your column. Discussion of this subject of disposal of the Japanese after the war is most timely. It is a matter of deep concern to the thoughtful citizens of the whole Nation, and is of transcendent importance to the Pacific Northwest and the coast, which faces Japan. This is the most serious threat in our history and it comes from an aggressive, militaristic nation. Arguing before the Supreme Court recently, United States Solicitor General Fahy said: "Japan * * * intended to conquer the United States. There is no doubt about that—and Japan still intends to conquer us." He told the Court that Japanese on the Pacific coast lived in colonies and had not been assimilated; that 10,000 youths had been sent to Japan for education—a proportion not reached by any other racial group. The letter from the gentle young Japanese girl was appealing, but she can have no influence on her nation which, under its doctrine of dual citizenship, will always claim her fealty. They are enemies in our midst; this war is just a dress rehearsal, a sortie for supplies. We are now up against the question as to which race will dominate this beautiful section.

If you would talk with the best citizens of Hood River County, where they know this situation intimately, you would learn that it is not the "rabble" which is aroused. That

designation "rabble rouser" which you give me is a compliment, as it was applied to Sam Adams and Patrick Henry, and to scores of others who have aroused citizens by their appeals to Americans when they had fears for their country. It is a privilege, in my old age, to endeavor to stir men to action in the face of Japanese penetration of the United States during the past 40 years, and the statements of their government as to future plans.

While we rejoice over our costly victory on Attu, we must mourn over our defeat in Malheur County, Oreg. In the midst of this bloody war, Japanese agents have bought 10,000 acres, so it is estimated, of most fertile sugar-beet land which was irrigated by our Government at a cost of $13,000,000, on the plea that American farmers needed more land. Was any other government, at any other time, so criminally negligent as to allow the sale of its very soil to people of an enemy nation, set out to conquer them and killing its youth? I have been told Japan does not give the privilege of land ownership to any other nationals. Australia and New Zealand forbid residence to the Japanese and they are willing to fight to keep their country free, just as our Army is doing. Why should citizens lag, behind the lines? The man who makes the first sale to Japanese is foully unpatriotic, as he creates a Japanese settlement in which Americans cannot live and rear families. The first sale imperils other landholders, and they have no alternative but to sell. The neighborhood sinks to the Japanese level and becomes an outpost for penetration. It is not true that white labor cannot raise sugar beets. It is a question of fair division of the huge profits between the sugar barons and the producers. We brought Negroes to America for cheap labor, and we have one difficult race problem. Greed should never again be allowed to saddle our country with undesirables because they furnish cheap labor. Oriental and occidental cannot live together. Shall we surrender to Asiatics the country which has been won with so much sacrifice and is the finest flower of white civilization?

In 20 years, the Japanese have acquired 40 percent of the best pear and apple lands of the Hood River Valley, largely through evasion of our land laws. Thirty-five percent of the profits this year are credited to the Bank of Yokohama, to be paid, after the war, to those we are now supporting in concentration centers. I am told that they own 60 percent of the best Wenatchee fruit land.

You point to Japanese accomplishment at Labish. When I was Governor, this was called "Little Tokyo" and it looks like it now. Any passerby would know Americans did not live in those huts. White farmers from the South would do the same and leave no problem. The white race has pioneered this land, leveling all barriers in its 3,000-mile path, lined with schools, churches, hospitals, and American homes. Our civilization has developed along lines which will always be foreign to the Japanese. Our people are not the kind who sink hospital ships and execute prisoners of war. The Oregonian editorially called them debased barbarians, just yesterday. It is not only the yellow skins and the slant eyes, but it is the ruthless nature, the cruel heart, their traditions which take the place of religion, their methods of living, dual citizenship, and their aggressive nation—all these factors point to the desirability of carrying out the missionary enterprise among them in their own land, if they will allow it.

You speak of after-war business with Japan. Business will be possible without the shameful appeasement which kept scrap iron moving from Portland to Japan right up to December 7, 1941. That business was profitable, but it exacted a fearful toll from American youth. There are things more important than business, as our businessmen and farmers have conceded, in their cooperation to win the war. Other nations have learned how to do business with the Orient without granting insolent demands. I would preserve the flow of trade and international relations, while keeping our country free from colonization.

The alien Japanese must go back to Japan. If necessary, we must amend our Constitution so that the accident of birth will not give American citizenship to those whose parents are not eligible to citizenship through naturalization.

WALTER M. PIERCE.

SALEM, OREG., *May 22, 1943.*

The Farmer After the War

EXTENSION OF REMARKS

OF

HON. JOE STARNES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 22, 1943

Mr. STARNES of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by James P. Pope, Director, Tennessee Valley Authority, entitled "The Farmer After the War," before the meeting of the Cherokee County Farm Bureau, Centre, Ala., August 13, 1943:

Farmers are mostly plain folks who work hard long hours at the job of supplying the food we eat and the raw materials for the clothes we wear. They are doing this now not only for the 130,000,000 American people, including the millions of fighting men at the front, but for the many millions of other people who are associated with us in this war, or who have been impoverished by the enemy.

There may be differences of opinion as to how much this or that industry may be contributing to the war, but there is no difference of opinion as to the completely essential character of the work the farmer is doing to win the war. And there is no doubt as to the vital part he will play in rehabilitating the starving millions that have been and will be wrecked by this war. Upon the work of the farmer will depend largely the kind of peace settlement there will be after the war, the stability of human society in the days to come, and the sort of civilization the world will have tomorrow.

NOT TO DWELL ON WAR-TIME PROBLEMS

It is not my purpose today to discuss the immediate wartime problems of the farmer. They are serious. Some of them have to do with the exceedingly difficult fight against inflation. All of us recognize that with about $80,000,000,000 of purchasing power in this country in the hands of consumers, and only about $60,000,000,000 of civilian goods and services available, inflation is a dire threat. Nobody wants to see prices rise 70 times as is the case in China. Nobody wants to pay $4 for one orange or $200 for a sack of flour. Nobody wants to see prices, wages, and salaries spiraling to dizzy heights. Only distress could follow such a catastrophe. No tolerable sacrifice is too great to avoid it. Yet neither the farmer nor the industrial worker nor the salaried man wants to make sacrifices that would ruin him, but certainly all of us must be and are prepared to make any reasonable sacrifices. We must be prepared to accept less—a good deal less perhaps—than we feel we are entitled to. Businessmen must be prepared to receive less profits, workers less wages, farmers lower prices, and consumers less goods and services than they want—if the inflation line is to be held. I feel sure that the rank and file of farmers are willing to make their share of sacrifices to avoid runaway inflation.

PEACETIME PROBLEMS

But these trying war problems will not last long. The end of the war will come within a comparatively short time, whether it be a matter of months or of years. There will undoubtedly be new farm problems after the war, but I venture to say that the toughest ones will be those which have plagued us in the past.

There is the problem of production—the problem of an adequate and efficient farm plant. This plant consists of the land, the livestock, and the facilities on the farm. How can the farmer overcome the continuous depletion of his soil? How can he improve his plant? How can he in the long run produce for everybody enough to eat, enough to wear, and a good house to live in? How can the business of farming be made efficient and profitable?

Upon the answers to these questions depends in very large measure the whole future of our civilization. It is an old story. History is filled with examples of nations that have decayed due to the wastage of the land. Until a few years ago the farm lands in the United States were being eroded at a rate that would have made the Nation bankrupt in a few decades. While progress has been made toward the prevention of soil losses, these are still greater than the Nation can afford. The farmers, with the help of the National and State Governments, including the farm demonstration program, have made a good start toward the restoration of the land. But it is only a start and there is a long way to go. The great problem remains for the farmer after the war to hold and to improve his plant if humanity is to have a chance to reach higher levels of well-being.

And there is the peacetime problem of markets and prices. The farmer wants and is entitled to a living price for his products—a price in harmony with the general price structure of the country, in harmony with industrial wages, in harmony with the prices he has to pay for things he buys. To use a modern term heard much in recent years, he is entitled to parity. But it is not about this that I desire to speak today.

BALANCE OF AGRICULTURE AND INDUSTRY

I want to talk about another problem that will face the farmer and everybody else after the war, and particularly the people of the South. This is the problem of a balance between agriculture and industry. The farmer knows as well as anybody else that we can never go back to the days when 90 percent of the people of the country were engaged in agricultural pursuits. In 1939, only about 21 percent of those gainfully employed were engaged in agriculture, forestry, mining, and fishing. All the rest were in manufacturing industries, in trades, and other services. Modern industry, with its mass production methods, has come to stay. It has helped to raise the standard of living to a higher level generally than ever existed before. And, through the application of science and still more efficient methods of operation, it will help to raise the standard still higher. But a progressive agriculture in the same way has its contribution to make to this end. Indeed, agriculture and industry must move forward together if the best results are to be achieved. All the parts of our economic machine—agriculture, manufacturing, and distribution—must be strong and integrated in operation. All the cogs must mesh. There must be a fair balance all around if there are to be improved standards of human well-being.

The first question is what is a fair balance. It is the task of agriculture and industry to supply the physical needs of everybody with the comforts and conveniences of modern life—in an advancing civilization. There must be an economy of plenty and it is the job of our economic system to supply that plenty. This cannot be done if the parts of the system are unbalanced; if any of them is operating under artificial handicaps. The same thing is true if one or more sections of the country are operating at a disadvantage as compared to the others.

RESOURCES VARY

It is recognized at the outset that nations vary greatly in climate, in soil, and in other natural resources. Some nations have great natural disadvantages. These disadvantages may not be overcome, but certainly they should not be increased by any artificial barriers or discriminations against them. In some countries the natural resources are limited, and in all certain indispensable resources are lacking. In some countries, like Norway for instance, the land is not suitable for agriculture. There the people must depend largely upon fishing, shipbuilding, and the operation of a merchant marine. In others, like England, an industrial pattern has long been set where the country is largely industrialized and depends upon imports for most of its raw materials, and upon the exports of its manufactured goods. In such case there can be no balance between agricultural or raw material production and industry within the national boundaries.

This situation indicates very clearly that foreign trade is not only desirable but absolutely essential, if the nations are to survive and prosper. It indicates that world-wide economic well-being can be had only with the largest possible freedom of trade. So interdependent economically have the nations become that the idea of economic isolation or economic self-sufficiency has little place in the modern world. Economic Chinese walls are about as obsolete as the famous third century structure.

SOME SECTIONS ADAPTED TO BOTH

In large countries, like the United States, China, Russia, or India, there are sections that vary in climate, soil, and natural resources as they vary among nations. This indicates the importance of free exchange of products within such countries. Some sections have natural disadvantages as compared to others. This is perhaps less true of the United States, with its temperate climate than of the other great nations. There are large sections in the United States in which the conditions are suitable both for agriculture and for industry. There is in them good climate, ample rainfall, and a richness and variety of natural resources. When these conditions exist, no one section should have a monopoly of industry or of agriculture maintained by artificial barriers.

Notwithstanding these facts, a pattern has been established in this country where manufacturing is largely concentrated in one section, the Northeastern States. There a great preponderance of capital has been invested in manufacturing enterprises. There, of course, can be found most of the industrial workers, the largest cities, and the greatest density of population. The people of the South and West, on the other hand, are engaged mostly in agriculture and the production of other raw materials. These are shipped largely to the Northeast for processing and manufacturing, not because natural conditions are not suitable for processing and manufacturing in the South and West but because of traditional social and economic patterns that have grown up.

It is true, of course, that in the processing and manufacturing of finished goods there is employed a higher percentage of skilled, highly paid labor than in agriculture, and industrial wages of unskilled labor are generally considerably higher than in agriculture. Profits are higher and the return on capital investment in industry is greater than in agriculture. This has been the basis for the colonial policy of England and of some other European countries, and this is the main reason for the concentration of manufacturing in the Northeastern States. To create and maintain this advantage artificial barriers have been set up, such as the tariff and the present freight-rate structure, which discriminate against the raw-material sections of the country.

Where there are large regions suitable for both agriculture and industry, then the matter of a balance between them is of vital importance to the welfare of such regions as well as that of the country as a whole.

TENNESSEE VALLEY ADAPTED

All who have studied conditions in the Tennessee Valley area agree that it is well adapted for both agriculture and manufacturing. It can produce an abundance of food, feed, and fiber products. It has a good climate and an ample rainfall. It has an exceptional supply of streams and lakes for the production of fish and for recreational purposes. It has a variety and in some cases an abundance of minerals and metals. It has an unusual supply of coal, and great quantities of low-priced electric power. It has good transportation facilities.

But this region is now, and has been since the beginning, predominantly agricultural. Its population is largely rural. Most of its people live by farming and by extraction of raw materials from the land. It has a serious deficiency in manufacturing industries. It ships out a large balance of raw materials and ships in a large balance of manufactured goods. While all the natural conditions for a fair balance of agriculture and industry exist in this region, yet there is a serious imbalance.

Taking the United States as a whole, there is an opportunity for a pretty fair economic balance between agriculture and industry, and such a balance has been attained to a far greater degree than in many sections of the country. In the year 1940, in the country as a whole, 20.8 percent of the gainfully employed were working in the production of raw materials—that is, farming, forestry, mining, and fishing; 23.4 percent were employed in manufacturing industries, and 55.8 percent in all other forms of employment.

DENMARK AND SWEDEN EXAMPLES

Let us now compare this with two European countries which had, before the war, about as good an economic balance as could be found. They are Denmark and Sweden. These countries were outstanding examples of sturdy people and of generally prosperous conditions among all population groups.

Denmark, in 1930, had 35.2 percent employed in extractive employment, 27.1 percent in manufacturing industries, and 37.7 percent in all other trades and services. Sweden had 37.1 percent in extractive employment, 30.8 percent in manufacturing industries, and 32.1 percent in all other trades and services. While these percentages in Denmark and Sweden relate to the people as a whole rather than the gainfully employed, the difference would not be sufficient to substantially affect the figures for purposes of comparison.

It will be noted that a much larger percentage is engaged in extractive employment in these countries than in the United States, and that a much larger percentage is engaged in manufacturing than in this country. The greatest difference, however, is in the number engaged in other trades and services. Over 20 percent less people in these countries are engaged in these other trades and services than in the United States.

It is a remarkable fact and something more than a mere coincidence that in the year 1932—the year of deepest depression throughout the world—while the United States had unemployment of over 12,000,000, or about 10 percent of the total population, Sweden had only about 1 percent of its population unemployed and Denmark only about 2½ percent, and, so far as I can determine, there was not a bank failure in either of these countries during the depression, while in the United States thousands of banks failed. These facts speak eloquently for the balanced economy that existed in these countries.

Another significant thing is disclosed by these employment percentages; that is, the great difference between the percentage of those engaged in trades and services other than agriculture and manufacturing. They indicate that the proportion of middlemen—those between the farm and the factory and between the factory and the ultimate consumer—was far greater in the United States than in these well-balanced countries. Just why should it take so many more middlemen in the United States than in Sweden and Denmark?

This may have a good deal to do with the vast discrepancy between the prices of agricultural products on the farm and the prices that have to be paid by the consumer for manufactured goods. It may have a good deal to do with the price of pork which the farmer receives and the price of pork chops the consumer has to pay. It may have a good deal to do with the difference between the price of corn on the farm and the price of a package of corn flakes to the consumer. The problem of distribution in this country is still one of the most important that the farmer and the consumer have to face after the war.

TENNESSEE VALLEY UNBALANCE

Now let us consider the population percentage of employment in certain regions of the United States. In the northeastern States, known as the official freight-rate territory, the number employed in agriculture and other production of raw materials was 11.2 percent; in manufacturing, 30.8 percent; and in trades and services, 58 percent. These percentages are, of course, out of all proportion to the country as a whole. The raw materials employment is less than half the National average. The manufacturing employment is about one-third higher. As compared to Denmark and Sweden, the discrepancies are still greater.

In the Tennessee Valley region the unbalance is striking. In 1940, 34 percent were engaged in raw-material production; 18 percent in manufacturing, and 48 percent in trades and services. This region had a manufacturing percentage of only a little more than half that in the North and East, and an agricultural percentage of three times as much. As compared to the country as a whole, the Tennessee Valley region had about 25 percent less in manufacturing and over 60 percent more in agriculture.

This unbalance is the great problem the South, including the Tennessee Valley region, faces in the days to come. It affects all the people of this region—the farmer, the manufacturer, the businessman in every line, and the tens of millions of consumers. It affects the health, the education, and the well-being of the people.

IF BALANCE WERE ACHIEVED

In the country as a whole, it is found that $188 of the $579 of per capita income is contributed by manufacture. In the Southern States only $96 is added by manufacture. This means a deficiency of $92 per person in the South. If per capita manufacturing income were brought up to the national average in the Southeastern States, it would mean an increase of nearly $2,500,000,000.

And on the basis that at least $4 of capital investment is required for each dollar of increased income, the additional value in plant investment would be in the order of $10,000,000,000.

This would mean not only the employment of hundreds of thousands of men in new manufacturing industries, but would mean large additional employment in all other businesses, trades, and services. It would mean better markets for agricultural products. It would mean largely increased per capita income, perhaps comparable to the national level. It would mean more money for schools, for public improvements, for medical care, for better homes. It would mean the keeping on the farms and in the community many more of the young and talented who have in the past been attracted by opportunities elsewhere. It would mean generally better living conditions.

BALANCE MEANS MORE

But a balance of industry and agriculture means a great deal more than a mere balance of employment statistics. If the new industries that were needed to create the balance were to be centralized in a few of the larger cities of this region, if they had no relation to the development of the resources here, if there were no correlation between them and the agricultural interests, and if no provision were made for the employment of members of farm families in the vicinity of the plants, there would still remain a serious maladjustment or imbalance in the region. As industry has developed in some other sections of the country, the breach between the wages of industrial labor and agricultural labor has not only not been closed but has actually been widened.

The zone of human relations must enter into any right concept of balance. Such a concept would include industry that would process the farm products of the region, industry that would utilize the products of the forests, of the mines, and of the streams. It would include the building of sound cooperative industrial units around the products indigenous to the region. It would include a policy and practice of all-time or part-time employment for members of farm families residing within convenient distance of the plants. In order to carry out this concept it would be necessary for such industries to be distributed throughout the region. This would mean the location of industrial units in small towns and villages. It would mean the diffusion of industry among many communities. It would mean a correlation of agriculture and industry to a degree hitherto unknown in this country.

The experience of T. V. A. in its construction projects, scattered along the Tennessee River and its tributaries for a distance of a thousand miles, is in some respects quite analogous to the idea here suggested. The Authority before the war recruited its unskilled labor on a project from the people of that neighborhood—usually within a radius of about 50 miles from the project. These unskilled employees recruited from the neighborhood were as good workers as could be found anywhere. The record-breaking performances in dam construction have been made with this labor. And the effect of the distribution of wages of these employees in the communities is a matter of common knowledge. It has increased farm-family incomes, increased the business of local merchants, and swelled the public revenues. It has helped to pay off loans, and to improve the homes and farms. It has improved living conditions all around.

The widespread distribution of electricity to the homes and farms carries out the same general idea. The time was, not so long ago, that the power companies operating in this region preferred to, and did, serve the cities, towns, and more prosperous communities, with very little effort to extend their lines into the less remunerative farming communities. Through the R. E. A. and the T. V. A. in this region, particular attention has been paid to this matter, with the result that the percentage of electrified farms has been increased since 1933 from less than 3 percent to over 18 percent. This has meant a large increase in the business of generating and distributing electricity, and a large increase in the business of manufacturing and selling electrical appliances. Outside of the T. V. A. territory, the power companies have adopted a much more liberal policy of extending their lines into farming communities and of supplying R. E. A. cooperatives operating in rural sections, with the result that the amount of electricity generated and sold has been largely increased, and the market for electric appliances has been largely extended. The benefits of this extension and diffusion of electric business into farming communities are now recognized on all sides.

The Tennessee Valley Authority, as you know, has sought to assist farmers and householders by the invention and adaptation of electrical appliances for the more beneficial use of electricity. It has sought to provide farm devices other than electrical for the benefit of the farmer. You are all familiar, I think, with the various electrical and farm devices that have been and are being made available. In connection with the use of such things, T. V. A. has encouraged their manufacture and distribution in this region. It has dealt with private manufacturing concerns and with cooperatives to accomplish this purpose.

T. V. A.'S CONCEPT

It has never been the policy of T. V. A. to encourage the removal of industries from another section of the country to the Tennessee Valley area. It has never urged the advantages of low-priced power upon any manufacturer as a reason for any such removal. It has made studies of the natural resources of the region, of transportation facilities, of markets and marketing opportunities, and of other location factors, and has supplied such data to any persons or business concerns which have requested it.

T. V. A. conceives of an agricultural-industrial balance in this region, not brought about by the uprooting of established industries anywhere else, not by creating an unbalance in any other section, not by a centralization here of large industries unrelated to the resources of the region. It conceives of a balance brought about by the building up of industrial enterprises, distributed as widely as possible among various towns and communities of the region, that will process the raw products of the farm, of the forest, of the mine, and of the stream.

T. V. A. conceives of a balance that will revitalize the rural life of the region, that will largely increase the purchasing power of the rural communities, upon which the larger cities and towns depend for their existence and permanent prosperity. It conceives of a balance that will promote the increasing welfare of the family, which is, after all, the economic as well as the biological unit of society. It conceives of an enduring economic and social structure, resting upon the firm foundation of a sturdy, God-fearing people, serving one another in growing, in producing, in manufacturing, in distributing in plenty the good things that men live by.

This is the concept, we believe, that will best serve all the people in the days to come.

Palestine: Roadway to Rescue

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me over Mutual Broadcasting System, Saturday, September 25, 1943:

It would seem most plausible, would it not, that compassionate humanity which had set into motion the Evian Refugee Conference, the Bermuda Refugee Conference, the Intergovernmental Committee on Refugees to ease in any practical measure the travail of the suffering minorities in Axis-dominated countries, as well as the more fortunate who had escaped to neutral territories would seize avidly and without prejudice any course that would help in the solution of the festering problem. But no. Folly, greed, and power politics continue in disregard to human rights.

In the East, a small area of the Land of Zion, mandated Palestine, stands ready, like a welcoming beacon, to take the driven Jews unto itself, grant to them the dignity and security denied to them by all others, democratic countries and otherwise.

But the British Foreign Office would blackout that beacon. Very slyly it seeks to create public opinion in this country and Britain to speed its determined purpose to liquidate Palestine as a homeland for the Jews. So * * * if events are not unfavorable to the Zionist cause—create them. All news and dispatches coming from the Levant must be cast in such a mold as to discredit and impoverish the spirit of unity and cut into shreds the aroused sympathies of interested spectators.

Here in Palestine is a trial of two confessed gun-running English soldiers. Why not use it as a vehicle to show up the deadly schemes of the Zionists who are buying up a stock pile of guns and ammunition for the coming war against the Arabs? Levantine anti-Semites lick their chops. The acquisition of arms by the Jews shall be high lighted. No mention, of course, shall be made of the purchase of arms by the Arabs. This being a military trial, the presiding brass hats can steer the proceedings at will. By no means allow any evidence to seep in to show the need for the Jews to arm, to defend home, hearth, and dear ones. Any attempt to recall the Moslem pogroms of 1920 in Jerusalem, in 1929 in Jaffa, Kfar-Saba, of Hebron, Mozza, and Safed in 1929 and the pogroms of 1936 and 1937 shall be ruled out of order. Arab uprisings against defenseless Jews shall be no matter of defense. It dare not be revealed that the British Colonial Office refused to allow the Jews to acquire arms for self-defense. In the pogroms of 1929 and 1936–37, they were mowed down and massacred by the Arabs—with the very guns refused the Jews.

Does the Colonial Office believe they are fools, that they can defend themselves against brutal assaults with bare knuckles?

It is not the first time that accusations have been brought against the Jews to serve the more sinister purpose of screening what actually goes on behind the scenes. It is an old stunt. The rulers in the Middle Ages blamed the Jews for the plagues; the Czars aroused the populace against the Jews by charging them falsely with ritual murders in

order to hide their own foul deeds. The French trumped up the charge of treason against Dreyfus to veil their own noxious activity. So now in order to develop a public opinion against the Jewish agency, directed by the mandated powers to take care of Jewish affairs in Palestine, and ir order to discredit Palestine as a homeland for the Jews this gun-running trial has been used to camouflage the real purpose behind it. The British Colonial Office, and it is no secret, wants Palestine liquidated forever as a Jewish homeland. It seizes upon any pretext, even to the arousing of dormant anti-Semitism of its audience, to gain its selfish ends. Caesar tried it, so did Hamman in biblical times. It stood the Romanoff Czars in good stead. Why not use the dodge again? What if the means are spurious, false coins, so to speak?

Unfortunately, one of our well-known newspapers, wittingly or unwittingly, has become a coconspirator in this campaign to discredit Palestine and all that is implied therein. It is most strange, and perhaps no mere coincidence, that this same paper has as a publisher who presides over its destinies a convinced anti-Zionist. The newspaper dispatches which ran in that paper were opinionated and colored according to the point of view of that publisher. Such conduct hardly comports with the dignity and important achievements of that paper.

Moreover, it is significant that every time a royal commission of inquiry has gone to Palestine, the Palestine government officials have been charged with anti-Semitism. It is a shocking revelation to know that anti-Semitism should run rampant in an office under British democratic control.

How farcical is this trial when the Jews remember with fear and trembling the Arab treachery of 1929 and the failure of the government to provide adequate precaution against recurrence. Small wonder the Jews must implement an unsurpassed fortitude and will to die for Eretz Israel with machine and tommy guns and Garand rifles.

Those who have steered the frame-up in Palestine into channels designed to undermine and defame the Jewish agency in Palestine have neglected to take cognizance of the true facts that stand as a matter of record and of which all interested America and England are quite aware. It is no simple matter to poison the wellsprings of public opinion, as the Germans, to their everlasting humiliation, have learned in their Anglo-American operations. It most certainly cannot be done with the obvious farce now being played at the gun-running trial in Palestine.

The facts stand out as large as life that Jewish Palestine is the only effective ally the United Nations have in the Near East. Did Iran, Syria, Lebanon, the Kingdom of Saudi-Arabia, in even the tiniest measure, place what resources they had in the hands of the Allies? Pro-Axis they remained until, craftily, they saw the tide turn in Allied favor. It is now widely known that Jewish Palestine is democracy's arsenal, its granary, and storehouse in the Near East. Thousands of factories, small and large, are turning out essential supplies and war materials, ranging from optical goods to heavy equipment, which, together with the food raised on Jewish farms, would have had to be transported thousands of miles were they not produced on the spot. This was of inestimable value to the cause of the United Nations, especially so at the time when the Mediterranean was closed to Allied shipping. In addition, 30,000 Palestine Jews, out of a total of 550,000, have voluntarily enlisted in the British Army and that enlistment continues. This is 6 percent—equivalent to an enlistment of 8,000,000 in the United States. Those who have seen service have covered themselves with glory in every campaign from Greece and Crete and Ethiopia to the great victories in north Africa and Sicily, a service which has been acknowledged in terms of highest praise by Churchill and by the greatest of Britain's military leaders. Can a gun-running trial in Palestine obscure these facts?

Pandering to Arabs, the British Colonial Office should have learned by this time, is no guaranty of Arab friendship. When in 1939, the British, no longer able to ward off knowledge of a world marching to war, and aware of the strategic importance of the Near East, promulgated the infamous MacDonald White Paper, limiting and then closing Jewish immigration into Palestine in an effort to gain the partisanship of the Arab, the results were anything but what have been bargained for. On the contrary, the Arabs, under the influence of the Grand Mufti, who even now is carrying on his nefarious activities via radio from Berlin, have done everything possible to hamper the United Nations' war effort. Because of their ill-concealed hostility, the Arabs have made it necessary for the British to maintain armed forces in the Near East. It is no secret that the British had a larger army watching the activities of the Arabs than they had facing the Germans and Italians in Egypt. Moreover, it has been substantiated time and again that Arab gun-running has gone on all the time and that the trial of Arabs for this crime has been a frequent occurrence. Nevertheless, the authorities have not seen fit to give this conduct on the part of the Arabs any publicity of the type through which they have attempted to stigmatize the Jews.

Mr. Malcolm MacDonald's White Paper, restricting Jewish immigration into Palestine to 75,000 within a 5-year period, beginning 1939, and thereafter prohibiting it, did not gain the friendship of the Arabs, but the death warrant to Zionism still stands.

At the time when Hitler had reached the zenith of his power, climbing on the rungs of a ladder built upon the overwhelming sorrow of the tortured Jew, Palestine, the one roadway to rescue, was closed by a nation girding itself to fight for the freedoms and humanity. The voices of many, high in position, however, were not stilled. Churchill called it a "breach of faith." It was condemned by Lord Wedgewood, Lloyd George, Herbert Morrison, the great premier of British South Africa, General Smuts, and by members of the Conservative party and of the Labor and Liberal opposition. The Mandates Commission, to which it had been referred for approval, not only refused to approve it, but unanimously rejected and condemned it, stating that the new policy "was not in accordance with the interpretation which, in agreement with the mandatory power and the council of the League of Nations, the commission had always placed on the Palestine mandate." The Geneva decision was ignored. Immigration was restricted in accordance with the White Paper. Jewish land purchases were prohibited in most of the areas of Palestine and the outbreak of the war obviated the necessity of reporting to the Mandates Commission. Thus it stands today, negating the Balfour declaration which was dedicated to facilitating the building of a homeland for the Jews in Palestine, a declaration which was issued by the British government after consultation with the Allied and associated powers on November 2, 1917, and agreed to the mandate accorded to Great Britain in 1922, with the consent of the 51 members of the League of Nations, together with the unanimous approval of the Congress of the United States.

But yet, in accordance with the terms of the MacDonald White Paper, in 1944 all Jewish immigration into Palestine must cease, and unless nullified in the spring of 1944, we shall find the one realistic avenue to the solution of the Jewish problem forever blocked.

Of course, Hitler is providing a partial answer. Millions are dead and the end is not yet in sight. What of those still in the hands of the henchmen? Whither shall they go? Is there a land that will accept them gladly, out of pity and humanity, save Palestine? What is their guilt, save that of being born Jew?

We can never afford to lose sight of the fact that while it is not our wish to view Jewish refugees and potential refugees as different from others, that difference has been thrust upon us. The lot of the Jews is not comparable in horror, ferocity, and destruction to that of others. The Polish peasant, the Dutch merchant, the Czechoslovakian farmer all have the opportunity of life and labor, hard as that may be. The fate of the Jews is hopeless. Hitler attempts to exterminate the Jews and make Europe Judenrein. When liberation with Allied victory comes, all others will savor the lifting of oppression, the freedom to return to life and liberty, save the Jews. The non-Jews have, at least, a shred of hope of survival denied the Jew. Doom stalks wherever he may be. The non-Jew is in a prison; the Jew is in a death chamber. It must not be denied again, as it was denied at the Bermuda and Evian conference on refugees, that the Jew is a special problem and calls for special measures of rescue.

There is still the chance to heed the dictates of conscience. Out of the otherwise abortive efforts of the Evian conference on refugees held in France in 1938 was born the Inter-Governmental Committee on Refugees now functioning in London. Its feeble heartbeat has been revived by the dire necessity for action. If that, too, is permitted to sink beneath the weight of diplomatic palaver and indifference as the hollow Bermuda conference on refugees, which refused even to consider Palestine as a possible haven, then will be written some of history's blackest pages. Future generations will write the bill of indictment. They will say with justice, "They denied the dying and the dead."

The Inter-Governmental Committee on Refugees must recognize how imperative it is this time that Palestine be considered as the haven for Jewish refugees. The limitations of the MacDonald White Paper must be revoked. To keep it off the agenda, to smother it in silence is to speed the doom of millions awaiting succor, to negate decency, honor, and faith. Theodore Roosevelt once said, "It is a wicked thing to be neutral between right and wrong."

It is hoped that this Inter-Governmental Committee will act with vision and compassion and will not approach the problem in any cold-blooded manner, subservient to the diplomatic protocol, knowing no master but its conscience. It will not, we fervently trust, be "the beadle who always agrees with his rector." We are given some hope by the statement of Viscount Cranborn in the House of Lords' debate on refugees which took place on July 28, 1943, who, when asked if Jews were to be associated with the reorganized Inter-Governmental Conference, replied that, and I quote, "Jews will be associated with it." That and nothing more. I take it that it, nevertheless, means accredited Jewish organizations will be permitted to have representatives at the committee, which representation was denied them at Bermuda.

Public sentiment is forging itself into a mighty instrument of action. While I am confident our leaders are aware of the urgency for rescue of the tortured and maimed we must let them know we are all behind them. The Axis savages are reeling under the blows of our military machine, our moral machine must be no less in might and achievement.

The work of the Christian Council on Palestine under the leadership of Dr. Henry A. Atkinson and the work of the diverse Jewish

groups will surely not be in vain. All turn to Palestine as the one hope. Indeed, what other is there?

King Ibn Saud, ruler of Saudi-Arabia, recently in an article in Life, was featured as opposing any more Jewish immigration into Palestine.

Opportunely Emir Feisal, his third son, will soon be received by President Roosevelt. He will be eager, no doubt, to gain the friendship of the United States now that Allied victory is no longer a debatable question. It is inevitable that the question of Palestine arise in the conversations between the two. Only recently has our President reiterated his views favoring the establishment of Palestine as a homeland for the Jews. That the Arabs and the Jews can live side by side in mutual consideration of each other's needs in fostering the prosperity and well-being of their lands (without the British colonial policy of divide and rule) I am certain will be stressed by President Roosevelt. Surely he will point out that no reason exists for the restriction of Jewish immigration into Palestine other than power politics. He cannot fail to remark that at the same time that the Jewish population has expanded from 55,000 to 500,000 within the past decade, the Arab has increased his population from 600,000 to 1,100,000, and thus Arab increases have occurred precisely in the areas where the Jews have created their most significant improvements in agriculture and industry. Emir Feisal will not have to be told, since he must know it well, that in no other area of the whole Near and Middle East have the Arabs experienced such great advances in education and in social and economic welfare as has been demonstrated in Palestine. Finally he must be told that no one has been hurt with the exception of the Arab landholder, mostly absentees, who have been paid enormous prices for the lands which they have sold to the Jews, but who much prefer to retain their ancient feudal grip on the Arab fellahin or peasants in the Holy Land. It must be remembered, too, that the interests of the inarticulate Arab masses are as entitled to consideration as the ambitions of Arab princes.

Most devoutly it is hoped that out of these conversations will arise a better understanding that will cut the Gordian knot that is the Jewish problem.

If I have been harsh in my strictures against the British Colonial Office, it does not follow that I am unaware of the wondrous achievements that are Great Britain. Indeed I have the highest regard for them, but I am here reminded of the words of Churchill: "Never give in, never, never, never, never, to anything great or small, large or petty, never give in except to convictions of honor and good sense."

I shall never, never give in to accepting and approving the MacDonald White Paper. I shall never cease to fight until that infamous document is buried full fathom five in the sea.

Disposal of Surplus Property After the War

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. PATMAN. Mr. Speaker, the House Small Business Committee, opened hearings this morning on a very vital subject—the orderly disposal of surplus plants, tools, equipment, and material which will be owned by the Government at the end of the war.

This is a question which is perplexing large and small business alike and is now the subject of considerable informal discussion in many places.

Due to the flood of letters and requests from small business firms asking that our committee give serious consideration to this problem from the viewpoint of small business, it was decided to initiate hearings on the subject immediately with a view to doing this in a leisurely fashion until the views of a large cross-section of both industry and government could be heard on the matter.

This morning we were favored with some very illuminating figures and testimony by the Honorable Jesse H. Jones, Secretary of Commerce and Federal Loan Administrator, under whose jurisdiction are held billions of dollars' worth of this type of property. I will not attempt to list here any of the things told us by Mr. Jones, but will submit for the RECORD in a few days a transcript of his testimony in the belief that it will be of interest to the majority of the Members in this connection.

Mr. David E. Castles, president of the National Automobile Dealers Association, submitted a very thoughtful statement to our committee on this problem, a copy of which is appended herewith. I offer this statement of Mr. Castles for the RECORD in the hope that what he has to say will also be of real interest to the Members on this problem which is already upon us:

The disposal of surplus war goods is of deep interest to the retail automobile dealers of the United States not only as it affects their businesses but also as it affects the general economic welfare of the Nation. For that reason the post-war planning committee of the National Automobile Dealers Association has attempted in an extended study to explore the subject in its broadest aspects. Committee recommendations which I shall present will, it is believed, apply equally advantageously to the distribution of all nonperishable goods whether they be automobiles, clothing, shoes, metals, and other materials. It is the hope of the motorcar dealers that their program may prove generally helpful because there surely exists the utmost need for a strong peacetime business America.

These recommendations do not represent merely the opinions of a few hand-picked committeemen. They are the result of a national survey among dealers. The committee asked dealers to say frankly just how they thought the problem could be met and solved and they did.

In passing, I might say that we think that in approaching motorcar dealers we were going to experts on the subject of saving retail business from ruin. They have come as near being wiped out during the last 2 years as any group ever has. Much credit is due the House Small Business Committee for the fact that more than 80 percent of the dealers who were in business at the time of the Pearl Harbor attack still are doing business at their old stands. The Murray-Patman Act put us on our feet, and we have been fighting ever since to keep going. So we know something about weathering unusual situations.

No one knows, of course, how much surplus goods will be on hand when the war stops. Furthermore none knows where these goods will be located. We do know, however, that there will be a vast amount of them. It has been estimated there may be as much as $50,000,000,000 worth. We also know that if these goods are sold in hit-and-miss fashion at sacrifice prices like so much junk in a back lot the taxpayers will lose vast amounts of money and every retail line represented in the surplus will be seriously injured by a rush of speculators to cash in on their bargain purchases.

The primary recommendation which we have to offer is that for the benefit of business, Government and taxpayers surplus goods be sold in an orderly manner and at fair prices through established retail outlets. We earnestly urge that the slip-shod method of auctioning and dumping through fly-by-night speculators followed in many instances after the last war be studiously avoided. The records of the sale of that relatively small amount of surplus goods from World War No. 1 comprise a sorry page in Government business transactions. To follow similar methods now when the volume of surplus goods will be so much greater than it was 25 years ago would be little short of tragic.

Not only will the volume of surplus goods to be sold after the peace be greater than ever, but the need to help retail business get back on its feet also will be greater. The records of this committee show in a minor way what is happening today to small retailers everywhere. Their empty shelves from coast-to-coast tell an even more impressive story. The fact is that most small dealers today are just hanging on to their places of business by the skin of their teeth. Thousands never will survive to see the peace. Add to the back-breaking load of those who do survive the surplus goods competition from gyp speculators and you will slaughter thousands more. Give them and their employees returning from the service an opportunity to deal in these surplus goods and you will have rendered a real service. You will have denied a few wealthy opportunists chances to harvest big fortunes overnight, but you will have helped small businessmen and their help immeasurably.

It is in an effort to help small business survive and to give the taxpayer a decent return on his investment in surplus goods, that the National Automobile Dealers Association offers the following recommendations:

1. The distribution of surplus war commodities should be directed by a committee created by Congress of appropriate size, of which one-half of the members should be selected from Government and the other half from business.

2. An inventory of surplus war commodities should be prepared as soon as possible and kept current throughout the duration of the war.

3. Immediately upon the termination of the war all Government-owned surplus war commodities should be frozen with the exception of perishables, agricultural products, and foodstuffs.

4. Distribution of surplus war materials should be governed by the following considerations:

(a) The distribution should be at the rate which would not unduly disrupt trade.

(b) Goods should be distributed at a price low enough to make goods move and high enough to recover a fair return for the Government in order to reduce the national debt.

(c) Distribution should be solely through proper trade channels. Acquisition of an abnormally large supply for speculative purposes should be avoided, probably through some governmentally directed inventory control. It is not contemplated that the commodity manufacturer should be prevented from buying, but the price to the manufacturer should be made the same as to a retailer.

(d) Prices of commodities sold by the Government should be as uniform as possible.

(e) The right of the Government to dispose of surplus commodities to any Federal agencies should be acknowledged. It is the intention that gifts or sales outside of the Federal Government and the usual trade channels should be prevented.

(f) Reimported surplus war goods should be sold through regular channels and at the same price that surplus war goods in this country are sold by the Government.

Particular emphasis should be placed on the proposal to have sales directed jointly by a Government-business board. This sales problem will be so large and the types of materials so diversified that no one man, regardless of the honesty of his intentions, could discharge it satisfactorily. Initially fearless Government men of unquestioned integrity and practical sales and distribution experience and top-flight businessmen should be named as sales administrators. Finally, and of great importance, special subcommittees composed of experienced men from the different lines affected should be appointed to work with the main committee. Only with such informed control can this gigantic job be done.

Various bills looking to proper control of these sales have been introduced. Suggestions similar to certain recommendations N. A. D. A. offers are contained in some. N. A. D. A. has no pride of authorship or ideas and any bill which covers the ground as indicated will have the hearty support of dealers generally. They are pleased that this House Small Business Committee is seeking to develop fully the facts in the situation. Out of these efforts dealers hope, will come a sound measure all can support.

The automobile dealers of the Nation—still more than 30,000 strong and located from crossroads to metropolitan centers—are anxious to devote all of their talents and treasure to a strong peacetime America. They feel they can do this best by returning to their pay rolls some 250,000 former salesmen that war conditions forced them to let out, and thousands of other employees now in the service.

Acceptance of recommendations made, dealers believe, will help put these people back to work. Establishment of gyp competition, as surely will follow unless Congress legislates otherwise, will only delay the restoration of thousands to dealer pay rolls. In this respect, what is true in the motor car trade doubtless is true in other lines.

Analysis of Veterans' Benefits Under H. R. 2703, Now Public, No. 144, Seventy-eighth Congress

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. RANKIN. Mr. Speaker, it will be recalled that H. R. 2703, Seventy-eighth Congress, "A bill to provide more adequate and uniform administrative provisions in veterans' laws pertaining to compensation, pension, and retirement pay payable by the Veterans' Administration, and for other purposes," was passed by Congress and approved by the President and became Public Law No. 144, Seventy-eighth Congress, July 13, 1943.

The Committee on World War Veterans' Legislation, of which I am chairman and which reported the bill after hearings on various bills pertaining to World Wars No. 1 and No. 2, has received numerous calls and letters regarding the new act. Although a detailed analysis of the bill was contained in our Committee Report No. 463, May 18, 1943, because of the length of the act, 17 sections, and the numerous provisions which are basically administrative but indirectly affect benefits to veterans and their dependents, I requested that a brief statement of benefits to World Wars No. 1 and No. 2 veterans and their dependents under the act be prepared by the Veterans' Administration. That simplified statement together with the detailed analysis, corrected to include Senate amendments approved by the House, and instructions thus far issued by the Veterans' Administration under the act should be most helpful to Members, and I have requested that this material and my introductory statement be incorporated in the RECORD under extension of remarks:

The matter referred to follows:

WORLD WAR NO. 1 AND WORLD WAR NO. 2 BENEFITS UNDER PUBLIC, 144, SEVENTY-EIGHTH CONGRESS, APPROVED JULY 13, 1943

The Committee on World War Veterans' Legislation conducted hearings May 13 and 14, 1943, on bills to grant benefits to veterans and dependents of deceased veterans of World War Nos. 1 and 2. The bills were principally directed (1) to granting additional benefits in World War No. 2 cases comparable to benefits granted in World War No. 1 cases, and (2) to increase benefits pertaining to both World War No. 1 and World War No. 2. Following the hearings, H. R. 2703, Seventy-eighth Congress, containing 17 sections, was reported favorably by the committee, House Report No. 463, May 18, 1943. The bill became law July 13, 1943, Public, No. 144, Seventy-eighth Congress.

Briefly, the act provided the following benefits pertaining to World War Nos. 1 and 2:

1. Liberalized the presumption of soundness at time of examination, acceptance, and enrollment for service for the purpose of determining service connection of disability by (a) removing the requirement of 90 days' service for application of the presumption, and (b) by limiting the rebuttal of the presumption by the Government, except as to defects, infirmities, or disorders noted at time of examination, acceptance, and enrollment, to those cases where clear and unmistable evidence demonstrates that the injury or disease existed prior to acceptance and enrollment and was not aggravated by such active military or naval service.

Prior to this amendment World War No. 2 veterans must have had 6 months' service in order to apply the presumption, and the rebuttal, except as to defects, infirmities, or disorders noted at time of examination, acceptance, and enrollment, was by evidence or medical judgment warranting a finding that the disease or injury existed prior to acceptance and enrollment.

This amendment also has the effect of making the full wartime service-connected rates available to any veteran of World War No. 1 where service connection under part 1 of Veterans Regulations No. 1 (a), as thus amended, is established. This will include some cases where the disability is service connected under the rebuttable presumption of soundness under Public, 141, Seventy-third Congress, March 28, 1934, but where the compensation under Public, 141, is less than that provided under part 1 of Veterans Regulation No. 1 (a), as amended, because of the provision in Public, No. 141, reducing the compensation by 25 percent where service connection is based upon statutory presumption.

2. By placing service in World War No. 2 within the provisions of part I of Veterans Regulation No. 1 (a), as amended, in addition to the benefit described under 1, World War No. 2 veterans are now entitled to the rebuttable presumption of service connection for chronic disease manifest to a degree of 10 percent or more within 1 year from separation from active service on a parity with World War No. 1 veterans.

3. In the hospitalized and domiciled cases of single veterans without dependents, the reduction of monetary benefits in the case of service-connected disability before the enactment of law was to $15 per month and in non-service-connected cases to $6 per month. By virtue of the provisions of this new act, the $15 per month rate was increased to $20 in service-connected cases, and in non-service-connected cases, as to World War No. 1 veterans, the rate of $6 per month was increased to $8.

4. The act also provides for payment of pension for disability from the date of discharge if claim therefor is filed within 1 year from discharge. This provision, which particularly affects World War No. 2 veterans at this time, is similar to that which permits payment of death pension or compensation from date of death if claim is filed within 1 year from death. This law removes injustices where there is delay in filing claim due to no fault of the veteran and payment could otherwise be made only from date of claim, thus depriving the veteran of necessary financial assistance based upon his service-connected disability.

5. The act also makes it possible to pay the wartime rates of disability or death pension in the cases of cadets and midshipmen based upon disabilities incurred in line of duty on or after December 7, 1941, and before termination of hostilities incident to the present war. The act makes service as a cadet or mishipman, during such period, active military and naval service in World War No. 2 for the purpose of laws administered by the Veterans' Administration. Previous to this enactment peacetime service-connected rates were payable in such cases even though the disability was incurred as the result of war service.

6. The act also increased the World War Nos. 1 and 2 service-connected death compensation and pension rates for widows and children. The following table shows the increases granted by the act:

PUBLIC, NO. 198, 76TH CONG., JULY 19, 1939

Widow—no child

Age under 50 years	$38
Age 50 years or over	45

Widow—with child or children

Widow's rate, with $10 additional for first child up to 10 years of age, increased to $15 from age 10 with $8 for each additional child up to 10 years of age, increased to $13 from age 10.

Rates for children (no widow)

1 child	$20
2 children	33
3 children	46
Each additional child	8
Total amount may not exceed	83

RATES UNDER SEC. 14, PUBLIC, NO. 144, 78TH CONG.

Widow—no child

Irrespective of age	$50

Widow—with child or children

Widow, 1 child, with $13 for each additional child	$65

Rates for children (no widow)

1 child	$25
2 children	38
Each additional child	10
Total amount may not exceed	100

7. More equitable provisions are included in the act with respect to concurrent payments of compensation or pension or of such gratuities and active-service or retired pay. As an example of one of the inequalities under the prior law, a widow entitled to death-pension benefits under the general or service pension law or Public, No. 484, Seventy-third Congress, as amended, could receive such benefits concurrently with active-service pay as a member of the Women's Reserve of the Navy or Women's Reserve of the Coast Guard or as a United States Army nurse, whereas a widow entitled to death-pension benefits under Public, No. 2, Seventy-third Congress, and the Veterans Regulations, as amended, or Public, No. 141, Seventy-third Congress, as amended, was precluded from receiving such benefits while in receipt of active-service pay. This and similar inequalities arising under existing laws were corrected by Public, No. 144.

8. Public Law No. 144 also liberalized the definitions of child, parent, mother, or father under Public Law No. 2 and the Veterans Regulations, thus affording monetary benefits to additional groups based upon World War No. 2 service.

9. Provision was also made to pay compensation, pension, or retirement pay to the wife of an incompetent veteran, having no guardian, for the use of the veteran and his dependents and to permit payment of death benefits directly to a minor widow, having no guardian, for herself and minor child or children, notwithstanding her minority.

10. As to World War No. 1, amendment was made to the income limitation in Public Law No. 484, Seventy-third Congress, as amended, granting compensation to widows and children of veterans of World War No. 1 where the death of the veteran resulted from non-service-connected disability. The act provides that payments made by the United States Government under laws administered by the Veterans' Administration because of disability or death shall not be considered in determining annual income of the widow, child, or children of a deceased World War No 1 veteran. This particular amendment also permits payment of benefits to a child or children notwithstanding the fact that the widow is barred by the income limitation.

The rates of pension for widows and children based upon peacetime service-connected death were increased by this act. This increase took into consideration the increase granted the wartime service-connected death cases and is approximately 75 percent of the new wartime service-connected death rates; the act also contains a number of administrative provisions, for example, concerning renouncement of pension or compensation; forfeiture of accrued or future benefits under laws pertaining to gratuities for veterans and their dependents by any person shown to be guilty of mutiny, treason, sabotage, or rendering assistance to an enemy of the United States or its allies but provides for certain payment to dependents; termination of benefits to any person not a citizen of the United States located in the territory of or under military control of an enemy of the United States or any of its allies with provision for payment to dependents in the United States or in a place not occupied or controlled by the enemy and provision for payment under certain conditions on the basis of a new claim by the person whose award was so terminated; a more satisfactory and liberal provision regarding the payment of pension, compensation, or retirement pay to which a person was entitled prior to his death and not paid during his lifetime; and a provision governing the effective dates of awards. Greater uniformity in the administration of laws pertaining to veterans is established by this law because many of the provisions are made uniform as to various groups of veterans and dependents, with certain protective provisions to avoid injustices.

DETAILED ANALYSIS OF THE PROVISIONS OF H. R. 2703, SEVENTY-EIGHTH CONGRESS, WHICH BECAME PUBLIC, 144, ON JULY 13, 1943

Section 1: Section 1 of the proposed bill would make the administrative, definitive, and regulatory provisions of Public, No. 2, Seventy-third Congress, and veterans' regulations, as now or hereafter amended, applicable to benefits provided under Public, No. 141, Seventy-third Congress, as amended, Public, No. 484, Seventy-third Congress, as amended, and under laws reenacted by Public, No. 269, Seventy-fourth Congress, as amended. Notwithstanding certain legislative enactments and regulatory measures designed to insure uniform application of these provisions to benefits provided under these separate acts, complications tending to create injustices and inequalities have arisen, particularly in administering the provisions of Public, No. 484, Seventy-third Congress, which clearly indicate the necessity for the legislative action proposed to establish uniformity in the manner stated. One result of this provision would be to extend entitlement to pension under the general or service pension laws to the child of a deceased veteran of the Spanish-American War, the Philippine Insurrection, or Boxer Rebellion until the child attains the age of 18 years or marries, or to age 21, if he is pursuing a course of instruction in an educational institution as the term "child" as defined in paragraph VI, Veterans Regulation No. 10—Series, would be for application. As the rates payable to a child or children under the general or service pension laws are higher than those payable for wartime service-connected death, provision is made for payment to the child or children in such cases at the rates payable for World War No. 1 non-service-connected death under Public, No. 484 Seventy-third Congress, as amended.

Section 2: The purpose of the amendment proposed by this section is to provide uniform application of the provisions of section 21, World War Veterans' Act, 1924, as amended, and of Public Law No. 262, Seventy-fourth Congress, August 12, 1935, which pertain to safeguarding of estates of veterans derived from benefits under laws administered by the Veterans' Administration, and to afford more flexible administrative action in certain types of cases wherein the present provisions of section 21, World War Veterans' Act, 1924, as amended, are too restrictive. The amendment would extend the provisions of these laws to retirement pay of Reserve Officers, United States Army, payment of which is made by the Veterans' Administration, although the question of eligibility is determined by the War Department under Public Law No. 18, Seventy-sixth Congress, April 3, 1939. It would also authorize the Administrator of Veterans' Affairs, in his discretion, to make payments of compensation, pension, or retirement pay to the wife of an incompetent veteran, having no guardian, for the use of the veteran and his dependents, and permit payment of death benefits directly to a minor widow, having no guardian, for herself and minor child or children, notwithstanding her minority. This last provision is for the purpose of applying, where indicated, the principle of emancipation by marriage which is recognized by a considerable number of the States.

Section 3: Section 3 would amend paragraph XXI, Veterans Regulation No. 10—Series pertaining to renouncement of pension. The language follows the existing regulation which now applies only to any person entitled to monetary benefits under the provisions of title I, Public, No. 2, Seventy-third Congress, or section 20, Public, No. 78, Seventy-third Congress, but extends its provisions to any person entitled to pension or compensation under any law or veterans regulation administered by the Veterans' Administration. Under this paragraph, as amended, any person entitled to pension or compensation, upon written application over his signature may renounce his right thereto, and from date of receipt of such application payment of such benefits and the right thereto are terminated. This renouncement, however, does not preclude the person from filing a new application for pension or compensation at a future date, but no payment may be made for any period prior to the date thereof.

Section 4. Section 4 of the proposed bill provides for forfeiture of all accrued or future benefits under laws administered by the Veterans' Administration pertaining to gratuities for veterans and their dependents, by any person shown by evidence satisfactory to the Administrator of Veterans' Affairs to be guilty of mutiny, treason, sabotage, or rendering assistance to an enemy of the United States or of its allies, but permits apportionment and payment of any part of such benefits to the dependents of such person not exceeding the amount to which each dependent would be entitled if such person were dead.

Section 5: This section would authorize termination of the award of compensation, pension, or other gratuity under laws administered by the Veterans' Administration in favor of any person not a citizen of the United States located in the territory of or under military control of an enemy of the United States or any of its allies and provides that such person will not be entitled to any such benefits except upon the filing of a new claim accompanied by evidence satisfactory to the Arministrator of Veterans' Affairs showing that the claimant was not guilty of any of the offenses enumerated in section 4 of the act, and then only prospectively, as such benefits would not be paid for any period prior to date of such new claim. It permits the Administrator to apportion and pay any part of the benefits to which such person would otherwise be entitled, to the dependents of such person who are in the United States or in a place not occupied or controlled by the enemy not exceeding the amount to which each dependent would be entitled if such person were dead. The purpose of this section is to bar accrued or future payments of gratuities to persons guilty of any of the offenses enumerated in section 4 of the act or alien enemies and to prevent the building up of large estates in favor of those residing in countries at war with the United States or in countries under military control of the enemy. While payments of such gratuities which have already been made in favor of persons located in foreign countries controlled by the enemy and which have been deposited in the special deposit account with the Treasurer of the United States entitled "Secretary of the Treasury, Proceeds of Withheld Foreign Checks" under the act of October 9, 1940 (Public, No. 828, 76th Cong.), as amended, will not be affected by the provisions of this amendment, payments which may have accrued in favor of any person while he is located in territory controlled by the enemy will be barred as any such benefits to which such person may be shown to be entitled upon the filing of a new claim may only be paid prospectively.

Section 6: This section would amend paragraph V of Veterans Regulation No. 10, as amended, so as to define the term "widow of a World War No 2 veteran." Service in World War No. 2 is not now included in part I,

Veterans Regulation No. 1 (a), as amended, as wartime service, hence the eligibility requirements governing payment of pension for disabilities incurred in peacetime service or deaths resulting therefrom must be applied in World War No. 2 cases, although wartime rates are payable by virtue of the provisions of Public, No. 359, Seventy-seventh Congress, December 19, 1941. As a result, the definition of the term "widow of a peacetime veteran" is now applied in determining eligibility of a widow of a World War No. 2 veteran. Section 9 of the bill would amend paragraph 1 (a) part I, of Veterans Regulation No. 1 (a), as amended, to include service on or after December 7, 1941, and before termination of hostilities incident to the present war as wartime service. The effect of this amendment is to apply to veterans and the dependents of veterans of World War No. 2 the eligibility requirements governing payment of pensions based upon wartime service, as contained in part I rather than those now governing their eligibility as contained in part II of this regulation. As a definition of the term "widow of a peacetime veteran" would no longer be applicable to widows of veterans of World War No. 2, it is essential that the term "widow of a World War No. 2 veteran" be defined for adjudicatory purposes. No material change is made in the definition of the term "widow of a peacetime veteran," now applicable in World War No. 2 cases in establishing a definition for the term "widow of a World War No. 2 veteran."

Section 7: Section 7 would amend paragraph VI of Veterans Regulation No. 10—Series to establish a definition of the term "child" for purposes of Public, No. 2, and the Veterans Regulations, as amended, comparable, generally, to that applied in World War No. 1 cases under the World War Veterans' Act, 1924, as amended, and reenacted by Public, No. 141, Seventy-third Congress. The effect of this amendment is to include within the definition of that term, a stepchild, and an illegitimate child under certain conditions, permitting in the latter connection recognition of an illegitimate child, but as to the father only, if he is otherwise shown by evidence satisfactory to the Administrator of Veterans' Affairs to be the putative father of such child.

Section 8: This section would amend paragraph VII Veterans Regulation No. 10, so as to define the term, "parent" and include within the definition of that term and the terms "mother" and "father" as now defined in this paragraph, persons who have stood in loco parentis to a member of the military or naval forces at any time prior to entry into active service for a period of not less than 1 year. It is identical with the definition of these terms as contained in the National Service Life Insurance Act of 1940, as amended, and similar to the definition of the terms "father" and "mother" as contained in the World War Veterans' Act, 1924, as amended, except that the latter includes stepfathers and stepmothers. Such persons, although not included specifically in the proposed amendment, may, if the facts so warrant, establish entitlement as persons who stood in loco parentis. The amendment would establish greater uniformity and permit payment of benefits in certain meritorious cases where it is not now possible to make an award under Public, No. 2, Seventy-third Congress and the veterans regulations, as amended. The amendment would further limit recognition in any case to not more than one father or one mother, as defined, and give statutory preference to such father or mother who actually exercised parental relationship at the time of or most nearly prior to the date of entry into active service by the person who served. Such limitation and direction as to preference are considered desirable in order that administrative complications, where there are contesting claimants, may be avoided.

Section 9: This section under paragraph (a) would amend paragraph 1 (a), part I, Veterans Regulation No. 1 (a), as amended, so as to extend to veterans and to the dependents of deceased veterans entitlement to pension for disability or death resulting from service on or after December 7, 1941, and before termination of hostilities incident to the present war as determined by proclamation of the President or by concurrent resolution of the Congress on a parity with veterans and the dependents of deceased veterans of the Spanish-American War, including the Boxer Rebellion and Philippine Insurrection, and of World War No. 1. While pension, at wartime rates, for service-connected disability or death based upon service in the present war is payable under Public, No. 359, Seventy-seventh Congress, December 19, 1941, the eligibility provisions governing payment of such benefits are those contained in part II of said regulation, as amended, applicable to peacetime service. By including World War No. 2 service in paragraph 1 (a), part I, Veterans Regulation No. 1 (a), as amended, the eligibility requirements would be those established for wartime service rather than those established for peacetime service. As to the former, paragraph 1 (b), part I of Veterans Regulation No. 1 (a), as amended, at present provides that for the purposes of paragraph 1 (a) every person employed in the active military or naval service for 90 days or more shall be taken to have been in sound condition when examined, accepted, and enrolled for service except as to defects, infirmities, or disorders noted at time of the examination, acceptance, and enrollment, or where evidence or medical judgment is such as to warrant a finding that the injury or disease existed prior to acceptance and enrollment.

The amendment made by this bill removes the 90 days' service requirement for application of the presumption of soundness and limits the rebuttal of the presumption by the Government, except as to defects, infirmities, or disorders noted at the time of examination, acceptance, and enrollment, to those cases where clear and unmistakable evidence demonstrates that the injury or disease existed prior to acceptance and enrollment and was not aggravated by such active military or naval service. This modification of the eligibility requirements would affect veterans of World War No. 1, the Spanish-American War, Boxer Rebellion, and Philippine Insurrection who meet the requirements of paragraph 1 (a), part I, of this regulation as well as veterans of World War No. 2. The provision of paragraph 1 (c), part I, Veterans Regulation No. 1 (a), as amended, governing service connection of chronic diseases becoming manifest to a degree of 10 percent or more within 1 year from date of separation from active service, now applicable to those who served in the Spanish-American War, Boxer Rebellion, Philippine Insurrection, or World War No. 1, would be applicable to World War No. 2 cases.

Section 10: This section would recognize service as a cadet at the United States Military Academy, or as a midshipman at the United States Naval Academy, or as a cadet at the United States Coast Guard Academy, on or after December 7, 1941, and before a termination of hostilities incident to the present war as determined by proclamation of the President or by concurrent resolution of the Congress, as active military or naval service in World War No. 2 for the purposes of laws administered by the Veterans' Administration. Under the general pension law, cadets at the United States Military Academy and midshipmen at the United States Naval Academy were considered eligible for pension if disabled by reason of any wound or injury received or disease contracted while in the service of the United States and in the line of duty, there being no distinction between wartime or peacetime service, or active service requirement. Further, such cadets and midshipmen had long been held to be officers of the Army and Navy within the meaning of the general pension laws. They were not pensionable under the service-pension acts solely on the basis of wartime service while pursuing courses of instruction at these academies unless they were assigned to duties which constituted war service as practice cruises during a period of hostilities. Cadets and midshipmen disabled by reason of wounds or injuries received or disease contracted while pursuing the prescribed course of instruction at the academies and in line of duty are entitled to pension at peacetime rates as prescribed in Veterans Regulation No. 1 (a), part II, and if so disabled while assigned to duties constituting war service, which includes practice cruises at sea but excludes practice maneuvers at West Point, to the wartime rates authorized under part I of said regulation, if otherwise entitled. If suffering from permanent total disability not connected with any period of service, the pension rates prescribed in part III of Veterans Regulation No. 1 (a) are payable if the service requirements thereof were met while they were assigned to practice cruises or otherwise actually assigned to active duty during a period of hostilities as enumerated in said regulation. There is no authority under Public, No. 359, Seventy-seventh Congress, to pay pension as provided in section 5 of Public, No. 198, Seventy-sixth Congress, as amended, to the dependents of a cadet or midshipman otherwise entitled to pension under part II, Veterans Regulation No. 1 (a) or the general pension law where his death results from injury or disease received in line of duty while pursuing his prescribed course of instruction at the academy and such death occurs while the United States is engaged in war, for the reason that their service is not active military or naval service.

As many of those who are now being enrolled or inducted in the active military or naval service are continued or enrolled in schools for prescribed courses of instruction as a part of their military training for service during the present war, it is believed that cadets at the United States Military Academy and midshipmen at the United States Naval Academy and cadets at the United States Coast Guard Academy, particularly in view of the intensive training programs prescribed for these groups, should occupy a similar status and that their service while pursuing courses of instruction at these academies for any period on or after December 7, 1941, and prior to termination of hostilities incident to the present war, should be considered as active military or naval service.

Section 11: This section would amend section 1 (c) of Public, No. 484, Seventy-third Congress, as amended by Public, No. 198, Seventy-sixth Congress, so as to provide that any payments made by the United States Government under laws administered by the Veterans' Administration because of disability or death shall not be considered in determining annual income of the widow, child, or children of a deceased World War No. 1 veteran. The law prohibits payment of benefits thereunder if the income of the person entitled exceeds a certain amount but provides that payments of war-risk term insurance, United States Government life (converted) insurance, and payments under the World War Adjusted Compensation Act, as amended, and the Adjusted Compensation Payment Act, 1936, as amended, shall not be considered in determining annual income. It does not specifically include, for exemption, payments under the National Service Life Insurance Act

of 1940, as amended, which were authorized by a subsequent statute.

The amendment, without designating any specific benefits, by the general language employed, would comprehend the benefits now excluded in determining annual income, as well as payments under the National Service Life Insurance Act of 1940, as amended, and any other analogous benefits now or hereafter payable under laws administered by the Veterans' Administration.

The law would be further amended to provide that where payments to a widow are disallowed or discontinued, payment to a child or children of the deceased veteran may be made as though there is no widow. Under the existing law, where there is a widow with child or children, whether in her custody or not, the rights of such child or children are governed by the rights of the widow and where her entitlement is barred because of the income limitation, it is not possible to award benefits to the child or children. It is believed that this was not intended and the amendment will permit payment of benefits to a child or children under such or similar circumstances and result in more equitable administration of this law.

Section 12: This section would amend paragraph V, part I, Veterans Regulation No. 2 (a), which pertains to payment of pension, compensation, or emergency officers' retirement pay, to which a person was entitled prior to his death and not paid during his lifetime. The amendment would limit the amount payable to that which was due and unpaid for a period not to exceed 1 year prior to date of death, whereas now there is no limit as to the period prior to death over which the amount due may be computed. It would also authorize payment under ratings or decisions based upon evidence in file at date of death whereas at present payment may be made only under ratings or decisions existing at date of death. In specifying the persons to whom payments may be made and directing the order in which each shall be eligible, certain changes have been made with a view to clarifying and facilitating uniform application of the provisions under laws administered by the Veterans' Administration. Where there are no persons entitled to such benefits, within the classes thus enumerated, the regulation authorizes payment of such amount undue and unpaid at death as may be necessary to reimburse the person who bore the expense of burial. The amendment would permit similar reimbursement to the person who bore the expense of last sickness as well as the expense of burial. The amendment would further provide that a check received by a payee in payment of pension, compensation, or retirement pay shall, in the event of the death of the payee on or after the last day of the period covered by such check, become an asset of the estate of the deceased payee. Under the regulation, such checks, other than for pension payable under laws relating to service prior to April 21, 1898, and those reenacted by Public, No. 269, Seventy-fourth Congress, August 13, 1935, must be returned and canceled. Cases have arisen wherein substantial justice would require that the amount of the check received but not negotiated by the payee during his lifetime be considered as an asset of his estate.

Section 13: This section would amend paragraph VI of Veterans Regulation No. 6 (c) by modifying the provisions of subparagraphs (A) and (B), repealing subparagraph (C) and substituting a new subparagraph (C) in lieu thereof and by adding a new subparagraph (D).

The effect of the proposed changes would be to make veterans of all wars and the regular establishment subject to the limitations on payment of pensions, compensation, or retirement pay contained in subparagraphs (A), (B), and (C), except that the pension of any disabled veteran who is an inmate o. the United States Soldiers' Home or of any National or State soldiers' home on the date of the enactment of the amendment may not be reduced or discontinued by reason of the provisions of (A), (B), or (C). The proposed changes will insure uniform administration as to all persons furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof.

The principal changes which would be effected are as follows:

(A) At present, the amount payable to a disabled veteran, having no dependents, while he is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof is limited to $15 per month where benefits are payable for service-connected disability, and $6 per month where benefits are payable for non-service-connected disability. However, in the case of any such veteran entitled to pension on account of service prior to the Spanish-American War who is being furnished such treatment or care by the Veterans' Administration, $15 per month is payable. The amendment would authorize payment of $20 per month in all these cases, except where the veteran is entitled to pension for non-service-connected disability under part III of Veterans Regulation No. 1 (a), as amended, but would increase the rate from $6 to $8 per month in such cases. This is in cognizance of the increase of pension for permanent total non-service-connected disability under part III, Veterans Regulation No. 1 (a), as amended, from $30 to $40 per month. The effect of the amendment would be to authorize payment of pension in Spanish-American War cases on a parity with Civil War cases at the rate of $20 per month where the disabled veteran without dependents is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof.

(B) The changes proposed by this subparagraph would permit consideration of funds derived from any source when the estate of an insane disabled veteran, having no dependents, who is being furnished hospital treatment, institutional, or domiciliary care by the United States or any political subdivision thereof, equal or exceeds $1,500, whereas at present only funds derived from payments under certain laws administered by the Veterans' Administration may be considered under this limitation when discontinuing further payments until the estate is reduced to $500; extend the limitation to cases where the insane disabled veteran is maintained at his own expense in an institution, but make provision, in such cases, for payment of any additional amounts otherwise payable as would equal the amount charged for his care and maintenance in such institution not exceeding the amount the Administrator of Veterans' Affairs determines to be the charge as fixed by an applicable statute or valid administrative regulation. This latter provision is designed to prevent circumvention of the statute and the accumulation of large estates for the ultimate benefit of remote heirs or next of kin on death of the veteran, in those cases where he is removed from an institution where he is being maintained by the Government to an institution whose maintenance charges may be paid from his estate, thus avoiding operation of the provision for discontinuing payments in cases subject to the limitations of this subparagraph.

(C) In view of the foregoing provisions, the present subparagraph (C) relating to the amount payable under the regulation where benefits are based upon service prior to the Spanish-American War is not required and a new subparagraph is substituted in lieu thereof, which provides that any veteran subject to the provisions of subparagraph (A) or (B) shall be deemed to be single and without dependents in the absence of satisfactory evidence to the contrary. It further provides that in no event shall increased compensation, pensions, or retirement pay of such veteran be granted for any period more than 6 months prior to receipt of satisfactory evidence showing such veteran has a wife, child, or dependent parent.

(D) As the purpose of the proposed amendments to paragraph VI of Veterans Regulation No. 6 (a), as amended, is to insure uniform application of the limitations prescribed therein where any disabled person is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, provision has been made in subparagraph (E) for the repeal of those laws or parts of laws regulating the amount of pension which may be paid to any disabled veteran while an inmate of the United States Soldiers' Home or any National or State soldiers' home. It is proposed, however, by the new subparagraph (D) to save from reduction or discontinuance, the pension of any such disabled veteran who is in the United States Soldiers' Home or any National or State soldiers' home on the date of enactment of the amendment where such reduction or discontinuance would be caused by the operation of the provisions of (A), (B), or (C). Any disabled veteran thereafter admitted would, of course, be subject to the limitations prescribed therein.

(E) This subparagraph provides for the repeal or modification of any law or regulation in conflict with the foregoing provisions.

Section 14: Section 14 (a) has for its general purpose the simplification of wartime service-connected rates of death compensation or pension to widows and children by elimination of the differential in rates based upon age, and adoption of the higher rates for all ages, with some adjustments within what are considered to be conservative and equitable limits. The rates under existing law, Public, No. 198, Seventy-sixth Congress, July 19, 1939, and the rates proposed by this bill are set forth for convenience below:

PUBLIC, NO. 198, 76TH CONG., JULY 19, 1939

Widow—no child

Age under 50 years	$38
Age 50 years or over	45

Widow—with child or children

Widow's rate, with $10 additional for first child up to 10 years of age, increased to $15 from age 10 with $8 for each additional child up to 10 years of age, increased to $13 from age 10.

Rates for children (no widow)

1 child	$20
2 children	33
3 children	46
Each additional child	8
Total amount may not exceed	83

PROPOSED RATES

Widow—no child

Irrespective of age	$50

Widow—with child or children

Widow, 1 child, with $13 for each additional child	$65

Rates for children (no widow)

1 child	$25
2 children	38
Each additional child	10
Total amount may not exceed	100

With respect to the elimination of age differentials as to widows and children, while the facts supporting such principle are recognized, experience has shown that an age limitation produces inequitable results; that widows under age 50 generally have minor children, and responsibility for their care and supervision precludes their being employed on a permanent and full-time basis, and in many instances they are not qualified for sufficiently remunerative employment to warrant the differentiation. The age differential as to children was established in the veterans regulations promulgated by the President under the Economy Act of March 20, 1933, and while it is generally true that the cost of maintaining a child under 10 years of age is undoubtedly less than for a child of 10 years of age or over, the particular age limitation in this instance also produces inequitable results as circumstances exist in many cases where the importance of the differential is materially reduced. One of the most important considerations in connection with the proposed change is that the age differentials require adjudicative actions involving administrative cost and impede prompt adjudication of death compensation and pension claims. These results offset the savings effected by establishment of age differentials. Further, although administrative complications should be avoided at any time, the exigency of the present war makes it imperative that any provisions of law which are not shown to be justifiably necessary and which serve to hamper adjudications of claims should be changed.

Section 14 (b) is designed to accomplish the same purpose with respect to peacetime-service-connected death pension benefits. The rates which would be authorized are approximately 75 percent of the rates which would be authorized under section 14 (a) for wartime-service-connected death. This ratio has been consistently maintained in the laws or veterans regulations establishing monetary rates for disability or death resulting from wartime or peacetime service. Paragraph (c) relates to the effective dates of benefits or increased benefits authorized under this section.

It is estimated that the cost of the proposed equalization of rates of compensation or pension to widows and children of veterans whose deaths resulted from wartime or peacetime service would amount to approximately $4,536,000 the first year. This estimate is based upon the following statistical data:

	Number of cases	Estimated cost first year
Wartime-service-connected:		
World War No. 2 [1]	2,100	$349,000
World War No. 1	34,000	3,516,000
Spanish-American War	1,000	66,000
Total wartime	37,100	3,931,000
Regular Establishment:		
At peacetime rates	7,350	510,000
At wartime rates	750	95,000
Total Regular Establishment	8,100	605,000
Total estimated cost	45,200	4,536,000

[1] Based on cases on rolls Mar. 31, 1943.

This additional expense, it is believed, would be offset to some extent by savings effected through simplification of adjudicative actions, which, as stated above, now result in considerable administrative cost due to complicated adjustments in awards necessitated by present age differentials.

Section 15: This section would amend paragraph XIII, Veterans Regulation No. 10, and repeal certain laws relating to concurrent payments of compensation or pension or of such gratuities and active service or retired pay, and provide more equitable provisions with respect thereto to be uniformly applied under all laws administered by the Veterans' Administration.

The statutes relating the concurrent payments of pension under the general or service pension laws, or compensation under the World War Veterans Act, 1924, as amended, which were continued or restored with limitations by Public, No. 141, Seventy-third Congress, or pension under Public, No. 2, Seventy-third Congress, and the veterans regulations, as amended, or such benefits with active service or retired pay are not uniform, and Public, No. 484, Seventy-third Congress, as amended, contains no provision either permitting or prohibiting payment of benefits thereunder to any person in receipt of compensation or pension under any other law. As the result of the variance in these laws and administrative interpretations thereof, certain inequalities exist which justify immediate correction by way of legislation. For example, a widow entitled to death pension benefits under the general or service pension law or Public, No. 484, Seventy-third Congress, as amended, may receive such benefits concurrently with active service pay as a member of the Women's Reserve of the Navy or Women's Reserve of the Coast Guard or as a United States Army nurse, whereas a widow entitled to death pension benefits under Public, No. 2, Seventy-third Congress, and the veterans regulations, as amended, or Public, No. 141, Seventy-third Congress, as amended, would be precluded from receiving such benefits while in receipt of active service pay. These and similar inequalities arising under existing laws will be rectified by the proposed amendment.

Section 16: This section provides that the act shall be effective from date of its approval and that necessary adjustments in awards shall be effective, unless otherwise provided, the first of the calendar month following adjudicative action, or the first of the calendar month following date of receipt of claim, whichever is earlier. In all other cases, benefits authorized by virtue of any of the provisions in the act will be effective from date of receipt of claim therefor except that death compensation or pension will be effective as of the day following date of death of the veteran if claim is filed within 1 year after the death of the veteran. This provision conforms to similar provisions in sections 2 and 4 of Public, No. 690, Seventy-seventh Congress, July 30, 1942. This section also provides that payments authorized under this act shall not be made for any period prior to date of its enactment.

Section 17. This section provides that pension payable for disability shall be payable from date of discharge if claim therefor is filed within 1 year from discharge.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 1, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Definition of the term "child" under the acts enumerated in section 1, Public, No. 144, Seventy-eighth Congress.

For the purpose of making effective the provisions of section 1, Public, No. 144, Seventy-eighth Congress, the following instruction is hereby issued:

1. It is provided by section 1, Public, No. 144, Seventy-eighth Congress, that the administrative, definitive, and regulatory provisions of Public Law No. 2, Seventy-third Congress, March 20, 1933, and veterans regulations, (as now or hereafter amended, shall be applicable to benefits provided under Public Law No. 141, Seventy-third Congress, March 28, 1934, as amended; Public Law No. 484, Seventy-third Congress, June 28, 1934, as amended; and under laws reenacted by Public Law No. 269, Seventy-fourth Congress, August 13, 1935, as amended: *Provided*, That where solely as a result of the definition of the term "child" in paragraph VI of Veterans Regulation No. 10 series as amended by this act, the child or children of a deceased veteran of the Spanish-American War, Boxer Rebellion, or Philippine Insurrection would be entitled to benefits under the general pension law or service pension acts reenacted by Public Law No. 269, Seventy-fourth Congress, August 13, 1935, the rates of service pension applicable to such child or children shall be those provided in Public Law No. 484, 73d Congress, as now or hereafter amended.

Section 7, Public No. 144, Seventy-eighth Congress, amends paragraph VI of Veterans Regulation No. 10 series issued under Public Law No. 2, Seventy-third Congress, March 20, 1933, and the instruction issued under that section defining the term "child" will be for application under the laws enumerated in section 1.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 12, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 2

Section 1, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Review of central office death claims affected by section 1 of Public, No. 144, Seventy-eighth Congress.

For the purpose of effectuating the provisions of section 1, Public, No. 144, Seventy-eighth Congress, the following instructions are issued:

1. Cases to be reviewed: The budget officer and chief of statistics will supply the dependents claims service with a list of central office cases in which a widow and child or child is receiving death pension under the service pension acts reenacted by Public, No. 269, Seventy-fourth Congress, or Veterans Regulation No. 1 (a), part III.

2. Award action: Based upon the list furnished by the budget officer and chief of statistics the dependents claims service will request the case files for review to determine in each case whether additional or increased benefits may be awarded. If, upon review it is determined that entitlement exists by virtue of section 1 of Public, No. 144, Seventy-eighth Congress, appropriate amended award action will be taken on supplemental award brief face, form 552c, and the payee notified by means of an award letter.

3. Effective dates: (A) Awards to widows with children whose names were on the rolls July 13, 1943, under the act of May 1, 1926, as reenacted by Public, No. 269, Seventy-fourth Congress, will be amended to include the additional $6 monthly for each child effective—

(1) The first of the calendar month following adjudicative action or the first of the calendar month following date of receipt of claim, whichever is the earlier, in those instances where the child became or will become 16 years of age on or after July 13, 1943, and prior to the first of the calendar month following that in which adjudicative action is taken; and

(2) The sixteenth birthday of the child in those instances where the child will become 16 years of age on or after the first of the calendar month following that in which adjudicative action is taken.

(B) Awards to children (no widow) under 16 years of age whose names were on the rolls July 13, 1943, under the act of May 1, 1926, as reenacted by Public, No. 269, Seventy-fourth Congress, will be amended to reflect the rates provided in Public, No. 484, Seventy-third Congress, as amended, as outlined in R. & P. R-2634 (B) (2), effective in the same manner as stated in (A) above.

(C) Awards to children (no widow) whose names were on the rolls July 13, 1943, under

part III, Veterans Regulation No. 1 (a), wherein the service requirements of the act of May 1, 1926, are met, will be amended to reflect the rates provided in Public, No. 484, Seventy-third Congress, as amended, as outlined in R. & P. R-2634 (B) (2), effective as of the first of the calendar month following that in which adjudicative action is taken or the first of the calendar month following date of receipt of claim, whichever is the earlier, provided they are otherwise entitled. It should be borne in mind that the income restrictions contained in Veterans Regulation No. 1 (a), part III, are no longer applicable to children who are continued or placed on the rolls under the pension laws as reenacted by Public, No. 269, Seventy-fourth Congress, at the rates provided by Public, No. 484, Seventy-third Congress, as amended.

4. Should a case be encountered in the course of the review in which a child was on the rolls with the widow or in its own right, to or for whom payments were discontinued prior to July 13, 1943, because of attaining the age of 16, and who is shown to be under 18 years of age at the time of the review of the file, appropriate action will be taken to ascertain the child's eligibility to be restored to the rolls under section 1 of Public, No. 144, Seventy-eighth Congress.

5. Previous determinations on which an award was predicated will be accepted as correct in the absence of clear and unmistakable error or fraud.

FRANK T. HINES,
Administrator of Veterans' Affairs.
SEPTEMBER 20, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 2, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Payment of compensation, pension, or retirement pay to wife of an incompetent veteran having no guardian.

For the purposes of laws administered by the Veterans' Administration pertaining to compensation, pension, or retirement pay, the following instructions are issued:

1. Section 2, Public, No. 144, Seventy-eighth Congress, amends section 21 of the World War Veterans' Act, 1924, as amended, by adding a new section No. 4, which provides in part that any benefit payable or paid by the Veterans' Administration shall be subject to the applicable provisions of Public Law No. 262, Seventy-fourth Congress (U. S. C., title 38, secs. 556a, 454a), as now or hereafter amended: *Provided*, That in any case of an incompetent veteran having no guardian, payment of compensation, pension, or retirement pay may be made in the discretion of the Administrator to the wife of such veteran for the use of the veteran and his dependents.

2. It will be observed that pursuant to the provisions of the preceding paragraph compensation, pension, or retirement pay due an incompetent veteran for whom no guardian has been appointed may, in the discretion of the Administrator of Veterans' Affairs, be paid to the wife of such veteran for the use of the veteran and his dependents. It will also be noted the amendment of Veterans Regulation No. 6 (a), paragraph VI, as amended by section 13, Public, No. 144, Seventy-eighth Congress, among other things, authorizes payment of compensation, pension, or retirement pay to the wife while the veteran is hospitalized or furnished institutional or domiciliary care. The procedure outlined under R. & P. 5201 (A) will be followed in both classes of cases.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 19, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 3, Public, No. 144, 78th Congress (act of July 13, 1943)

Subject: Renouncement of pension or compensation.

For the purposes of Public, No. 2, Seventy-third Congress, as amended, and Public, No. 141, Seventy-third Congress, as amended, the following instructions are issued:

1. Section 3, Public, No. 144, Seventy-eighth Congress, amends paragraph XXI of Veterans Regulation No. 10 series to read as follows:

"Any person entitled to pension or compensation under any law or veterans regulation administered by the Veterans' Administration may renounce his right thereto. The application renouncing the right shall be in writing over the person's signature and upon filing of such application, payment of such benefits and the right thereto shall be terminated and he shall be denied any and all rights thereto from date of receipt of such application by the Veterans' Administration. The renouncement provided for herein shall not preclude the person from filing a new application for pension or compensation at a future date but such application shall have the attributes of an original application and no payment will be made for any period prior to the date thereof."

2. It will be observed the provisions of the preceding paragraph permit renouncement of pension or compensation payable under any law or veterans regulation administered by the Veterans' Administration.

3. By reason of this amendment the procedure outlined in R. & P. R-2554 covering renouncement of pension is applicable on and after July 13, 1943, the date of the approval of this act, to both compensation and pension.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 12, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Sections 7 and 8, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Definitions of the terms "child," "parent," "father," and "mother."

For the purposes of Public, No. 2, Seventy-third Congress, as amended, Public, No. 141, Seventy-third Congress, as amended, Public, No. 484, Seventy-third Congress, as amended, and the laws reenacted by Public, No. 269, Seventy-fourth Congress, as amended, the following instructions are issued:

1. Section 7 of Public, No. 144, Seventy-eighth Congress, amends paragraph VI of Veterans Regulation No. 10 Series to read as follows:

"The term 'child' shall mean a person unmarried and under the age of 18 years, unless prior to reaching the age of 18 years the child becomes or has become permanently incapable of self-support by reason of mental or physical defect, who is a legitimate child; a child legally adopted; a stepchild if a member of the man's household; an illegitimate child but as to the father only if acknowledged in writing, signed by him, or if he has been judicially ordered or decreed to contribute to the child's support or has been, prior to his death judicially decreed to be the putative father of such child, or if he is otherwise shown by evidence satisfactory to the Administrator of Veterans' Affairs to be the putative father of such child: *Provided*, That the payment of pension shall be continued after the eighteenth birthday and until completion of education or training (but not after such child reaches the age of 21 years), to any child who is or may hereafter be pursuing a course of instruction at a school, college, academy, seminary, technical institute, or university, particularly designated by him and approved by the Administrator, which shall have agreed to report to the Administrator the termination of attendance of such child, and if any such institution of learning fails to make such report promptly the approval shall be withdrawn."

2. Section 8 of Public, No. 144, Seventy-eighth Congress, amends paragraph VII of Veterans Regulation No. 10 to read as follows:

"The terms 'parent,' 'father,' and 'mother' include a father, mother, father through adoption, mother through adoption, and persons who have stood in loco parentis to a member of the military or naval forces at any time prior to entry into active service for a period of not less than 1 year: *Provided*, That not more than one father and one mother, as defined, shall be recognized in any case, and preference shall be given to such father or mother who actually exercised parental relationship at the time of or most nearly prior to the date of entry into active service by the person who served."

3. Since section 1, Public, No. 144, Seventy-eighth Congress, makes the administrative, definitive, and regulatory provisions of Public Law No. 2, Seventy-third Congress, and Veterans Regulations, as now or hereafter amended, applicable to benefits provided under Public Law No. 141, Seventy-third Congress, as amended, Public Law No. 484, Seventy-third Congress, as amended, and the laws reenacted by Public, No. 269, Seventy-fourth Congress, as amended, the above definitions are for application under Public, No. 2, Seventy-third Congress, as amended, Public, No. 141, Seventy-third Congress, as amended, Public, No. 484, Seventy-third Congress, as amended, and the laws reenacted by Public, No. 269, Seventy-fourth Congress, as amended, on and after July 13, 1943, the date of the approval of the act. It is to be noted that the term "child" includes an illegitimate child and prescribes proof to be supplied as to the father. Proof of birth is all that is required as to the mother.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 18, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 9 (a) and (b), Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

For the purposes of section 9 (a) and (b), Public, No. 144, Seventy-eighth Congress, the following instructions are hereby issued:

1. Section 9 (a) of Public No. 144, Seventy-eighth Congress, amends paragraph 1 (a), part I, Veterans Regulation 1 (a), as amended, to include therein as war service, active military or naval service on or after December 7, 1941, and before the termination of hostilities incident to the present war as determined by proclamation of the President or by concurrent resolution of Congress.

(a) The amendment of paragraph 1 (a) in this manner makes all the other provisions of part I, Veterans Regulation 1 (a), as amended, except paragraph III thereof applicable to World War No. 2 service. Determinations as to whether a disease or injury was incurred in or aggravated by World War No. 2 service, as defined in Veterans Regulation 1 (a), part I, paragraph 1, as amended, or that death resulted therefrom, as to entitlement to disability or death pension for periods on or after July 13, 1943, will be made in accordance with the provisions of paragraphs 1 (a), (b), (c), and (d), part I, Veterans Regulation 1 (a), as amended, and the regulations and instructions issued pursuant thereto. Part I and appropriate paragraph will be cited in the rating code, instead of part II, as heretofore required and original awards will be prepared on Form 553.

2. Section 9 (b) of Public, No. 144, Seventy-eighth Congress, amends paragraph 1 (b), part I, Veterans Regulations 1 (a), as amended, as follows:

"For the purposes of paragraph 1 (a) hereof every person employed in the active military or naval service shall be taken to have been in sound condition when examined, accepted, and enrolled for service except as to defects, infirmities, or disorders noted at the time of the examination, acceptance, and enrollment, or where clear and unmistakable evidence demonstrates that the injury or disease existed prior to acceptance and enrollment and was not aggravated by such active military or naval service."

(a) Ninety days' or more service is no longer necessary under paragraph 1 (b), as amended, also that the provisions thereof are applicable to all war service as defined in paragraph 1 (a), as amended. Under paragraph 1 (b), as amended, sound condition when examined, accepted, and enrolled for service may be rebutted only by notation of defects, infirmities, or disorders at time of examination, acceptance, and enrollment, or where clear and unmistakable evidence demonstrates that the injury or disease, though not noted, existed prior to acceptance and enrollment. Regarding notation at enlistment, only those defects, infirmities, and disorders actually found as a result of examination are to be considered as noted. History or complaints volunteered by or elicited from the veteran at the time of examination do not constitute notations unless confirmed by proper notation of the examining officer as result of his examination.

(b) "Clear and unmistakable" means obvious or manifest. Accordingly, evidence which makes it obvious or manifest, that the injury or disease under consideration existed prior to acceptance and enrollment for service will satisfy the requirements of the statute.

(c) Regardless of the period of war service, medical judgment alone, as distinguished from well established and accepted medical principles, is not sufficient to rebut sound condition at the time of entrance into active military service, nor will admitted history of prior disease by the veteran or members of his family suffice, although they may serve as leads for further development.

(d) The provisions of (a), (b), and (c) hereof are subject to the following: There are certain medical principles so well and universally recognized as definitely to constitute fact, and when in accordance with these principles existence prior to entrance into service is established, no further additional or confirmatory facts are necessary. For example, with notation or discovery during service of residual conditions, such as scars, healed fractures, absent or resected parts or organs, supernumerary parts, congenital malformations, fibrosis evidencing formerly active tuberculosis, with no evidence of the pertinent antecedent active injury or disease during service, the established facts are so convincing as to impel the conclusion the residual condition existed prior to entrance into active service, without further proof of this fact. Similarly manifestation of lesions or symptoms of chronic disease from date of enlistment, or so close to that date that the disease could not have originated in so short a period, will be accepted as clear and unmistakable proof that the disease existed prior to entrance into active service. Likewise, manifestation of disease within less than the minimum incubation period after enlistment will be accepted as showing inception prior to service.

3. It is contemplated that in claims based upon recent military or naval service and discharge on account of disability, development of evidence as to prior existence and severity of injury or disease, either by correspondence, social survey, or field examination, will not be undertaken when the acceptable evidence of record, including well-established and generally accepted medical principles will permit either favorable adjudication or denial. Development by correspondence, etc., will be resorted to only when there are definite indications in file of a disabling condition at the time of enlistment, as severe as, or more severe then, the condition at discharge, which, however, require confirmation by clear and unmistakable evidence to be acceptable. Under no circumstances will a claim be developed merely to establish prior episodes of disease or injury which may have cleared up leaving no actual disability at the time of enlistment.

(a) Where notation or clear and unmistakable evidence shows that a disease or injury existed prior to service, service connection on the basis of aggravation will be conceded in case there is any increase in disability during active service resulting from the injury or disease manifested on the record, except where contrary to clear and unmistakable facts, including medical principles.

(b) In considering the question of aggravation, attention is invited to the fact that by reason of the amendment of paragraph 1 (b), part I, regulation 1 (a), greater weight attaches to the report of examination at the time of entrance into active service than heretofore. Also, that paragraph 1 (d), part I, Veterans Regulation 1 (a), is modified to the extent that medical judgment alone, as distinguished from well-established and accepted medical principles, is no longer sufficient to support a finding of natural progress. Further, that medical or surgical treatment furnished during service for preexisting conditions does not of itself establish increase in disability; however, increase in severity necessitating treatment, unless actually improved thereby, may do so. Discovery or notation of healed residuals of former injury or disease, without evidence of active pathology during service, does not reflect increased disability. Mere recurrences within a short period after entrance into active service, as of epileptic seizures, seasonal asthma, recurrent dislocations, etc., do not establish increase in the degree of disability. There are certain diseases, including new growths (including most endocrine disturbances, but not hyperthyroidism or diabetes mellitus), epilepsy, arteriosclerosis, and hypertrophic (degenerative) arthritis, commonly designated osteoarthritis, which in the absence of pertinent local injury or abrupt and sudden pathological developments do not of themselves reflect increase in severity. On the other hand advancement of conditions such as peptic ulcer, atrophic arthritis, diabetes mellitus, active pulmonary tuberculosis, bronchial asthma (not established as seasonal), and dementia praecox (with any sudden alteration of personality), can be expected from the unusual exertion, exposure, emotional stress or strain, or other adverse influence of the service. Acute infections, as pneumonia, active rheumatic fever (even though recurrent), acute pleurisy, acute ear disease, and sudden developments, as hemoptysis, lung collapse, perforating ulcer, decompensating heart disease, coronary occlusion or thrombosis, cerebral hemorrhage, occuring in service are service-incurred or aggravated unless shown by clear and unmistakable evidence that there was no increase in severity during service. Even though prior existence of a condition not noted by report of examination at time of entrance into active service may be established by clear and unmistakable evidence, the records and affidavits of physicians, hospitals, or institutions cannot be accepted to controvert the report of examination at the time of entrance into active service as to the severity of the preexisting condition, unless the evidence constitutes clear and unmistakable showing to the contrary.

(c) Under Veterans Regulation 1 (a), part I, as amended, no pension is payable if the disability is the result of the person's own misconduct. Hence question of service connection for misconduct conditions either by incurrence or aggravation under Veterans Regulation 1 (a), part I, as amended, is not involved. In the event question of innocent incurrence or aggravation of misconduct condition arises, cases will be submitted to central office, attention director of the appropriate service, for disposition.

4. Determinations as to service connection for chronic diseases on account of World War No. 2 service will be made in accordance with the provisions of Regulations and Procedure R-1080 and 1086. Hospital confirmation of diagnosis of chronic disease initially made after discharge from World War No. 2 service will be required, in disability claims.

(a) In considering the listed chronic diseases, the following points should be borne in mind: Rheumatic fever has no causative relationship to atrophic or hypertrophic arthritis. Epidemic encephalitis is an acute infectious disease having a period of incubation limited to 3 weeks; however, early episodes may be mistaken for influenza or other acute infectious disease. Endocarditis and myocarditis, as active diseases, are acute, prostrating complications of infections, particularly rheumatic fever; chronic types are rarely, if ever, recognized; inactive types, as valvular lesions, myocardial damage, etc., must be considered for service connection on the basis of the status of the disease when active or on the basis of actual decompensation during service. Glomerular, or parenchymatous, nephritis is a complication of acute infectious disease. Nephrosclerosis, or interstitial nephritis, is closely associated with arteriosclerosis and is typically chronic. Among the organic diseases of the nervous system, many, for example, anteriopoliomyelitis and spinal meningitis, are typically of acute onset. The psychoses must be viewed in relationship to the disease, if any, with which they are associated. No type of psychoneurosis is included in the list of chronic diseases.

5. The discussion of "reasonable doubt," page 2, 1933, schedule for rating disabilities, will be borne in mind in resolving doubts in favor of veterans when applying the policies and principles outlined above as to sound condition at the time of examination, acceptance and enrollment, and aggravation. Also, in all matters of service connection, due consideration shall be given to the places, types, and circumstances of the veterans' service.

6. The application of the foregoing instructions carrying into effect the purpose and intent of section 9 (b), Public, No. 144, Seventy-eighth Congress, will be in full accord with the principles involving clear and unmistakable evidence and burden of proof enunciated in Public, 141, Seventy-third Congress.

7. The effective date of ratings and awards made pursuant to paragraph 1 (b), part I, Veterans Regulation 1 (a), as amended, will be determined in accordance with the provisions of instruction I, sections 16 and 17, Public, No. 144, Seventy-eighth Congress.

FRANK T. HINES,
Administrator of Veterans' Affairs.

SEPTEMBER 4, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 10, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Service as a cadet or as a midshipman.

For the purposes of section 10, Public, No. 144, Seventy-eighth Congress, the following instructions are hereby issued:

1. Section 10 provides:

"Service as a cadet at the United States Military Academy or as a midshipman at the

United States Naval Academy or as a cadet at the United States Coast Guard Academy on or after December 7, 1941, and before termination of hostilities incident to the present war as determined by proclamation of the President or by concurrent resolution of the Congress shall be considered active military or naval service in World War No. 2 for the purposes of laws administered by the Veterans' Administration."

2. By reason of the provisions of section 10, service as a cadet at the United States Military Academy or as a midshipman at the United States Naval Academy or as a cadet at the United States Coast Guard Academy on or after December 7, 1941, and before termination of hostilities incident to the present war as determined by proclamation of the President or by concurrent resolution of the Congress, is active military or naval service in World War No. 2. Accordingly persons performing such service will be entitled to all benefits provided by Veterans Regulation No. 1 (a), part I, as amended, if otherwise in order.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 12, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 12, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Accrued apportioned awards.

For the purposes of all laws administered by the Veterans' Administration pertaining to pension, compensation, or retirement pay, the following instructions are issued:

1. Section 12 amends paragraph V, part I, Veterans Regulation No. 2 (a), to read in part as follows:

"Pension, compensation, or retirement pay authorized under laws administered by the Veterans' Administration, to which a person was entitled prior to the date of his death, and not paid during his lifetime, and due and unpaid for a period not to exceed 1 year prior to death under existing ratings or decisions, or those based on evidence in the file at date of death, shall, upon the death of such person, be paid as hereinafter set forth:

"(a) Upon the death of a person receiving an apportioned share of the veteran's pension, compensation, or retirement pay, all or any part of such unpaid amount, to the veteran or to any other dependent or dependents as may be determined by the Administrator of Veterans' Affairs."

2. Upon the death of a person receiving an apportioned share of a veteran's pension, compensation, or retirement pay the accrued amount due the apportionee at the time of death will be awarded to the veteran except where the evidence of record indicates this would work a hardship upon other dependents, in which event the complete case file will be forwarded by the adjudication officer or chief, claims division, with appropriate recommendation as to the exact disposition of the apportioned share through the director, veterans' claims service, to the assistant administrator in charge of compensation, pension, and vocational rehabilitation, who will determine the person or persons to whom the accrued apportioned share will be paid.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 12, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 13, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Adjustment of awards of members of the United States Soldiers' Home or of any National or State soldiers' home.

For the purposes of section 13, Public, No. 144, Seventy-eighth Congress, the following instruction is hereby issued:

1. With respect to disabled veterans who were inmates of the United States Soldiers' Home or of any National or State soldiers' home on July 13, 1943, subparagraphs (D) and (E), section 13, Public, No. 144, Seventy-eighth Congress, provide as follows:

"(D) The pension of any disabled veteran who is an inmate of the United States Soldiers' Home or of any National or State soldiers' home on the date of this enactment, shall not be reduced or discontinued by reason of the provisions of (A), (B), or (C) above.

"(E) The provisos of section 3 of the act of May 1, 1926 (44 Stat. 383; U. S. C., title 38, sec. 364b), and of sections 2 and 4 of the act of June 2, 1930 (46 Stat. 492, 493; U. S. C., title 38, secs. 365a, 365c); that part of the proviso of section 5 of the act of July 3, 1926, extending to and ending with a semicolon (44 Stat. 807; U. S. C., title 38, sec. 321a); the second proviso of section 5 of the act of June 9, 1930 (44 Stat. 530; U. S. C., title 38, sec. 321c); the third proviso of section 1 of the act of August 25, 1937 (50 Stat. 786; U. S. C., title 38, sec. 381–1); the first proviso of section 4 of the act of May 24, 1938 (52 Stat. 440; U. S. C., title 38, sec. 370c); and all other provisions of law or regulation in conflict with the foregoing provisions are hereby repealed or modified accordingly."

2. The provisions of subparagraphs (A), (B), and (C) are applicable where the initial admission or return from furlough of 30 days or more is on or after July 14, 1943, and the reduction of pension to $20 monthly in service-connected or service pension cases, or $8 monthly in part III, Veterans Regulation No. 1 (a) cases specified therein is for application where there is no wife, child, or dependent parent as defined by the amended instructions. The full amount of pension otherwise payable will be continued if the veteran has the required dependents as currently defined.

3. Those veterans who were inmates of the homes specified on July 13, 1943, are protected from the reduction provisions of subparagraphs (A), (B), or (C). If, however, such a veteran has a wife, child, or dependent parent, the full amount of pension otherwise payable will be awarded from the first of the calendar month following receipt of claim for such increase, or the first of the calendar month following adjudicative action, whichever is the earlier.

4. Where the inmate of the home is deemed insane by the Administrator of Veterans' Affairs, and has neither wife, child, nor dependent parent, the chief attorney, upon receipt of an account from the fiduciary or at the regular accounting period, will notify the proper adjudication agency whether the estate, derived from any source, equals or exceeds $1,500. Where an award action is necessary, for any reason, the chief attorney will be requested to advise the adjudicating agency as to whether the value of the veteran's estate, derived from any source, equals or exceeds $1,500. No increased benefits will be awarded until the necessary evidence is in file. Reductions otherwise in order will, however, be made, pending receipt of the evidence requested. The instruction issued under subparagraphs (A), (B), and (C) will be applicable where the insane veteran is maintained at his own expense in an institution.

5. The veteran and his representative, if any, or his guardian will be notified of the action taken under section 13, Public, No. 144, Seventy-eighth Congress, and of the right to appeal.

FRANK T. HINES,
Administrator of Veterans' Affairs.
AUGUST 3, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 2

Section 13, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Payment of Pension, Compensation or Retirement Pay While Receiving Hospitalization, Institutional or Domiciliary Care.

For the purposes of all laws administered by the Veterans' Administration pertaining to pension, compensation, or retirement pay, the following instructions are issued:

1. Section 13 amends paragraph VI of Veterans Regulation No. 6 (a), as amended, to read as follows:

"(A) Where any disabled veteran having neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States, or any political subdivision thereof, any pension, compensation, or retirement pay shall not exceed $20 per month: *Provided*, That the amount payable for any such disabled veteran, entitled to pension for non-service-connected disability under the provisions of part III of Veterans Regulation No. 1 (a), as amended, shall not exceed $8 per month. Where any disabled veteran who is being furnished hospital treatment, institutional or domiciliary care by the United States, or any political subdivision thereof, has a wife, child, or dependent parent, the pension, compensation, or retirement pay may, in the discretion of the Administrator, be apportioned on behalf of such wife, child, or dependent parent, in accordance with instructions issued by the Administrator.

"(B) Where any disabled veteran having neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States, or any political subdivision thereof, and shall be deemed by the Administrator of Veterans' Affairs to be insane, the pension, compensation, or retirement pay for such veteran shall be in the amounts specified in (A) above: *Provided*, That in any case where the estate of such disabled insane veteran derived from any source equals or exceeds $1,500, further payments of such benefits will not be made until the estate is reduced to $500. Any such veteran without such dependent or dependents, when maintained at his own expense is an institution, shall be paid such amount otherwise payable as equals the amount charged for his care and maintenance in such institution not exceeding the amount the Administrator of Veterans' Affairs determines to be the charge as fixed by any applicable statute or valid administrative regulation: *Provided further*, That all or any part of the pension, compensation, or retirement pay payable on account of any such veteran may, in the discretion of the Administrator, and in accordance with instructions issued by the Administrator, be paid to the chief officer of the institution wherein the disabled veteran is maintained, to be properly accounted for by said chief officer and to be used for the benefit of the disabled veteran; or may be paid to the guardian of the disabled veteran in accordance with the provisions of paragraph 1 of section 21 of the World War Veterans' Act, 1924, as amended; or, in the event the disabled veteran has a wife, child, or dependent parent, may, in the discretion of the Administrator, be paid to his wife or apportioned on behalf of such wife, child, or dependent parent; or otherwise be disposed of in accordance with the provisions of paragraph 3 of section 21 of the World War Veterans' Act, 1924, as amended.

"(C) Any veteran subject to the provisions of subparagraph (A) or (B) shall be deemed to be single and without dependents in the absence of satisfactory evidence to the contrary: *Provided*, That in no event shall increased compensation, pension, or retirement

pay of such veteran be granted for any period more than 6 months prior to receipt of satisfactory evidence showing such veteran has a wife, child, or dependent parent."

2. It will be observed that on and after July 13, 1943, the date of the approval of the act, veterans without dependents of the classes enumerated being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof are entitled to payments not to exceed $20 monthly, in lieu of $15 monthly, for service-incurred disability, $20 monthly, in lieu of the rate formerly received, for non-service-connected disability for which pension is payable under other than part III of Veterans Regulation No. 1 (a), as amended, and not to exceed $8 monthly, in lieu of $6 monthly, for non-service-connected disability under the provisions of part III of Veterans Regulation No. 1 (a), as amended.

3. It will be observed that under paragraph (B), as amended, when the estate of a veteran deemed insane by the Administrator of Veterans' Affairs, who is without dependents of the classes enumerated, derived from any source, equals or exceeds $1,500, further payments of such benefits will not be made until the estate is reduced to $500. It will also be noted that under paragraph (B), as amended, when any such insane veteran, without such dependents, is maintained at his own expense in an institution, the limitations of paragraphs (A) and (B) are for application, but there shall be paid, in such cases, such amount otherwise payable as equals the amount charged for his care and maintenance in such institution, not, however, exceeding the amount the Administrator of Veterans' Affairs determines to be the charge as fixed by any applicable statute or valid administrative regulation.

Upon receipt of notice by the adjudicating agency from the chief attorney, as provided in Regulation and Procedure 5326 (A), the following awards action will be accomplished:

a. When notice shows veteran's estate derived from any source equals or exceeds $1,500, and veteran is not maintained in an institution at his own expense, any payment of disability compensation, pension, or retirement pay being made will be discontinued.

b. If notice shows veteran's estate derived from any source equals or exceeds $1,500, and the veteran is maintained at his own expense in an institution, the information furnished by the chief attorney under Regulations and Procedure 5326 (A), will be used as the basis for an award in the veteran's behalf.

c. If notice shows the veteran is being maintained in an institution at his own expense and monthly payments are in order under paragraph (A), the information furnished by the chief attorney under Regulations and Procedure 5326 (A), will be utilized in determining the amount, which, together with the amount allowed under paragraph (A), if otherwise payable, will be awarded in the veteran's behalf.

4. It will be further noted that under paragraph (C) any veteran subject to the provisions of paragraphs (A) and (B) will be deemed to be single and without dependents in the absence of satisfactory proof to the contrary; and that in no event will increased compensation, pension, or retirement pay be granted for any period more than 6 months prior to receipt of satisfactory evidence showing veteran has a wife, child, or dependent parent. In those instances where the required proof of dependents is not of record, sworn statements, on Form 404 or otherwise, as to dependency status will constitute a prima facie showing thereof. The veteran will be informed of the necessary additional evidence and that in the event it is not submitted within 60 days the award will be adjusted on the basis of a veteran without dependents effective from the date of admission to the institution.

5. Section 13, Public, No. 144, Seventy-eighth Congress, amends paragraph VI of Veterans Regulation No. 6 (a), as amended; accordingly, except as otherwise provided in the instructions issued under Public, No. 144, Seventy-eighth Congress, the provisions of Regulations and Procedure, Veterans' Administration, pertaining to definitions of relationship, dependency, jurisdiction, appeals, effective dates of awards, discontinuances, etc., insofar as applicable, will continue under this instruction.

FRANK T. HINES,
Administrator of Veterans' Affairs,
AUGUST 21, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 14, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Review of central office death claims affected by section 14 of Public, No. 144, Seventy-eighth Congress.

1. In order to carry into effect the provisions of section 14 of Public, No. 144, Seventy-eighth Congress, the budget officer and chief of statistics will furnish the dependents claims service with a list of cases in which a widow and/or minor child or children are in receipt of death compensation or pension based on the veteran's death having been due to service.

2. Based upon the list supplied by the budget officer and chief of statistics, the dependents claims service will request the case files in numerical sequence beginning with the lowest number. Upon receipt of the case files they will be reviewed and in each case where title to increase exists by virtue of section 14 of Public, No. 144, appropriate amended award action will be taken and the payee notified by means of an award letter. It will not be necessary to show the rates in effect prior to August 1, 1943.

3. As to those persons found entitled under the provisions of section 14 of the act of July 13, 1943, who were on the rolls or who were awarded death compensation or pension thereafter based on claims pending on July 13, 1943, the effective date of the increased rates will be August 1, 1943.

4. Upon review of a case in which death compensation or pension is being paid to the fiduciary of a widow because of her minority, appropriate action will be taken to award payments direct to the widow as provided in the last proviso of section 2 of the act of July 13, 1943.

5. Previous determinations on which an award was predicated will be accepted as correct in the absence of clear and unmistakable error or fraud.

6. Cases comprehended by this instruction will be reviewed as promptly as possible consistent with the proper conduct of current adjudication activities.

FRANK T. HINES,
Administrator of Veterans' Affairs.
JULY 21, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 2

Section 14, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Adjustment of awards of service-connected death compensation or pension to widows and/or minor children of deceased veterans, under section 14, Public, No. 144, Seventy-eighth Congress.

For the purposes of section 14, Public, No. 144, Seventy-eighth Congress, the following instructions are issued for the information and guidance of field stations having authority to adjudicate claims for death benefits:

1. Review of cases with running awards of service-connected death compensation or pension.

(A) In order to effect expeditiously the increase in rates of service-connected death compensation or pension to widows and/or minor children, as provided in section 14, Public, No. 144, Seventy-eighth Congress, the adjudication division will be furnished with a list, prepared from the abstract cards, of all cases in which widows and/or minor children are receiving payments of wartime or peacetime service-connected death compensation or pension.

(B) Based upon the lists made from the abstract cards, the adjudication division will obtain and review the corresponding XC–files. If, upon review it is established that the payees are entitled to the increased rates provided by section 14, Public, No. 144, appropriate amended award action will be taken on supplemental award brief face, form 553c, with the following notation under "Reason for amendment": "To increase rates under section 14, Public, No. 144, Seventy-eighth Congress." It will not be necessary to show the names or dates of birth of the veteran's children; however, a statement should be made to show the number of beneficiaries involved, for example, "W & 4C" (widow and four children). It will not be necessary to show any of the rates in effect prior to August 1, 1943. The payee will be notified by appropriate form letter of the increased rates awarded. An initial supply of form letters will be forwarded under separate cover to each field station having adjudication activities. Additional supplies will be requisitioned in the usual manner.

(C) As to those persons found entitled under the provisions of section 14 of the act of July 13, 1943, who were on the rolls or who were awarded death compensation or pension thereafter based on claims pending on July 13, 1943, the effective date of the increased rates will be August 1, 1943.

(D) Should a case be encountered in which service-connected death compensation or pension is being paid to the fiduciary of a minor widow, appropriate action will be taken to award benefits direct to the widow notwithstanding that she may be a minor. (Second proviso, sec. 2, Public, No. 144, 78th Cong.)

(E) In any case in which there is an apportioned award for a widow and minor children not in her custody, it will be necessary to prepare amended awards for all payees to reflect the increases authorized by section 14, Public, No. 144. Appropriate notation concerning the apportionment will also be entered under "Reason for amendment" on the award brief face.

(F) Previous determinations on which an award was predicated will be accepted as correct in the absence of clear and unmistakable error or fraud.

2. Rates payable on or after August 1, 1943.

(A) Wartime service-connected death rates:

	Per month
Widow but no child	$50
Widow with 1 child	65
(With $13 for each additional child.)	
No widow but 1 child	25
No widow but 2 children (equally divided)	$38
(With $10 for each additional child; total amount to be equally divided.)	

As to the widow, child or children, the total amount payable under this subparagraph shall not exceed $100. As to the widow, and child or children not in her care and custody, any amount payable under this subparagraph may be apportioned as prescribed in R. & P. R–2591 and R–2592.

(B) Peacetime service-connected death rates:

	Per month
Widow but no child	$38
Widow with 1 child	49
(With $10 for each additional child.)	
No widow but 1 child	19
No widow but 2 children (equally divided)	28
(With $8 for each additional child; total amount to be equally divided.)	

As to the widow, child, or children, the total pension payable under this subparagraph shall not exceed $75. As to the widow and child or children not in her care and custody, any amount payable under this sub-

paragraph may be apportioned as prescribed in R. & P. R-2591 and R-2592.

3. The foregoing rates are not applicable to cases in which payments to a widow or child are authorized solely by section 31, Public, No. 141, Seventy-third Congress, as amended (A. D. 415). However, the rates set forth in subparagraph 2 (A) of this instruction are applicable to all cases in which widows and children are entitled to wartime service-connected rates by reason of the provisions of Public, No. 359, Seventy-seventh Congress.

4. The Director, Dependents Claims Service, should be notified of the veteran's name and claim number in all cases subject to review under this instruction in which the XC file has been temporarily transferred to central office, in order that appropriate amended award action may be taken therein. Should a service-connected death case be encountered wherein the case file has been permanently transferred to central office but the payment cards, Forms 511, were inadvertently retained by the field station, prompt action should be taken to transfer the payment cards to central office and the case brought to the attention of the Director, Dependents Claims Service.

5. Cases comprehended by this instruction will be reviewed as promptly as possible consistent with the proper conduct of current adjudication activities. A report will be submitted as of the last day of each month to the Director, Dependents Claims Service, setting forth the total number of cases listed for review, the number of cases reviewed during the month, and the balance remaining for review at the end of the month. This report shall be discontinued immediately upon completion of the review.

FRANK T. HINES,
Administrator of Veterans' Affairs.

JULY 21, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Section 15, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Limitation on awards:

For the purposes of all laws administered by the Veterans' Administration, the following instructions are issued:

1. Section 15 amends paragraph XIII of Veterans Regulation No. 10 to read as follows:

"Not more than one award of pension, compensation, or emergency officers' or regular retirement pay, shall be made concurrently to any person based on his own service. The receipt of pension or compensation by a widow, child, or parent on account of the death of any person, or receipt by any person of pension or compensation on account of his own service, shall not bar the payment of pension or compensation on account of the death or disability of any other person. This paragraph is hereby made applicable to all laws administered by the Veterans' Administration. Section 4715 of the Revised Statutes (U. S. C., title 38, sec. 25) and any other laws in conflict herewith are hereby repealed or modified accordingly.

"Pension, compensation, or retirement pay on account of his own service shall not be paid while the person is in receipt of active-service pay.

"The third proviso of paragraph 2 of section 1 of the act of March 3, 1891 (U. S. C., title 38, sec. 26); the last proviso of paragraph 2 of section 3 of the act of January 28, 1915 (U. S. C., title 38, sec. 27), and any other provision of law or veterans regulation contrary hereto is hereby repealed or modified accordingly."

2. It will be observed that while a veteran can receive only one award based on his or her own service he or she can, in addition to such award, receive an award based on the death or disability of another person.

FRANK T. HINES,
Administrator of Veterans' Affairs.

AUGUST 12, 1943.

VETERANS' ADMINISTRATION, INSTRUCTION NO. 1

Sections 16 and 17, Public, No. 144, Seventy-eighth Congress (act of July 13, 1943)

Subject: Effective date of awards.

For the purposes of sections 16 and 17, Public, No. 144, Seventy-eighth Congress, the following instructions are issued:

1. Section 16, Public, No. 144, Seventy-eighth Congress, provides as follows:

"This act shall be effective from the date it is approved and necessary adjustments in awards shall be made effective unless otherwise provided herein, the first of the calendar month following adjudicative action, or the first of the calendar month following date of receipt of claim, whichever is the earlier. In all other cases benefits authorized by virtue of this act shall be effective from date of receipt of claim therefor under this act and subject to the provisions that death compensation or death pension shall be effective as of the day following the date of death of the veteran if claim is filed within 1 year after the death of the veteran: *Provided*, That in no event shall payments authorized by this act be made for any period prior to the date of enactment of this act."

Section 17, Public, No. 144, Seventy-eighth Congress, provides as follows:

"Notwithstanding any other provision of law, pension payable for disability shall be payable from date of discharge if claim therefor is filed within 1 year from discharge."

2. Accordingly, except as otherwise provided in Public, No. 144, Seventy-eighth Congress, the effective date of an award of monetary benefits authorized solely by reason of the provisions of Public, No. 144, Seventy-eighth Congress, shall be as follows:

"Original or increased awards of disability pension, compensation, or retirement benefits shall be effective as of the first day of the calendar month following date of approval of the award, or as of the first day of the calendar month following date of receipt of claim, whichever is the earlier, but in no event prior to July 13, 1943, the date of approval of Public, No. 144, Seventy-eighth Congress: *Provided, however*, That when an initial claim for disability pension is filed on or after July 13, 1943, and within 1 year from date of discharge from service the effective date of the award of disability pension shall be the date following the date of discharge, the date the evidence shows entitlement, or July 13, 1943, whichever is the later: *Provided, further*, That where the claim was in a pending status as of July 13, 1943, the effective date of an original or increased award shall be the date of the approval of Public, No. 14, Seventy-eighth Congress, July 13, 1943. No general review is authorized for the purpose of applying the provisions of Public, No. 144, Seventy-eighth Congress."

FRANK T. HINES,
Administrator of Veterans' Affairs.

AUGUST 12, 1943.

Commentators Confusing People by Sharp Variance of Their Expert Opinions

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Griffin from the Boston (Mass.) Sunday Post of September 26, 1943:

COMMENTATORS CONFUSING PEOPLE BY SHARP VARIANCE OF THEIR "EXPERT" OPINIONS—COLUMNISTS ALSO ADD TO MUDDLING AS PUBLIC WONDERS WHERE ALL THE "INSIDE" STUFF IS COMING FROM

(By John Griffin)

There is quite a row going on at the present time between one of the big broadcasting chains and an organization composed of radio commentators over the decision of the chain to restrict the commentators to news rather than opinion. The commentators hold that freedom of speech is being impaired by the ruling, and the radio company insists that their facilities should not be available to a few men for the purpose of trying to swing listeners to their opinions.

Perhaps out of the dispute may come some sort of a plan that will place such broadcasts on a workable basis which will react to the benefit of listeners if not to the immediate financial benefit of the broadcasters.

Eventually such a development will have to come, if for no other reason than the fact that listeners generally are now completely bewildered by the mass of opinion which flows nightly from the mouths of the "experts" who address themselves to millions of people.

HAD SUDDEN GROWTH

Not only radio commentators, but also some of the big syndicated newspaper columnists, have grown too big for their britches. The syndicated columns, as well as the broadcasting commentators, are a peculiar growth, fed on the hunger of Americans for information.

They have a chance to serve the public well by giving information about things that are going on in the Nation's Capital and elsewhere. But they have dangerous possibilities, too, for not all of them are strictly concerned with accuracy. In fact, competition among them is so great that there is a strong temptation for them to rush into print or onto the air with material that has not been adequately checked.

The fact that it might turn out to be wrong does not daunt them, for they can produce another item equally sensational to turn attention away from the first mistake.

Perhaps the old style of Washington correspondence left much to be desired and had to make way for modern methods. But at least the Washington correspondent of a few years ago, before the development of broadcasting on its present scale and before the growth of the big syndicated newspaper column, had a real regard for facts, even though he maintained a spirited competition with his rivals from other papers and press services.

The gossip columnists of the New York tabloids, whose idea of a great story was the announcement that some widely known couple was about to break up a marriage or the proclaiming of an impending "blessed event," were the forerunners of the present syndicated political commentators. And they operated in much the same way.

That is to say, they made themselves valuable to people "in the know" and received tidbits of gossip and rumor which they accepted as real news.

HAD TO BE RIGHT

The responsibility that confined the earlier Washington correspondents to facts made them continually aware of their duties. They knew they had little in the way of a come-back. If their stories were discredited by facts, they didn't last long. They had to be right.

The modern style of columnist and radio commentator, however, is not cramped in that fashion. He has his sources of information which are almost always nameless,

and he prints what comes from them. This is not to say that all of them operate without making any effort to check their information, but it is pretty clear that most of them go ahead whether or not they can make an adequate check-up.

Inasmuch as the commentators address themselves to millions of persons, and some of the columnists serve hundreds of newspapers, their potentialities for effecting harm are at least as great as their capacity for doing good.

Competition among them is terrific. Some of them have to get out a column every day. Some have to be on the air every night. And some undertake both of these assignments.

In the nature of their work they have to have stories or opinions that startle else they finding themselves fading. Under such conditions it is probably only human that they have a tendency to print or broadcast stuff that has more than a touch of the phony about it.

To put it mildly, it is surprising that the listeners or readers do not say to themselves, "Well, this fellow is interesting all right, but how can he possibly know so much about every subject under the sun?" or why they don't decide, under the constant barrage of the broadcaster's setting forth conflicting claims and opinions, to give up trying to maintain their mental balance.

NOBODY ELSE KNOWS

One gets the impression, listening to the commentators or reading their stuff, that neither the President nor the Secretary of State nor the General Staff know half as much about what is going on in the world as do the commentators themselves.

Regardless of the subject, whether it is the state of relations between Russia and the United States or the military and naval possibilities and probabilities in far corners of the world, the commentators have an opinion and usually express it in such a manner that seems to leave no room for any other version.

Have you ever tried listening to them on a day when there is not much doing in the news? They have a certain amount of time to fill and they manage to use it, but the sum total of their remarks amounts to nothing. When a period of several dull days comes along they feel they have to say something that sounds important and exclusive, and they don't let themselves be hampered too much by facts.

Considering the complexities involved in their position as the wise men of the world and the necessity for them keeping themselves excited, it is small wonder that during a period such as the Quebec conference they became desperate.

QUEBEC AN EXAMPLE

There was no news at Quebec. There couldn't be. President Roosevelt and Prime Minister Churchill could not possibly have divulged what went on in their meetings. Undoubtedly the average newspaper reader and radio listener fully appreciated this, and didn't expect anything startling. After all, you don't tell your enemy what you are going to do.

But the syndicated columnists and the radio commentators fell all over themselves explaining just what the big problems were and what was being done to solve them. To read the stuff or hear it, one would think that each of them had some real inside stuff, but a little thinking on the part of readers and listeners would have shown that it was all guesswork.

If it wasn't, then there is no escaping the conviction that secrets were being given away free to anyone who wanted them, whether he be enemy or patriot.

The one hope in the situation now is that these great minds are confusing the enemy as much as they are confusing the American people.

Bugs Might Win the Next Round

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pacific Rural Press of September 18, 1943:

BUGS MIGHT WIN THE NEXT ROUND

Truck crops loom increasingly important as the vital role of vegetables in nutrition is recognized. War and domestic needs make greater demands. Acreage is increased. Crop values go up: California, 1940, $104,000,000; 1941, $118,000,000; 1942, $169,000,000.

Grower problems become more difficult, particularly pest control.

What happens? Congress and the policy makers cut the U. S. D. A. budget for pest-control investigations.

The field laboratory at Ventura, studying control measures for certain lima-bean insects, is closed.

The laboratory at Modesto, working on the sugar-beet leaf-hopper problem, is closed.

The laboratory at Alhambra, investigating insect problems of several important vegetable crops, now operating with a reduced staff, is cut to a skimpy budget of about $17,000. The trained entomologists do not have the funds to work effectively, to do field follow-ups, or pass along their fact findings to growers.

The University of California is not doing much truck-crop insect-control work in southern California. By agreement this has been left largely to U. S. D. A. workers to avoid duplication.

Serious insect damage to cabbage has occurred this summer. A vast amount of work needs to be done on tomato insects. The diabrotica beetle, feeding on most vegetable crops, needs first-hand attention. Thrips on beans, peas, tomatoes, onions, are of serious consequence. Wireworms continue a vexing source of loss. Flea beetles cause damage. There are some unanswered aphis-control puzzles. Freezing of vegetables calls for highest quality—leaf miners can ruin a crop of spinach. Mites of cane berries and strawberries worry growers. And so on. Problems of immediate importance.

Great progress has been made in production of new insecticides. But not much headway on methods of application. What type of equipment to use? What stickers are best? What are the most desirable diluents? Are there environmental factors, temperature, etc? Plenty more questions. Answers needed. Kill bugs effectively, economically; save food, labor, investment.

Some of these problems seem not very difficult of solution, but they need attention, and that takes men, materials, money.

Congress and the policy makers have muffed this one. Curtailment of investigational work important to food production, when need for practical answers was never greater, is poor judgment at best. Continued research to prevent bug harvesting crops would help, rather than hinder, the progress of the war. Increased grants should be made available, or transfers from non-essential activities should be made. Millions of dollars are being thrown around, much of it with reckless abandon. Let's put a few thousands, mere small change these days, to work controlling bugs. They might win the next round.

D. M. RUTHERFORD.

Peace in the Pacific

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. HINSHAW. Mr. Speaker, the following article by Mr. Walter Lippmann is one of the best I have read on the subject.

Mr. Lippmann sees clearly in his book, United States Foreign Policy, that we must not make international commitments that we are not prepared to back up with force if necessary. He makes clear in this article the fact that if our country did not intend to be a force in the Orient we should have abandoned the Philippines long ago and that if we had abandoned them we probably would have avoided war in the Pacific; and, on the other hand, if we intended to hold our interest in the Orient we should have been prepared with adequate force and policy to maintain that position.

In other words, Mr. Speaker, if we are going to take a position of vital interest in the Pacific after this war is won then we must surround that position with a firm and active policy definitely understood by all, and absolutely back up that policy by proper and adequate distribution of our fighting forces. It means the maintenance of land; sea, and air bases in the Pacific adequately equipped and manned; it means the firm occupation of the necessary lands; it means definite commitments among nations with like interests.

Otherwise, Mr. Speaker, we will be looking down the throat of the greater east Asia coprosperity sphere for a long time to come. Nature abhors a vacuum. If we and our allies do not do that the Japs will take over.

If we wish to abandon the Pacific to the Japs, then we should get out and stay out, instead of having a timid tentacle stuck out there to get hurt. The question of policy must be decided and positive action taken one way or the other.

Mr. Speaker, the peaceful people of the world must not sit back and relax again after this war is won. We must see to it that the predatory people do not get coiled to spring upon us and we must see to it that any who may prepare to attempt it are promptly and efficiently knocked out of that position before they strike. Thus may we live in peace until the millennium when the Golden Rule shall prevail on earth. Mr. Lippmann's article follows:

TODAY AND TOMORROW

(By Walter Lippmann)

GENERALITIES ARE NOT A POLICY

The Senators may well be right in not wishing to debate now the abstract and general proposition laid down in the Fulbright resolution. The action of the House is a clear and unimpeachable expression of public opinion, and the next step is to move from the general principle to the particular and practical application of it.

Though little attention has been paid to it as yet, something happened last week which will compel Congress to face the real issues of our foreign policy, or admit that it is not interested in them. By an agreement reached by President Roosevelt, Secretary Hull, and President Quezon, a resolution has been introduced in the Senate by Mr. TYDINGS and in the House by Mr. BELL, of Missouri, to give the Philippine Islands their complete independence at any time within 30 days of the passage of the resolution. Under existing law, known as the Tydings-McDuffie Act, the Philippines become an independent sovereign state on July 4, 1946.

This action is being taken to counteract the Japanese move to set up a Quisling puppet government in Manila.

Since no one will pretend that the Philippines alone are capable of defending themselves, the question must be faced as to how the Philippines are to be defended after the United Nations have recovered them from the Japanese. Under the existing act, the United States retains its "naval reservations and fueling stations" after full independence is granted and until a treaty dealing with them has been negotiated with the Philippine government But the land and air defenses of the islands pass at once out of our hands.

It is evident that this act, which was passed in 1934, takes no account of the fact, so amply demonstrated at Hawaii and Singapore, that a navy cannot defend a naval base. It places upon the Filipinos an implied obligation to defend, though they lack the means, our naval bases; and it places us in the position where we have a naval base at a distance of 7,000 miles to which we cannot guarantee an assured defense.

Regardless of what Japanese propaganda or Filipino Quislings may make of it, this is not a statesmanlike solution of the problem. Senator TYDINGS says that we must take this action as a propaganda measure. It would be better propaganda, because far more convincing to the thoughtful, if we took the position that the effective independence of the islands must be accomplished by the formation of a reliable regime of security in the Pacific.

A Filipino who does not see that is not fit to govern an independent state. An American who does not see that is making the fatal error of creating a distant entanglement without providing the necessary means to carry out the commitment.

For what earthly good is independence to the Philippines if the United States is incapable of defending them? And how can the United States afford to retain the commitment, which the naval bases as well as considerations of humanity would entail, if no agreements have been reached which make secure the whole region in which the islands lie? We cannot withdraw entirely, and wash our hands of the Philippines, without washing our hands also of China, the Netherland Indies, Australia. The Philippines are the strategic center of that whole region. If it were our intention to leave the Far East, we need not have had a war with Japan in 1941.

On the other hand, we cannot take the tremendous risk of staying there with just enough force to get into trouble and with not enough force to be invulnerable. If Bataan and Corregidor have not burned that lesson upon our minds, we are hard to teach when it comes to foreign affairs.

The Philippine question is, therefore, inextricably bound up with the whole settlement in the Pacific and eastern Asia. If it is advisable to pass the Tydings bill now, let it be done. But let it not be done without our making it clear that we are aware of the problem and of its immense consequences. To act as if we thought the independence of the Philippines were something which could be enacted by a congressional vote would be reckless and imprudent to the last degree.

The independence of the Philippines, the kind of treaty which would have to be negotiated with the Filipinos on the subject of their defense, cannot be separated from the agreements we reach or fail to reach with all the other great powers of the Pacific. In the absence of adequate agreements with China and Russia on the Asiatic mainland, with the British and the Netherlands Empires, the United States cannot, except at exorbitant cost and danger, project its power 7,000 miles across the Pacific Ocean. To attempt to do that without even having a clear knowledge of what will be Filipino foreign policy, and Filipino military policy, would be sheer folly.

So now that the President, the Secretary of State, and President Quezon, haxe raised the question in such a way that it must be acted upon, the era when high sounding generalities could pass as a substitute for foreign policy comes abruptly to an end. It has come to its end also in Europe, and we must move now from debating abstractions to the negotiation of agreements with the other great powers.

Oil Workers Go on Record for Scientific Monetary System

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. VOORHIS of California. Mr. Speaker, it is with great satisfaction that I include with my remarks the following very effective and thoroughly set forth resolution passed by the recent convention of the Oil Workers International Union:

PROPOSITION NO. 57 SUBMITTED BY H. L. SAVAGE, VICE PRESIDENT, LONG BEACH LOCAL NO. 128, OIL WORKERS INTERNATIONAL UNION, C. I. O.

Whereas it is an established and self-evident fact that in order for a Nation of people to enjoy economic security and freedom, it is imperative that Government shall have the sole power to create and regulate the value of the Nation's money; and

Whereas the founding fathers of this great American Republic recognized this fact and specifically provided for the Government of the United States of America to have the sole power to create money and regulate its value by making it mandatory on Congress as provided in article I, section 8 of the Constitution of the United States of America, "To coin money, to regulate the value thereof, and of foreign coin, and fix the standard of weights and measures," and

Whereas among other great Americans we find that the scientific-minded Benjamin Franklin, the democratic Thomas Jefferson, the noble George Washington, the martyred Abraham Lincoln were all advocates of the powers vested in Congress, by article I, section 8, of the Constitution of the United States of America; and

Whereas it is a widely known fact that Congress has violated its own oath and trust to support the Constitution by delegating to private bankers its powers to create money and regulate its value thereof; and

Whereas the private bankers, and in particular the heads of the Federal Reserve banks (private banking institutions), have abused their powers to create money and by regulating its value to destroy money as well, have caused widespread unemployment, economic chaos, loss of homes, farms, business' savings, and paved the way for world warfare; and

Whereas it is a positive matter of record that the overlords at the top of the money world deliberately planned and viciously carried out the program to cause the depression, widespread unemployment, loss of homes, farms, and savings after World War No. 1; and

Whereas the same people have the same power to do the same thing after World War No. 2 unless Congress restores to itself the powers vested in article I, section 8, of the Constitution of the United States of America; and

Whereas the overlords at the top of the private banking institutions can continue to exploit the American people and the resources of this Nation so long as they have the power to create our Nation's money and regulate its value thereof; and

Whereas it is a widely known fact that our Government is compelled to borrow its own money from private institutions and pay interest tribute to private banking institutions for the use of its own money; and

Whereas the national interest-bearing debt is growing larger and larger because Congress has delegated its power to create and regulate money to private banks; and

Whereas the United States Government does not own 1 cent of stock in the Federal Reserve banks; and

Whereas even when the war is ended with full and complete victory for the United States of America and her allies there can never be a secure and lasting peace so long as a few ruthless, cold-blooded, brutal private bankers have the power to bring on a condition which will cause continued economic chaos and eventually bring about either a revolution or another world war; and

Whereas our representative form of government is in the very gravest danger of being destroyed and a dictator form of government in one of its various forms being instituted, because the intent of the blueprint for representative American democracy is being grossly violated by those sworn to uphold and defend it; and

Whereas many sincere but uninformed Americans are being seduced into embracing foreign ideologies and philosophies of economics and government due in large part to the violation of article I, section 8 of the Constitution of the United States of America; and

Whereas it is becoming increasingly necessary that American trade-unions crusade for the American ideal of living; and

Whereas American labor unions can never gain their goal or objectives by simply bargaining collectively in the matter of hours, wages, and general working conditions until Congress restores to itself the power to regulate the value of the buying power of the wages bargained for, any attempt to bring about economic security for wage earners being futile while the New York Stock Exchange and the overlords at the top of the money world set the value of the buying power of the dollars earned; and

Whereas an amazing revolution has taken place in the science of production, no change, in any way commensurate, has taken place in the financial mechanism; and

Whereas it has become increasingly necessary for the United States of America to institute a scientific, non-interest-bearing, constitutional monetary system; and

Whereas, this scientific monetary system should have its supply of money so regulated as to prevent any material decline of the domestic average wholesale commodity price; and

Whereas the Government-created money interest free at source of origin used scientifically would prevent inflation, deflation, repudiation; and

Whereas an equitable and scientific Government controlled monetary system should be based on a balance being constantly attained in order that distribution, exchange, and consumption shall keep pace with production; and

Whereas the volume of money should be increased year by year to match growth of production; and

Whereas it is an established fact that an honest, scientific, constitutional monetary system must have these essential principles:

1. It must be created and controlled by Congress.

2. It must be free from interference by politicians and private bankers.

3. It must be interest free at the source of origin and be based on the total wealth of the Nation and not on the bonds or basic metals owned by private bankers; and

Whereas one of the main contributing factors to our present unsound monetary system is the practice of the so-called fractional reserve requirements; and

Whereas in order to secure a sound monetary system it will be necessary to institute a 100-percent-reserve requirement on demand deposits held by banks, or, in other words, a dollar for dollar or 100 percent reserve being mandatory; and

Whereas it is common knowledge that many and probably a majority of the Members of Congress are ready to restore to Congress the powers vested in article I, section 8, of the Constitution of the United States of America when they are convinced that they have the support of their constituents: Now, therefore, be it

Resolved, That we, the delegates of the Oil Workers International Union, in convention assembled at the city of Fort Worth, Tex., respectfully request Franklin Delano Roosevelt, President of the United States of America, to immediately call upon Congress to restore to Congress the powers vested in article I, section 8, of the Constitution of the United States of America; and be it further

Resolved, That we go on record urging the Senate and House of Representatives of the United States of America in Congress assembled to immediately enact such legislation as will be necessary to restore to Congress the sole power to issue money and to regulate its value, as provided in article I, section 8, of the Constitution of the United States of America; and be it further

Resolved, That we go on record urging the Senate and House of Representatives of the United States of America in Congress assembled to immediately enact legislation to provide for non-interest-bearing, constitutional United States Government money; and be it further

Resolved, That we urge the Senate and House of Representatives of the United States of America in Congress assembled to seriously consider the monetary bills introduced by Congressmen JERRY VOORHIS, PATMAN, and others, and, in particular, the following: H. R. 112, H. R. 118, H. R. 373; and be it further

Resolved, That in order to carry out the intent of the qualifying clause of article I, section 8, of the Constitution of the United States of America, to wit, "and regulate the value thereof," we go on record urging the Senate and House of Representatives of the United States of America in Congress assembled to set up a "value stabilization committee" of its own Members, together with representatives of labor, industry, agriculture, the professions, etc., the purpose of said committee to immediately plan, devise, or work out an equitable, just, and stabilized price schedule or value on all property, goods, commodities, and services; and be it further

Resolved, That we earnestly request and we go on record urging each C. I. O. international union, each A. F. of L. national organization, each national railroad brotherhood organization, each legitimate national independent labor organization, the national executive councils of the C. I. O., A. F. of L., railroad brotherhoods, legitimate independent labor organizations to adopt this resolution and to urge immediate action on the part of Congress to carry out the intent of this resolution.

How Far Can We Go in Organizing Peace?

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject How Far Can We Go in Organizing Peace?, delivered by me in Christ Church, New York City, on September 15, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

How far can we, the people of the United States, go in organizing peace?

The question is timely and practical. It deserves a specific and practical answer. I shall, therefore, break it into three parts. First, how far can we go within the United States? Second, how far can we go within the Western Hemisphere? Third, how far can we go on a world-wide basis? In each case the question is how far can we go toward establishing and organizing a just and lasting peace that will live and grow with us?

1. WITHIN THE UNITED STATES

Our internal stability within the United States, for years to come, will be vital not only to ourselves and as one element in world-wide stability, but also as an outstanding example of the practice of the principles we preach.

As America turns from the governmentally financed war production during her first total war to the far freer privately financed peacetime production of useful goods, she will do so under the heaviest taxes in her history and under a national bonded debt 10 times heavier than at any time before the war.

We must take these burdens in our stride. These bonds are held by every church, insurance company, bank, trustee, and practically every family in America. We must pay the interest on them. We must pay enough of their maturities to enable us to refund the rest. These bonds are evidence of our national credit. To carry on, we must produce a larger national income in real wealth than at any time before the war. We can do it, because in this war we have discovered new productive strength within us. Our stability will depend upon our use of much of this new productive strength. Our ability to do it depends, in turn, upon cooperation between industry, labor, agriculture and Government in a spirit of mutual helpfulness coupled with increased development of the resources and markets of the world.

To fail to develop such post-war prosperity would mean a shortage of food, clothing, shelter, and all sorts of goods in the midst of a world capable of producing much more than enough to meet the shortage. Such a disaster after this war, with the taxes that we have on us, would make our last depression look like comparative prosperity. It would force upon us such regimentation as would make us wonder whether we had won or lost the fight against totalitarianism.

To develop this post-war prosperity, we must have peace, stability, reasonable assurance of stability, and a readiness to develop new discoveries and opportunities. I speak in terms of aviation, radio, electric power, diesel power, automotive power, possibly atomic power, electric welding, light metals, improved housing, chemistry, chemurgy, plastics, wood, glass, soy beans, sulfa drugs, and countless other "acres of diamonds" available close at hand.

Using aviation as a specific example, we find that 3 years ago America produced $280,000,000 worth of planes; 2 years ago $1,800,000,000; 1 year ago $6,400,000,000. This year it will be $20,100,000,000. Our automobile industry at its peak produced only $4,000,000,000 of automobiles a year. I cite this not because I expect us to continue to produce 4-engine bomber planes at this rate in time of peace, but because for a short time following the day of military victory we shall have available a capacity in plants, tools, skilled workmen, skilled supervision, pilots, ground crews, and air bases sufficient to revolutionize the transportation and communication systems of civilization.

This capacity can make savings in time and money of infinite value and can open new resources and markets of equally immeasurable worth. This industry is but one of many that can develop tremendous new values if it has the opportunity to do so. It should be noted also that its greatest value lies in its longest trips. Its internal value to America depends in large part upon its world-wide success. Let us bear it in mind that this is characteristic of the opportunities of today when all the world is a neighborhood—a newly formed neighborhood full of new opportunities.

2. IN THE WESTERN HEMISPHERE

Of extreme value to us is the development of stability in the Western Hemisphere. In this hemisphere, all the nations are at peace and most of them are allies in the fight against totalitarian slavery. Improved transportation and new industrial production will increase the prosperity of the other people of North, Central, and South America in a way that will benefit both them and us if the Western Hemisphere can have peace, stability, and reasonable assurance of stability for many years ahead. Under such conditions private industry will prosper in this new neighborhood "like a tree planted beside a river of water and it shall bring forth its fruit in its season."

3. WORLD-WIDE STABILITY—ITS FOUNDATIONS

This brings us to consideration of the foundations for world-wide lasting peace. It has been well said that "nations can blunder into war, they cannot blunder into peace," and I would add, much less can they blunder into a just and lasting peace that will live and grow with us. That is common sense because war is like an explosion or a disaster that can be caused by many kinds of mistakes and accidents. But peace is more like a building. It must have firm foundations, well thought-out plans, practical specifications, skillful workmanship, and after it is built, careful maintenance. First come the foundations.

The foundations must be so placed that every part contributes to the support of the rest and all must rest upon the rock of human understanding and good will toward men.

Mutual support is essential to the strength and survival of the United Nations. This became tragically clear when the sovereign, independent and freedom-loving nations of Europe one by one lost their sovereignty, independence and freedom as they attempted separately to face the assault of the enemy.

But when the last few free nations of the world, in their extremity, united their forces, the enemy was stopped and the tide of battle turned. Today the United Nations are winning in every part of the globe. On the day of final victory, the United Nations will have demonstrated their ability, when united, to establish military stability in the world for the cause of freedom and justice. Likewise, it will be clear that as long as that winning combination of the United Nations remains intact, at least that long will the military stability of the world remain secure. At least, that long there will be peace from military aggression. On the other hand, at any moment that that championship team disbands, there will be an end to the demonstrated certainty of military stability established by the war. While, thank God, it would not necessarily mean immediate war among the allies, it would end an important assurance of peace which otherwise would have existed. Any relaxation of the military unity of the United Nations introduces a new uncertainty that calls for military measures to offset it. In practical terms, every relaxation in the assured unity of the United Nations means correspondingly increased armaments or other means of defense against an unnecessary and self-created risk.

UNITED STRENGTH OF THE UNITED NATIONS

What then is the first foundation structure for lasting peace? It is the multiple arch of unity between all the United Nations. It exists now. We must continue, in some form, this assurance that the United Nations will remain united in peace as well as in war. If we can have this assurance of peace among the United Nations, including the assurance of their unity in resisting attacks from without, then we will have retained at least that degree of military stability that will have been won on the battlefields of this war. The form of this unity is not nearly as important as the fact of it. The first responsibility of the United Nations is to make sure that they as nations and their people as individuals, realize that in unity there is strength and promise of peace, but in disunity there is weakness and danger of war.

This unity is important also to the economic and social stability and development of each of the nations of the world, including our own. Unless each of us is freed from the burden of producing great quantities of nonproductive implements of war, we will find that the cost of them in taxes will handicap our industrial recovery, and that the manpower and materials needed in the production of them will be taken from the production of articles needed not only to raise the standards of life but even to supply essential human needs for food, clothing, and shelter.

THE SPECIAL VALUE OF AVIATION

If we examine further into the feasibility of maintaining military stability through the unity of the military forces of the United Nations, we find encouragement springing from the recent advances in aviation. The increased speed of travel by air will make it possible for an international air force to reach any outbreak of trouble before it can gain dangerous headway. This speed of military aviation tomorrow means as much to the prevention of war in the world of tomorrow as the speed of modern fire departments means to the prevention of conflagrations in our cities today. If a modern fire department reaches a fire at its start it can put out nearly any fire at once with a bucket of water or a single fire extinguisher. Never has it been possible until now for the forces of civilization to reach a distant danger spot until after the danger had started an international conflagration so great that generally it became necessary to let it run its course. Today, the international air force could reach practically any local explosion within less than 60 hours and long before the situation was out of control.

INTERNAL AND REGIONAL STABILITY

With this unity of the United Nations as a foundation, how far can our Nation go now in organizing peace? First, to develop our own internal stability as a local foundation for lasting peace, our Government should initiate meetings at once between industry, labor, agriculture, and Government. Those attending these meetings should devote themselves not merely to planning such postwar policies as public construction and public relief. They should devote themselves primarily to the encouragement of such type and volume of private industry and employment as will prevent the coming of the depression and thereby eliminate or reduce the number of its victims before they become its victims. The prevention of any disaster that damages its victims is far better than the relief of its victims, necessary and vital as that is.

Likewise, in our Western Hemisphere, our Nation should initiate meetings between industry, labor, agriculture, and Government. The opportunity for the development of production and prosperity is ours if we direct our efforts toward it rather than toward the restriction of individual initiative to the point where we lose the very freedom for which we fight and induce the very disease we seek to cure.

In seeking world-wide stability it is quite as important that we do not do now those many things that should not be done as it is that we do do now those several things that should be done. To this end Senate Resolution 114, introduced by Senators BALL, HATCH, HILL, and myself, advises that the Government of the United States initiate meetings among representatives of the United Nations to propose a form of organization to deal with the utilization of all resources in the prosecution of the war; the establishment of temporary administrations for the government, relief, and rehabilitation of occupied territories; the establishment of procedures and machinery for peaceful settlement of disagreements between nations and the provision for a United Nations military force to suppress any future attempt at military aggression by any nation. Similar meetings might also deal with such subjects as international aviation and international monetary stability that should be acted upon immediately and that need not be included in the final peace treaty. Such of these questions as will directly and seriously affect nations whose governments are now in exile and such of these questions as call for a treaty subject to constitutional ratification by two-thirds of our Senate need not be brought to formal conclusion at this time.

On the other hand, much is to be gained by establishing a method of orderly procedure in dealing even with these questions which will wait until a later date for their formal conclusion. The important thing is to go as far as we can on immediate issues and that the gate be open and the way be clear so there shall be no moment of disorder in proceeding with the rest. The declared intent of the United Nations to travel a road of peace and cooperation will lend strength to their conduct of the war and confidence to all the world that the fruits of victory this time shall be fully worth the price paid for them.

DECENTRALIZATION

In the field of international relations it is important also to recognize that many changes have taken place even within the past 20 years emphasizing the value of the decentralization of many international questions among groups of nations especially concerned with them. The Pan American Union for example is peculiarly fitted to the needs of the Western Hemisphere. Its form probably would not meet the needs of Central Europe. On the other hand, some form of association among nations of Central Europe, far closer than that among members of the Pan-American Union, might prove to be of great permanent value in separating the internal problems of that area from those of the world as a whole. In this way the problems remaining for world-wide consideration would be reduced in number and in difficulty and the organization of the United Nations of the world might be simplified.

I have spoken thus far in the practical terms of immediate and tangible objectives and I shall return in a moment to the practical steps that we may take today and tomorrow on the road toward them.

However, under the inspiration of this great forum in this Church of Christ that is dedicated to the eternities of God and Man, I cannot resist lifting your eyes and mine to a glimpse toward the distant horizons of the years, decades, and centuries ahead. Only the skyline can be seen, but it looms in magnificent proportions. If we will but turn upon it our telescopes of faith there is much for us to see. Almost in the foreground is the stern and rugged peak that guards the road beyond. It is the peak of world-wide law and order rising directly from the foothills that represent the armed forces of the United Nations in this war, uniting their great strength to form the physical foundations for the peace of the world. Beyond, to the right, we see the green summit of economic stability rising from the fertile fields of fair-trade relations, which recognize both the needs of the individual producers of the world and the benefits that come from the widespread sharing of the resources and the markets of the world. Beyond, and to the left, is the domelike peak of political stability rising like a temple of justice above the crags of national and racial conflicts and prejudices. Still further and straight ahead are the sweeping heights of a great range of innumerable peaks of social and cultural development. These mark the goal to be reached beyond the others. Finally, if we will raise our eyes to a still greater height, we can see above them all the snow-capped peak of spiritual stability. It rises like a symbol of everlasting hope above the mists of the earth into the radiant light of Heaven and over it glows the rainbow of "Peace on Earth and Good Will Toward Men."

But coming back to earth, what is the action that should be taken in Congress so that we may follow Lincoln's infallible rule for peaceful progress which is to move ahead 5 percent of the way at a time?

ACTION NEEDED

In the House of Representatives, the point of view that I have recommended is expressed in general terms by the Fulbright resolution. The early passage of this by the House would be helpful. In the Senate, this point of view is expressed in general terms by the Vandenberg-White resolution, and more clearly and fully in Senate Resolution 114. Individual support of action by the Senate and particularly by its Committee on Foreign Relations along any of these lines will be helpful. The development of popular interest in these measures is of substantial importance now and becomes increasingly important as the issues become more specific.

SENATE RESOLUTION 114

As to Senate Resolution 114, it is not its serial number, its sponsors, or its form that is important. The important thing is the taking of the steps it recommends. The important thing is that meetings of representatives of the United Nations shall take place to prepare and to submit to the United States

Senate and to the other United Nations an agreement presenting some practical program that will preserve the unity of the United Nations in peace. The issue must be lifted above all partisanship, personalities, and prejudices. There is no room on this issue to consider anything but the best interests of the United States of America as a whole. That in turn will serve the best interests of all humanity.

SOVEREIGNTY

As to the sovereignty of the United States of America and of each nation of the United Nations, this sovereignty exists in order to be used in the interest of the people from whom it is derived. One of the most important uses of sovereignty is in the making of treaties of mutual advantage to the parties to them. It is only through the international meeting of minds that the principle of peace on earth and good will toward men can be applied on the heroic scale that is now both necessary and possible since God has given men voices to speak, ears to hear, and wings to fly around the world. By virtue of these new powers, men have, for the first time, means adequate to organize the peace of the world. It is for us to prove that we are deserving of these new talents which are the evidence of God's increasing faith in man. The opportunity is ours, let us have the faith of our forefathers to develop a solution equal to the need.

In closing, I wish to tell you of a simple letter a young soldier recently wrote home to his mother.

Among other things, he said, "Please don't change the furniture in the living room, please don't change the pictures on the wall, please don't change a thing on the mantelpiece. I want to see home, when I come back, in the way I think of it and dream of it." If we just enlarge that picture, we can see that what that young soldier wants is to see America when he comes back in the way he thinks of it and dreams of it. He wants to see a land of opportunity where he and his wife and their children and their children's children can live and develop higher standards of living with peace, stability, and a reasonable assurance of stability for many years ahead, giving them a chance to work always toward their highest ideals. He wants a victory worth the price even of his own life and of the lives of his comrades.

It is for us as citizens of the United States to unite and dedicate our minds, our hearts, and our souls to the establishment of such an America that all our soldiers, sailors, and flyers who shall return to it, may find here that America of which they think, of which they dream, and for which they fight.

James E. Van Zandt

EXTENSION OF REMARKS

OF

HON. LOUIS J. CAPOZZOLI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 23, 1943

Mr. CAPOZZOLI. Mr. Speaker, I join with my fellow Members of Congress in expressing my regret in the loss to the Congress of the services of a valuable Member.

Nothing that I can say can in any way add to the luster of the public service record which the Honorable JAMES E. VAN ZANDT, retiring Member of this House, has established.

It has been my good fortune to have served with Congressman VAN ZANDT on a number of committees. More recently he and I served in the field as members of a subcommittee of the Committee on Merchant Marine and Fisheries, charged with the duty of investigating production in shipyards throughout the country. Our work brought us in close contact and I have had an excellent opportunity to observe the general qualities of the Congressman.

Imbued with an ardent patriotism, chafing at the bit because of his burning desire to get into the actual fight and capable by training to do so, he chose to disassociate himself from the greatest legislative body in the world in order that he might see active action. I share the opinion, which is universal amongst the Members of this House, that the resignation of Congressman VAN ZANDT from this body, while a loss to the Congress, affords to the Navy the acquisition of the services of a trained veteran naval officer.

Mr. Speaker, I join in the prayers of his many friends, that JIMMY VAN ZANDT return to us after this conflict is over, to resume a useful and constructive public career.

Address by Senator Wiley to the Catholic Knights of Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by me before the Catholic Knights of Wisconsin at their convention at Beaver Dam, Wis., September 9, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Modern society is confronted with a lethal challenge. It is not the challenge of Adolf Hitler, brutal and deadly as that challenge is. It is not the challenge of the Japanese war lords, cynical and ruthless as that challenge has proven. It is the challenge of war, itself. It is the challenge which says bluntly to some 2,000,000,000 human beings who now inhabit this planet—

"Either find a way to live in peace or face the inescapable consequences."

We all know the story of that last night in the garden when Judas came out with the mob to betray the Master. We all recall that the Master said to one of His followers who tried to protect Him—

"Put up again thy sword into its place; for all that take the sword shall perish by the sword."

Christian philosophers have explained to us the difference between a just and an unjust war. They have told us that all those who take up the sword ruthlessly to impose their will on others are flouting divine justice. They have told us that against such wanton aggression, decent men and women not only have a right to defend themselves, they must defend themselves. For only if they do defend themselves can those moral values which they recognize as decent and civilized standards of conduct be perpetuated.

But if it has always been true that those who take up the sword shall perish by the sword it is now more dreadfully true than ever that whole populations shall perish with them.

This is so because modern war is total war. It mobilizes not only the young men of fighting age, it mobilizes the old men, the women, yes even the children. And since entire populations are mobilized for total conflict, entire nations and continents become battlegrounds.

Time was when the Peace of God and the Truce of God protected in a major measure the civilian populations against the ravages of war. Time was when wars were fought by small bodies of professional soldiers.

But those were times of an agrarian economy, of a handcrafts industry. They were times of simple tools, simple tools of peace and simple tools of war.

The modern machine age has changed all this. It has provided us with unprecedented power with which to produce, process and distribute the riches of the earth. It has enabled some 2,000,000,000 human beings to live on an earth which until the opening of the eighteenth century had never been able to support more than 600,000,000.

But mark this, it is the great fact of our time, only a minority of the 2,000,000,000 has direct access to the first fruits of the earth. The vast majority must depend for its livelihood on processing and distributing those riches. It must depend for its livelihood on the smooth and continuous functioning of the vast and intricate machine system of the age.

In the olden times the ravages of war destroyed only part of the annual production. In the Middle Agres the truce of God protected the peasants during the planting time and the harvest time, protected also the growing mercantile class. And the small professional armies of the later centuries spread their destruction over only limited areas. Nor did millions then live in great cities and work in great industries and in far-flung transportation systems.

But in these modern times not only are entire populations mobilized for war, but acres of great factories are razed by war, entire great cities are reduced to rubble by war, and the men, women, and children who live in them are uprooted or destroyed by war. Not only in the smooth functioning of the machine age utterly disrupted by war, the machines themselves, and the buildings which house them, the individuals who work them, are destroyed by war. The teeming and closely interdependent life of the crowded earth is shattered, atomized by modern war.

Modern man, the creator and builder of the modern machine age, has developed unprecedented tools of production. For the first time in history man has the tools in his hands with which to build a lush abundance. But these same tools in the same hands may and do become engines of an unprecedented and terrifying destruction. For the intricate and powerful tools of modern peace become with a few simple changes the powerful and devastating tools of modern war.

I need not tell this audience of a Catholic fraternal order how your present pontiff has warned of the dangers of this modern age, how he has worked untiringly for peace. I need not point out to you how he has warned that when man permits the tools of the modern world to become his master he invites his own destruction, how he has urged again and again a return to that natural order among men which rests on a recognized relationship between an all-powerful

Creator and his creatures. I need not point out to you how this national order is a Christian fraternity which has for its sanction Christian justice not only among men but among nations.

"A fundamental condition of a just and honorable peace," he tells us in his Christmas message of 1939, "is to assure the right to life and independence of all nations, large and small, strong and weak. One nation's will to live must never be tantamount to a death sentence for another."

But the nations cannot know justice, he tells us in his Christmas message of 1941, unless they recognize that higher moral law "which the Creator Himself has manifested by means of the natural order and which He has engraved with indelible characters in the hearts of men."

From this juridic order, he tells us in his Christmas message of 1942, from this natural order willed by God, "flows man's inalienable right to juridical security, and by this very fact to a definite sphere of rights, immune from all arbitrary attack."

Nor has he neglected to warn us of the dangers of the reconstruction era, dangers which are the final heritage of war and its most lethal challenge.

"We therefore regard with alarm," he says in his 1939 Christmas message, "the tremendous amount of work that will be necessary when a world tired of fighting wishes to restore peace—to break down the walls of aversion and hatred which have been built up in the heat of the strife."

We know, of course, the long history of man is a bleak and bitter record of war and the ravages of war. We know that no single century of which we have knowledge has passed without war, and often great wars, being waged. And knowing this, many sincere and well-meaning persons insist that it is mere wishful thinking to talk now of banishing war henceforth.

Let us grant the force of the historic argument. Let us even grant that we cannot hope in the present stage of development of humankind to banish war entirely But granting all this, are we then to throw up our hands in despair? Are we to mark time meekly and with bowed heads until the next war has engulfed us? Are we to do nothing while such civilization as has been passed on to us is torn to fragments about our heads?

To ask the question of free and Christian men and women is to answer it. We realize the difficulties confronting us. We realize the tremendous task we will face when this war ends. We recognize the dismaying prospect of building an order of Christian fraternity and justice on the rubble and the hatreds and the aversions of six continents.

But we realize, too, that unless we win the peace which will follow this war, this modern world of ours—this crowded, interdependent world of ours—may commit world suicide.

Mark this, however: We must recognize the validity of the historic argument at least to the extent of not indulging in wishful thinking; we must build our new world on the old world as we find it.

To do that we must recognize frankly and face openly the hatreds and distrusts and aversions which are our heritage—and our major problem. Men of good will and nations of good will can accomplish much if they face their problem with good will—and if they recognize their problem clearly.

Involved in this war against the Axis tyranny are some 30 nations, large and small. Four of them, the United States, the British Empire, Soviet Russia, and the Chinese Republic, are now bearing the brunt of it.

When war ends these major powers, and we may include emerging China as among the major powers, must bear the brunt of restoring order. If there should be disunity among the major powers, the world will once again start to break into rival armed camps and the way will be paved for a third world war. It is imperative, therefore, that these powers find common ground on which to work together in the vast task of rebuilding.

Whether such common ground may be found depends not on one or two of these powers, it depends on all of them. Or putting it the other way, since the close cooperation of all is necessary, the refusal of any of them to attempt to find such common ground will be disastrous. This is particularly true of the United States, Great Britain, and Russia which have together the modern mechanical tools of war and peace in sufficient quantity to be decisive.

It does not follow that these three or four major nations should attempt to "boss" the post-war world. On the contrary, since they are all major powers, theirs is the major task of post-war reconstruction, theirs is the major obligation of building up a new international order of law and justice and fraternal freedom. They should invite the cooperation not only of all their associates, they should invite the cooperation of all the peoples and states which pledge to work for peace and law. They should welcome a reborn France and a new Italy and finally a new Germany and a new and chastened Japan.

Nor is it necessary to build some immediate superstate to accomplish a new reign of world law. As a matter of fact, talk of such a supergovernment only creates confusion and distrust on the one hand and wishful overconfidence on the other.

We have learned to our bitter cost that mere constitutions and covenants are meaningless unless the will and purpose which give them sanction is present. We have learned to our disaster that they may well be mere facades behind which evil men may plot and scheme for war while giving ready lip service to peace.

We are not, however, without a foundation on which to build a new world order. Not only have we such lessons as we have learned from our more recent experiences, we have a well-defined system of international law and international procedure which we have inherited.

This inherited system must be revised and brought up to date. It must be made to fit modern conditions. It must recognize and accept modern imperatives. Above all, it must recognize very frankly and declare very bluntly that no nation can live unto itself alone. It must insist that all nations must live under international law and that any nation or any group within a nation which undertakes to challenge orderly international procedure shall be held to a strict and immediate accounting. Unless there is national and international "will" to insist on such fundamentals, all talk of international fraternity and justice is dangerous nonsense. This "will" results from understanding, enlightenment, and common need, and is mental and spiritual in character and not primarily political or economic.

In other words, the machinery we may devise for international post-war purposes is not nearly so important as the determination to make post-war world law itself meaningful and purposive. Modern men can make modern world law meaningful and purposive only if they reexamine the final meaning and purpose of their own lives, only if they frankly accept that higher moral law which is final sanction for all decent worldly values, only if they recognize that man has final meaning and purpose and inalienable rights because he was endowed with them by an all-powerful Creator.

The Victory Program

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D. C., September 25, 1943.

DEAR FRIEND: A few days before I left for Washington, I received a petition bearing your name, calling on me to do everything in Congress within my power to back the Victory program.

I assure you I am working with all the energy at my command to this happy end.

Please feel free to call on me whenever I can be of service to you in the Nation's Capital.

With kindest personal regards, I am,
Your Congressman,

EDWIN A. HALL.

Policing the Axis—The German Phase

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. THOMAS of Utah. Mr. President, last spring I was asked by the Washington branch of the Commission to Study the Organization of Peace to prepare an article entitled "Policing the Axis—the German Phase."

This article was prepared and made public in April 1943. Since it is of public interest, I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The policing of the Axis in or for Germany presents three problems: The policing which must take place as each German-controlled land is freed of the German military and the gestapo; the policing of Germany during the period of occupation before the peace begins to operate or world organization is set up under treaty; and the policing and inspection of Germany under the terms of the peace.

Germany demanded colonies before the war started. Her theory of conquest was to get control of the sea by controlling all the land that bordered on the sea. That meant fighting out at all times from the German center. The control of Germany from a military standpoint constitutes the same military maneuver—Germany's trying to widen her size and her enemies attempting to narrow it. Thus the problem of policing Germany is an European one. It is, therefore, more simple than that of Italy or Japan. If the Axis succeeds, of course, the European

world would be run from Germany. Since Germany herself has not assumed a world-wide or hemispheric-wide war, she can be defeated in Europe, and she will be controlled as a European problem, in spite of her widespread U-boat activity. The U-boat phase of the war must end as soon as the U-boat bases become controlled or the ships destroyed.

The first phase of policing the freed territory will be complex. It should follow lines which will permit the rapid reestablishment of a civil government which the people will respect. If the first land freed is Norway, the Norwegian Government should be restored; honest Norwegian judges should be placed back on the bench, and the punishment of wrongdoers among the conquerors and the traitors should be left to these judges and their courts. Thus, France should act in the French way; Poland in the Polish way, and so on. The reason for this is two-fold: The process will build up the local governments and bring a stability that the people understand at the same time.

The Norwegian military should not operate outside Norway, or the Belgian military outside Belgium; the complex restoration must remain in the hands of the nationals whose governments have been destroyed. But these different national forces must be sanctioned and directed by a single force or a single command. The command must be the general staffs of the United Nations, or if in the war process one nation should be given supreme command of the European part of the world-wide war effort, that nation should continue to control all. Only thus can unity of action and unity of ideal be maintained.

As for Germany herself, absolute unconditional surrender is the first essential. There must be giving over of swords as a sign of defeat. There must never be any doubt in the minds of the German military about their having been whipped. There must never be a new steel-helmet organization, and the growth of the notion that the military fell because the people ceased to support it. Such a situation would simply mean disorder or civil war and would plant the seed of another war of conquest or aggression. The military force which gets control of Germany must be single in its command; and its first duty should be to overcome completely the Nazi party and Hitlerism, then set up whatever civil control can be trusted among the German people. The military should not be withdrawn for some little time after the courts are restored to administering justice and not political action. The military must remain in control until the peace force of the United Nations is operating or world organization is functioning with its ability to call on some force universally recognized. The single-purpose command must continue under one head. The great mistake in occupying Germany after the last war was made when certain districts were given over to the French, the Italian, the English, and the Americans, with no unitary control. Different methods were used in different places, making for a trading of one against the other in bargaining for the removal of the military, if not for utter confusion.

Unconditional surrender will, of course, imply practical disarmament, and the first principle of peace should rest upon the right and the duty of inspection to see that disarmament remains honest.

Adjustment from this phase of control may come as rapidly or as slowly as world organization commences to function. The world peace force, or the United Nations peace force, need not be large, but it must have definite sanction, with freedom of action under the direction of the world organization in limited spheres. Germany must be given and guaranteed the right of peaceful intercourse and trade under the Atlantic Charter theory, and the world peace force must maintain Germany's rights, as well as imposing upon her the responsibilities of observing her obligations.

Thus we move on to the third aspect of the problem of policing Germany—after peace is established and the world organization is functioning. Germany under an unconditional-surrender status may give us the characteristics essential to successful world government.

To date in international organization the world has failed because it has denied to that organization the essential factors of government. In order for any government to function properly, that government must, by its own law, administer over land and people. We can have no government unless there are land and people and organization to direct both. Give to world organization or the United Nations the responsibility of policing and inspecting Germany for a number of years, and we shall develop world government and a token force large enough to ward off aggressors wherever the aggressor may again raise his head.

That does not mean a super State. That does not mean a world force with sanction to enter any government which has not been, and is not, an aggressor against a neighbor. The United Nations' peace force will have narrow and specified duties. The power of our Federal Government in operating within the States is not great in quantity. A United States marshal represents a force, though, that is respected. His jurisdiction is greatly limited, but that does not interfere with its effectiveness. The same is true with the world or United Nations' peace force. The nations of the world need not fear this power, but the wrongdoer among them will.

The Axis Powers have proved themselves not of being unable to govern their own lands and peoples, but of being untrustworthy as neighbors. That is Germany's greatest wrong. The death and destruction which has followed that lack of trustworthiness is Germany's crime. She has lost her right to absolute freedom of action among the nations, and until the world regains confidence in her, she must be made to suffer for her wrongdoing. If this fact is recognized by all, it will not take a great force to curb her.

Bring a United Nations' peace force into operation with definite tasks and definite sanctions, and the path of peace will be assured.

Confusion and Uncertainty Among Businessmen

EXTENSION OF REMARKS

OF

HON. EDWARD H. MOORE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. MOORE. Mr. President, my attention has been directed to a newspaper clipping carried under a Washington date line of August 17, 1943. This article was sent to me by a former automobile dealer, who now is a major in the Ordnance Department of the Army. I should like unanimous consent to have this printed in the RECORD, together with a letter which I received from the former automobile dealer, now a major in the Ordnance Department, and my answer thereto.

I am omitting names and places for the reason that I do not desire to bring reprisals upon men of business who today are engaged in all-out war effort in the interest of winning this war and men who have given up their business in order that they might be helpful in this battle for survival, but who, at the same time, after the success in the war, hope to return to business and hope to keep a government that will permit them to do so. I am placing these expressions in this RECORD with the hope that the dissemination of such sentiments as those expressed in this letter may give courage to others of such a character as is manifest by this former businessman and present major in the Ordnance Department, and that this may be an inspiration for further determination on the part of millions, to the end that business on the home front shall be preserved as is guaranteed by the Constitution.

There being no objection, the article and letters were ordered to be printed in the RECORD, as follows:

UNITED STATES FIGHTS STRIKE OF AUTO DEALERS—FIRMS REFUSE TO PART WITH 100,000 CARS LEFT IN STOCK—INCOME TAX DODGE—O. P. A. WANTS ALL MODELS OFF MARKET BY 1944; ORDER IGNORED

WASHINGTON, August 17.—An Office of Price Administration excutive disclosed tonight that the Nation has only 100,000 new cars left out of a stock pile of 500,000 in January 1942.

At the same time, the high-placed official revealed that O. P. A. authorities are at work on plans to end a sellers' strike caused by the refusal of dealers to part with the new machines to holders of ration certificates.

According to schedule, the O. P. A. executive declared, the 100,000 new cars were to have been exhausted by the end of 1943, leaving the country without a single new automobile for sale by January 1.

REASONS GIVEN

But with the dealers' strike now in full swing there is no indication as to when the current stock of unused cars will be wiped out, it was explained, even though O. P. A. plans to issue enough ration certificates to account for the entire 100,000 machines by the end of the year.

At least two factors are responsible for the sellers' strike, the O. P. A. official asserted. First, some dealers are reluctant to dispose of their new cars because additional sales now will put them into higher income-tax brackets.

Secondly, others have declined to sell new cars to ration-certificate holders unless the latter have old cars to trade in. The reason for this, it was pointed out, is that dealers not only can keep their sales staffs busy in the used-car field, but also can realize greater profits via trade-in sales because of the high prices prevailing in the used-automobile market.

Meantime, automobile owners eligible for new cars, themselves, prefer to sell their used machines in order to take advantage of the high market for those vehicles.

A number of methods to force dealers to sell their new cars are under contemplation, the O. P. A. executive said, although plans are yet only in the formative stage.

MAY REQUISITION CARS

The proposals include action to requisition new-car stocks where necessary, forcing re-

calcitrant dealers out of business by taking away their licenses to sell, making ration certificates mandatory, and cutting down the new-car ceiling prices.

Persons eligible for new automobiles include physicians, clergymen, dentists, public health nurses, school teachers, veterinarians, Red Cross workers, certain Federal and State officials and employees, and others, provided a car is necessary to enable them to carry out their essential duties.

The W. P. B. has insisted that after the present supply of new automobiles has been distributed no new cars will be manufactured until the end of the war.

Hon. E. H. MOORE,
United States Senate,
Washington, D. C.

DEAR SENATOR MOORE: I respectfully refer you to the attached news item that, I assume, appeared in many other newspapers over the country.

It seems to me that this so-called O. P. A. executive should be made to understand that automobile dealers in general are just as honest and as patriotic (perhaps more so than he is) as other good citizens of our country.

To state my own case briefly, which I believe is a fair sample: In the early part of 1942 along with all other automobile dealers our business was the first to feel the effects of rationing. We did not complain, realizing that our factories had to turn to producing munitions of war.

However, many dealers liquidated their businesses, feeling that they could not survive financially without new car supplies. Some of the more courageous made their plans to stay in business throughout the duration. We hoped to retain our investments in a thoroughly legitimate field that we had built up over the years. This reasoning would probably appear traitorous to this particular O. P. A. gentleman.

Further, we had an obligation and a service to perform for the people who had bought our cars, to see to it that they kept running. We had a responsibility to our employees to continue their employment in a business that since has been called essential to the war effort and in which many of them had spent a good part of their lives and knew more about than they did other lines of work.

In the early part of 1942 some of us had large stocks or could buy from our factories stocks of new cars for future sales. Without knowing at that time what the rationing rules would be and having no buy-back guaranty from the Government or anyone else, the writer decided to invest in approximately 400 new Chevrolet cars that were available. Then as nearly as anyone could guess the end of the war, we planned the sale of these cars over a 3-year period. From the start and now we are operating on that basis. What is there unfair about it? Is that a "seller's strike" or is it good business planning which permits us to continue to serve our owners? Certainly if we had not had the courage to make the investment originally in new cars we could not have kept our service department open.

Of course, we prefer to take in trades because we make some profit on used cars under present conditions and are enabled to hold together the employees in that department of our business as well as to continue to sell transportation in used cars from us because they at least think we are honest and responsible. We have sold and will continue to sell some of our cars without trade-ins.

The question of income-tax evasion had nothing to do with our original planning or our present operation. Anyway, since when has a merchant been forced to temper his business plans and policies to assure the highest possible tax yield used to some extent, unfortunately, to assist in carrying on the Government pay roll such obviously irresponsible people as the quoted O. P. A. czar?

Do you believe that threats such as forcing recalcitrant dealers out of business by taking their licenses to sell and others in the clipping should be enforced or even permitted to be made? Has Congress really delegated this life and death authority to the O. P. A.? If so, it is time for Congress to act before it is too late.

As an honest automobile merchant among many thousands of such, and a man who voluntarily is doing what little he can for his country, I am wondering if perhaps this particular O. P. A. employee, with his peculiar thinking should not have some regulating along with so much, and in my opinion, too much in many of our lives.

I should like to have my business to go back to when the war is over.

A reply will be appreciated.

Very respectfully,

——— ———.

I have your esteemed favor of September 25, enclosing a newspaper clipping of the International News Service under a Washington date line of August 17. This article quotes a high-placed O. P. A. official and has to do with the conduct of the sale of cars by all automobile dealers throughout the country. It reveals to the mind of the O. P. A. authority a sellers' strike caused by the refusal of the dealers to part with their new machines to the holders of ration certificates. It complains that there is now no indication as to when the current stock of unused cars will be wiped out and indicates the great disappointment of the O. P. A. plans that they will not be wiped out by the end of the year 1943.

The O. P. A. has discovered that the reluctance on the part of dealers is probably due to a desire on their part to avoid being placed in higher income tax brackets. The O. P. A. has also discovered that some will not sell their cars to those holding ration certificates unless they have old cars to trade in. It has also been discovered by the O. P. A. that the reason used cars are kept in stock is that the dealers may keep their staffs busy in the used car field and may realize profits in trade-in sales because of the high prices prevailing on the used automobile market. It develops, according to the O. P. A. authority, that those eligible for new cars may sell their own used cars in an active used car market.

The O. P. A. discloses that it has in contemplation plans that as yet are in the formative stage to deal with automobile salesmen, such as action to requisition new car stocks where necessary, taking away their licenses to sell, making ration certificates mandatory, and cutting down new car ceiling prices.

It is understood also that after the present supply of new automobiles has been distributed, there will be no others manufactured until after the war. Having accomplished these purposes, as contemplated in the formative plan, the automobile dealers will then be entirely out of business. To the O. P. A. and to the bureaucratic mind generally, this seems to be a desirable thing. It seems to them that the more businesses that can be destroyed under the cloak of war necessities, the simpler it will be to socialize all businesses in this country.

It is legitimate for men to conduct their business along such lines as will minimize the tax burden. It is recognized that taxation can be made so burdensome that it will become confiscatory. The courts have upheld the right of businessmen to do all legitimate things in avoidance of excessive and ruinous taxes. The business mind in this country has never found fault with one who has supplied himself with stocks of goods to meet a contemplated market, and he who has been courageous enough and forethoughtful enough to so supply himself and who does find a ready market for the future, has usually been commended and rewarded by such practices. If he has made a mistake, the businessman has always had the courage to pay the penalty for such mistakes. He, therefore, should be entitled to the reward that his move proved to be wise. That wouldn't conform to the kind of thinking of our bureaucrats, but the bureaucrats are wasters and the businessmen are producers. The bureaucrats are theoretical and impractical, while the businessman is realistic and understanding. It is the business and business practices, and all forms of free enterprise in this country that have made it what it is. If it hadn't been for the good sense and sound thinking of the businessmen, the war effort would have bogged down in chaotic despair. The businessmen and the business interests, and the free enterprise system, should be entitled to an everlasting debt of gratitude of the whole world for its work done, and done in spite of the interferences and hindrances of American bureaucrats. These bureaucrats are the product of the socialistic, communistic Roosevelt administration, ably directed by the Frankfurters, Rosenmans, Lehmans, Hopkinses, and others constituting what is generally understood as the "palace guard."

We shall win this war and the credit for winning it will be due to the private enterprise system and its determination in spite of all the irritations and annoyances by bureaucrats in all the activities of the people. The American people still believe in business, and believe in it as conducted under the capitalistic system. This belief is shared by those today who make up the fighting forces of our country. We can depend upon them to become an invincible force against the onrush of socialism initiated in the last decade by the ruling classes of the present regime. This invincible spirit of the American people is not crushed, and the invincibility of the New Deal administration will be as completely exploded as that of the supermen and dictators of the aggressor nations. This spirit will rise and manifest its power at the first opportunity the American people have to express themselves.

The character of the smear article that you refer to is typical of the propaganda against business, and it is the most contemptible of tactics ever foisted upon a free people. The experience related by you is applicable to hundreds of thousands of other people in your line of business, as well as in many other lines of business. The intelligent and determined resolution of business itself to handle the great business of war in a business way gives us assurance of a successful termination of the war, the preservation of peace, and the return to constitutional government. We shall yet become a great people with a character that all peoples will want to emulate in the future as they have in the past. When we shall have restored our Government to the people and to the institutions provided by the Constitution, the New Deal will be remembered only as a bad dream.

You ask, "Has Congress really delegated this life and death authority to the O. P. A.?" This is a pertinent question. In answering it we must remember the people can have the kind of government they want. They can choose between state socialism or constitutional government. If they choose the latter, they will see to it that such men are sent to Congress as represent the will of the people. Congress has abdicated its responsibility, but the people have a right, and as yet an opportunity, to change that—I have every confidence they will exercise that right.

With kindest regards, I beg to remain,

Very truly yours,

E. H. MOORE.

Mr. MOORE. Now, Mr. President, as additional reasons to show why the people are confused and uncertain, and why they lack confidence in their Government, I read what the President stated in his recent message to Congress. He said:

> Since the outbreak of the war in Europe, we have increased our output of petroleum by 66 percent.

This shocked the oil industry and all others who are familiar with our domestic oil problems. It is not known on what basis the President's calculations were made, but it is safe to say that the members of the industry can find no figures that will produce any such results. The President has been misled either by those wholly ignorant of the facts or by those who seek to conceal the true facts. As a total refutation of the accuracy of the President's statement, I ask unanimous consent to have printed in the RECORD a statement I have had prepared with reference to the present status of the oil industry.

Mr. President, I also ask unanimous consent to have printed in the RECORD a radio speech which I made, which was broadcast over the Columbia network on the program Congress Speaks, under date of August 10, 1943, from Tulsa, Okla., because I think it pertinent and apropos to the consideration of these matters that are of such vital importance to the people throughout the country.

It is well known that since 1938 there has been an alarming decline in the discovery of new fields. According to estimates of the Petroleum Administrator for War, the industry is credited with the discovery of new fields in 1938 containing recoverable reserves of 1,894,000,000 barrels; in 1939, 943,000,000 barrels; in 1940, 945,000,000 barrels; in 1941, 361,000,000; and in 1942, 317,000,000 barrels; or a decline over the 5-year period of approximately 84 percent. During the same period the total annual production increased from 1,214,000,000 to 1,385,000,000, but it is obvious that, in view of the severe decline in the discovery of new reserves, a substantial portion of our 1942 production was the result of heavy withdrawals from reserves discovered prior to 1938.

On August 1, 1941, the industry was drilling 3,605 wells, as compared with 2,391 drilling wells on August 1, 1943—a decline of over 33⅓ percent. During December 1940 there was an average weekly completion of 476 wells as compared to 273 wells for the month of December 1942, or a decline of approximately 43 percent.

On January 1, 1941, inventories of crude petroleum and products on hand showed 570,000,000 barrels. On January 1, 1942, inventories had dropped to 560,000,000 barrels, and on January 1, 1943, to 500,000,000 barrels. The industry now estimates that by January 1944, total crude and petroleum products inventories will have dropped to 435,000,000 barrels, with an anticipated increase in demand for the first quarter of 1944 of 500,000 barrels per day for crude petroleum, creating an all-time high demand of 5,000,000 barrels of crude per day.

The Independent Petroleum Association of America has pointed out that the Bureau of Mines figures indicate an approximate increase of crude production since the outbreak of the war in Europe of approximately 17 percent, but everyone in the industry knows that the increase has been largely due to stepped-up withdrawals from the older fields and not from new discoveries.

On February 27 of this year, the American Petroleum Institute announced that the total estimated known underground reserves of petroleum, as of December 31, 1942, were estimated at 20,082,793,000 barrels, which was an increase of 1,878,976,000 barrels over the estimated known reserves at the close of 1941; but, at the same time, the institute stressed two important factors; first, that 1,618,925,000 barrels of the increase was attributable to additional development in old fields, leaving 260,051,000 barrels attributable to new fields, which compares with the average estimate of 559,243,000 barrels for each of the past 5 years, and second, that the availability of the known reserves was dependent upon the rate of production. The report of the institute's committee warned that—

> As a matter of fact today's known oil can be recovered only over a period of many years and at gradually declining rates, as has been widely demonstrated by past performance under all kinds of operating conditions.

A possible explanation of the President's statement might be found if the month of August 1939 were used as a basis of comparison with current production. Such comparison is wholly inaccurate and misleading. Practically the entire production of petroleum in the States of Texas, Oklahoma, Louisiana, Kansas, New Mexico, and Arkansas was shut in by orders of the State regulatory bodies during the last 15 days of the month of August 1939. This unprecedented shut-in was due to economic conditions existing in the industry and would afford no basis of comparison with normal productive periods.

Petroleum is essential to winning the war. Petroleum is as essential as guns, ammunition, and manpower. A mobile army is dependent upon petroleum and its products. The continued denial of a fair price for oil by the bureaucrats is another example of New Deal incompetency and bungling. The people are about fed up with such nonsense. The condition existing in the oil business is what happens to all industry when bureaucratic control displaces private enterprise.

I have full confidence that we will discover additional petroleum reserves sufficient for our domestic and wartime purposes. All the oil industry needs is a fair price for its production and relief from bureaucratic control.

If I speak on this program for Congress, I speak for the people. This is a people's government, and they can keep it a people's government. They have a right to govern themselves, and I think they will exercise that right.

Those who wrote the Constitution knew that the people's government might be seized by those entrusted with power. They knew that this power might be abused. They were just fresh from an experience of living under the rule of a king. The people had been regimented, and their every activity had been interfered with, just as they are today. So this great charter of government was devised, and it guaranteed a people's government. It guaranteed the maximum of individual liberties to the people and constituted a beneficent government. Individual liberty and freedom and opportunity were safeguarded, and the State itself could not deprive the people of these liberties and freedoms. It carried out the principle that men are entitled to life, liberty, and the pursuit of happiness.

The Government was divided into three branches, each independent of the other and a check upon the other. The powers granted to the Federal Government were limited, and all other powers were reserved to the individual States.

Members of the Congress were to be elected by the people of the States, under laws provided by the States. The term of office was fixed and the qualifications were set up. This could not be deviated from except as the people amended their Constitution.

The Constitution provided for a Supreme Court and authorized Congress to create other courts, if and when needed.

It provided for a President to be elected, and his qualifications and tenure of office were fixed.

Congress was given the power to coin money and regulate the value thereof, to levy and collect taxes, and to authorize expenditures from the taxpayers' money, and Congress was given the sole power in this respect. No one else had any such power. It was assumed that the people would insist that Congress not abuse this power, as Congress was immediately responsive to the will of the people.

The Constitution also gave to Congress the power of impeachment and removal from office of members of the executive and judicial branches of the Government, for misbehavior in office. The procedure for trial and impeachment seemed to guarantee against an abuse of that power.

It seems, therefore, that the people could not lose their Government or their power to govern themselves unless they just wanted to lose it I don't believe they will lose it.

We read in a nationally circulated magazine a statement by Senator BYRD, of Virginia, a very distinguished, honorable, and experienced statesman a Member of the United States Senate during all of the Roosevelt administration, a man who is a scholar, experienced in business, a great American patriot, and one in whom the people of the country have a supreme confidence. We might be frightened by the question he poses: "Are we losing our freedom?" If we are losing our freedom, it is by usurpation by the executive branch of the Government of the powers of Congress.

Senator BYRD carries the thought throughout his article that Members of Congress want to give the people the kind of government they want. I don't think that a Member of Congress should wait upon the people to direct him, but I think the Congressman should advise with the people, and should lead the people in the direction that their rights will be safeguarded. He was elected to represent them because they thought he was qualified to understand and act in their interests.

The people now know that Congress has vested too much power in the President, and that Congress was remiss in its duties when it allowed the executive branch of the Government to become so powerful through the building of a bureaucracy which has become a substitute for constitutional government. Congress must accept the blame. It abdicated, to the great detriment and injury of the country. The people know that now, and in the last election defeated

many Members in both Houses who had become mere rubber stamps for the executive branch of the Government.

The people know that the Senate never rejected the executive appointment of one of those defeated Congressmen whose name has been sent to it for confirmation. The people did not think these men ought to be given another place in the Government when they defeated them at an election on a fundamental issue in government. These repudiated Members of Congress have been appointed to govern over vast activities of the people. This has destroyed the people's confidence in the Government, and that is one of the fundamental things wrong with our country today. Senator BYRD says that the people do not necessarily need to defeat these Congressmen for failing in their duties but they should give them new directions. I believe the people will defeat them. They won't trust them. They should not trust them. It won't make any difference to the people what party they belong to. They are not going to be concerned about party when the issues are so important.

Another very distinguished Senator, Senator O'MAHONEY, says in a recent magazine article: "America is being made over", made over by Executive decree, and these decrees have reached nearly 4,000 during the Roosevelt administration. This number about equals all of the laws passed in that period of time. These decrees are contrary to the limitations fixed by the Constitution. Congress failed to do its duty when it delegated such power to the executive branch of the Government.

Senator O'MAHONEY says that "Congress has entered the executive agencies' calculations only when funds were needed" and when funds were denied, these executive agencies, without authority of law, circumvented Congress. He cites an instance when Congress refused to make an appropriation for a downtown office building in Washington, but the building was put up and paid for from a fund that had been provided through a blank-check practice on the part of Congress. Through this means, Government funds to the amount of $890,000 were spent for this building which was built after Congress had denied its authorization.

Yes; we need new Congressmen who have a different concept of duty than those who have failed the people. Congressmen, who have either supported or acquiesced in the practice that has been going on in our Government during the last 10 years should and, I believe, will be defeated.

The people are more concerned about losing their Government at home than they are about winning the war. Of course, everybody knows we will win the war; that is not a subject for discussion. Our generals, admirals, officers, and all of the boys in our fighting forces are winning it. Of course we will win it, and of course everybody wants to win it as soon as possible, and of course they want the kind of peace that will insure, as far as possible, against a repetition of war.

The people are terrorized by tyrannical, dictatorial bureaucrats, hindering their efforts in every kind of business. We have the much-titled Harold Ickes, with brazen effrontery, stating publicly that he is a bureaucrat and that it is not the bureaucrats and New Dealers who have been running this war, but the dollar-a-year businessmen, and that those who think the war effort is being bungled should blame them. He mentions men like Knudsen, Nelson, Stettinius, and many other able men of business. This is obnoxious and disgusting. These New Deal bureaucrats have done everything within their limited capabilities to hinder the war effort. Ickes, himself, is one of the most flagrant examples of this New Deal, bureaucratic type. In a book, either written by himself or by someone else for him, he calls himself "the old curmudgeon," which probably signifies that he is a miser for power.

The President has vested in Ickes the management and control of the oil industry, and nothing could have been done, that we can think of, that would have constituted a more inane and senseless conduct of a business. It has resulted in a shortage of crude oil, a vital war material for this country in its peace economy as well. Ickes sounds off with statements that are inane, meaningless, ill-considered, and unreliable. He talks about the wealth of the country now running into the trillions, with each man, woman, and child worth about $89,000, represented mostly by undiscovered and unmined coal.

This "old curmudgeon" has been vested with the administration of some 18 agencies of government. Nobody understands how the President expected him to hover over all of these agencies. It reminds one of the story of Lincoln about a boy who reported to his mother that he had put 40 eggs under a hen and that he did it just to see her spread herself. This comparison between these two hens will probably be understood by all, unless it is the economists and theorists in the departments in Washington.

Ickes wants control of the oil industry. He has not been sincere in this matter of trying to obtain an increased price on crude oil. Andy Rowley, oil editor of the Tulsa (Okla.) Daily Tribune, one of the leading newspapers in the Midwest, is an authority on the oil industry. For a number of years he was editor of the Oil and Gas Journal, which is the oil man's bible, and has an international circulation. Speaking from his memorandum more than 2 years ago, the Phillips Petroleum Co. requested permission to increase the price it paid for crude. Oil men throughout the country supported this request and no one opposed it. Data was supplied to establish its justification, but the "old curmudgeon" was discourteous to all who tried to discuss with him these matters. He was not only discourteous, but positively insulting to men who had traveled throughout the length and breadth of this country to aid him. But he is not receptive to aid. He is a dictator in spirit and an ignoramus in practice. He made a recommendation to Prentiss Brown for an advance in the price of crude oil but he made this recommendation as a gesture and just a day before the President issued his freezing order on prices and wages. He had had 2 years in which to be advised, but you can't advise a man like that. He is past hope. When he recommended the price of crude oil be advanced he knew it would not be, and he knows now that it won't be. He is not on the level at all.

The obsession with Ickes to take over the oil industry is not new. It dates back to 1933, when he was appointed czar of the petroleum industry under the now defunct N. R. A. The oil business was the only big business placed under separate control of a Government official outside of the N. R. A. Nathan R. Margold, an attorney from the East Side of New York, was made Chairman of the Federal Oil Conservation Board, which was the agency running the oil industry. Margold was then, and still is, Solicitor of the Interior Department under "the old curmudgeon." One of Margold's first actions was to set up a work sheet of control of the entire petroleum industry, with himself as head. He asked oil men how much Walter C. Teagle, then president of Standard Oil Co. (New Jersey) made a year. When told Teagle's salary was $125,000 a year, Margold is reported to have said: "Well, if Teagle makes that much for running one oil company, I should get more for running the whole industry." On his work sheet was a staff of 15 lawyers which Margold would pick. Margold was working under Ickes then, and still is. Margold denied he ever prepared such a work sheet but prominent oil men were shown it and discussed it with Margold. It can be documented so as to show it to be an undeniable fact.

Now, in view of this, who would believe Ickes? I am positive of what I am saying. It is well known to informed men in the industry. Of course he is now being appeased because of his power and because of fear of reprisals that it is the policy of the New Deal bureaucrats to practice against the taxpayers of the country. These tyrants are not moved by any efforts at appeasement. The only salvation for this country is to get rid of them and we will depend upon the people that this may be done.

Such things as I have recited not only affect the oil business, but the farming and stock-raising business, and all other business activities of the people. The people are talking about them, they will keep on talking about them, and they will act when they have an opportunity.

Increased Food Production—Availability of Farm Machinery

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. NYE. Mr. President, the increased food production being asked for, accompanied as it is by dire lack of farm machinery, leads me to request unanimous consent to have printed in the RECORD a letter from R. A. Lathrop, secretary-treasurer of the North Dakota Implement Dealers' Association, on the subject of the availability of farm machinery.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA IMPLEMENT
DEALERS ASSOCIATION,
Hope, N. Dak.

Mr. MARVIN JONES,
War Food Administrator,
Washington, D. C.

Dear Mr. JONES: We wish to present some phases of the 1944 food production program, particularly as it applies to the farm equipment situation in this State. Our farmers are being asked to greatly increase their acreage, the report being that our 1944 quota will be 10,000,000 acres of wheat alone. That is second only to Kansas, and two to three times that of the other wheat-producing States.

The program should not rest only upon added acres, but also upon increased yield per acre. To accomplish this with run-down equipment is a long-shot gamble in this State where (outside of eastern 20 percent) we have to raise crops with less than needed rainfall. The purchases of the past 2 years have centered on replacing the power-producing and grain-saving machines, especially tractors and combines. That was no doubt good policy, as the lack of funds, due to the drought of the 1930 decade, made it impossible for the farmer to make all needed replacements, even if machinery had been available.

Even yet there are many 10- to 20-year-old tractors on the farms, and still a shortage

of combines. However, the immediate problem, as we see it, is to provide tractor plows, and to make sure that grain drills will be provided for 1944.

While preparing this letter we went out on the street and asked the first 12 farmers we met the ages of their plows and drills. The average was 13 and 16 respectively, and this area was not quite as badly hit by the drought as was two-thirds of the State.

The foundation of our 1944 crop should be good plowing this fall and good drilling next spring, to get the grain down to the subsurface moisture. This is the only assurance of even a fair crop, unless it happens to be a very wet year, which is the exception rather than the rule. Whether we do a real good job may make a difference of from fifty to one hundred millions of bushels in the total of our crops.

Even though North Dakota is so regarded, it is not a wheat State, as 60 percent of our acreage is in other crops. We rank first in rye and flax, are tied for first in barley, in hay acreage we equal Illinois, we are sixth in potatoes, and raise 70 percent as many acres of corn as Michigan. Outside of flax all our crops enter directly (or indirectly via livestock) into the food picture. To show that we do have some livestock, in the worst drought year we had to reduce our cattle population by 900,000 head. So it may be seen that North Dakota is really an important factor in the food production program.

While it is the writer's job to try and advance the interests of the retail farm equipment dealer, as to this particular problem my first thought is that our State's response to Uncle Sam's call for more food shall be 100 percent. The sale of two or three extra plows and drills per dealer will not greatly affect their welfare, but, as we have already stated, it may make a very great difference in the total food production of our State.

The immediate need, as we see it, is that tractor plows in sufficient quantity be immediately shipped to North Dakota, to assure a good foundation for our 1944 crop—and plowing is just that. Also, that our farmers be assured that they will get sufficient grain drills to properly plant the acres they do prepare. A careful investigation should be at once made as to the condition of all the different machines that enter into the growing and processing of our crops, and that they will be available when needed. The situation in this State is abnormal, due to low replacements during the 1930 decade. Fortunately, the farmers are now in financial condition so that they can make the necessary replacements, if permitted to do so. And, they may be safely trusted to buy only such equipment as they do need.

Let's make sure that the supply of farm equipment is balanced to the requirements for growing the crops most essential to the winning of the war—and of a worth-while peace.

Very truly yours,

R. A. LATHROP,
Secretary-Treasurer.

A Challenge to Americanism

EXTENSION OF REMARKS
OF
HON. RAYMOND E. WILLIS
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address entitled "A Challenge to Americanism," delivered by Henry J. Taylor, author of Men in Motion, before the Indiana Republican Editorial Association at French Lick Springs, Ind., on September 18, 1943.

There being no objection, the address was ordered to be printed in the RECORD as follows:

Fellow Republicans, fellow working members of the press:

In February 1918 an important event occurred for the State of Indiana, the Republican Party and the Nation. Will H. Hays was elected chairman of the Republican National Committee. The House and Senate were overwhelmingly Democratic at that time and the war with Germany was at its height.

All the Democratic horses were being paraded back and forth in the middle of the stream. The rivers were flowing and overflowing with worthies and semiworthies who seemed to base their claims for continued acceptance on the thesis that having gotten into the middle of the stream they were so far unable to cross it.

But even our glorious victories overseas were not enough to redeem these water-soaked equine against the forthright and straightforward campaign for better government conducted by an honest man from Sullivan, Ind.

At the height of our war victories, at a moment when all the world echoed the name of a Democratic President who was considered indispensable both in war and in the coming peace, at a moment when the country rocked with one victory after another, in fact, as you know, within 1 week of the victorious armistice itself, the Republican campaign resulted in the election of a Republican majority in both the House and the United States Senate.

Now, what was the magic of Will Hays' campaign? I believe Mr. Hays would be the first to admit that there was no magic at all. But there was truth, intelligence, forthrightness, and burning desire to let the people speak again and have their way.

Seeing the obvious parallel between our situation today and the problem 25 years ago, and in coming to this meeting in French Lick, I have gone back over the record of that campaign. Here, for example, is something Will Hayes said in a speech to the Michigan Republican State Convention in Grand Rapids in this same month of the year 25 years ago—September 1918. I quote him: "There always should be in American affairs at least two great parties, both strong and vigorous. But I insist that our politics be open and acknowledged and on a plane and of a character that needs no substitute, and that there be no politics in anything that touches the war.

"Has it occurred to you, my friends," he said, "what it means to the country's cause for the minority party to make it its one chief business to try to excel the majority party in support of the war? Have you estimated what it means for the sake of that cause for the minority party to strive continually to outdo the party in power in every war activity and actually to lead in its unqualified support of all war measures? This is the mission of the Republican Party at the moment," said Mr. Hays in 1918. "It is its high privilege and duty."

How could those words of September 1918 be more appropriate than they are for September 1943? And how could it be more clear that if we are equally forthright today, equally clear-minded in our recognition that we must be an opposition party, act like one, talk like one, and fight like one, we can serve this Nation as it will be served in no other way! It is simply not politically true that we have to endorse our opposition to beat our opposition. I do not notice our opposition endorsing us!

I believe we can take in new hands the determination of the necessary changes to preserve the principles of freedom and individual self-faith that our national traditions requires, and I believe that we must do so or we cannot win this war and safeguard the peace in the American manner. For our Government today is Europeanized. We are not changing a personality, we are changing a basic philosophy of government. Communism is the red, fascism is the black. We are shepherded into a blending. We are both reddish and blackish. We are a brown. For the fundamentals of the Government idea brought forward in our country, and now to be expanded from here, were already prepared in a combination of the polyglot doctrines of Europe.

For 10 years, in the name of a strong personality, our national socialists have practiced in wider and wider measures a strange mixture of sheer opportunism, emotional economics, and reckless adventure along with a hard-headed political program of making the labor unions and farmers of our Nation so dependent on special favors from them, that they could control both of these two groups and thus maintain themselves in power indefinitely.

In this, from the very beginning, they have performed a profound disservice. For one of the political venoms communicated from abroad is that even America now wonders whether democracy will work. We are losing faith in our system at home while we battle the system of our mortal enemies abroad.

The first desire of the human heart is to find something on which to lean. And this is the desire which is capitalized by Europe's totalitarians and America's national socialist leaders alike.

Thus, while Europe's totalitarians cut a cruel and violent gash in the very web of civilization itself, America's national socialist New Dealers perform a sad unraveling. For civilization rests upon individual self-faith. Civilization is first and foremost an individual thing. Without the worship of truth, rooted in the action of its leaders, and depending on the individual faith of its citizens, no government can exercise national virtue, and no war or peace can have a truly moral basis.

Neither rhetoric nor clever conditioning of the public mind, nor brilliant formulas which disguise a group's plans while this is being done, not even the goodness of the cause which is disguised, can maintain the edifice. The ultimate ground on which the strength of the nation rests is the spiritual quality within the people and their confidence in themselves, and in the integrity of their government. Integrity is what upholds all and the whole is menaced whenever the government sets that example.

In our present government the separation of enlightenment and virtue, the separation of thought and conscience, was at the bottom of America's failure in any way to direct the world toward peace from the time Hitler came to power in 1933 to the outbreak of war in 1939. As our leaders pressed their views and expanded their words and promises at home, they fell further and further away from the ability to enforce any peace abroad.

For 6 years, while the world smoldered, ready to burn under the torch of the madman Hitler and the historic flame of pan-Germanism, knowing and being warned by such men as Mr. Hull, that war was coming, our National Socialist leaders still tampered with the spiritual and intellectual honesty of our Nation.

Our Government was run then, as it is now, by a small group thoroughly familiar with the power that such organization gives

for the attainment and retention of influence and position. The tongue and pen were the cogs of the machine, just as they are today. A masterly camouflage of spoken morality was daubed over the grim reality of partisan politics. Side by side with the misuse of speech, they entered into their vast pretense of "making democracy work."

These men did not operate for democracy, for their measures and orders, their appointments to the judiciary, their witch hunts and purges, were the antithesis of any confidence in democracy. They operated for the purpose of ruling the Nation as they—in their wisdom—saw fit. They pursued the same program which led to such bitter trouble abroad—the elaborate suppression of facts and the doctrine of hate to suit a secret policy.

Are these men competent to conclude this war in justice to the American people, and to conclude the peace in justice to the world? That is a fair and honorable test, more important than ever in wartime, mercilessly exact. The answer is a clear and roaring, "No."

I have just come from Charlottesville, Va., to debate there at the University of Virginia, "America's Town Meeting of the Air," "Should the Atlantic Charter Be the Basis for the Peace?" If the Republican Party will take these men at their word, and point alone at the eight clauses of the Atlantic Charter, clause by clause, the bankruptcy of even foreign policy—a policy which, as far as I can see, is nonexistent, uncontrollable, and unlimited—can be and should be mercilessly exposed in the interests of our people and in the interests of a lasting peace for the world.

The preliminaries to a lasting peace are confidence and integrity. This greatest of all nations is without these two qualities in its leadership today.

Turning to our position at home, these 1943 horses who are in the middle of the stream clutch the banner of liberalism and wave it hard on high.

Now, you know as well as I do that the term "liberal" has grown so out of hand that an honest use of it is impossible.

Like many of your friends and mine, I have long since stopped saying I am a liberal. I answer that I am an American and let it go at that.

National socialists stole the liberal label and falsified the concept.

It is typical of national socialism that it calls itself liberal when it is, in fact, reactionary. It is reactionary because it turns back the course of man's advance to the liberal social order which it seeks to overthrow. Its enemies are Chatham and Burke, Fox and Pitt, Palmerston and Cobden, Bright and Gladstone, and, on our side of the Atlantic, Washington and Franklin, Jefferson, Madison, Clay, Webster, Lincoln. Where in all history can be found a group of names like these, and in what teachings have there been more fruitful influences in the thoughts and institutions of mankind?

Instead, there had been various sorts of incompetents, like Karl Marx, preaching the doctrine of national socialism for the better part of a hundred years. But they were not listened to until the sudden growth and distortion of the mechanistic network, when new industrial, social and economic problems began to force us with such force and in such a bewildering manner that, separated from the good earth, we hesitated to act in terms of what had, since the early immigrations to America, been the fundamental, underlying convictions of free people.

History will never forgive America's national socialists for having used their opportunities in abusive ways which led to weakness and cleverness when mankind all over the world had so much at stake in an American example of sobriety, stability, and integrity.

If our national socialists were honest with us, and with the world we seek to help, they would agree that it is moral principles, and moral principles alone, by which any individual's accomplishment should be tested. But they are herd-minded and they have a special interest in the advancement of national socialism.

Second to the exposure of our foreign policy, how can we fail to expose the fact that the struggle of the Republican Party is really the struggle for freedom in this of all countries from which the best hope for freedom must come. This issue is profound, and it is our issue, for the responsibility rests on us as it has rested on others at earlier times in the history of the world.

The Roman Republic rose against the despotic world as America rose against the religious and economic limitations of Europe. The banner of freedom passed from tired Athens to Rome, for the early Roman Empire was a republic, res publica, a public affair, the product of the Hellenic idea of freedom—the rights of individuals against arbitrariness.

Rome occupied the successive states of the Asiatic Middle East, but this Asiatic world gradually stifled the spirit of Roman freedom and Rome's political spiders did the rest. The process was similar in its extension from Sulla to Diocletian—a transition to rule by appointment, to absolutism, to tyranny, and to the downfall of Roman freedom.

But at the moment when freedom seemed to die and Roman citizens were converted into subjects of the Caesars a profound agitation broke upon the distracted world from Palestine. To redeem and liberate an enslaved and despairing humanity with a new Gospel of God, Jesus walked among men.

As a shining light, the Gospel revealed the principle that each human soul comes into existence once, is unique, immortal, and that the will is free, and through its action man shapes his destiny on earth and in the hereafter. The idea of man, the concept of freedom and personality, was reawakened by Christianity just when state omnipotence had reached its highest development, and the struggle of Christianity is still against all who see the future of man in terms of government omnipotence.

We have the resources and the temperament for our greatness. But they are ours. They were not free to us, and they are not free to squander. They are not common property. An honorable state cannot give them away because they do not belong to the state. They belong to us.

America is incomparably better off than the rest of the world, and it is the solemn duty, the prime duty, of our Government to see that we remain so. We obtained this position by coming here in the first place, then working hard and honorably after we got here.

We have been fortunate in our location. But, remember, we made our location. It was not delivered to us. Our blessings did not come easily.

From the days of the first immigrants, through the days of Concord and Lexington, of the wilderness of Indiana, from the days of the Great Lakes, the days of the new California, and the great Pacific Northwest, through the tragedy of the last war and of this one, we have built our Nation with more idealism and less greed than any people on earth. It has been a long and difficult struggle, the combined struggle of a great and successive body of free men. It has been a continuing process.

The result: America is the greatest Nation on earth. How true you find that as soon as you leave our shores. As a people, we are more productive, we ask less and give more, we are more generous and more open-minded, more tolerant and more forgiving, than any group on earth. Our men are the most versatile, our women the most beautiful and free, our children the best educated. As a nation we are plagued by neither infancy nor old age. From the banks of the Wabash to the waters of both seas, we want only to work and play, live honestly, love deeply, and die in our time.

Our hopes may not be important to national socialist officeholders. But our hopes are important to us. We cannot live in debt, and many of us never have. We cannot take on obligations for others until we have fulfilled our own. Neither can our country.

It is difficult at best for most of us to make our way and provide for our families. We have no surplus. We have no certainty of our future. We have great problems, great sadnesses. It will take us generations to overcome the mistakes already made at home, and to overcome the effects of this war.

We shall be faced by every sort of readjustment, deep privations. We must provide for the returning American soldiers, for the desperate and the wounded of our own land. We must work tirelessly to regain our solvency and to recompense the huge drain on every resource we have. In this alone we face the greatest task in our history. We are in no position to lift the standard of living in China, in Russia, among 400,000,000 impoverished people on the overpopulated peninsula of Europe, no matter how desirable that may be. One hundred and thirty million Americans are in no position to do this, and there is no possibility whatever of our succeeding in the attempt. There are a hundred places to start and no place to stop. We simply descend into the morass of repudiation or continual war. Our citizens deserve a better destiny than that.

In the process of our national life we have already been incredibly charitable to the rest of the world. We have asked no thanks for this, and sometimes it seems as though we have received none. But the record stands. We need not be ashamed of our generosity to the rest of the world.

The obligation to assist toward a better world and the value in doing so are obvious. Who does not know that? Our duty is to be useful, however, not according to our desires but according to our powers.

Our national socialists' idea is that our Government promises to arrange freedom and prosperity for the people of the world. This is a thoughtless undertaking—how thoughtless no one knows. Yet this airy and fatuous approach to the reality of the world is promulgated at the very time when the solemn and high purpose of the United States should be to have the people of all the world believe in us—what we say, what we do, and what we intend to do.

On the narrower question alone, the question of freedom from want—anyone must know that the politicians, good and bad, of each and every country of the world will be pulling on us in a tug-of-war to get the most out of America's international W. P. A., exactly as our local mayors camped in Washington to get the most out of the "don't change artists" disastrous, boondoggling W. P. A. at home. The "middle of the streamers" who do not want to be changed are referring to at least a billion people, most of them in primitive surroundings, and 400,000,000 of them in the Europe I have attempted to describe. Will they succeed? Their promise in the name of the United States is utterly fantastic.

Yet the Viscount Cranborne, Lord Privy Seal of England, representative of the Inter-Allied Committee on Post-War Requirements, announced in the House of Lords that the United States Government had already requested from all Allied Governments and governments in exile estimates of their food, clothing, and housing needs for the first 18 months after the war was over, along with supplementary lists of raw materials, machinery, and industrial goods which all these various countries of the world will need.

The Viscount Cranborne, says the Associated Press, reminded the House of Lords that, while Prime Minister Churchill had already promised that "Britain would do all she could to help," the principal supplier can be only the United States; England herself, he pointed out, will need much.

The Archbishop of York protested over the omission of certain countries of the world in the report. Lord Cranborne corrected this promptly. "Russia, China, Burma, Malaya, and the Netherland East Indies," he said, "will state their needs."

Now, it is no discredit whatever to the Viscount Cranborne and the Archbishop of York that they talk this way, or to the Inter-Allied Committee on Post-War Requirements to meet and make their arrangements. They have been educated to do so by the promises of the official spokesmen of the United States who, after a parade of broken promises and colossal stupidities at home, now make new promises to the world.

Our national socialists now in power shall fail the world. We shall be unable to do what they say we should do, and probably unwilling to do it. And in these circumstances we shall make enemies of our friends. Voices will rise against us in panic and denunciation, precisely as voices rose against us after the last war, when our leaders promised much less.

Our national socialists commit a national sin in the folly of their promises, for the promises we make should be honest and within our reach. Then we should live up to them, set our example, and in that way establish our place in the world of freemen.

No one will thank us for starting down the road, going as far as we can, and then chucking the whole business through the revulsion of our own people to a program which Americans know in their hearts is unsound and untrue.

The success of the hope for a better world depends on reestablishing the self-faith of the American people and the integrity of the United States through the Republican Party.

The fundamental error of our collectivists is that they have never understood the place which integrity has in all the ramifications of life. They have always believed that to say a thing is the same as to do it, as though speech were final, as though rhetoric were capable of modifying the tendencies, habits, and character of real beings, as though verbiage were a substitute for will, conscience, and education. They proceed by bursts of eloquence or of lawmaking; they believe they can legislate the nature of impulses, and in so doing they produce disintegration. They have never understood the first line of Montesquieu: "Laws are necessary relations, derived from the nature of things."

They will not see that their inability to organize liberty comes from their own nature; from wrong notions which they have of the individual, of society, of races, of law, of duty. Their way is to plant trees downward and then be astonished at the result.

This means perpetual wavering between confusion and tyranny, between the red and the black, between Danton and Loyola.

Again, the evidence of their history is mercilessly exact. Through long years they have been wasting and abusing the liberties our ancestors won. Conceived in liberty they have distracted our people from the stern fact of liberty, the first element of which is that we supply ourselves with good government.

When President Roosevelt said, "We do not need to abandon our democracy to match the strength of aggressors," he spoke the truth. We do not need to abandon it, but we do need to go back to it.

The immediate war measure and the primary post-war task of the United States in behalf of itself and the world is to return to its moral and intellectual foundations and believe in them again.

The heavy foreboding which many note in the hearts and minds of thoughtful men and women, the strange failure to rejoice and be electrified by the mere thought that one day the war may be over—what does it mean? It means we see a fate coming closer and that we know we have been made weak in our own house.

Our Nation has been weakened because ordinary Americans have not been trusted.

Our Nation has been weakened because every bulwark of integrity we have has been tampered with. The oath-bound leaders of our Government cannot circumvent the purpose of law, destroy the authority of contracts, belittle the fundamental postulates by which all honorable men live, the sanctity of the spoken word, the clarity of the written word, whether it be between Government and citizen or citizen and citizen, and in this way make us strong.

Our Nation has been weakened because of haphazard and bureaucratic planned economy, which was, in essence, the substitution of an unplanned economy for the virility of self-faith and manly enterprise. Instead of freeing the creative power of America under a triumphant affirmation of its ability and power, Americans were shackled to bureaucracy.

Under the disguise of modifying our economy, which was really a witch hunt, the creative impulses of countless millions were destroyed. After toying with the most explosive features of racial questions at home, fomenting class prejudices, inciting pressure groups, agitating the young and the old, and foundering in a purchasing-power policy which collapsed for all except middle-of-the-stream office-holding horseback riders themselves, they contemplate healing the world.

They contemplate healing the world when they are not decently governing themselves.

The reality of this demands the elimination of their domination in the United States, or the future ability of the United States to help the world is nil and the ability of the world to be helped is negligible.

It will take a new honoring of first principles to get back to self-faith and to reestablish the integrity of our Nation. To do this, to turn our backs on political opportunists, and to resist the inevitableness of no change, requires a courage which is the equivalent of the courage of Indiana's pioneers. For in their principle of self-faith and integrity is the only hope of our country this side of intermittent war and permanent national distress.

Over the mantelpiece of the Union League Club in Philadelphia is a legend which many Indiana editors have seen. It reads: "We join ourselves to no party which does not follow the flag and keep step to the music of the Union."

Gentlemen from Indiana, the Republican Party does not follow the flag and the Republican Party does not keep step to the music of the Union.

The Republican Party carries the flag and makes the music of the Union.

The Unity of Interest of West and South

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, September 24 (legislative day of Wednesday, September 15), 1943

Mr. JOHNSON of Colorado. Mr. President, last week a historic conference of western and southern Governors was held in Denver. Governors from the West and the South and numerous nationally prominent Americans delivered addresses. One of the ablest, most timely addresses of the conference was delivered by the youngest Governor and perhaps the most dynamic figure in the United States today—Gov. Ellis Arnall of Georgia. Because of the widespread interest in Governor Arnall's excellent address I ask unanimous consent that it be printed in the Appendix of the RECORD where it may receive the official consideration which it merits.

I am informed by the Public Printer that this manuscript will make approximately two and two-thirds pages of the CONGRESSIONAL RECORD at a cost of $120 which is two-thirds of a page more than is permitted without a printer's estimate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We, the Governors of the Southern States, are seeking to end discriminations against every section of the United States. We believe in the doctrine of Americanism under which, and by which, every section of our Nation is due the same consideration from the Federal Government, is due equality of treatment and fairness of opportunity.

The Governors of the Southern States invite the Governors of the Western States to join in this fight because many of the discriminations which work so monstrously against the South likewise, in the same manner, impede the progress of the Western States. Our battle is not sectional. It is a fight for common fairness to every section of our common country. In its very essence, therefore, the contest we are waging is a fight for national justice.

In seeking to abolish sectional discriminations that, in their ultimate and inevitable effect will bring "Balkanization" of the United States, the West and the South have such a unity of interest that unity of action is essential if we hope to succeed in our effort to redress those wrongs.

It does not require a gift of prophecy to foresee the dismal results to the entire American Union of the destruction of the American principle of equal economic opportunity, of free enterprise, of the right to engage in any business that is lawful, decent, and socially desirable.

Unless we turn our attention to the acute need for decentralizing industry in the United States through the application of the natural laws of economics, there will come about inevitably an America like this: divided into an exploting central region, drawing its sustenance from exploited colonies held in subservience by economic pressure and, perhaps, by physical force; wasted natural resources and manpower; a system of centralized government, administered by a bureaucracy ignoring all sense of responsibility to the people; seething discontent in every section as stratification into classes becomes the natural corollary of stratification into regions.

To the South and West, comprising three fourths of the territory of the Nation within their 30 States, this is a disheartening picture, not of something that probably could happen, but of something that already has actually begun to happen.

To the East, which is supposed to profit by this division of our Nation into imperial dominion and colonial dependency, the change will bring but little comfort. For though the East garners the wealth produced in the South and West, destroying and wasting in swiftly passing weeks the natural resources that might support the Nation in dignity for generations, the more favored East does not become rich.

For, as such exploitation continues, West and South are able to trade less and less with the East. Their mills become idle. Their

workers go upon relief, not "relief" in the American sense, but with the stigma of the dole in the European sense.

With the whole economic picture out of focus, with all men, rich and poor alike, trapped in the meshes of their own misdoing, collapse of political freedom becomes inevitable.

It is a dark and gloomy picture. It is a picture of what we must avoid.

There is yet another possible picture. There is the picture of an America mobilizing all its wealth and power, all its capacity for production, all its accumulated resources, and storing them away in a small, densely congested and dangerously vulnerable region. And then some foreign enemy, undisclosed as yet, swooping down and rendering the whole Nation helpless by seizing and occupying this small segment of our continent.

That, too, is a dismal and unpleasant picture. It could have happened, however, in 1941, if the Nipponese had taken the greater but wiser gamble of attacking the production centers of the East with their "sneak punch" instead of attacking the fleet at Pearl Harbor. Our narrow escape from that desolation is either a dispensation of Providence, or an example of the stupidity of the enemy. It is not proof of invulnerability upon our part. It is a vision that even now we shudder to contemplate.

How can these things be avoided? How can our Nation escape from the strangulation of bureaucracy and centralization? How can we restore free enterprise in America?

There is but one way. That is for the people of the West and South, by economic and political action, to restore the conditions that are the essential predicates of freedom of individual responsibility.

There are three theories of the function of government.

One is that government owns every citizen—owning, I presume, the whole of the citizen: his life, his fortune, and his honor. That has been tried in totalitarian countries of Europe. Under that philosophy the life of the citizen was short, his fortune small, and his honor sadly compromised.

The second theory is that the government should act wholly and solely as an umpire, metaphorically sitting back on a well-cushioned, stately, and impressive bench, twiddling its thumbs until some dispute arises which the umpire is petitioned to adjudicate.

The third concept is that government should perform for the citizens those services that can be performed more cheaply, more efficiently, and with smaller hazard by collective action than by individual exertion.

This last is the American concept. It epitomizes what we have learned to define as the American way of life.

That concept can be translated into action, however, only in circumstances where the function of government is not distorted; only when freedom of individual initiative, individual opinion, and individual thought exists, and only when competition is liberated from restrictions that hamper its freedom.

I am opposed to governmental control over every phase of life.

I am opposed, also, to government tipping the scales against any competitor in any honest enterprise.

Most of our fallacies and muddled thinking in recent years have grown from an inability to recognize the distinction between what is government and what is private initiative.

One of the most dangerous cankers on American life today is the wholly unwarranted discrimination against West and South in freight rates.

It is assumed by many that railroads are private concerns, existing because of private initiative.

That is wholly and completely false.

The fact that railroads have private investors, who own their bonds and their stocks, does not make them private enterprises. By that argument, indeed, you could plausibly assert that the Federal Government is a private enterprise.

Primarily the railroads are instruments of government. For example, they have been granted one of the highest attributes of government: the tremendous right of eminent domain.

They recognize themselves as a kind of government. In a startling document filed by the carriers in the eastern or so-called official territory, those railroads admitted with a disarming cynicism that their section was "hemmed in on the South, the Southwest and the West by territories seeking to market their products within the territory served by official lines. In many instances such commodities come into direct competition with the commodities produced in that territory. Official lines, therefore, are in duty bound to protect the geographical or other natural advantages possessed by shippers or producers on their lines, and as a matter of justice and equity, they may not be required to join in such low bases of interterritorial rates as to nullify or neutralize these natural advantages."

They have arrogated to themselves the authority, wholly denied to Congress and to the State governments by the Constitution of the United States, of setting up internal tariff walls within our Nation.

The basic facts about freight rate discriminations in the United States are too well known to everyone to require elaboration.

The United States is arbitrarily divided, by a law decreed by the railroads themselves, and not by the people or their government, into five horizontal sections. In Eastern or official territory are grouped the New England States, New York, New Jersey, Pennsylvania, Maryland, Delaware, a portion of Virginia, as well as the coal-producing State of West Virginia and the industrial States of Michigan, Illinois, Indiana, and Ohio.

South of the Potomac and Ohio Rivers and east of the Mississippi lies the southern territory, comprising eight States and the remainder of Virginia. Across the Mississippi lies the southwestern territory, with four States: Oklahoma, Arkansas, Louisiana, and Texas, and, to the north, the western trunk-line territory, containing the Dakotas, Nebraska, Kansas, Minnesota, Wisconsin, Iowa, Missouri, and fragments of Wyoming and Colorado.

The remaining fragments of partitioned Wyoming and Colorado, together with the other nine Mountain and Pacific coast States, compose what is known as the "Mountain-Pacific" territory.

Around those territories the railroads have carved the map of the Nation that is our common inheritance. They have erected a structure of freight differentials, to serve as a barrier which has paralyzed our industry and retarded our commerce.

It is against this malignant growth that we strongly protest.

The cost to the carrier of moving freight is apparently lowest in the Southwest, with all factors of operating expense taken into consideration. It is highest in the eastern or official territory. Yet the rate structure is so arranged that shippers in official territory receive lower freight rates than those in the South and West. This means that every item that we in the South or West produce or sell is discounted by those discriminatory rates, designed for the further enrichment of the most populous and already most highly industrialized section of our country.

Our industry is precluded from development. Accordingly our income standards in the South and West are kept constantly depressed in relation to the income levels of the balance of the Nation.

Let me document a few of the typical items in these charges.

The study of railway freight costs, made for the Interstate Commerce Commission from 1940 through 1942 under the direction of Ford K. Edwards, is based upon certain assumptions that, if they may be said to favor anyone, are favorable to the official territory carriers.

This analysis discloses that, under any possible condition, total service costs are prevailingly lower in the southern and southwestern territories than in the official or eastern territory; that for any normal operation, costs are lower in the Mountain-Pacific territory than in eastern territory; and likewise that upon medium and long hauls at below-average loadings, western trunk-line costs are below those in the East.

Upon the basis of a 600-mile haul of a 40,000-pound net load, the per car cost to the carrier in the southern area is $18.60 less than in official territory. This scales down to $9 for the Southwest, $3.20 for the western trunk-line section, and $7.40 for the Mountain-Pacific area.

That is conclusive on the subject of relative costs. These differences arise from many factors. In the South, for example, one factor is lower terminal costs. Another is lower maintenance costs on the great Coastal Plain, where no severe cold weather occurs.

Despite the lower cost to the carrier of transportation in the South and the West, the freight rates are higher; and they grow progressively higher whenever we endeavor to manufacture anything either for our own use or to ship beyond our borders.

To reach our own markets requires a haul of an assumed 300 miles. That is to say that, to reach a profitable market, a manufacturer in southern territory marketing his product wholly within that territory, would ship it that average distance.

To reach eastern markets requires a haul of an assumed 1,000 miles, which is the approximate average distance that a larger manufacturer, selling a substantial part of his product in the East, would have to ship.

These estimates of 300 and 1,000 miles respectively are based on southern experience and conditions, rather than on those in the West. Because the States west of the Mississippi are of tremendous area, with broad spaces to be traversed, the plight of a western manufacturer in these particulars is even more acute.

At 300 miles southern freight rates are 40 percent above those in official territory; southwestern rates are 53 percent higher, and Mountain-Pacific rates are 47 percent above official tariffs.

But when you reach the thousand-mile haul, although the rates for southern and western trunk-line territory stay at about the same level as those for 300 miles, those for the southwest and the Mountain-Pacific areas jump to 65 percent and 83 percent, respectively, above official or eastern rates.

I have cited class-rates, which are the rates upon manufactured goods. The Southern Governors' Conference, which is presenting the case for southern industry before the Interstate Commerce Commission, in the famous class-rate investigation begun in 1939, and still pending, has repeatedly cited those examples as well as many more instances of discrimination.

To those recorded facts, there is a frequently presented rebuttal that the rates upon the raw products of the South and West are low and that such rates are a great advantage. It is not always stated just to whom they are such an advantage.

We must put an end to these illicit transactions under which every shipper in the West and South to whom is issued a freight bill of lading, is in fact receiving what only amounts to a pawn ticket that serves to perpetuate the financial supremacy of the East.

It is true that some commodity rates are low—when those commodities are needed to keep eastern plants running. These commodity rates are subsidies to eastern plants, and nothing else. If they did not exist, in their present form, it would be necessary for

prudent investors to establish their plants where the raw materials are to be found, instead of wastefully transporting them half way across America for fabrication.

That can be proved only by inference, by circumstantial evidence. But circumstantial evidence, fairly considered, is the best evidence, since it does not depend upon any bias or misjudgment upon the part of any witness.

Here is some of the incontrovertible circumstantial evidence.

Lead is a commodity much desired in the East. Therefore it moves from southwestern territory on an 11-percent rate advantage. But when a manufacturer in that territory decides to make lead battery plates and ship them west, up leaps the rate to 34 percent above that in the East. Let him try to manufacture printing type and the rate handicap then becomes 52 percent.

Cotton moves from southern territory at the same rate that it moves in official territory. But turn it into cloth. Unfinished fabrics pay a 10-percent tariff. Bleaching adds 11 percent. In consequence there is not a single fine-fabrics bleachery in Georgia. Oilcloth makes the tariff 54 percent—a wall that cannot be surmounted.

As was eloquently pointed out by Gov. Prentice Cooper, the distinguished chief executive of Tennessee, at a meeting of the Southern Governors in Atlanta last April:

"It is clear that the discriminatory freight rates now in effect operate to discourage and exclude industry in the South and to keep the South a raw-material-producing region, and consequently a low-income region, and thus contribute to produce the economic ills of the South."

Let us take another striking illustration:

Defense contracts have been awarded with prudence. The public officials responsible for the awards and the businessmen who patriotically turned their attention to manufacturing supplies for our armed services, alike, desired to do a good job, an honest job, and an economical job.

They located only a few war industries outside official territory, even though they recognized that heavy concentration of industry was tempting a considerable strategic jeopardy. Believing that our defenses in the air and on the sea would hold, they took this dangerous strategic gamble rather than pay the excessive costs of transportation—and then, unfortunately, they wound up with both an enormous added cost and a very critical risk.

I do not have available the complete figures on war-contract awards for the year just past, but they are even more one-sided, I am convinced, than those that I now cite.

Although shipbuilding in the South and on the Pacific coast, and the huge airplane production of these two areas, must be taken into account in these figures—despite the fact that in these industries freight tariffs cannot deprive us of them because we can sail the ships and fly the planes away without paying tribute to freight agents, more defense awards were made to factories in the little States of Maryland and Connecticut than in all the States in southern territory or all the States in western trunk-line territory. And if you deduct the shipyards and airplane industry of California, more awards were made to the single State of Michigan than to all the States in the mountain-Pacific area. That tells the wartime story of our industries.

The freight rate discriminations are a pattern of the burdens under which South and West alike have so long suffered. Similar unjust discriminations are also met in the distribution of Federal assistance to old-age pensioners and dependent children.

Just as the freight rates bear heaviest, perhaps, upon the West, the "matching system" of Federal grants bears heaviest upon us in the South.

The present system of distributing Federal funds—for public assistance, for public health, for highways—in the main is based, not upon human values and human needs, but upon the ability of the State to put up an equal amount of money.

It is callously brutal to assert that, because our people's earnings are low, because our State's income is low, the health of a Georgia child or the hunger of an aged man or woman in Georgia is not equally as imperative, or is less important to our Nation, than are the elements of health or hunger in a more prosperous section. Yet that is the formula under which our participation has been measured.

The system that freezes us into a colonial status, prevents our expanding our industry and thereby increasing the incomes of our citizens actuates itself to bestow upon the section profiting on the premiums of injustice, a greater share of Federal allotments than goes to those areas where the need is greatest and most appealing to every instinct of humanity and fair play.

Against this, the South protests. Human needs must be the measure for the distribution of funds raised by taxes imposed upon a national basis.

The South and the West must unite to meet the challenge of these discriminations.

I do not believe that we should ask for all that, on the surface, we may seem entitled to. Deeply as I sympathize with those whose indignation at the mistreatment we have endured leads them to demand that freight rates be based upon costs, I do not concur in this view.

I recognize certain aspects of fairness in the proposal. I recognize likewise that it would give to the West and South, generally speaking, the very same freight rate advantage that the East now has. This would further disturb the equilibrium which must be our ultimate goal.

I believe on the other hand that what is necessary is complete equality, not an advantage for any section or combination of sections.

But, by the same token, I cannot agree with those who express a belief that we should temporize in our demands for immediate justice.

The reason is fairly obvious. I will give one illustration.

The woolen textile industry of the United States is largely outmoded, with obsolete equipment and many marginal mills that ought to be replaced, and which would have been replaced before the war had they not existed entirely upon the freight rate subsidy at the expense of the South and West.

The woolen textile industry is concentrated, of all odd places, in New England.

It has three natural places to exist: in the center of our own sheep raising country; in the Southeast, where South American wools may be shipped cheaply by water on a much shorter haul; on the Pacific coast, where Australian wools can be procured and which are within reach of the domestic supply.

In the Southeast we have a trained labor supply, familiar with textile processes, that can move from a lower wage scale—where the scale is based on the "value added by manufacture"—into a higher wage scale, by turning to the manufacture of a more valuable product.

If we delay readjustment of freight rates until new mills are built in the East, we will have disrupted the true economy of the Nation. We will have destroyed the possibility of American initiative, courage, and industry coping with the problem. We will have created a condition where a vital industry must forever live under an economic oxygen tent supplied by some species of public dole.

It does not make the least difference whether the dole is paid in cash by the Government, or in cash by the railroads, it is a dole—nothing more.

Equality of opportunity is the American dream. It is the foundation of the edifice we have erected. It is the bedrock upon which private industry rests. Once it is abridged, governmental regulation in some drastic and more dangerous form, will be inevitable.

Some day in the not too distant future, the guns will be silent. The drone of the last bomber will be stilled. The men of the armed forces, now dispersed over six continents and the islands of all the seven seas, will begin their long and triumphant voyage home.

There will be ringing of bells and throwing of ticker tape and rejoicing crowds to watch parades.

Then will come, with terrific impact, the problem of readjusting our national economy, our social structures, our way of life for a world at peace.

Then will come the stirring challenge that the South and West must meet, if we are to become equal partners in our national enterprise.

Then will come the struggle to develop new industries in the South and the West, and the equally difficult and important struggle to retain those industries that have been developed as a result of the war. It depends upon our action at this time whether we shall be able to quote as true prophecy the inspiring words of John Temple Graves, one of our distinguished southern journalists:

"'They came for war and remained for peace'—so let it be said of the industrial increases they have come to the South in the war's course: 'They came for war and remained for peace.'"

A wise union of the South and West to combat the conditions I have described is the surest safeguard against a new and more vicious menace to our security and national solidarity.

The full and reasonably complete employment and utilization of all our resources of manpower, capital, and natural wealth is an absolute essential for our future prosperity and safety.

By no other means can we escape from rapidly sinking into a deep depression when once the boon of fabulous war orders is ended. And, as many wise economists have predicted, if America sinks into such a new form of economic disaster we may drag the whole world down. In the words of Stuart Chase, "if we move forward to build a more splendid America, we can lift the world with us."

The South and West, natural allies, were united, politically and economically, through the period of our Nation's greatest growth. I shall not review the tragedy that severed the alliance that brought the United States from a handful of sparsely settled States cowering on the Atlantic seaboard to a great Nation occupying most of a great continental land mass. That tragedy must be forgotten in a new day when we again join forces to remedy old abuses and to realize at last the dream of a great America of freedom of opportunity where all men shall be able to achieve economic independence through the full enjoyment of the fruits of their efforts.

And so it is that we, the Governors of the Southern States, are striving to demolish artificial man-made barriers which so long have separated section from section. We fight not only for the South, but for all sections, and for a Nation indivisible and just. We invite the Governors of the Western States to join us in this cause.

And this time we must never stop until that cause is won.

Land-Use Planning

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from E. J. Haslerud, director of extension and chairman of the North Dakota Agricultural Advisory Council. Mr. Haslerud is actively interested in cooperative extension work and in agriculture and in home economics in the State of North Dakota.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FARGO, N. DAK., *September 20, 1943.*

Senator WILLIAM LANGER,

Washington, D. C.

DEAR SENATOR LANGER: The North Dakota Agricultural Advisory Council at its last meeting passed the following resolution with the request that it be passed on to Members of Congress and heads of various Federal agencies involved:

"Whereas various forces and factors are now at work that threaten an unwarranted and undesirable land inflation; and

"Whereas land inflation, if uncurbed and not controlled, will only result in future disaster and blight for agriculture: Therefore, be it

"*Resolved*, That we recommend immediate steps be taken by the Government to invoke such controls as will prevent an unwarranted land inflation.

"As possible aids in such control, we recommend ceilings be placed on all farm lands to be based primarily on past and prospective production value.

"We recommend further that all transfers of land be subject to a permit approved by local committees consisting of actual farm operators and persons sincerely interested in the development and future well-being of our agriculture.

"We recommend that all acts or steps and regulations to be imposed be of such nature as to encourage owner operation in family-type units and discourage corporate and absentee land holdings."

This resolution was drafted and sponsored mainly by the farmer members of the council.

In order to clarify matters, I believe I should explain what the North Dakota Agricultural Advisory Council is: When the program of land-use planning was being developed, it was necessary to set up a State land-use planning committee made up of a majority of farmers and also including the heads of the various agencies of the department of agriculture. Later, a system of selecting the farmer members was developed. Therefore, the farmer members as shown on the attached list of council members, were selected from the various farming areas of North Dakota, mainly by the county land-use committees of the counties in those areas. When the B. A. E. funds for land-use planning were lost, the members of the council decided to continue as such because even now considerable land-use planning is being done in the counties.

This council has been active in the various food programs, and has been assigned, particularly, duties in connection with determination of feasible production goals for the State and determination of the distribution of these goals in the State. This assignment was given the council by the War Board.

The council also has taken under consideration from time to time various problems that come within the sphere of land-use planning. Particular emphasis is given to proposals made by the farmer members, and when it comes to resolutions, the matter is largely left up to the farmers. The farmer members of the council are an outstanding group of men.

Yours sincerely,

E. J. HASLERUD,

Director of Extension and Chairman, North Dakota Agricultural Advisory Council.

Poultry and Dairy Feed Situation in New Hampshire

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me from Charles R. Hopkins, of Greenfield, N. H., enclosing minutes of the meeting of New Hampshire feed mixers and dealers held on September 11, 1943, in Concord, N. H., containing suggestions for certain corrective measure, together with other data incidental thereto.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

E. C. & W. L. HOPKINS, INC.,

Greenfield, N. H., September 21, 1943.

Senator CHARLES W. TOBEY,

Washington, D. C.

DEAR SENATOR TOBEY: Enclosed find a report on the meeting of New Hampshire feed mixers, held at Concord, Saturday, September 11, to which you were invited but could not attend. This invitation was extended in an attempt to keep you informed on the poultry and dairy feed situation as it exists in New Hampshire.

In response to War Board requests plus the normal incentive of large profits, New Hampshire's poultry and dairy industry was expanded by a large percentage during the current year, the same as in other States. This has developed a shortage of milling-plant capacity which has been aggravated by selective-service demands on manpower and it has also developed a Nation-wide shortage of feed ingredients.

The ingredient shortage has been further aggravated by O. P. A. regulations which have drastically upset price relationships. This is particularly true in the case of corn, our major ingredient, which normally makes up 25 to 30 percent of the tonnage used.

The facts: We can pay only $43.60 per ton for corn raised by United States farmers, but because we cannot buy corn in quantity (it being fed more profitably to western hogs or sold via black-market operations near where it is grown), we are forced to buy substitutes—wheat, which is subsidized by C. C. C. at the rate of about 50 cents per bushel, oats at a cost of $60 per ton, or barley at a cost of $55 per ton. It seems unbelievable that we would be denied the privilege of paying over $43.60 for corn to our own farmers, but be forced into paying the Canadian farmers and the Canadian Government $55 and $60 for barley and oats. Incidentally, about one-third of the money we are paying the Canadians is going to their Government in the form of an export fee. This week the fee amounts to 31 cents per bushel on oats and 43 cents per bushel on barley.

We suggest the following corrective measures:

1. That the ceiling price of corn be readjusted to a reasonable relationship to the price of hogs and to the grains we are using as a substitute for corn.

2. That following such adjustment, the reopening of the future market on corn be permitted, in order to offer an opportunity to elevators and grain shippers to hedge their purchases and thereby permit the building of a visible supply of corn on any movement of the new crop.

3. To encourage the importation of Argentine corn (where it is being burned for fuel). It is rumored among the trade that one reason we have not imported Argentine corn is because of a desire on the part of the State Department to "spank the Argentine." This would be cutting off our nose to spite our face.

We believe the present plans for distributing the high protein byproducts such as linseed meal, soybean meal, beef scraps, and the like is as good as any that can be worked out at this time.

The manpower problem referred to in the second paragraph is fast becoming paramount. In our own plant we stand to lose 5 to 7 men out of 22 operators. This because they are under 38 and classed only as laborers even though our industry is classed as essential.

There are not any men available to replace these laborers. Women cannot be used as the work is too heavy (i. e., handling 100-pound bags of feed all day). The United States Employment Service cannot furnish us with any men, as we have already asked them. If the Army needs the men more than the world needs food, then they should be taken, otherwise every worker in the milling and mixing industry should be exempted.

Respectfully yours,

CHAS. R. HOPKINS.

MINUTES OF THE MEETING OF NEW HAMPSHIRE FEED MIXERS AND DEALERS, SATURDAY, SEPTEMBER 11, 1943, CONCORD, N. H.

Present were: J. Ralph Graham, chairman, Durham, N. H., New Hampshire State U. S. D. A. War Board; S. W. Tyler, Cayuga, N. Y., the Beacon Milling Co., Inc.; R. F. McLeod, Boston, Mass., Charles M. Cox Co.; P. E. Newman, Cayuga, N. Y., the Beacon Milling Co., Inc.; E. S. Winslow, Concord, N. H., G. N. Bartemus Co.; C. E. Merrill, Londonderry, N. H., Oliver Merrill & Sons; G. M. Cookman, St. Johnsbury, Vt., Purina Mills; D. S. Keller, West Springfield, Mass., Eastern States' Farmers Exchange; E. E. Fowler, Suncook, N. H., Fowler Bros.; G. Tilton, Concord, N. H., Stratton & Co.; A. E. Johnson Potter Place, N. H., R. P. Johnson & Son; E. E. Gannon, Concord, N. H., Park & Pollard Co.; F. S. Deyo, Boston, Mass., Park & Pollard Co.; Donald W. Hopkins, Greenfield, N. H., E. C. & W. L. Hopkins, Inc.; T. B. Charles, Durham, N. H., Poultry Department, U. N. H.; W. E. Wakefield, Laconia, N. H., Farm Service Co.; Charles H. Towers, Manchester, N. H., Food Distribution Administration; Charles R. Hopkins, Greenfield, N. H., E. C. & W. L. Hopkins, Inc.; Thomas H.

Sherman, Concord, N. H., E. C. & W. L. Hopkins, Inc.; D. J. Truland, Lancaster, N. H., F. B. Spaulding Co.; R. C. Ringrose, Durham, N. H., Poultry Department, U. N. H.; H. A. Keener, Durham, N. H., Animal & Dairy Husbandry, U. N. H.; M. H. Clark, Concord, N. H., Merrimack Farmers' Exchange; R. E. Parmenter, Concord, N. H., Merrimack Farmers' Exchange; L. Clavton Berry, Lebanon, N. H., L. C. Berry; Errol C. Perry, Durham, N. H., Agricultural Adjustment Agency.

Mr. Graham acted as chairman of the meeting which had been called by the New Hampshire U. S. D. A. War Board. The purpose of the meeting, he stated, was to acquaint the New Hampshire feed industry with a number of proposed orders designed to spread out the inadequate supplies of oil meals, to indicate the added responsibility which these orders would place on the war board, and to point out the need for assistance from the industry.

Proposed Food Production Order 9 (Set Aside Requirements and Forward Selling and Inventory Limitations on Oilseed Meal) and Commodity Credit Corporation Order 6 (Restrictions on Purchases and Use of Soybeans) were read and discussed. Mr. Graham also read and explained the procedure which war boards will probably follow in distributing oil meals to the mixers and dealers under the set-aside provisions of the expected new orders.

Mr. Graham stated that it had been extremely difficult for the war board to properly distribute the small amounts of high protein ingredients available in the past and that the problem would be greatly complicated in the future because of the larger quantities concerned. The war board had done the best it could but needs the knowledge and experience available only to the industry. He asked the group to set up an advisory committee to assist in this task suggesting that it consist of both local and out-of-State mixers and representatives of the State experiment station.

In the dicussion which followed, a number of factors complicating the problem were mentioned. It was stated that outside feed mixers have in the past, and must continue in the future, to supply a large proportion of the New Hampshire needs; there has been a great increase in the demand during recent months; and it is evident that the feed supplies of the country are not sufficient to carry the livestock industry if it is maintained at the present level. In regard to the increased demand, one New Hampshire mixer indicated that they were now mixing 265 tons in the same period where formerly they mixed only 150 tons. An illustration of the expansion in poultry production is a case where 1,400 broilers were found in the basement of a New Hampshire city home.

It was agreed that a feed advisory committee should be appointed which would—

1. Consider the needs of both out-of-State and local mixers in the allocation of feed ingredients
2. Determine preferable uses for feed materials distributed through the War Board, and
3. If necessary, make suggestions regarding the final allotment of feed supplies to farmers.

A nominating committee consisting of J. Ralph Graham, Andrew L. Felker, T. B. Charles, Robert M. McLeod and Charles Hopkins was appointed. They immediately met and proposed the following:

New Hampshire Feed Committee: J. Ralph Graham, New Hampshire, U. S. D. A. War Board; Andrew L. Felker, New Hampshire, Commissioner of Agriculture.

New Hampshire mixers: Roy Peaslee, Merrimack Farmers' Exchange; Edgar S. Winslow, B G. Bartemus Co.; Edward Fowler, Fowler Bros.

Out-of-State mixers: C. D. Kendall, Eastern States Farmers' Exchange; Arthur Hopkins, C. M. Cox Co.

New Hampshire Experiment Station: Dr. H. A. Keener, animal nutritionist; Dr. R. C. Ringrose, poultry nutritionist.

The committee was unanimously approved with the understanding that the companies represented might appoint different representatives if they prefer. It was also agreed that in the event the committee found it desirable to add to its membership, the proposal could be presented to the industry at a meeting called for that purpose.

The question of the most desirable use of the small supplies of corn now available was then taken up and it was unanimously concluded that corn should be reserved for incorporation into mixed rations, preferably poultry mashes.

The meeting then adjourned.

ERROL C. PERRY,
Secretary pro tempore.

UNITED STATES DEPARTMENT
OF AGRICULTURE,
Durham, N. H., September 14, 1943.

To the Feed Mixers Supplying Feeders in New Hampshire:

Last Saturday, September 11, the feed mixers of the State met at Concord, N. H., to consider the feed situation, to listen to proposals made by the Government and processors for a method of equitably supplying each State with its share of protein ingredients and to select a committee to work with the New Hampshire U. S. D. A. War Board in allocating each of the mixers supplying the State a fair share of the ingredients that will be available.

The following committee was elected: Arthur Hopkins, of Charles M. Cox Co. of Boston, Mass.; C. D. Kendall, of Eastern States Farmers Exchange at West Springfield, Mass.; Roy Peaslee, of the Merrimack Farmers Exchange at Concord, N. H.; Edward Fowler, of Fowler Bros., Suncook, N. H.; Edgar S. Winslow, of Bartemus Co., Concord, N. H.; Drs. H. A. Keener and R. C. Ringrose, of the University of New Hampshire Experiment Station, Durham, N. H.; and Andrew L. Felker, Commissioner of Agriculture for the State of New Hampshire, Concord, N. H. These men were selected to act as members of the committee to work with the war board in mapping out a program of allotting any feed that is allocated to New Hampshire by Commodity Credit Corporation.

The committee met after the meeting and decided that if they were to be able to do the right kind of job in allocating these ingredients it would be necessary for them to have certain information from the different mixers. Therefore, it was suggested that I write you requesting you to send to this office the tonnage distributed by your company during the last 6 months of 1942 and the first 6 months of 1943. It will be necessary to have by months the amount of poultry mash, scratch feed, dairy ration, and miscellaneous rations that you mixed during the months mentioned above.

It will also be necessary for the committee to have this information if they are to do a fair job of allocating these cars that are directed to us by Commodity Credit Corporation. This office will also need to be informed of the amount of protein ingredients that you receive through the regular channels of trade. I am suggesting that at the end of each month you give us this information.

The committee is reluctant to request any information that would cause anyone extra work in these times when office forces are depleted and everyone in general is really overworked, but the committee is very much in earnest about doing the best kind of job possible with these critical ingredients, and I hope it will be possible for you to aid them by sending us this information.

Very respectfully yours,

J, RALPH GRAHAM,
Chairman, New Hampshire
U. S. D. A. War Board.

Estimated feed requirements of livestock in New Hampshire from October 1943 to September 1944

(Prepared by Dr. H. A. Keener, livestock nutritionist, New Hampshire Agricultural Experiment Station and Dr. R. C. Ringrose, poultry nutritionist, New Hampshire Agricultural Experiment Station)

Kind of livestock	Estimated number	Total	Feed requirement in 1,000 tons	
			High protein feed	Oil meal
Dairy cows and heifers	70,000	59.5	11.5	7.1

The Bastille of Tyranny Is Falling

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Bastille of Tyranny Is Falling, delivered by me in August 1941, to the National Society of the Ahepa at Cincinnati, and appearing in the Ahepan for September–October 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BASTILLE OF TYRANNY IS FALLING

From Florida, from beautiful Tarpon Springs, the most Hellenic city in the United States, I bring most cordial greetings to a distinguished American institution — the Order of Ahepa.

As a citizen and a Senator of the United States, I bring you the greetings of a Nation which is grateful for the loyalty, the public spiritedness, and the wholesomeness of its Greek citizenry. You, of course, are justly proud of the record of a people which is the most law-abiding of all emigrant stocks in the United States—a people who, by War Department records, were more numerous in the United States Army in the World War than any other foreign racial element in the United States—a people who produced an immigrant boy, George Dilboy, one of the outstanding heroes of the World War, awarded posthumously the Congressional Medal of Honor and in whose memory stands today a commanding monument in Somerville, Mass.

These distinctions are not new to the Hellenic name and tradition. Where in history

has liberty and the sentiment of freedom found firmer lodgment than in the Hellenic world?

MONROE'S MESSAGE

For more than a hundred years it has been the privilege of the United States to lend a helping hand to the heroic struggle of the Greek people for freedom in their own ancient land. President Monroe, in a great message to Congress on December 2, 1823, said:

"A strong hope has been long entertained, founded on the heroic struggle of the Greeks, that they would succeed in their contest and resume their equal station among the nations of the earth. It is believed that the whole civilized world takes a deep interest in their welfare. Although no power has declared in their favor, yet none, according to our information, has taken part against them. Their cause and their name have protected them from dangers which might ere this have overwhelmed any other people. The ordinary calculations of interest and of acquisition with a view to aggrandizement, which mingles so much in the transactions of nations, seems to have had no effect in regard to them. From the facts which have come to our knowledge, there is good cause to believe that their enemy has lost forever all dominion over them; that Greece will become again an independent nation. That she may obtain that rank is the object of our most ardent wishes."

How tragic the necessity for another message by another American President—President Roosevelt—when your Supreme Lodge of the Order of Ahepa, on April 25, 1941, visited the President at the White House. Said the President:

ROOSEVELT'S MESSAGE

"The heroic struggle of the Hellenic people to defend their liberties and their homes against the aggression of Germany after they had so signally defeated the Italian attempt at invasion has stirred the hearts and aroused the sympathy of the whole American people.

"During the Hellenic War of independence more than a century ago, our young Nation, prizing its own lately won independence, expressed its ardent sympathy for the Greeks and hoped for Hellenic victory. That victory was achieved.

"Today, at a far more perilous period in the history of Hellas, we intend to give full effect to our settled policy of extending all available material aid to free peoples defending themselves against aggression. Such aid has been and will continue to be extended to Greece.

"Whatever may be the temporary outcome of the present phase of the war in Greece, I believe that the Greek people will once more ultimately achieve their victory and regain their political independence and the territorial integrity of their country. In that high objective the people of Greece and their Government can count on the help and support of the Government and the people of the United States."

Was the glory that was Greece ever more illustrious than the glory that was Greece in the last tragic year? The whole world opened its heart in unrestrained admiration to the gallant heroism of the Greek Nation which, in the face of overwhelming odds, chose to die heroes rather than to live slaves. Against this tyrannical assault how many times did an admiring world speak again and again the words of Lord Byron, who wrote the patriots of Greece who waged the same fight in an earlier age:

"The sword, the banner, and the field,
Glory and Greece, around me see!
The Spartan, borne upon his shield,
Was not more free.

"Awake! Not Greece—she is awake!
Awake, my spirit! Think through whom
Thy lifeblood tracks its parent lake
And then strike home!

"Seek out—less often sought than found—
A soldier's grave, for thee the best;
Then look around and choose thy ground,
And take thy rest."

BE NOT AFRAID

If on the other side of the river of life the heroes of an earlier day who gather together to tell the epics of their time were privileged to look down on the Hellas of 1940–41, what homage they must have paid to those who bore with luster unsullied the proud Hellenic name. Be not afraid. The moving finger which has written another sad chapter in your long history will move on yet to write again other chapters of other golden ages which shall be worthy of your Pericles. It is not too much to say that those who look back upon these sorrowful days will see more clearly than we can see now that it was again from the heart of Greece that came the first bright rays of a new dawn for the race.

Yet, it is only natural that you who have so translated the beauty of the spirit and the mind into those things which the eye could see and the ear could hear should be among the most steadfast defenders of those intangible realities which are the souls of men. You know how true, countless ages beyond the measure of time, it has been the inside of man which made him real and of moment, and not the outside. "As a man thinketh in his heart, so is he" has been the truth in every age and land.

Jail the spirit of man and no liberty of the body can make it free. Leave free the spirit and no shackle can bind man.

You know that it is those inner satisfactions for which men make the great struggles and, if needs be, the last sacrifices. Deny that honor and peace to the man within and all life is but sounding brass and tinkling cymbal. Your whole history is an epic of the race's struggle toward the Holy City of the spirit. It is a long hard road. It is strewn with the bones of many pilgrims. Monuments of heroes line the long avenues which wind back to a misty past and for immeasurable distances beyond that lie the unknown and the unsung. The echo of their many marching songs comes back again and again. Why is the way so long? The struggle so hard?

THE BLOODY HAND

Today other men are dying to preserve those things which are theirs in the sight of God against a devil's assault. The sword of tyranny again smites the earth. The bloody hand that wields it defies every sentiment which expresses the refinement of man and the progress of civilization. No Satan ever in fantastic imagery held writhing sinner over devouring flame with more fiendish satisfaction than does that heartless man, whose name is twisted into a curse upon every Godly tongue, destroy those who would dare defend against him their sacred homes, the graves of their fathers, their own mountains or valleys, the integrity of their minds and hearts.

He has prostituted modern science with which a beneficent God has blessed the race and made the human family his slave. He has made the lie his chief weapon, and enthroned vice as a goddess to be worshipped. He has torn down the temples and profaned the altars of those who sought their God. He has driven out of the pulpits and chained to the concentration camps those who are the messengers of the spirit. He has ravaged the intellectual virtue of every being he could touch. He has plundered and robbed and murdered the helpless and unoffending. Every commandment he has violated. At last he has torn from the heavens every vestige he could reach of that God to whom every human heart is lifted and builded as high as he could the graven images of savage Gods who are dull-eyed, motionless and feelingless pagan Gods of the ancient forests.

Yet this horrible spiritual monster claims to be the Messiah to bring a new order to the earth.

Of what material does he build this new order? All the sorrowing tear-dimmed eye which gazes upon the spectacle of what he has wrought can see is broken pledges, broken people, the blended bodies of the enslaved, the wan, ghostlike remains of what were happy and healthy children, mangled bodies strewn over a continent, the pattern and the heart of the world torn and bruised into the ugly shape of the mutilated.

And hardly a one whom he would convert by his engines of war to his new order but curses the thought of his name, and writhes and prays to gain deliverance from his cruel bondage.

MAMMOTH BEASTS

From your long past you know that those things which this wicked man now calls new are but the tyrannies against which man has struggled from the dawn of time, and those things by which he wreaks his wrath on the race are but the vices against which the virtue of every age has spent itself in mortal assault. Countless times in the long years of your forebears have you seen such a monster raise his head to devour all who came within his bestial reach. Yet, always, however long it took, however great the sacrifice, however painful the struggle, these mammoth beasts have been overthrown, their captives liberated, the traces of their bloody triumphs washed away, the fair fields scorched by their fiery breath brought to life again, the valleys and the mountains over which rolled the tumultuous echoes of desperate struggle and the sad sights of death come to rest again in the arms of a soothing peace.

The good, the brave, and the steadfast have at last been the victors. If the good, the brave, and the steadfast have in all these older struggles of the race been the victors, shall it not be so in this age, in good time? Those things for which they fought are no less precious now than then. They ar still the pearls of such great price that they cannot be purchased, let alone taken away. Surely we who are the heir of every gallant one who has lived, every brave one who has died, are not less worthy stewards of their precious things than they.

Today the world of the oppressed and the free has new hope from those momentous events of the last days. Like ancient giants, two men rose to Olympian heights while a breathless world waited. At last came their thrilling words to a thrilled world. In language and thought as clear as the blue ocean sky under the vault of which they met, they laid down the commandments of a new world. They spoke not for governments, not even for nations but for mankind. Like Moses of old, who communed with his God, these mortals, both from their own communion with nature and nature's God, raised words of new purpose and new policy for mankind.

TWO AGING MEN

They spoke as men with authority, because they were speaking truths eternal. They gave eloquent expression to those hopes which were maturing in the hearts of men everywhere.

In this great ocean, under this blue sky, they thought not of selfishness, but of selflessness. Two aging men thought of the human family and the countless millions yet to live upon earth. They thought of the kind of a world it ought to be, of the kind of a world it could be. They dreamed dreams of the long-promised land. They felt the mellowing spirit of what was right. They were moved by the impulse of justice.

They forgot not little nations or little men. They forgot not the problems of little nations or little men. They forgot not the

fears that little nations and little men shrink from, neither did they omit consideration for those things which besides bread are the staff of life.

In this testament of faith those who bear the galling yoke of slavery, those who are hard beset by mighty assault, those who are threatened and those who contemplate the dreary future all found renewed hope and new determination.

MAN'S LABORS

Man is always best when he dreams. We are all indebted beyond measure to these men who in the midst of a chaotic and bloody world dared to choose to dream dreams of the quiet ways of peace. It will be for the world for which they labored and dared to dream to determine whether those dreams shall come true, or whether they shall be shattered on the shoals of selfishness. Another dreamed for mankind a quarter of a century ago and held up the torch of a new hope for the world. He labored long and mightily to build a temple to house justice for all nations and all men. He toiled mightily to lay down, to point out the way which men might follow to the paths of peace.

Yet a little group of willful men, selfish, vain politicians, greedy, avaricious men, and, alas, a tired and shortsighted people, broke the heart and the body of the dreamer, and soon the dreams of Woodrow Wilson, like his tortured, broken body, were strewn in miserable wreckage in a chaotic world. Not the dreamers have had to pay the price for shattered dreams, but those for whom the dreams did not come true.

But these ways of peace which Franklin D. Roosevelt and Winston Churchill have dreamed for us they knew lay far over the distant horizon; between us and the realization of those dreams lies the hard ways of struggle, the bitter dregs of pain and suffering sacrifice; for many, death. For so hideous a monster, so colossal a giant as the force of tyranny which today menaces the world, can be thrown back only by the most heroic and determined effort of those who would oppose them. Already millions have given themselves as hostages to the destruction of these evil forces. They have given all that these wicked things might be destroyed.

OUR GREATEST EFFORT

We all know that no less than our greatest effort has hope of avail against these satanic powers. Each in every free land must do his or her part without a thought of self, or selfishness, and in every one of those weary lands upon whose neck rides the galling yoke of slavery there too must the fight be continued.

Daniel Webster once said, "God grants freedom only to those who love it and who are always ready to guard and preserve it." How sad has been the spectacle of a government pledging its troth to a dictator who has ravaged its fair people. Who is not heartened, however, by the signs that France—ancient glorious France—is stirring out of its lethargy and that the indomitable French spirit is rising in irresistible wrath to strike down this modern Caligula who has tortured it.

You Greeks of America, I know, would want to have your part in lifting America, your chosen land, to the incomparable challenge which it today confronts. Upon what this Nation does, must you well know, shall hang the destiny of the world. This unsurpassed power, which a beneficent God has cast upon us, we hold in stewardship for mankind. America is no longer, thank God, a land of sluggish conscience and callous heart. America is today the land of the Puritan, the land of the crusader, the moral land which wills to do right because before God it is right. Which is not afraid because it knows its cause is just, which counts not the cost because the end cannot be measured by cost.

This America has planted itself across the path of tyranny and defied every tyrant upon the face of the earth. This America has rallied good men, godly men, honest and decent men, noble and heroic women, hopeful children all over the earth to the side of those who love liberty, respect men, and revere God.

And America pledges its faith that those paths which shall destroy tyranny shall not be used to father new tyrannies anywhere in all the world. Rather shall these forces which in good time shall emerge the master of the earth be employed to make a better home for the race, richer lands, fuller fields, better homes, healthier lives, wider horizons for every human being.

A NEW ORDER

There is to be a new order, we agree. But it is to be the new coming of the old things, the old virtues, the old good life, the old faith, the old brotherhood, the old spirit, the old God, and in the old way these old things new come back shall rule upon the only thrones which are permanent—the hearts of men.

These old things in their new raiment shall shine more richly than ever before, for they bear the scars of more sacrifices, the crown of more glorious deeds.

This is the message which you men of Hellas, I know, would give to the world. Teach us all to be men of faith, who do not fear, who are steadfast. Meanwhile, know that you are not alone in your faith, and others with you wear the red badge of courage. Know that the giants of the earth are stirring from their slumbers; the timid are coming out of their hiding places; the uncertain are beginning to feel sure of themselves; the ground is moving under the march of rallying men; the roar of machines, out of which comes the illimitable volume of weapons, is rolling across the hills and the oceans; banners which men follow are waving in the breezes of many continents; the earth is rising against the tyranny of hell; Armageddon is being fought, and the hosts of the Lord are advancing along the whole front.

Although you of Hellas and others who share your sad plight can only say now what Tennyson said of you in Ulysses:

"We are not now that strength which in old
days moved earth and heaven; that which
we are, we are;
One equal temper of heroic hearts,
Made weak by time and fate, but strong in
will
To strive, to seek, to find, and not to yield."

Yet be of good cheer. The old days are breaking anew over the horizon. The Bastile of Tyranny is falling.

Address by Hon. Scott W. Lucas, of Illinois, at Meeting of Indiana Democratic Editors

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the Senator from Illinois [Mr. LUCAS] at a meeting of Indiana Democratic editors held at French Lick, Ind., on September 25, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I appreciate this opportunity to meet with the Democratic editors of my neighbor State of Indiana. The people of Indiana are no different from the people of Illinois, my home State. We are a part of the great Middle West, that section of our country which has contributed so much and can contribute even more to the continued well-being of our democracy.

I feel that in talking to you, as writers, I am speaking to what is perhaps the most representative group of Indiana's culture and contribution to Americana. The Hoosier State has both figuratively and literally written American history. Its sons and daughters, James Whitcomb Riley, Booth Tarkington, George Carey Eggleston, Jean Stratton Porter, and others too numerous to mention, have drawn word pictures of the American scene that are unforgettable. The famous Hoosier painters have added the exquisite colors to the American panorama. But, working in the background, constantly and faithfully observing and reporting the everyday life of typical Americans, the big things and the little things, the trouble, the struggle, the hopes, and the fears of the common man, have been the newspapermen of Indiana. I have often commented on the unusual number of fair, intelligent, and outstanding men Indiana has given to the national and the international press. I have met them not only all over this country, but in other lands. Today one of your native sons, Elmer Davis, sits at the controls for the agency that disseminates every item of information on the war effort. His is a crushing responsibility, and he is discharging his duty with a degree of conscientiousness and patience that is amazing in view of the criticism and unpleasantness to which his post exposes him.

Washington, as you know, is in some aspects an isolated place. Of course, the radio, the telegraph, and the mail bring us information and news from all parts of the country, yes, all parts of the world. But really to know how the people of this Nation feel, what they are interested in, and what they are thinking about, it is necessary to go to the people. That, of course, is one of the blessings of our form of government. It is democracy at its best. But in going to the people, we as representatives of a democratic form of government, should go with clean hands. We should be honest with the people. They in turn should be honest with us. If one goes merely as a politician, seeking only information that will aid his own political fortunes, or the party he represents, then such a meeting accomplishes little. Unfortunately, you and I witnessed some such meetings last summer while Congress was in recess. These meetings were organized by some Republican leaders who were thinking primarily of holding the political line. This political plot was hatched in Washington. Such an objective is not in keeping with the obligations public servants owe to the people, especially in time of war.

In peace or in war you and I share a mutual responsibility. I am the servant of my constituents and represent them in the Nation's Capital. I should say at this point that, like every other sincere Member of Congress, I do not feel that I serve only those whose vote enabled me to go to the Senate, but rather that my concern is the welfare of the whole State regardless of party. It goes without saying that the welfare of the State is inseparably fused with the welfare of the Nation.

Your responsibility as the liaison between the Government and the people is a serious one. The Government depends upon you not only for the news but to make articulate the views, the problems, and often the unspoken feelings of the American people. The people in turn look to you for a fair and full report on the manner in which their Government is functioning. Thus we share a duty in our Government, a responsibility that has grown more significant and more grave as the internal and external problems mount during this world-wide crisis.

Strange as it may seem this Nation's external problems have been complicated by the very advancement of science which has brought happiness and comfort to the American people. The existence of these external problems upon such a gigantic scale has also complicated our internal problems. The war of today is unlike the war of yesterday. In the past war has been more or less localized. It usually arose from a dispute among rulers and was carried on to a great extent by professional soldiers. This conflict encircles the globe. Every nation and every national has felt the impact of this war, even those who heretofore have been virtually cut off from civilization. When the outlaws in the family of nations seized the highly developed machinery of science, which has so enhanced our peacetime progress, and turned it into an instrument of destruction they unloosed pandemonium on every shore and in every secluded spot in the world. The enormity of this global convulsion makes it difficult for us all to comprehend the functioning of our war program.

This world catastrophe with all of its implications hurls into the face of democracy its greatest challenge for existence. Thank God the leaders of this Nation are conscious of that fact. In a remarkably short space of time we have recruited and trained the largest army in our history, our production of planes, tanks, ships, and guns has been little short of marvelous. It is our genius and capacity for production of implements of war which have raised the hopes of mankind throughout the world. These implements of war are placed in the hands of men who are thoroughly and adequately trained.

Notwithstanding the constant chatter of a few Fascist-minded Americans to the effect that we are muddling the war effort, it is a signal fact that never before in American history has there been a war conducted with such expert generalship. Every leader at the front knows war first-hand. Any mistakes made by Roosevelt, Marshall, King, Eisenhower, or MacArthur have been influenced by our desire to save human lives.

As a member of the Naval Affairs Committee of the United States Senate, it was my privilege to hear General Vandegrift, commander of the Marines, who first invaded and held the Solomon Islands. He told us dramatically of the caution they took in protecting the men under fire. Little or no hand-to-hand fighting was involved. He concluded by saying that Americans fight to live while the Japs fight to die.

Let me add that each campaign has been carefully planned. Our military leaders have not been stampeded by armchair strategists at home. We have accomplished the greatest results with the least cost in blood.

But I would not be true to my trust if I did not say that in reality we have only begun to fight. We shall have reverses. Our casualty list will be long, but in the end democracies will triumph and our fighting men and women will march through the streets of Berlin and Tokyo.

I repeat, I must urge you my fellow citizens to lay aside any optimism of an early end of the struggle. The hard days for the armed forces lie ahead. Instead of taking things easy here at home, we should strengthen our program of self-discipline. It is no idle statement to say that this is a serious hour in the affairs of this Republic. It is the time for every American to ask himself, "What further contribution can I make to win the war, what contribution can I make to win the peace?" An enlightened public opinion is one of the bulwarks of a free people. The hour calls for fearless, honest men—men who place country above any consideration. And in this hour of one victory after another upon the far-flung battlefields of the world, it is the duty of every American, worthy of his name, to give unfailing loyalty, unflagging support to our Commander in Chief, Franklin Delano Roosevelt.

My friends, the mention of this great statesman's name takes me back to the summer of 1937. A bridge on the outer Michigan Drive in the city of Chicago is being dedicated. Words come through the microphone, "The peace of the world and the welfare and security of every nation today is threatened. War will come unless aggressor nations are quarantined." The statement made upon that occasion stunned the average American. It was difficult to believe. But this voice was attempting to stir the imagination of the American people to the impending dangers. It was a voice that was speaking with authority. It was the voice of a man who had four sons subject to military service in the event of war, our own beloved President, Franklin Delano Roosevelt.

He was one of the first Americans who saw in the long ago the machinations of the Axis Powers. He had the vision to foresee the coming events. He had the courage to warn his people that war was possible at a time when they wanted to think of nothing but peace. As a result of this vision and courage, he was subjected to fierce and penetrating criticism. In spite of this criticism he never wavered in his determination to give America and her institutions an adequate national defense. Even today, with victories everywhere on the military and naval fronts, a few men in both public and private life seize every opportunity to snipe at this good man and his administration. The latest attempt to smear the administration in the conduct of the war deals with the controversy over Gen. George Marshall, Chief of Staff of the Army. Some partisan Republicans, hungry for an opportunity to make the headlines in the press, had the temerity to say that Marshall was being demoted and relieved of his post of duty because the British do not like him. It was one of those absurd canards that frequently come to life in the Nation's Capital. The instigators had no facts upon which to base this statement. It made no difference to them that such a rumor might disturb the friendly relationship between England and America. It was of no concern to them that such demoralizing statements tend to impair and frustrate the war effort. It meant nothing to them to strike savagely at the reputation of General Marshall, one of the great global military experts of all time. The truth of the matter is that the war has been going too well for some of the little men and women who from the beginning have criticized the conduct of the war. Obviously, I do not contend that everything is perfect.

Mistakes have been made—mistakes will continue to be made. That was inevitable in a democracy which turned its peacetime econom, to all all-out war machine over night. Errors were bound to creep in and they will continue to in a great democracy like ours.

But, my friends, history is only repeating itself. All through the American Revolution, appeasers, political enemies, kickers, the lazy, and selfish, who shrank from sacrifice, nagged and sniped at George Washington. Shrewd Tories, masked as patriots, spread defeatism by whispering that Washington was a blunderer and incompetent.

During the struggle between the States, Abraham Lincoln was bitterly assailed. Vilification of a President reach an all-time low in venom and vulgarity. They called him a gorilla, tyrant, an ignorant backwoodsman, and a warmonger. But the immortal Abraham Lincoln received the criticism with a charitable spirit and quietly mumbled, "Lord forgive them, they know not what they do."

Let me ask the people of Indiana this simple question, Is there anyone who believes that Japan would not have started her undeclared war against us if Wendell Willkie, your Hoosier copatriot, had been elected President in 1940? Does anyone believe that Wendell Willkie could have kept the peace of this Nation, in view of what we now know about the treacherous conspiracy of the Axis Powers?

Had Wendell Willkie been the people's choice in 1940, war would have come, Congress would have delegated to him, or any other President, the same wartime powers we delegated to Franklin Roosevelt. Rationing would be necessary, price control would be here, and there would have been imposed all the Government rules and regulations which now interfere with your daily life. Hardships have always been felt in time of war. Liberty has always been curtailed. It is more so in this war because of its global character. But after every war the people have regained their liberties, and this coming post-war period will be no exception to that time-proven practice, notwithstanding the 10-year-old cry of dictatorship by the die-hard leaders of the opposition.

Yes, we have made mistakes, but how many mistakes do you think Wendell Willkie would have made, as President, if you use the mistakes he made in his campaign of 1940 as a yardstick?

Turning from Editor Willkie to the editors assembled here, let me emphatically say you have that highly important role of presenting to the people throughout the Nation, the legislators, and the administrators of the Government the truth. Yours is the responsibility because you are at the core of local, national, and international affairs. You comment and you illuminate as much as is possible upon what you see or hear. However, there is a very important line that should be maintained between the news and comments, one of which most editors are well aware. Yet, as in all forms of endeavor, there is the occasional one who fails to observe and respect, either unintentionally or intentionally, the distinction between news and comment.

I doubt that there ever was a time in our history when it was more important that the canons of journalism should be respected. Fidelity to the public interest is all important at any time, but it seems to me to assume greater significance than ever in this gruelling global crisis through which we are passing. News as it is found is what the people need. Obviously, news in the finest sense of the word is what is required. That the press of the Nation realizes its responsibility is conceded. Newspapers throughout the country have established an unequaled record for loyalty in the manner in which they have guarded those aspects of our economic life and public action which required secrecy so as not to give information to the enemy. The newspaper men in Washington respect the requests of men in high public life. You can give them an off-the-record story for their own information, and they will keep it out of public print. What is true of Washington reporters is true of the press throughout the country. The newspapers have given and will continue to give support to the war program, advocating purchase of

bonds, establishing of blood banks, encouraging welfare work for the armed forces, devoting much space to acquainting their readers with wartime regulations, and serving in innumerable other ways.

We all know that it is the duty of the newspapers to support enthusiastically the war until Nazi, Jap, and Fascist tyranny is destroyed. We also understand that during the war it becomes necessary for the press to discuss the winning of the peace. Here, there can be an honest difference of opinion as to what should be done in the future to eliminate war once and for all. I maintain that every American agrees with the objective. The only question which arises is the mechanics for the enforcement of a lasting peace.

Americans everywhere hope that out of this debacle of blood, tears, and toil a better world awaits us. But it will not come to us unless we plan for it. Law makers and administrators look to the press to learn the attitude of the people. And they hope to get from the press, not only the private views of the publishers or the editors, but the views of the people as evidenced by their activities. It is not my intention to minimize the contribution which the editors can make in interpreting and presenting views, for by virtue of their position of listening post for the country they are well qualified to observe and to focus attention. That is their job in every community.

It has been accepted that we will by no means return to the normal as we knew it in 1933, 1935, or at any time before the war. A new norm will be established. We all hope that economic equality, social equality, and tolerance will not be merely catch words, merely dreams on the international scene, but rather that they will be the basis and fundamental issues upon which a new world order can be created from the chaos of the past. Our role when peace is declared will be to point the way and to help nations achieve that degree of civilization which will assure more than a generation of peace.

It is evident that we are making headway in the Congress. It seems to me that we have reached the turning point. That conclusion is based upon what the House of Representatives did on Tuesday last when the Fulbright resolution was overwhelmingly passed. The near unanimity of action in the House of Representatives, when the House passed this resolution, was befitting the Representatives of a great people who have seen the light. That resolution merely proposes appropriate international machinery with power adequate to establish and to maintain a just and lasting peace. We are to be a part of that international machinery through duly constituted processes. The passing of this resolution demonstrated beyond peradventure of a doubt that the isolationism of the pre-Pearl Harbor days is dead forever. This action upon the part of one branch of Congress is a recognition of a great responsibility that we cannot shirk in the days to come. There will be great rejoicing by the people of the earth to learn that at last America is willing to take her place in an organization that has for its purpose the keeping of the peace of the world. It is pure balderdash for anyone to say that any part of the American sovereignty is being destroyed through this kind of a resolution.

My friends, America is a Nation of destiny, and under this resolution we shall still be the masters of our own destiny. To follow any path other than some type of world collaboration means another war in 20 years. If we want to enjoy the "four freedoms" so pointedly expressed in the Atlantic Charter by President Roosevelt and Prime Minister Churchill, we must design some type of international machinery which will insure freedom from war.

It would be a sad commentary, indeed, upon the wisdom of the United Nations if, after sacrificing millions upon millions of men, utilizing untold billions of wealth, all in the cause of freedom, we do not some way succeed in writing the final chapter to barbarism and brutality. But I am firmly convinced that modern warfare with all of its implements of human destruction by land, air, and sea has convinced the leaders and the peoples of the earth that a continuation of war, with all of the modern equipment, means the end of civilization.

As one of your representatives in the United States Senate, one of the last citadels of parliamentary liberty, let me say in conclusion that my fervent hope is that two-thirds of the Members of the United States Senate, backed by the determination of the American people, will enter into some kind of an international collaboration with the Allied Nations which has a basis for enduring and lasting peace. Whatever course we adopt must be a long-time course if we are to remove the causes of war. The day has passed when this Nation or any nation can live alone. The individual who believes that we can defend ourselves in modern warfare against a combination of any world powers is thinking in the limbo of the long dead past. In the momentous days to come may we as Americans stimulate clear thinking upon the national and international picture before us. Let us do away with petty and selfish considerations in our mental toil. Patriotic Americans must consider the problems of tomorrow. They will strive mightily to find the right if they are willing to consider the future welfare of their country and all mankind. And those same American patriots will pray to God that He will uphold and defend that right.

Post-War Planning

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an interesting and timely article which appeared in yesterday's New York Times. The article is entitled "Russia Is Forcing Issues as We Delay Post-war Plan." The article was written by Mr. James B. Reston, whom I consider to be a reliable authority.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSSIA IS FORCING ISSUES AS WE DELAY POST-WAR PLAN

(By James B. Reston)

LONDON, September 26.—The decision of the Senate Foreign Relations Committee to defer consideration of any international peace plan until some time in the future has not produced any noticeable increase in the unity of the United Nations governments that are operating in this part of the world.

While officials of the British and refugee Governments in London fully sympathize with Senator TOM CONNALLY'S desire to avoid any "illconsidered debate with regard to subjects of vital interest to our allies," they do not share his confidence that postponement of these international problems will contribute to their solution.

The truth is that Russia's aggressive diplomacy is forcing these countries to choose up sides; they are being asked point blank by the Russians to make treaties such as the forthcoming Soviet-Czech treaty, and the Soviet Government is making it quite clear that Moscow expects Britain and the United States to give evidence at the forthcoming conference of the three great powers that they are prepared to talk turkey on detailed questions of spheres of influence and boundaries and to make clear what our policy is on the so-called world authority about which so many people are talking and writing in the United States.

Nobody here is trying to interfere with the internal affairs of the United States, the complexities of which startle them into silence; this is particularly true of British officials.

BRITISH ARE WORRIED

While it is their fondest hope that they will be able to coordinate their post-war foreign policy with ours, they cannot ignore the fact that Russia is pressing them most urgently to make definite decisions on all kinds of questions that the United States Senate is apparently unwilling even to discuss.

Two overwhelming fears dominate the minds of British officials—first that they will be unable to work out with the United States and the rest of the world some kind of international trade and financial organization that will give their people full employment after the war (that is why Baron Keynes is in Washington now); and, second, that they will be forced into a position of choosing between Russia and the United States instead of working out a world authority that all nations can agree upon.

Like Senator CONNALLY and his colleagues on the Foreign Relations Committee, the British also would like to postpone the day when they have to put the chips down on a specific foreign policy—like ourselves, the British also have a genius for postponing decisions and a hatred of violent division and controversy—but they are in the middle between us and the Russians, with the Russians pressing them to decide now and we are pressing them to temporize and generalize until some more favorable unidentified day.

There is reason for saying, and it is necessary to report, that this issue of declaring ourselves now or postponing all definite discussions is almost certain to come to a climax at the meeting in Moscow among representatives of the United States, Britain, and Russia.

The agenda drafted for this meeting by Russia on one hand and by ourselves on the other indicate clearly the dilemma in which the British find themselves. The Russians want to speak frankly now and at least reach a basis whereon the future Europe will be decided.

Prime Minister Winston Churchill in the House of Commons has said that on his part no questions would be barred, though he did not guarantee any specific answers. We on the other hand have so far indicated that there are certain questions that we would like to bar and this division clearly has serious implications.

Most objective observers in London agree that a great deal of nonsense has been spoken in the past about how we and the British have not been willing to cooperate with the Russians in the conduct of the war. The fact is that the British have run all over the world at the drop of a hat to talk to anybody about anything and President Roosevelt has shown unprecedented patience in his at-

tempts to arrange a meeting with Premier Joseph Stalin.

OUR POLICY HELD ENIGMATIC

Once this is conceded, however, it must also be stated that in the last few weeks Washington's foreign policy has been even more enigmatic than Moscow's.

We know that Vice Foreign Commissar Andrey Y. Vishinsky will represent Premier Stalin on the allied political commission to deal with Italian and other Mediterranean questions and that Harold Macmillan, Minister to the French Government in Algiers, will represent Britain on this same body. We know that Foreign Secretary Anthony Eden will represent Britain and Foreign Commissar Vyachesloff M. Molotov will sit in for Mr. Stalin on the "foreign secretaries conference" in Moscow. But we do not know who will represent the United States at either of these vital conferences and we do not know anything about what our policy will be on the commission or at the conference when we do make up our minds who is to attend.

Nor are these the only questions being asked about America's intentions by officials in this part of the world. The long delay by Washington in settling the case of Sumner Welles has naturally led to a great deal of discussion here. So have reports that are not mere speculation that at this critical point we are debating about changing our Ambassador in Moscow. So have our announcements that we were establishing committees to deal with the rehabilitation of areas belonging to our allies.

All these points have led to a great deal of uncertainty about the United States and where she stands, and while this is not exactly a new experience among the diplomats of the world, it is particularly urgent now, due to the pressure from Moscow. The right of the United States to take any unilateral decision it likes is not denied here, but at the same time it is pointed out that by choosing to do so we are encouraging the Russians to establish a unilateral European policy of their own.

Shipbuilding and Merchant Seamen

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. BLAND. Mr. Speaker, the work of shipbuilding in the present war has been one of the most outstanding achievements in the history of the world. I extend my remarks by including herein a statement made by Rear Admiral Emory S. Land, United States Navy (retired), Chairman of the United States Maritime Commission, on September 24, 1943, which is a report to the American people on the progress of the merchant shipbuilding program for the past 2 years. The progress is remarkable, and is one in which every American should take the greatest pride. I hope that any person interested in this speech may also read my remarks yesterday on Victory Fleet Day.

The statement of Admiral Land to which I refer to above is as follows:

This is a report to the American people on the progress of their merchant shipbuilding program for the last 2 years and an invitation to them to join the men and women of the shipbuilding industry in celebrating Victory Fleet Day on Monday, September 27, second anniversary of the launching of the *Patrick Henry*, number one Liberty ship.

Victory Fleet Day has a deep intrinsic meaning to those who have been actively engaged in this the greatest 2-year shipbuilding program the world has ever known. By their sweat and their brains and their determination to see the job through, they have delivered into service with steam up a fleet of more than 2,100 oceangoing cargo ships, whose deadweight tonnage of more than 22,000,000 tons is double the size of the Nation's pre-Pearl Harbor fleet.

So vast is this new fleet that should it be strung out at intervals of little more than a mile apart it would stretch a bridge of ships across the Atlantic all the way from America to Europe. Considering that each vessel in war service is making an average of three round trips a year, the new fleet could deliver in one 12-month period enough war materials and other strategic supplies to fill more than a million and a half freight cars, each carrying 40 tons—the equivalent of about 30,000 average length American freight trains.

In September 1941 when the *Patrick Henry* slid down the ways as the first Liberty ship to taste salt water, there were 21 shipyards with about 100 ways employed in the oceangoing merchant shipbuilding program. Today approximately 70 yards, with more than 300 ways, are delivering more than 5 ships a day. These yards are expected to step up production still further so as to deliver 6 ships a day in the near future.

Two years ago the industry employed about 200,000 men. Today three-quarters of a million men and women are employed in shipyards alone, and more than a million others in plants throughout the Nation are producing materials for ship construction.

As ship production has risen during the past 2 years, going up from 7 vessels in September 1941 to about 170 this month, cost per ship has steadily decreased. In the last war, when America was startling the world with its production of the famous Hog Island vessels, ships cost the taxpayer $210 per ton. Today Liberty ships' costs have been slashed until they are now built for about $160 per ton. This difference is in spite of the fact that present-day shipyard workers earn a base pay of $1.20 an hour, as compared to 80 cents an hour for workers of the last war period.

High production at lower cost has been accomplished through three main developments. They are standardization, centralization and prefabrication. A fourth is "no changes." Standardization of design of the various types of ships being built made possible the centralized procurement and control of material flow from factory to shipyard. Today, all the power and speed of prefabrication has been brought into play so that the actual shipway is the end station of a vast assembly line reaching into more than 1,200 factories and dipping into the natural resources of the 48 States. With perfection of assembly line construction methods Liberty ship production time has been cut from more than 200 to less than 45 days since the program began.

There has been much discussion about the post-war use of Liberty ships. No definite plans can be made for their final utilization. It should be remembered, however, that Liberty ships were designed and are being constructed for one reason and one reason only—as emergency vessels to deliver the goods necessary to win the war. Without Liberty ships, it would be impossible for the Allies to prosecute the war to victory. When victory has been won and the world is again at peace, the Liberty ships will have served the purpose for which they were built.

Liberty ships were designed and constructed because, with existing materials and equipment, no other design of vessel could be placed into mass production. Today, as more modern propulsion equipment is being made available, some shipyards are switching from production of Liberty ships to the modern speedy Victory ships. A complete change cannot be brought about overnight, or even in a single year, unless existing conditions change, so while yards will soon begin delivery of Victory ships, Liberty ship construction will not be abandoned in the near future.

If the past 2-year record looks bright, the future looks even brighter. Present production records call for the completion, from the inception of the Maritime Commission's long-range program, by the end of 1944, of approximately 50,000,000 deadweight tons of merchant ships. This means that by the end of 1944 American shipyards will have constructed a fleet of ships whose deadweight tonnage is greater than the pre-war fleets of the United States, Great Britain, Germany, Japan, and Norway combined.

On this Victory Fleet Day America owes a special debt of gratitude to that small group of experts who formed the nucleus of the present shipyard personnel. When the United States was forced into its huge war shipbuilding program it had comparatively few men who possessed the "know-how" necessary to build ships. These men were spread throughout the industry to train and supervise hundreds of thousands of inexperienced workers.

The fact that American fighting men are attacking on the battle fronts of the world is firm attestation that our shipbuilders and ship operators are doing their job. America had to win the first phase of its shipbuilding battle before our armed forces could attack successfully. Next Monday shipyard workers from coast to coast are pledging to their fighting forces that they will continue to deliver the ships necessary to win the war and to bring our men back home.

Mr. Speaker, I also extend as part of my remarks a release of the War Shipping Administration under date of September 24, 1943, showing the response that is being made throughout the Nation to the appeal of Admiral Land to give merchant seamen a place of equality with other members of the armed forces on town and community honor rolls. There are no people more deserving of such recognition, and it is the earnest hope of all who are connected with the merchant marine that this course will be followed.

Governors all over the Nation are pledging wholehearted support to an appeal by Admiral Emory S. Land, War Shipping Administrator, to give merchant seamen a place of equality with other members of the armed forces on town and community honor rolls, the WSA announced today.

Admiral Land made his appeal in personal letters to Governors of the 48 States and of United States Territories and possessions as a result of a flood of letters from families and friends of merchant seamen who said that in many communities they were not counted among the Nation's war heroes. Land pointed out that Congress has officially recognized the outstanding services of these men by providing medals for distinguished service and other honor awards. He also called attention to a declaration by President Roosevelt that the work of our merchant seamen is just as important to our ultimate victory as the men in

the armed forces. That theirs is a most dangerous job, Admiral Land declared, is attested by the grim toll of their lost and injured.

"This is a war of transportation; these men are doing a big job—a tough job—in keeping open the vital life line between our industrial front and our battle fronts. Without it we could never hope for victory," Admiral Land said.

Responding quickly to his appeal, Governors are taking action by calling the attention of communities in their States to the role merchant seamen are playing. Many have notified the War Shipping Administration that they are preparing proclamations and others are calling press conferences.

Typical of letters received is one from Gov. Herbert R. O'Conor, of Maryland, who said, in part:

"I agree entirely with you that these men, performing outstanding services during the present crisis, rightfully deserve recognition along with those others in the armed forces. Certainly these men are doing a splendid job and are contributing their all to the cause; therefore, there should be no differentiation."

Post-War Employment Opportunities for Disabled Veterans in the Government Service

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Commissioner Arthur S. Flemming, United States Civil Service Commission, before the annual meeting of the Disabled American Veterans at Hotel New Yorker, New York City, September 18, 1943:

It is a real honor and privilege to be able to address this annual meeting of the Disabled American Veterans.

In a recent address before the Department of the District of Columbia of the American Legion it was my privilege and opportunity to explain the attitude of the Civil Service Commission relative to employment opportunities for veterans in the Federal Government after the war.

Today it is my purpose to deal specifically with the subject of employment opportunities for disabled veterans in the Federal Government after the war.

It is recognized, of course, that this is not exclusively a post-war problem. Disabled veterans are returning every day. Consequently, many of the observations which will be made relative to action to be taken after the war are equally applicable to current conditions. But in order that we may look at the whole problem the emphasis in this talk is on the situations which will arise after the war.

We believe that there is no question but that preference must be and will be extended to veterans by both public and private employers.

A grateful nation would not have it otherwise. In the words of the President of the United States:

"The members of the armed forces have been compelled to make greater economic sacrifice and every other kind of sacrifice than the rest of us, and are entitled to definite action to help take care of their special problem."

A realistic nation knows that it cannot be otherwise. Over 10,000,000 men and women cannot be uprooted from their normal pursuits in order that their nation may be preserved, and then, when this objective has been reached, be expected to pick up their normal pursuits again without any help or assistance. Life just isn't that simple.

The Federal Government, as an employer, should strictly enforce preference for veterans in the following manner:

1. Whenever it is necessary to reduce the number of employees on the Federal pay roll, the Civil Service Commission should see to it that no honorably discharged soldier, sailor, or marine, whose efficiency rating is "good" or better, is separated while a nonveteran in competition with him is retained, regardless of efficiency ratings and length of service.

2. Every employee who left other than a temporary position in the Federal Government to enter the armed forces should be placed back in his old job, or, if his old job has disappeared, in a job of like seniority, status, and pay. This must be done irrespective of any other personnel adjustments it may be necessary to make.

3. Veterans, following the war, should have the opportunity to compete and should be given preference for the career civil-service positions for which they had no opportunity to compete because of their service in the armed forces. This will be possible because, as a result of recommendations made by the Civil Service Commission to the President, all appointments to these positions since March 16, 1942, have been for not to exceed the duration of the war and 6 months thereafter. One of the primary reasons for making this recommendation was to make it possible for returning veterans to compete for these career positions.

4. Appointing officers who pass over veterans in considering names submitted to them by the Civil Service Commission should continue to be required to state their reasons in writing for so doing. But, in addition, the Civil Service Commission should have the authority to decide whether or not the reasons are acceptable.

That is a summary of the position of the Civil Service Commission. Let us discuss each one of these points with particular reference to the problems of the disabled veterans.

Our first point dealt with the granting of preference to veterans in connection with reduction in force programs. In this area there is no special problem as far as the disabled veteran is concerned. But we do want you to know that the Civil Service Commission intends to do everything within its power to enforce the regulations which grant veterans a preference in connection with any reductions in force. Where veterans or representatives of veterans feel that either the letter or the spirit of our regulations on this matter has been violated, they are not only invited but urged to appeal their cases to the Commission.

Next, there is the problem of the proper placement of persons who left other than temporary positions in the Federal Government for the purpose of entering the armed forces.

The Selective Training and Service Act specifies that persons who have left positions in the Federal Government and have entered the armed forces shall be restored to the positions they left or to positions of like seniority, status, and pay.

Up to this point the obligation of the appointing officer is clear. If any appointing officer of the Federal Government does not act in conformity with this obligation, something should be done about it, and something will be done about it. The Civil Service Commission will ask the head of the department or agency to take appropriate action. If such action is not taken, a recommendation for appropriate action will be submitted by the Commission to the President through his liaison officer for personnel management. In our judgment, however, the times when it will be necessary to take such drastic steps will be few and far between. The great majority of appointing officers will recognize their obligations and act accordingly.

But this isn't the complete story as far as the Selective Training and Service Act is concerned. The act specifies that the veteran who formerly worked for the federal Government has a right to return to his old position or to a position of like seniority, status, and pay if he is still qualified to perform the duties of such position.

This provision could be interpreted to mean that the Federal Government, as an employer, is under no obligation to a former employee who becomes disabled and who is unable to perform the duties of his former position.

Such an attitude upon the part of the Federal Government would, in the judgment of the Civil Service Commission, be intolerable. Certainly former employees of the Federal Government who become disabled in the service of their country are, if anything, entitled to more consideration, and not less consideration, than their comrades who were not disabled.

And yet, at the same time, we do not want to put former employees of the Federal Government who return as disabled veterans in just any kind of a job. They do not and will not want to be treated in this manner. They do and they will want us to place them in the kind of a job where they know they are making a distinct contribution to the carrying on of the Government's work.

This won't be easy. In many instances it will mean that before they are put back to work in the Federal Government it will be necessary for them to be trained to do things which they have never done before. In other instances, it will mean that, after they have been placed in positions, it will be necessary to provide them with special training.

Fortunately, the Federal Government, through the Veterans' Administration, the Federal Security Agency, the Army, the Navy, and the War Manpower Commission, seems determined to provide such veterans with this type of training. The Commission, as the representative of the Nation's largest employer, welcomes the work that is being done, and looks forward with real hope to the work that will be done in the field of rehabilitation. If the Government's rehabilitation programs are successful, it will be possible for the Government, as well as private employers, to place the disabled veterans who formerly worked for them in jobs where they will know that they are making a vital contribution to the work of government and industry.

This, however, is just one part of the total problem. The biggest problem is to convince appointing officers that there are jobs in their organizations which can be filled by physically handicapped persons.

The Civil Service Commission has been working on this phase of the problem for over a year. We have surveyed over 2,500 different positions in the Federal service to find out what jobs can be filled by handicapped persons. After all, very few jobs require all of the abilities and faculties of a worker.

In our surveys we have found out just what abilities and faculties are needed in particular jobs. Then, we have taken persons with these abilities and faculties, even though they may have other handicaps, and have persuaded appointing officers to use their services. Since October of last year

over 15,000 physically handicapped persons have been placed in Federal positions as a result of this program.

Our next step is to make a study of the manner in which these physically handicapped employees have carried on their work. This study will be completed within the next few months.

Our objective is clear. We are determined to put ourselves in a position where we can demonstrate that specific jobs require specific abilities and faculties. We also intend to be in a position where we can demonstrate that persons with these abilities and faculties, even though they may have other handicaps, are capable of doing just as effective a job as persons who are not handicapped.

We believe that once we are armed with this type of factual information we will be in a position to render a very real service to the former Government employee who has been disabled as a result of his service in the armed forces. We will work with him in finding jobs which can be filled by persons with the abilities and faculties which he possesses, even though he may at the same time be regarded as a physically handicapped person.

We will then call to the attention of the appointing officer concerned the fact that this former employee of the United States Government is entitled to preferential consideration in the filling of the job concerned. In most cases, this will be enough. The disabled veteran will be given the job.

But, once we have gone this far, we believe that any appointing officer who shows any tendency not to do so should be required to select this former employee—now a disabled veteran—for appointment, unless he can present reasons for not doing so which are acceptable to the Commission.

In this way, and only in this way, can the Federal Government fulfill what, in our judgment, is a solemn obligation to place in the right jobs all of the persons who left other than temporary positions in the Government to enter the armed services.

Next, we turn to the question of opening up positions for veterans who prior to the war did not work for the Federal Government.

We believe that thousands of returning veterans should have the opportunity to compete for career civil-service positions for which they had no opportunity to compete because of their service in the armed forces, and that they should be given preference in the filling of these positions.

When disabled veterans appear on the Civil Service Commission's lists of eligibles as a result of these career positions being thrown open to competition, we will be confronted with virtually the same kind of a problem which confronts us in the case of a former Federal employee who returns as a disabled veteran.

Here again we will present to appointing officers disabled veterans who have the faculties and abilities needed to perform particular jobs, irrespective of any other physical handicaps which they may have.

But what is going to happen to these disabled veterans after we have presented their names to appointing officers?

This question leads us very naturally to the fourth part of our program. Appointing officers who pass over veterans must now submit in writing their reasons for so doing. The Civil Service Commission believes that it should have the right to determine whether or not these reasons are acceptable. Any determination by an employee of the Commission that a particular reason was acceptable would be subject to appeal by the veteran or his recognized representative. In the course of such appeal, the veteran would, of course, be acquainted with the reasons advanced by the appointing officers for failing to appoint him, and then would be given the opportunity of presenting his side of the case.

Under such a procedure, if an appointing officer asserts that a disabled veteran cannot perform certain types of work, the Commission will be in a position to consider whether or not his assertions are justified in the light of what our studies have revealed as to the faculties and abilities which are needed to handle particular jobs. In addition, we will be able to point to concrete evidence indicating persons who possess certain faculties and abilities, even though they may not possess certain others, have demonstrated on the job that they are capable of rendering just as fine a service as those who do not have physical handicaps.

So much for policy. In addition to policies, however, we must be organized properly in order to carry out the policies.

With this in mind, the Civil Service Commission has recently established in its central office an organizational unit charged with the responsibility of devoting all of its time to veterans' problems. Mr. Charles R. Anderson, who is favorably known to veterans in all parts of the country, is in charge of this unit. Each one of our 13 regional directors will have on his staff a counterpart to Mr. Anderson.

The creation of these special units, however, is not a device for relieving the rest of the Civil Service Commission's personnel from the responsibility of dealing with veterans' problems. Mr. Anderson and his colleagues will develop the plans which, when accepted by us, will be executed by the entire organization. And you, and veterans everywhere, can rest assured that this responsibility will be discharged with the same determination and enthusiasm which has been characteristic of the Commission's personnel throughout the war period.

Throughout this talk reference has been made to the fact that war service appointees will have to make way for returning veterans. There is no question in our minds but that such a policy will be followed. And yet, this does not mean that we are blind to the fact that this will create serious problems for many civilian employees of the Government who have made a major contribution to the war program, just as have millions of civilians who have been working in our war industries. We must devise plans which will enable these loyal and efficient workers to bridge the gap between war activities and post-war activities. In this respect, Government, as an employer, faces the same problem that thousands of private employers will face. Government, as well as private employers, must actually face the problem in an effort to work out a sound solution and not simply recognize the existence of the problem.

When this tremendous problem is coupled with the many difficult situations which we know will confront all of us in connection with the placement of veterans, we recognize that the period of adjustment which awaits us is one which will truly try men's souls. And yet, I believe that a large percentage of the persons who will be charged with the working out of proper solutions to these problems will have as their sole motivation the desire to render the maximum of service to their fellow men. If this is the case, the problems will be solved.

Finally, I want you to know that even though today we have been discussing some of the problems which will confront us after the war we are not among that group which feels that the time has come to relax our efforts in connection with the war program and concentrate on post-war problems. Grim days lie just ahead. The time when all of our resources should be concentrated on our present job is at hand. If they are not so concentrated, we may be responsible for the needless loss of thousands of lives. This is no time for civilians to think about leaving war jobs, and obtaining jobs which they think will give them greater security in the days which lie ahead. Such persons are forgetting the part which they must play in saving the Nation, in a vain effort to save themselves. There will be no such thing as freedom from want or security for any one of us, unless all of us dedicate all that we have to the war, and do not let up for one second until the war is actually won.

Address by Hon. Scott W. Lucas, of Illinois, in Tribute to Defenders of Poland

---

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Illinois [Mr. LUCAS] at the Tribute to Poland Day meeting in East St. Louis, Ill., on September 26, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Throughout America patriotic citizens in every walk of life have paid tribute to the defenders of Poland, which 4 years ago this month was invaded and overrun by the Nazi army under the leadership of Adolf Hitler.

It is fitting and proper that the people of this thriving and patriotic community, people of all political parties and people of all religious faiths, should join in remembering what happened on September 1, 1939.

It was 5:45 in the morning on that eventful day when, without warning or a declaration of war, Poland felt the might of the Nazi army. The Poles were still asleep. Their anti-aircraft guns were not manned, their planes were drawn up in rows on their air fields. Nazi bombers caught them completely by surprise, bombed them unmercifully, and destroyed much of the Polish air force on the ground in the first 3 hours of the war. You ask me why Poland was caught by surprise, and my answer is that 3 days before the Nazi invasion Hitler had agreed to have Poland send an emissary to Berlin with full powers to settle the Polish question. Before Warsaw had time to send an emissary to Berlin, or even to receive Hitler's terms, the Nazis had begun their ruthless invasion. For 6 years Hitler had been promising Poland peace. And the request for the Polish emissary was only a ruse to set the German war machine rolling at the proper time. Over a period of years the leaders of the Axis Powers successfully pursued this same course of duplicity and hypocrisy.

On September 18, 1931, without warning or a declaration of war—with the identical technique of surprise treachery—the Japanese had invaded Manchuria, thus opening hostilities on China.

On December 7, 1941, without warning or a declaration of war, Japan struck at Pearl Harbor. All of these surprise attacks bore every earmark of systematically planned

campaigns—all were smoke-screened by suspicion-lulling protestations from the aggressors of no territorial designs and peaceful purposes.

This was the new "blitzkrieg without warning" on an unsuspecting neighbor. When asked, following the invasion of Poland, how the Germans justified it, Gen. Alexander Loehr, then commander of Hitler's air fleet southeast, said: "It is our new philosophy of war. It is the most merciful type of warfare. It surprises your enemy, paralyzes him in one blow, and shortens the war by weeks, maybe months."

He might well have been speaking for all the Axis Powers. This is a prime example of specious Axis argument—traitorous murder of the weak by the strong justified on humanitarian grounds.

The method has not shortened the war by bringing about a realization of Hitler's or Japan's imperial ambitions.

It has succeeded only in arousing 32 nations to the solemn determination, backed by their colossal armed might, that these traitors to human decency shall be hammered to unconditional surrender. Already in Europe and in the Pacific, Poland, Manchuria, and Pearl Harbor begin to be avenged.

Yes; we are aroused. We are fighting mad. We are utilizing our manpower, our natural resources; in fact, all we have to defeat the treacherous foe. In retrospect we realize how unfortunate it was the Allied Nations pursued their peaceful ways while the Axis Nations prepared to conquer the world. Peaceful nations, like England and France, living next door to Germany, apparently underestimated what Hitler and Mussolini were planning as they feverishly prepared for war. But that, my friends, is now water over the dam. This is no time to assess blame for what occurred in the past. We in America were under the hypnosis of peace in the Pacific. No one dreamed that Hawaii would be pulverized by the bombs of the unspeakable Jap. And so people who loved peace and hated war sat silently by, living on hopes and false information as to what would happen next.

But today, my friends, America and the Allied Nations thoroughly understand. All of the underbrush has been removed. Our course is set, our terms of unconditional surrender have been made. In victory we will quarantine the aggressors and strip them of their military power. In defeat we would become slaves, denied the right of free speech, freedom of worship, and all our unalienable rights.

That we will be victorious is now a certainty. But no one who is in his right mind can doubt that the roads that lead to Berlin and Tokyo will be marked by a tremendous sacrifice in human blood, destruction of property, and tears and heartaches by the millions. But with it all, Americans can take it. We know that our liberty is at stake. No longer does the boastful Hitler and the savage Tojo talk about making peace in the White House. No longer do these leaders, drunk with power, shout to the world about the weaklings of America. The leading democracy in the world has demonstrated to all mankind that it can function in a great global crisis. Three years ago we had 1,744 naval planes of all types, and many of us in Congress at that critical hour were being condemned because we wanted more. Today we have more than 18,000 planes, dive bombers, torpedo bombers, fighters, patrol ships, and planes of all types. Three years ago we had only 1,076 vessels and many less after the raid of Pearl Harbor. But today our fleet is composed of 14,072 vessels, including 613 warships. Three years ago our Army was composed of 440,000 men. Today our Army is around 7,300,000. Three years ago our ground air forces had 2,906 planes. Today the number is a military secret. However, it is safe to say that our total is many, many times what it was 3 years ago.

Let it be understood that these men in all branches of the service are the best equipped, best fed, best paid, and have the best medical care. The American Army is the finest Army that was ever sent forth to do battle against a common foe. This is the answer to the Axis Powers who understand nothing but might. "All they that take the sword shall perish with the sword." Mussolini is the first upon whom the promise of that biblical injunction has been visited. Hitler will be the next victim, then our might will be felt in the Pacific where our troops, our tanks, and other fighting equipment, backed up by planes and the most powerful Navy in all time, will wrest the beaches from the enemy and ultimately restore the property they have stolen to its rightful owners. The Japs, too, will perish by the sword.

In the vanguard of our fighting men and women can be found Americans who trace their ancestry to every nation in the world. America is, America has been and always will be the land of opportunity and freedom. Since long before the Revolutionary War, men who sought the free way of life, who hated the shackles of tyranny, left their native land to become Americans. This is the melting pot of the world, and with every race and religion represented here, we have been able to show the world how people with different tongues and conflicting backgrounds could live in peace with one another. If it can be accomplished in America, it can be achieved throughout the world. It may take time, you and I may not live to see that wonderfull day—but it is certain to come if civilization continues to progress. If I am wrong in this prophecy, then civilization must perish.

History tells us that Polish citizens were found in each of the Thirteen Colonies. One of the first citizens of Poland to make a name for himself in this country was Thaddeus Kosciusko. He came direct from Poland to enter the United States Army in the Revolutionary War. He volunteered in 1776. So distinguished was his record as a military genius in the battle of Yorktown and in New York that Gen. George Washington promoted him to the rank of colonel in the field artillery. He became known as the Father of American Artillery.

In that same struggle for independence, another citizen of Polish birth came to America to participate in this righteous cause. His name was Casimir Pulaski. So distinguished was his record as a military man that he was promoted to brigadier general in Washington's army and thereafter became chief of the dragoons in 1777. He was a brave man. He was always out in front and it was while leading his troops in the storming on the fort at Savannah, Ga., that he was killed.

Americans of Polish ancestry have fought in every war in which the United States has been engaged. They have contributed to the advancement of American commerce, industry, art, and education. Today Americans of Polish origin are giving as wholeheartedly of the war effort, both on foreign fields and on the home fronts, as they have given to the peaceful development of this Nation. There are Poles in the R. A. F. They are recognized by their comrades in arms as being among the best fighting men in this war. When they are in the air, they never forget the bombs of defenseless Warsaw. The Polish Navy took part in the naval operations in the Sicilian landing. Yes; the dauntless descendants of Kosciusko and Pulaski today fight even as they fought for the liberation of enslaved peoples. They fight for the destiny of mankind.

While speaking of the Revolutionary period, it is well to recall that Marquis de Lafayette, one of the dearest friends that General Washington ever had, came from the country of France to aid the colonists in their Revolutionary conflict. He had lived under one of the most despotic regimes that history has ever recorded. His soul, however, was aflame with the theory that all mankind is created equal and so he came to America as a crusader in a noble cause.

Your own county of St. Clair is filled with corresponding history of men who hated military despots. Hecker, Korner, Carl Schurz, and Siegel were leaders of a German group of citizens who fled from tyranny to come to the great Republic of the West. These men, in those early days, walked the streets of your cities and made the hearts of the whole Middle West thrill with their noble championing of liberty, union, and national security.

German immigrants, Polish immigrants, French immigrants, Italian immigrants, yes, immigrants from almost every nation in the world fought for the Union Army in the struggle between the States. These, my friends, are only typical examples of leaders who represented millions of their race, who fled from despot rule, and who when the time came were ready to fight for the preservation of liberty. And today if the leaders of these various groups were living, they would be in the vanguard fighting Nazi, Jap, and Fascist tyranny to an unconditional surrender.

On this anniversary of the invasion of Poland, it is well to remember that Poland was the first nation to oppose armed resistance to the Nazi onslaught. She refused to surrender. No nation has suffered more at the hands of the brutal conquerors. Cardinal Hinsley, broadcasting to the Polish nation on Easter Sunday 1940 said: "The real brutality, and the like cruelty of exterminating hate, the world has never seen before." But, my friends, Poland is not defeated. Her suffering will not be in vain. The fact that little Polish children are so weak from lack of food that they cannot play or laugh will not be forgotten in a world where civilization is on the march. What is true of the children in Poland is true of those in Greece, Belgium, and every other conquered country that now lies prostrate under the ruthless rule of the wicked Hitler.

General Sikorski, Polish Prime Minister and Commander in Chief of Poland in September 1939, recently said: "Poland will continue to fight until final victory. True to her traditions, she is fighting for the realization of her oldest maxim: 'The union of the free with the free, on a basis of mutual equality.' Regardless of overwhelming odds, Poland was the first to challenge brutal aggression. She will be the last to leave the field of battle."

In those words the general was telling the world that Poland even in exile continues to fight. She has a tremendous number of soldiers in the Middle East, an air force, a navy twice the size of Poland's pre-war navy, a merchant fleet, the tonnage which has not decreased in spite of the war service it has seen throughout the world. And so Poland carries on, true to her traditions of the past. She anxiously awaits the hour of redemption.

Not only does Poland await for the crucial hour of peace to come, but wherever liberty is lodged in the breast of human beings, there too that eventful day is anxiously awaited. But I would be untrue to you if I did not say upon this occasion that, in my opinion, the end of this world-wide conflict is not in the immediate future. One needs but to turn to the beaches of Salerno, Italy, to learn how desperate the remaining struggle will be. The well-trained and experienced Nazi, however, learned that the Americans can and will fight to the bitter end. The righteous cause and the courageous ability of General Clark and his Fifth Army of green troops were demonstrated as they withstood and finally pushed back some of Adolf Hitler's best and experienced troops. There was no

Dunkerque at Salerno; there will be no Dunkerque with the American forces. We strike only when we are adequately prepared.

The nonmilitary critics continue to wail about military strategy and tactics. But insofar as I am concerned, I am duty bound to follow the timetables of the American Army and Navy. Our success in the Pacific and Atlantic has been little short of marvelous when one realizes how totally unprepared we were in December 1941. I recently predicted that the war would end within 18 months or 2 years. That was before the battle of Salerno. I see no reason to amend that statement. And in the meantime the casualty list will continue to grow as the Axis Powers deteriorate under our devastating bombs and the thundering artillery.

People in conquered countries will continue to die day after day for lack of the necessities of life. Those who survive in these countries of want and despair will never be the same. A vigorous mind can function only when it is supported by a healthy body. It will be years, many years, before these helpless people again produce a sturdy race.

From our own lands we are sending the flower of youth. Thousands are already resting in eternal peace, thousands upon thousands have been wounded, many of them so seriously that never again will they meet the foe. We are building hospitals to care for the sick and the disabled. We are planning a program of education and rehabilitation for thousands upon thousands of veterans of this war. It is our duty to give employment to our returned soldiers in the event industry cannot absorb them. Our material resources have been depreciated, our national debt reaches a sum that fairly staggers the imagination.

Mothers who send their sons to war constantly ask if these sacrifices will never cease. They cry out, "Is there not some way by which the leaders of the world can stop this blood letting?" You and I, my friends, stand in the pitiless limelight of tomorrow, for what we do today and in the years following the war will be judged by our children and our children's children. There is not a single person in this audience who will not say that this debacle must not happen again. But the question that is constantly in the minds of the American people is, "How can future wars be prevented?" This is the most serious and gravest question that has ever been considered by the American people. There are some who say that it cannot be done. But, my friends, those who do not try to solve the ubiquitous problem which has been the bane of all mankind since civilization took root are failing their country and failing humanity in the most critical period of the world.

America will come out of this war as the leading nation of the world. She has the confidence of peoples everywhere. America is a nation of destiny. Ours is a great responsibility. We cannot shirk that responsibility; we cannot be unprepared for the judgment of tomorrow. To follow any other path in this world of human events to come will mean another war in 20 years. My friends, I cannot believe that Russia, China, England, or America wants another war. And if we are to have freedom from fear, as outlined in the Atlantic Charter, war must be eliminated. If we have freedom from war, all other freedoms are secure. Surely these four nations are strong enough to protect the weaker nations from being attacked by the stronger. Each nation, however small in the family of nations, should have the right to live in an atmosphere of freedom and independence.

We have a model in the United States. It can be duplicated throughout the world. Poland should have a right to live without fear of Germany as the little State of Rhode Island has nothing to fear from its next-door neighbor, the large State of New York. We have all kinds of people, different countries, and different nationalities in the Western Hemisphere. Our quarrels and our wars have been few indeed. I know of no nation in the Western Hemisphere that can be classified as an aggressor. They all desire to live in peace. Our good-neighbor policy is strengthening the bonds of unity and friendship. What has been accomplished in the Western Hemisphere can be the pattern for the peoples of the world.

It would be a sad commentary, indeed, upon the wisdom of the United Nations if, after sacrificing millions upon millions of men, utilizing untold billions of wealth, all in the cause of freedom, somehow, some way, we do not succeed in writing the final chapter to barbarism and brutality. I am firmly convinced that modern warfare, with all of its implements of human destruction by land, air, and sea, has convinced the leaders and the peoples of the earth that a continuation of war means the end of civilization.

As one of your representatives in the United States Senate, one of the last citadels of parliamentary liberty, let me say in conclusion that my fervent hope is that two-thirds of the Members of the United States Senate, backed by the determination of the American people, will enter into some kind of an international collaboration with the Allied nations which has a basis for enduring and lasting peace. Whatever course we adopt must be a long-time course if we are to remove the causes of war. The time has passed when this Nation or any nation can live alone. The individual who believes that we can defend ourselves in modern warfare against a combination of any world powers, is thinking in the limbo of the long-dead past. In the momentous days to come may we as Americans stimulate clear thinking upon the national and international picture before us. Let us do away with petty and selfish things in our mental toil. Patriotic Americans must consider the problems of tomorrow. They will strive mightily to find the right if they are willing to consider the future welfare of their country and all mankind. And those same American patriots will pray to God that He will uphold and defend that right.

International Bimetallism

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday September 15), 1943

Mr. MURDOCK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Bimetallism Held Needed by World," published in the New York Times of Monday, September 27, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIMETALLISM HELD NEEDED BY WORLD—AMERICAN SMELTING CHAIRMAN WOULD USE SILVER TO ASSURE ADEQUATE MONEY SUPPLY—STABILIZATION CALLED DIM—PACT BY LEADING COMMERCIAL NATIONS IS ADVOCATED BY FRANCIS H. BROWNELL

To assure an adequate supply of monetary metals for the post-war period, Francis H. Brownell, chairman of the American Smelting and Refining Co., urges adoption of international bimetallism by agreement of the leading commercial nations of the world. In a statement for publication today, he said the plan would retain every advantage of the international gold standard and yet assure an adequate supply of monetary metals for the post-war period.

Mr. Brownell declared that the currency inflation going on almost everywhere today, and particularly in Europe and the Far East, would result in an era of unprecedented monetary disorder when the war ended. Thus, he pointed out, "an early effective stabilization of their moneys is an urgent and absolute prerequisite to both internal recovery and the revival of foreign trade of these countries."

"The need for monetary stabilization is clear," Mr. Brownell asserted. "International collaboration is required to achieve it. We must make sure, however, that the standard adopted to assure such stability is sound and adequate, so that stabilization will be lasting."

Reviewing the break-down during the thirties of the international gold standard and the unhappy experiences of many peoples with paper currency, Mr. Brownell maintained that the extended periods of monetary stability in the past had been associated invariably with the use of gold and silver as monetary standards. He added that even if plans were adopted to economize in the use of gold through international clearing plans he doubted that there would be sufficient gold to carry on the expanded world trade.

GOLD STOCKS OF WORLD

"The monetary gold stocks of the world," Mr. Brownell explained, "do not greatly exceed $30,000,000,000 at the prevailing price of $35 an ounce for the yellow metal. The monetary gold stock of the United States amounts to $22,000,000,000, which is more than 70 percent of the world stock. Obviously the $8,000,000,000 or so of monetary gold owned outside the United States is very far from adequate to permit the other nations of the world to return to any type of workable gold standard.

"The world's monetary gold stock today is less than 1,000,000,000 ounces, of which the United States owns more than 70 percent. The world's monetary silver stock is well over 5,000,000,000 ounces, of which the United States holds between 50 and 60 percent."

Mr. Brownell held that adoption by agreement of international bimetallism as the world's monetary standard, with or without an international stabilization fund to economize on the use of monetary metals in settling international balances, would have the following far-reaching advantages:

1. The volume of standard money would be immediately increased, particularly outside the United States, to meet the larger needs of the post-war world. This would enable nations to maintain the stability of their currencies even if an adverse balance of payments should compel substantial shipments of gold and silver for a time to other nations or to the international stabilization fund.

2. The yearly addition to the world's stock of standard money would be expanded, for the normal annual output of some 40,000,000 ounces of gold would be supplemented by production of some 250,000,000 ounces of silver.

3. The stock of monetary metal could be expanded further, if found necessary, through drawing in considerable quantities of silver from the arts.

4. Nations whose populations desired would be able to restore coinage of standard money on a large scale. This has become progressively less possible as the gold shortage has caused all governments, including the

United States, to withdraw the yellow metal from circulation.

5. If a world-wide shortage of standard money should again threaten, it could be corrected through stimulating silver production and lowering the ratio of silver to gold by international agreement.

UPHOLDING STABILIZATION

6. Adoption of international bimetallism would not make the international stabilization fund plan unnecessary, but rather would help assure the success of any such plan by facilitating each nation's ability to replenish its credit on the books of the international fund through its power to deposit silver, as well as gold, for the purpose.

7. This is the only monetary plan that assures that the world at large will possess an adequate stock of monetary metals, no matter how large domestic and external trade becomes, and no matter at what points world prices are stabilized.

8. A much larger number of nations would be themselves producers of standard money under international bimetallism, and thus would be aided in maintaining the stability of their currencies through the production of monetary metals within their borders. The Western Hemisphere, chiefly Latin America, produces about three-fourths of the world's silver, while the Eastern Hemisphere turns out about three-fourths of the gold.

General Marshall's Religious Beliefs and Practices

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. REYNOLDS. Mr. President, I have received from Mr. Ray D. Brown, adjutant and public relations and welfare secretary of the Salvation Army, a letter enclosing a copy of The War Cry, the publication of the Salvation Army, containing an article pertaining to General Marshall. I ask unanimous consent for the publication of the letter and the article entitled "The Christian General," in regard to General Marshall.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

THE SALVATION ARMY,
Washington, D. C., September 21, 1943.

Hon. ROBERT R. REYNOLDS,
Military Affairs Committee,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: I am enclosing a copy of this week's issue of our War Cry which, I think, will be self-explanatory in view of the present rumors affecting Gen. George C. Marshall.

I can only speak as an individual and not for the organization which I represent, but I can say, without qualification, that the sentiment of every Salvationist, both at home and on the battle fronts all over the world is unquestionably against any shift in the present leadership of the United States Army.

Most of us feel that the general has brought our armed forces the type of inspirational Christian leadership which has made our fighting men examples to the civilized world of good behavior and of that spirit which only freemen possess.

You might be interested to know that the Southern War Cry has a circulation in the 15 Southern States of some 60,000 copies.

This letter is not designed to be a pressure instrument, but merely to give you the opinion of people who have long been known as admirers of true Christian character in the men who guide the destinies of our country.

I would appreciate you inserting this article in the CONGRESSIONAL RECORD, as I believe it presents a phase of the general's character not usually emphasized. I might also mention that Lt. Commissioner John J. Allan, who signed the introduction, was formerly in the office of the Chief of Chaplains of the United States Army.

Very sincerely yours,

RAY D. BROWN,
Adjutant, Public Relations and Welfare Secretary.

[Enclosure.]

THE CHRISTIAN GENERAL—AN INTIMATE INSIGHT INTO THE PERSONAL RELIGIOUS BELIEFS AND PRACTICES OF THE UNITED STATES ARMY'S CHIEF OF STAFF

(By William L. Stidger)

(I am delighted that Dr. Stidger has given our War Cry readers this intimate picture of General Marshall, whom I have known for many years. Efficient but unassuming, kindly but firm, conservative but daring, demanding the best and ever giving it, he is beloved and respected by all who know him. General Marshall is not only America's number one soldier but, in my judgment, the Army's number one Christian. His feeling in regard to the religion of the soldier may be summed up in his own words, as follows: "My hope for the soldier when he shall return from the battle is not only that he shall return better physically and mentally, but with a keener appreciation of the ideals for which the church stands." We can all safely trust our boys to such leadership, for the general's influence for righteousness percolates through the ranks—Lt. Commissioner John J. Allan, Central Territorial Commander.)

I recently spent a week in Washington, D. C., as the house guest of Justice Frank Murphy, of the Supreme Court. One evening we got to talking about Gen. George C. Marshall, who is the executive head of the largest Army that was ever assembled in the history of the United States of America.

Justice Murphy said to me: "I do not see why it is that we Americans talk about Chiang Kai-shek as the Christian general and are carried away by that well-justified slogan in describing him, and still do not seem to be very appreciative of the fact that our own General Marshall is also a Christian leader.

"Perhaps it's because we expect our generals to be Christians, and we do not expect Chinese and oriental generals to be Christians," I suggested mildly, inwardly delighted to find Justice Murphy that much concerned about the nonchalant way in which we in the United States regard the fact that the head of our armies is a Christian gentleman.

Then he added, "I don't know what that middle initial 'C' stands for in General Marshall's name, but if it is not descriptive of 'Christian' then I don't know men and I don't know what being a Christian means."

"Maybe we'd better nickname him 'Gen. George Christian Marshall,'" I suggested.

"It would not be inappropriate, added Justice Murphy with evident deep sincerity, "for he is much more than a fine soldier, a great executive, and an experienced Army man. He is a Christian gentleman in the finest sense of the phrase. I'm positive for I know him."

"To just what denomination does he belong?" I asked.

"He is an Episcopalian and proud of it. He's not like some leaders whom I know who are members of churches but who try to keep the matter a deep dark military secret.

"General Marshall's church membership is no military secret. He is proud of being a church member, attends church regularly whenever his duties permit and worships reverently."

That was enough to make me intensely interested in General Marshall, and I know that if I, a mere bystander, am interested, every father and mother, child and wife of every soldier in our Army will be even more interested.

In other words, it is highly important to every home in this Nation that the general who has the final authority over the lives of our boys, be a Christian in a personal sense.

When we know that fact, we know the most important fact about him, for we have confidence that the President of the United States and the Government behind him would not select a man to organize, equip, and train the largest Army that this Nation has ever raised unless that man were fit for the responsibility.

If a man has a real knowledge of his job—and of his God—that man is hard to beat. General Marshall has the characteristics of Oliver Cromwell, George Washington, and Chiang Kai-shek; and we Americans are glad to know that fact in these crucial days.

Among the confidential facts that I obtained in Washington to buttress this ideal are these excerpts from statements made by General Marshall himself:

"The soldier's heart, the soldier's spirit, the soldier's soul are everything. Unless the soldier's soul sustains him he cannot be relied on and will fail himself and his commander and his country in the end.

"Today total war is not a succession of mere episodes in a day or a week. It is a long-drawn-out and intricately planned business, and the longer it continues the heavier are the demands on the character of the men engaged in it.

"With each succeeding month, with each succeeding year, it makes always heavier and more terrible demands on the mental and spiritual qualities, capacities, and powers of the men engaged in it.

"War is a burden to be carried on a steep and bloody road; and only strong nerves and determined spirits, like unto the spirit of a Man who long ago carried the heavy burden of a cross up a steep and bloody road to His own crucifixion, may endure.

"It is true that war is fought with physical weapons of flame and steel; but it is not the mere possession of these weapons, or the use of them, that wins the struggle.

"They are indispensable; but in the final analysis it is the human spirit that achieves the ultimate decision.

"It is not enough to fight. It is the spirit which we bring to the fight that decides the issue. It is morale that wins the victory, and morale means a use of the spiritual powers inside of every soldier. Without that we fail.

"We are basing the discipline of the individual on respect rather than on fear; on the effect of good example given by officers; on the intelligent comprehension, by all ranks, of why an order has to be and why it must be carried out; on a sense of duty; on esprit de corps.

"This new discipline enables me to leave with all parents the assurance that the men in this Army which we are building for the defense of a Christian Nation and Christian values, will fight, if they have to fight, with more than their bodies and their hands and their material weapons.

"They will fight with their souls in the job they have to do, and we who have them in charge, want their parents and friends to know that everything, ultimately, depends

on the soul, for 'out of the heart are the issues of life,' as our Bible puts it."

I, as a Christian minister, say that this is sincere speech. And what is more, I know enough about General Marshall to realize that he means every word of it, down deep in his heart.

He practices what he preaches; and he does it with a vengeance, as all Army men know.

Two statements which have been made about General Marshall by chaplains who have served as his aides and who were close to him for years, have convinced me that these public utterances are true.

The first was made when a chaplain was complaining because he did not have enough physical equipment (a matter which was and is being remedied rapidly under General Marshall's personal direction): "A good chaplain does not require a church; a poor one will empty a cathedral."

It seems to me that this applies to everyday civilian preachers as well as wartime chaplains, and it would be a significant statement to carve in stone on every church and cathedral in this Nation for all time.

The second statement concerning General Marshall that a chaplain gave me is this one: "The General hasn't much sympathy with religion that is a mere lip service, formality, or ritual, in spite of the fact that he belongs to the Episcopalian Church which specializes in form and ritual.

"I once heard him say: 'I don't give a hoot for a man's religion either in war or peace if it does not set him on fire with a passion to do and die for Christ.'"

Gen. William Arnold, Chief of Chaplains, said to me when I asked him what real sympathy he got from General Marshall in his Christian work:

"I first became acquainted with General Marshall about 5 years ago. General Marshall, who at that time had not yet been appointed Chief of Staff, called on me in my office.

"He had recently come to Washington, D. C., from Vancouver Barracks, Wash., where he had taken a personal and lively interest in his chaplains and their work.

"He spent considerable time discussing freely the chaplains he had observed, and emphasized time and again his appreciation of the fact that the chaplains are definitely spiritually minded.

"Promotion to the position of Chief of Staff, combined with the advent of our national emergency, naturally increased General Marshall's responsibilities and duties.

"With this added responsibility also came an accompanying increase in his interest in the religious welfare of the servicemen. The many problems which are related to the religious needs of the soldiers were almost personal problems with him.

"He conferred with me often in order to arrive at the best possible solution. He was intensely interested in the chapel-building program, and when the initiatory ceremony was held for the first of our modern chapels, he was present to accept the chapel on behalf of the Army."

There is something even more personal in General Marshall's religion. This fact has been illustrated by several incidents which have been told to me by chaplains who have worked with him.

One remarked: "General Marshall was always a faithful attendant at church services. He and his wife and the members and families of his staff set a fine example for all the members of the command.

"He used to delight some of the soldiers' children who stayed for church when he would squeeze into the same pew with them, giving them his affable smile.

"They would always be as proud as peacocks to have the General sit with them, and would behave like little soldiers. In fact, those were the only times when the chaplain could be sure that those particular children would behave.

"Perhaps that was the reason he did it. But, in any case, we all knew that the children loved him in every post in which he served."

Continued the chaplain: "At one city where we had been located for many years there was a good, faithful Christian woman who had completed 25 years of service in teaching Sunday school at the barracks.

"A special service was arranged in her honor. Although the busy summer training session was at its height, General Marshall not only attended that service, but also paid her a personal tribute in a very gracious, kindly, understanding, and sympathetic address.

"He did something similar at Christmastime when all the boys and girls in the garrison were assembled for their Christmas service and party. He did not speak at length; but, as many remarked, he certainly realized and expressed most admirably, the true significance of the holiday season."

Then that old-time chaplain added these words: "General Marshall's spiritual interest did not rest entirely in providing material equipment for religious worship.

"Under his direction a very sound program for relieving want, aiding in sickness and helping in other emergencies, was provided for the personnel of his command.

"Then, too, he had a thorough understanding of the psychological and spiritual problems involved. He never refused to help.

"In one instance it was his letter to a famous clinic that made it possible for a soldier's crippled child to visit that clinic; this act resulted in the child's eventual cure.

"When he was thanked, General Marshall blushed a little, became embarrassed and said shyly, 'I never forget that our Master once took little children into His arms, blessed them and said "of such is the Kingdom of Heaven."'"

When, from the General's associates, I learned about these personal characteristics of this militant director I experienced a feeling of reassurance.

What better commander could our men have then a God-believing, God-directed one such as Gen. George C. Marshall—a leader led by God?

These words ring out in clarion sharpness, melodic beauty and a strange, sure comfort as General Marshall stands before our men: "I will instruct thee and teach thee in the way which thou shalt go; I will guide thee with Mine eye."

Labor Laws—And Logic

EXTENSION OF REMARKS

OF

HON. FRED E. BUSBEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Business Week for September 11, 1943:

LABOR LAWS—AND LOGIC

It is much too simple to dismiss the Connally-Smith War Labor Disputes Act as a badly drafted law and let it go at that. Testimony that there is something wrong with it can now be offered by more than 200 employers on the basis of direct experience. In a little over 2 months of the law's operation, unions have used it 214 times to put pressure on an employer, or through him on the Government, for some concession that was being refused. And the use of the law by organized labor for this purpose is increasing at an accelerating rate.

The line-up on the bill when it was before Congress led industry to believe that it had a vital and positive interest in the measure's passage. With a remarkable unanimity, organized business and its allies in the House and Senate fought hard and long for its enactment. The unions and their cabal in Government opposed it to the limit of their strength and the end of their stratagems.

Conceived as an instrument that would divest organized labor of some of its power as a pressure group and eliminate some of the frictions in employee relations, the law has had a directly opposite effect. It serves a purpose completely alien to that which was intended by its sponsors. Instead of curbing labor's bargaining strength, the section of the act that provides for plant seizures in the event of labor trouble or the threat of labor trouble has armed the unions with a new weapon.

Instead of neutralizing labor's political influence through its inclusion of a ban on direct political contributions by the unions, the act has been responsible for a resurgence of political activity in the A. F. of L. and C. I. O. which promises to make itself felt distinctly in 1944.

Instead of discouraging wildcat stoppages by its provision of penalties for strikers and leaders, flash strikes and quickies have increased since June.

Most important of all, the famous 30-day cooling-off period which must now elapse between announcement of intent to strike and the taking of a strike vote has become in practice a heating-up period during which compaigning and agitation have precipitated the employee relations of more than one important war plant into chaotic disorder.

Allis-Chalmers, Curtiss-Wright, power companies in Michigan and Ohio, and Newark trucking firms are representative of the employers who have already learned that the Connally-Smith Act is a two-edged sword. They were led to expect that it would be a valuable employer defense weapon, but with the exception of the token punishment administered to insurgent coal strikers in Pennsylvania, they have yet to see it wielded in the employer's behalf. And any of these employers will tell you that he has a much more serious problem to deal with when the United States Government steps in and plasters plant bulletin boards with sample strike ballots than he had when his union held a closed meeting in the local Odd Fellows hall to discuss whether or not to call a strike. If the old method was harmful to morale, the new one is, by comparison, disastrous.

Even so, if there existed some evidence to suggest that the Connally-Smith labor trouble was simply the old trouble in new dress, it would be possible to say that the law had provided an alternative outlet for the same head of steam and that, consequently, the sum total of labor trouble an employer has to deal with has not increased. But this easy assumption appears baseless. The number of strikes has increased rather than declined. The number of cases coming before the National Labor Relations Board in which unions seek certification under the Wagner Act as exclusive bargaining agents is at an all-time high. The National War Labor Board and its regional units are handling an increasingly heavy volume of disputes. The unions have abandoned none of the established devices for advancing their interests; they are using them all to the full. The Connally-Smith Act adds another string to their bow.

It is popular to say now that this inversion of the law's purpose came about because,

while the idea behind the measure had been long considered and discussed, the bill itself was hastily written to take advantage of the favorable legislative opportunity for its enactment that was presented by John L. Lewis' feud with the Government. This explanation is dangerously simple. It assumes that a different drafting into law of the Connally-Smith intent would assure the attainment of the desired end. This might be true, but it is by no means certain. It is dangerous doctrine because it focuses on the mere language of the law that attention which business should be giving to the theory behind it.

The fundamental question is, How much can be done by legislation to influence a social dynamic-like labor relations? We have, by judicious lawmaking, regulated strong-running currents. The Sherman Act and the law creating the Securities and Exchange Commission are examples of such regulation. But when we legislate in the hope of reversing a trend and in so doing make a too radical attack on established patterns, we risk intensifying the very hazards we seek to escape.

In the intensely practical but delicately balanced competition of labor relations, the concepts of politicians written into law may have unpredictable and intolerable consequences. The interests of business will best be served by leaving the details of collective bargaining and personnel policy to its industrial relations experts. Better than anyone else, they know what hazards inhere in further Government intervention of any sort.

THE EDITORS OF BUSINESS WEEK.

The Food Battle

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech delivered by my distinguished colleague, Hon. WALTER C. PLOESER, of the Twelfth Missouri District, before the Western War Emergency Food Conference, in Fresno, Calif., Sunday, September 19, 1943, at 9:30 p. m. This speech was delivered in the Fresno Memorial Auditorium and broadcast over the Pacific coast N. B. C. network. Congressman PLOESER through his activity as a Member of the House of Representatives has developed a well-earned national reputation as a champion of small business and private enterprise and as an uncompromising opponent of bungling bureaucracy.

Mr. Hadeler, members of the Western War Emergency Food Conference, fellow Americans, you have made a most auspicious beginning for your 3-day food conference. The results of the War bond sales efforts today are a compliment to your ever-active patriotism. It is a proud American who addresses you tonight. Proud, because no matter where you find Americans—East, Middle West, West, North, or South—they are not only willing to produce for victory, but they are also willing to give or lend their all to Back the Attack of their heroic sons.

Upon you rests the all important job of backing the attack on a most important front, and in a most important battle—the food battle.

I take advantage of the graciousness of your California hospitality by digressing from my main theme to praise you and to appeal to our radio audience. This opening meeting of the War Food Conference has purchased about $400,000 in War bonds. That is splendid. We Americans meeting here, appeal to you Americans listening to immediately join us by writing your check tonight for a War bond. We must not fail to provide the fifteen billion needed—now—to Back the Attack.

We Americans on the home front face a most serious and heavy responsibility. It is our duty to supply our armed forces all over the world with equipment for war and with food. It is our duty to maintain within reasonable degree a normal and necessary economy on the home front. People who deal in food—either producers, processors, wholesalers, jobbers, transporters, retail distributors and governmental regulators—share a specific duty, which carries a responsibility as heavy and as important as any other in the fight for victory. Medals, official recognition may not be yours. But, lack of intrinsic tokens of honor will not in any way lessen your responsibility or importance.

From my service in the Congress I have clearly observed that the farmer has taken his duty in a determined stride. Processors and distributors of food have been performing their duty to the best of their ability. The consumer has taken rationing in a most commendable manner as one of the necessities of war. I have, unfortunately, observed that the one place where constructive cooperation in the handling of food has been lacking has been in the governmental controls which have been placed around your industry. The war effort on the fighting front, ever since that fateful day at Pearl Harbor, has been handled magnificently by our Army and Navy and auxiliary forces. The war-production effort on the home front has been the most outstanding world demonstration ever made—by American industry, management, and labor. Again, the governmental effort on the home front in the field of food has been notably mismanaged. But, my fellow Americans, Government bungling does not lessen or in any way diminish your responsibility as distributors of food. Regardless of the thousands of bad rulings by the Washington bureaucrats and the procrastination and political maneuvering in the administration's handling of the food problem, you must carry on and produce and distribute.

The people have become increasingly aware of the fact that it is not the fault of the food industry and that there have been extreme dislocations in the production and distribution of food. These dislocations have caused unnecessary shortages and sharp price rises. The people of America can charge these sharp food price rises to the failure of the Price Administration. They are not chargeable to the food industry. I do not mean to imply that the food industry is perfect. I am not claiming that your industry is entirely free from exploiters and professional war profiteers. Every industry and every administration will have a few.

Your Government has attempted to carry out a program of price control. Your Congress erected the foundation for a program in the second price-control law. This law is specific and clear in providing safeguards against evils certain to rise if price-control authorities attempt to leave the well-marked trail and follow paths which lead to the disruption of normal business channels of distribution. Notwithstanding the foresight which was displayed in the revision of the price-control law, and notwithstanding the clear and specific prohibitions therein, the Office of Price Administration insisted upon ignoring the law. The result has been chaos.

The main fault with the Office of Price Administration, including the Food Division, is the incompetency of the higher officials. For the most part they have been impractical professors with theories of their own and without any practical business experience. They refused time and again to follow practical business recommendations. Occasionally, practical men would get recognition. However, once convinced they were in error, O. P. A. seldom took any immediate action to rectify a situation. They would let the situation rest for months while they wrangled among themselves or with another department. Meantime, retailers went out of business or suffered serious loss. Greatly needed food crops have been allowed to rot in the fields while O. P. A. and other departments delayed and fought among themselves.

There was a glaring California example. When Edmund F. Maher left his position as O. P. A. Chief of the Food Price Section for five Far Western States, he wrote an article in the Saturday Evening Post entitled "O. P. A. Need Not Have Failed." Bakers were closing their doors in San Francisco at the rate of approximately one per day, while he sent weekly memoranda to Washington advising them of the seriousness of the situation. This started in March of 1942. During the summer of 1942 he phoned Washington and was told that O. P. A. headquarters would immediately send out questionnaires for a Nation-wide survey. Finally, in January 1943, a new bakery schedule was issued, permitting bakers to equalize prices with cost. Such procedure seems to be typical of O. P. A.

The Office of Price Administration administrators have also taken a very bad attitude toward the consuming public. Mr. Pixley, an administrative officer in O. P. A., has stated that half of the population of Ohio made so many errors in their applications for ration book No. 3 that they will just have to go without their butter and prunes. It is astounding to know that a man in that position could be so insensible to public reactions as to think that more than 3,000,000 persons would sit calmly by while bureaucratic big shots denied them such things as shoes, coffee, sugar, butter, and prunes, when the citizens knew a supply was available. He would deny them food because the O. P. A. couldn't prepare an understandable application blank. This statement is as infamous as Marie Antoinette's words, "If they can't get bread, let them eat cake."

One of our most important foods is meat. The question of meat supply for America has been and is most critical. Mismanagement upon the part of the Administration has brought it to the point where we can expect a glut in the civilian market this fall and a probable famine next spring. The handling of this problem is typical. After months of work and argument with the Office of Price Administration I took it upon myself, in the closing days of last June, to get together with competent representatives of the meat industry. In the light of all current conditions and factors, both poliical and economic, we drafed a program. On Saturday, July 3, I addressed a letter to Economic Stabilizer Fred Vinson, to War Food Administrator Marvin Jones, and to Price Administrator Prentiss Brown. This letter embodied a program which I suggested to relieve this false meat shortage. The President had asked for a suggested program instead of criticism. I have criticized and I have also proposed a constructive remedy.

The Ploeser meat plan emphasizes the need for the retention in the meat industry of all normal, customary, and traditional channels of distribution. It safeguards against destructive price squeezes. It protects the feeding costs of live animals and allows for deficiencies in the proportionment of the over-all price range—from producer to consumer—to be aided if, and when, necessary by incentive Government assistance. It protects the independents in the meat industry by equitable allocation of available supply.

If we must have subsidy, then let's put it to work as an incentive for production, which is the only point at which it will do any good. There is not a shortage of livestock. Lacking proper consumption and normal distribution, a more critical situation will develop.

None of us welcome the idea of an over-all managed economy in any line of trade. But, we must realize that we are not living in a free economy during the war. Whether we like it or not, we must be realistic if we are to feed the Nation. You and I would have managed the entire program differently from the beginning. Now we must accept the fact that we are not at the beginning—we are in the middle—in the middle of a muddle—with certain unrelenting politicial conditions which cannot be corrected overnight or within the next few weeks. If around these conditions we can build a program which will at least start into action the marketing and normal distribution of meat—then that is the program we must, at least temporarily, demand. This program, I believe, will permit all branches of the meat industry to live; and not only to live, but to feed the people and supply the armed services and lend-lease.

Has the War Food Administration adopted this program? Has it adopted any other program? It has not. What has it done? It has procrastinated. We have a War Meat Board at Chicago, Ill. Has it authority over the meat situation? No, it has not. It can advise and does. Is its advice taken by the War Food Administration? It is not. The livestock industry has developed a war meat program called meat management. Has this program been adopted? It has not. When this administration asked for suggested programs instead of criticism it lacked sincerety. It was merely fencing for time. Time grows short, while the War Food Administration procrastinates.

About the time one gets the O. P. A. around to adopt what appears to be a practical program, one finds that they do not have the authority. Authority has been divided. We now have a procrastinating, political, counter-action on the part of the War Food Administration.

Rarely are bunglers fired in official Washington. A New Deal bungler merely moves to another post—frequently a post of greater responsibility. There is no real attempt in Washington on the part of the administration to clean out these bunglers. You may read in the newspapers where we have a change here and there on the surface, but they are political changes. The bunglers are still in action behind the scenes. It appears that we will go from one mess to another on the home front until this entire disturbing crowd of pay roll leeches are run out of Washington by the votes of the people. Our votes will be our national salvation.

While the farmer and the food industry of America fight valiantly to win the food battle, the administration, by its pitiful mismanagement, fights a counter-action.

If the Oil Producers Are Given a Fair Chance There Will Be No Necessity for the Further Rationing of Gasoline

EXTENSION OF REMARKS

OF

HON. JAMES V. HEIDINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. HEIDINGER. Mr. Speaker, under leave to extend my remarks I wish to submit for the consideration of the Congress a letter which I recently received from the Danciger Oil & Refining Co. of Fort Worth, Tex. The letter reads as follows:

DANCIGER OIL & REFINING CO.,
Fort Worth, Tex., September 4, 1943.
Congressman JAMES V. HEIDINGER,
Fairfield, Ill.

DEAR SIR: No problem with which you will be confronted during this session of Congress will be more serious than winning the war.

The oil price index of 59.2 is 57 percent below the all-commodity index of 103.8. Why this glaring discrimination against the most vital of all war products?

Foremost in importance will be the assurance of an adequate supply of the fast-dwindling material that makes the wheels go 'round—petroleum and its derivatives. Our domestic supply has reached a stage of diminishing returns, and uneconomic methods are being employed to stifle the incentive to augment it.

This is an oil war. We are busy supplying an abundance of tanks, planes, ships, and guns; but without crude and its derivatives not a wheel can turn. Now is the time to be concerned, before we are compelled to tear our hair in anguish at some of our short-sighted policies.

Screaming editorials in millions of words by those "in the know" have put the country on notice of the impending shortage of crude oil and refined products. You do not have to be a crystal gazer to prophesy what will happen shortly to the war's most critical material.

Present petroleum reserves are being depleted at an ever-increasing rate, and as the tempo of war is stepped up, the shortage will become still more acute. As surely as night follows day, we will find ourselves without the means of successfully combating the enemy for the want of this vital fluid, if some action is not taken now to establish a price that will justify increased production.

Your prompt action, in stimulating the drilling of more wells and the discovery of more producing fields, will save the lives of thousands of our American youth by giving them an adequate umbrella of protective aircraft while on the battlefield.

What if the major companies made an extra profit? Are we going to weigh this against the lives of thousands of our brave boys, willing to make the supreme sacrifice, but when everything is considered do they profit when compelled to pay a higher price for a larger quantity of crude than they themselves produce?

The much publicized "big steal" is in reality a theft from the independents in the industry, since independents are predominantly wildcatters and discoverers of new fields; and do not receive sufficient compensation for the crude they produce to cover their losses.

Because of the present inadequate price on crude oil the independents are retiring from the industry in droves, many of them receiving less than cost for their properties, a very unhealthy condition at this critical time.

The ceiling on everything that enters into the production of petroleum has skyrocketed like a gusher, except oil itself, which is nailed to the bottom of the hole.

Independents in the petroleum industry have on several occasions solicited various departments of the Government for relief, but for some unaccountable reason they receive no relief.

As a last resort we are now appealing to you and other Congressmen and Senators to assume jurisdiction over the petroleum-price situation before it is too late, and place the products of independent producers, refiners, and marketers on the same parity basis enjoyed by the products of other leading industries.

If we hope to have sufficient petroleum to successfully prosecute this war, there must be more of an incentive than is offered by the present price, to search for and produce it. With more planes to be manufactured and kept in the air, we cannot stress too strongly the importance of a petroleum price increase to stimulate production, as without a sufficient supply of gasoline many of our planes will be grounded for the duration.

In this connection, may we suggest that for each 35-cents-per-barrel raise in the price of crude oil, 42 cents should be realized from each barrel after refining. If the parity between crude oil and refined products is not maintained, all independent refiners would be forced to close their plants, since to ask them to absorb any part of a raise would be economically unsound.

Please refer to the attached sheet for parity index numbers of prices received by a dozen other important commodities and see how they compare with the abnormally low price of petroleum, the most important of all. Is justice no longer a cardinal principle?

We believe and hope this statement will stimulate some action on your part.

Sincerely yours,
DANCIGER OIL & REFINING CO.,
By DAN DANCIGER.

AVERAGE WHOLESALE PRICES AND INDEX NUMBERS OF COMMODITIES, JUNE 1943

The Bureau of Labor Statistics index wholesale commodity prices for the month of June 1943 as compared with 100 percent par in 1926:

	Index numbers, June 1943
All commodities	103.8
Farm products	126.2
Food	109.6
Hides and leather products	117.8
Textile products	97.4
Fuel and lighting materials	81.0
Metals and metal products	103.8
Building materials	110.6
Chemicals and allied products	100.0
Housefurnishing goods	102.8
Miscellaneous	91.8
Crude petroleum:	
Midcontinent field	59.2
Pennsylvania field	79.7
California field	85.2
Gasoline: Midcontinent field	56.7

Address of Hon. John W. McCormack, of Massachusetts, at Dorchester, Mass.

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from Massachusetts [JOHN W. MCCORMACK], majority leader, House of Representatives, at a luncheon held by the Dorchester Board of Trade, Dorchester, Mass., on September 9, 1943:

This summer the pattern of our victory has taken shape. The mighty military blows which we have been preparing since the bombs fell on Pearl Harbor are beginning to fall. I can promise that in the coming climax of the titanic struggle which engages us the world will witness such a show of concerted and coordinated strength as our foes had never dreamed of in their most

monstrous nightmares of global domination by the bomb and the bayonet.

The immensity of this growing power is not the achievement of our armed forces alone. The American people have played their full part in mounting the great offensives and moving them swiftly forward to the crescendo of fury which we are loosing against our enemies. The scope of warfare has been so enlarged and the power of destruction so vastly increased by modern weapons—even over what we knew in the first World War—that armies alone cannot wage it.

Such a war as we are fighting today requires the energy of whole peoples—those at home feeding their productive skill into creating the sinews of war which crush opposition on the battlefield. Even those Americans who do not contribute directly to the firepower of our armies play their integrated role in maintaining an adequate economy through necessary civilian services. By their enterprise and devotion to their tasks the workers in the fields and the factories are left free to concentrate on the sole objective which engages the Nation's attention—victory.

It has been my responsibility as majority leader of the House of Representatives to watch the unfolding of this great cooperative endeavor of the American people—in uniform and in civilian dress—as it has been implemented by legislation in the Congress. It has been my privilege to hear the periodic reports of progress which military and civilian leaders bring frequently to the committee rooms on Capitol Hill. There, in sharp focus, I have seen the complex pieces of the victory pattern take shape in a design of concentrated might.

Only by seeing the whole picture can proper perspective be gained on the distance we have come since Pearl Harbor and the distance which remains to go. I should like today to show you this picture as I have seen it. I should like to show it not only in terms of our military progress in the field, but of our gigantic feat of production which has made our victories possible.

Let me take first the production picture, and I think I can heighten its effect if I compare figures—when comparison is possible—with the figures of the World War in 1917 and 1918. Then, too, you remember, the Nation was called upon to deliver its full strength against an ambitious foe. Yet seen in detail and in perspective, the current struggle has called for an incomparably greater effort from the American people. In the unified drive we have tapped reserves of energy never called up in that earlier struggle.

In money, in numbers of weapons, in goods, in ships, in manpower we are driven to the utmost of our resources to provide what must be provided if our historic liberties are to be preserved from the fate which has overtaken nations less fortunate than we.

Let me begin with the men. On June 30, of this year, our Army numbered approximately 6,800,000.

This, in itself, has represented a gigantic undertaking. You cannot simply order 6,800,000 men to arms and have them spring from the ground caparisoned and equipped for battle. Land must be surveyed and cleared for camps and airfields, roads laid, barracks built, sanitary facilities installed, hospitals constructed. The last great budget which came before the House provided for the maintenance of 4,500 posts, camps, and other installations.

Funds to maintain over 900 airfields were also provided in that same budget, with runways in excess of two and three quarter million square yards, and with parking aprons and taxiways exceeding two and a quarter million square yards. The paved roadway alone constructed by the engineers in the last 2 years would build 4 separate highways from New York to San Francisco 20 feet wide.

This represents a huge task of construction and of organization, for each of these camps is a self-sustaining city in itself with its own hospitals, churches, theaters, service clubs. Before ever men could report to them, their quartermaster stores had to provide sleeping quarters and bedding for the men, food in the mess halls, and all the thousand-and-one little items which represent the ordinary comforts of ordinary living in an Army camp as well as in the houses and apartments of a city. And before these items could be issued to the men, they had to be manufactured. You see how complex and far-reaching this process is when you consider its ramifications.

All this expansion of the Military Establishment began with the passage of the Selective Training and Service Act in September 1940. On June 30 of that year, our Regular Army totaled 264,035 men, with an additional 214,612 in the National Guard and 119,869 in the Reserve. A year later, on June 30, 1941, with the National Guard in the Federal service and many of the Reserves called to active duty, the Army had grown to 1,350,000 enlisted men. Its strength had doubled by June 30, 1942, when our force numbered 2,865,000. In the 12 months ending June 30, 1943, it more than doubled again to reach its total of approximately 6,800,000.

The slower growth of the earlier months of the war was conditioned by the fact that this Nation was unprepared for the gigantic task which it had assumed. The foresight of the President and the Congress had done much to make us ready for the blow which was to fall in December 1941. But we are a peaceful people. Until the intent of Hitler on one side of the world and of Hirohito on the other became fully evident, I doubt that there were many Americans who envisioned that this Nation would be plunged inevitably into an engulfing war.

Once that design was made clear—once the traitorous attack on Pearl Harbor committed us to the necessity of defending our national existence—then the enterprise of the American people was turned into the channel of swift, relentless preparation to strike such a blow for liberty as the world had never seen before.

The camps grew and the men poured in, donned their uniforms, took up their weapons. It was a familiar pattern at first to those of us who remember the last war. There was the same type of cantonment, the same spectacle of citizens being turned into soldiers, the same grim air of determination.

But in the developing preparations of those early months, it became swiftly apparent how far the technique of war had advanced in the quarter century since 1918. We took our mechanized progress to France in those days—we had trucks to carry some of the men and supplies; we had a few planes and a few tanks. But the spectacle of a mechanized army of high mobility remained undeveloped to the end of that first World War. No army had acquired sufficient momentum to propel a force-in-motion capable of rolling back the defensive structure of its enemy.

The demand on our factories in 1917 and 1918 was small for this very reason in comparison with the sudden and unprecedented needs of modern warfare. The figures develop this comparison graphically.

For example, Army Ordnance spent $17,300,000,000 for artillery, tanks, motor vehicles, bombs, ammunition, rifles, machine guns, and aircraft cannon in the fiscal year 1943. This vast expenditure becomes more readily understandable when I say that, coupled with earlier expenditures, it has provided one piece of artillery for every 45 soldiers in our entire Army. In World War No. 1—when our striking power appeared by no means small—we had but a single piece of artillery for every 1,110 soldiers. In April 1943 alone this Nation produced three times as many pieces of field artillery as in the entire 19 months of World War No. 1.

Our total production of machine guns has reached one and one-half million, as compared with a delivery of slightly less than 200,000 in the first World War.

We have reached the 5,000,000 figure in production of shoulder weapons—the Garand rifle, the M1 carbine, and submachine guns. Our small-arms ammunition has mounted until we have produced 22,000,000,000 rounds, as compared with one-sixth of that amount in the earlier war We have produced five and one-half million demolition, general purpose, and armor-piercing bombs to June 30, 1943, whereas our production of this important weapon in the first World War was 192,000.

About 40,000 tanks had been received at the half-way mark in 1943. During a recent month almost twice as many were produced each day as in all of the first World War. More than 19,000 pieces of self-propelled artillery have been delivered so far. This is a startling figure when it is placed beside the simple 10 we had produced by Armistice Day, 1918.

Since the bombs fell on Pearl Harbor we have shipped 24,000,000 tons of cargo to bases overseas. In 1917 and 1918 our total shipments to the troops in France were 9,000,000. During the first year of this war the Army shipped overseas 6 times the volume of supplies and two and a half times as many men as were transported in the first year of World War No. 1. We have made this great accomplishment despite the fact that the distances traveled are over two and a half times as great as in the previous war.

Aviation was in its infancy in the first World War. The old DH-4 observation and bombardment planes, which we thought were so fine, reached an all-out speed of 125 miles an hour. Today's nearest comparable fighter, the Warhawk P-40, has a maximum range of over 900 miles and a top speed of approximately 390 miles an hour.

We spent a total of $503,000,000 in the last war for Army airplanes, engines, and spare parts. In the present war, up to June 30, 1943, allotments to the Army Air Forces totaled $40,000,000,000. Let's get the picture of what that money is going for. During the calendar year 1941 a total of 16,651 planes was accepted by the Army. During the 18 months from January 1, 1942, to July 1, 1943, the Army accepted 73,132 planes. For that 18 months' period, total monthly production under Army contracts averaged slightly over 4,000 planes.

Today aircraft production in this country is averaging more than 7,000 planes monthly, and production charts call for a steady upward climb during the months ahead. Some of these planes go to our allies in the United Nations under lease-lend, some go to the Navy—by far the largest share goes to our hard-hitting Army Air Forces. I daresay that the Army receives 4,500 or more planes out of each month's total.

How does this compare with our enemies' production? The best figures I have seen indicate that the Axis is not producing more than 4,000 planes a month. This is divided up between Germany, which produces 2,200, Japan, which produces 1,200, and Italy, 600. Quite apart from our own mounting production, Great Britain and Russia together are now turning out more aircraft than the enemy.

There is plenty of striking power left in the Luftwaffe and in the Jap air fleets, as our pilots are learning over Europe and in the southwest Pacific. But the situation has changed astonishingly since those days of the battle of Britain when the might of the

German air force was overwhelmingly superior to all the strength the democracies could muster.

These figures—and I think you will agree that they are astonishing figures—represent a great part of the huge momentum this Nation has rolled up in the 21 months since Pearl Harbor. The cost has been huge. From April 1917 through April 1919 Army expenditures were about $14,000,000,000. From July 1941 to July 1943 Army expenditures were about $56,000,000,000 and we had obligated $101,00,000,000.

This is a portion of the stake which America has been forced to provide to halt the ambitious progress of three men—Hitler, Hirohito, Mussolini. One of these three has now been eliminated. How long will these other two stand out against our growing might?

To that question, no man can give an answer, and the Nation is poorly served by those who believe that our recent and stunning victories on both sides of the world have driven the fight out of our enemies. Such speculation can only work harm to our cause. The fact is that all of our energies must remain committed to this war until the final conclusion of hostilities, when the Swastika and the Rising Sun are both hauled down from the slave states over which they fly. We cannot—we dare not—relax our effort, for then we shall permit our enemies time to recover from the smashing blows we are delivering. We shall permit them time to regroup their forces on new lines and, perhaps, time to gather new strength for counterblows which will delay the end by months if not by years.

I have heard rumors that all this production I talked about a few moments ago had progressed so favorably that now we could even begin turning back some of our efforts to civilian industry. Lieutenant General Brehon Somervell, commanding general of the Army Service Forces, which procures all its equipment and supplies for the entire Army, took notice of them when he appeared before a subcommittee of the House Appropriations Committee to discuss the budget for the new fiscal year.

"At the present time," General Somervell said, and I am quoting, "the production is such that we have had to limit to a very serious degree the amount of equipment that we can put in the hands of the divisions which we have in training. * * * So far from having a surplus of equipment, there is not enough in sight, even if we do meet the programs which are laid out now, to provide the equipment that the Army needs. * * *"

General Somervell had some interesting things to say about the uses to which funds have been allotted which indicate the development of our Army into an effective fighting force. He pointed out that year before last we used approximately 47 percent of our total equipment for the initial equipment of our troops. This year it is about 29 percent, and next year that figure will have been reduced to 19 percent.

But, General Somervell added, and I shall quote again: "That does not mean that the total over-all output in our production program is reduced. It only means that there is a change in emphasis on the type of maintenance we are making. In other words, once we get enough cannon to supply all our troops, we must make more cannon for replacements, and the more cannon we have on the firing line the more ammunition we must manufacture."

You can readily see from General Somervell's words that in spite of our huge production for war the demands of this global war are greater. If we let down our production for an instant, men on a distant firing line will want for guns, for ammunition, for food.

Let us see for a moment how far we have come along the difficult road to victory.

What we have done up to now is prelude for the greater military adventures which are to come. It has been a mightly prelude, but the reconquest of Europe and of the vast empire which the Japs have snatched for themselves in the Pacific is an adventure of the greatest magnitude. Do you believe that the grasping, voracious dictators of Germany and Japan will permit their nations to collapse while their armies in the field remain unbeaten?

I have no doubt that the German people have been made intensely uncomfortable by the terriffic bombings which they are suffering from the British and American planes. I feel equal assurance, judging by some of the comments by Japanese radio commentators which we see reprinted in our press, that the people of Hirohito's island homeland are dreading the shadow of our planes against the clouds.

But these people have been disciplined by the hard philosophies of their leaders, conditioned to privation and suffering. They are surrounded and cowed by legions of police who, they well know, will put down any suggestion of revolt against the established order with ruthless cruelty. Only the other day you read what the nervous trigger fingers of the Nazi overlords did to the gentle people of Denmark.

These men of Germany and Japan had gone far in their first headlong plunge. Before this Nation ever entered the war, Germany had overrun the entire continent of Europe. Before we could transport a sufficient force into the southwest Pacific, the Japs had carried through their own well-laid plans of conquest.

With these two enemies firmly entrenched, the wonder is that we have done so well in our 21 months of war.

We have transported more than 2,000,000 of our men to stations overseas. We have wrested Guadalcanal and New Georgia from the desperate hands of the Japs. We have driven them from a large part of their conquests in New Guinea and are now engaged in delivering the death blow at Salamaua. We have sunk a prodigious amount of their shipping. We have downed their planes at an increasingly favorable rate, culminating in the holocaust of destruction which caused them to abandon their forward base at Wewak and retire to Hollandia in New Guinea.

But the road in the Pacific is long and tortuous. We must drive the Japs from other strongly held island defenses. We must take Burma back, and open the Burma Road to China's interior. We must bring our might to bear against the homeland of the Japs itself—on the sea, in the air, on the land.

The Japs show no signs of weakness. We have given them plenty of indication that our American troops can be as tough and as crafty in jungle warfare as they are. But the fight remains strong in the men of Hirohito. We learned it at Munda. We learned it again on Attu. And because the Japs abandoned Kiska we have no reason for assuming that it was through fear. To remain would have been the hysterical, mass suicide of madmen. No military purpose could have been served by leaving a force to its annihiliation.

In Europe the prelude is over. The big show is about to begin—in fact, it has begun—with the landings on Italy's mainland. I do not need to rehearse the steps by which we have made the Mediterranean ours, driven the Italians and the Nazis from their conquests in north Africa, expelled their armies from Sicily until at last we have begun to batter against the citadel of Europe itself.

We must not be impatient for these greater events to unfold. It requires time to mount gigantic offensives. Three thousand ships took part in the invasion of Sicily, carrying 160,000 troops with 1,800 guns, 600 tanks, 14,000 vehicles, together wih the supplies and provisions to keep this great force on the move. It takes time to assemble all these parts of the invasion picture. It takes time to plan the split-second schedule of landings by which they are brought into the beaches. It takes time to batter down the resistance of seasoned troops and crush their will to resist.

And if you are tempted to impatience, if you hear the armchair strategists drive their fists into their palms and bellow for a frontal assault on Hitler's greatest defenses before the operation is militarily feasible, remember that in this war we are winning victories with an economy of casualties. In the 19 months of the first World War we lost 265,000 men killed and wounded. In the first 19 months of this war, including missing and prisoners of war, the Army alone suffered 65,000 casualties.

The toll of war is great and it is inevitable. Our leaders are keeping it to a minimum by the skill with which they prepare the men for battle, by the stepped-up firepower of their weapons, by the miracles of medical care which are performed on the battlefield and in the aerial transport which brings the wounded quickly to base hospitals. To show you what that care is doing, let me cite another comparison between this war and the last. In World War No. 1 the ratio of soldiers dying from wounds was 7.2 percent. We have come close to cutting that in half, for in this war the percentage is 3.8.

That, gentlemen, gives you the picture as I see it today. I cannot tell you how long this war will last. But let me repeat that if Americans on the civilian front relax their effort for a moment now, the end will be agonizingly delayed. Our military progress is proceeding now in carefully timed, skillfully planned offensives against the enemy. They have brought us into Europe. They will not stop until our troops are in Hitler's Germany.

This global war is a gigantic undertaking in which every man and woman plays their part. It is not the Army's war or the Navy's war. It is your war and my war, and our duties are as definitely assigned as those of any soldier on a hostile Italian road today.

He depends on you and on me to see that the effort at home never ceases. He depends on you and on me to help him gain our victory. Not till it is won can he come home.

American Recommitment

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. ROBINSON of Utah. Mr. Speaker, under leave to extend my remarks, I am including a poem written by William Stanley Dunford, of Provo, Utah, the father of Pvt. Paul O. Dunford, who died in the service of his country.

Mr. Dunford is a lawyer in my home town of Provo, Utah, and is one of Utah's leading and best-known lawyers. I feel sure that not only the people who have sons in the service but the public generally will deeply appreciate this very splendid poem. Such poems as this, it seems to me, make it easier for all of us

to do our share in the winning of the war.

AMERICAN RECOMMITMENT

I must not fail! This little life of mine,
So dear to me, and those who give me love,
Is no more mine to hoard or keep secure
Than rain distilling from the clouds above!

The heritage of ages fills my veins!
I am not me because I willed to be,
But since when dawn of human time began,
Strange forces focalized to make me—me!

I know that in forgotten ages past,
My fathers stood with fearless, blazing eyes,
Defiant of the foes that stalked their paths,
And shouted challenge into hostile skies!

I know, because, within my little life,
No progress e'er was made without a fight!
Whatever is most worthy in my days,
I've taken by my wits, or by my might!
The essence of my fathers' dreams is mine!
I have in me the filt'rings of their souls!
Their stamina is mine to keep me sane!
I'm strong, because, by strength, they reached their goals!

I dare not fail! The eyes of ancient sires
Are focused on the life I now must live!
What service to my world of living things
Is in my pow'r to give—I now must give!

Oppressed were they, in cob-webbed hist'ries gone,
Their comforts and their affluence despoiled,
But through their beatings—and their hearts' distress,
Their spirits ne'er were cowed—nor ideals soiled!

But, rising on the ashes of their homes,
They stood erect, with hands upstretched to God,
And pledged the sacred life blood in their veins,
To keep oppression from their sacred sod!

They never stopped to count the carnal gain,
An ideal saved was, richly, their reward!
If, by their death, they saw their aims confirmed,
What matter that they died by fire—or sword?

I shall not fail! The sacred blood they spilled
Ordains me to the valiant cause they won
I'll not be worthy my heroic sires
If I should pause before my task is done!

MY PLEDGE

No tyrant's heel will ever tread this ground,
Enriched by sacred martyr's holy blood,
As long as life shall pulse within my veins,
As long as I can take my cause to God!

—*Wm. Stanley Dunford.*

PROVO, UTAH.

Army-Navy Electronics Production Agency

EXTENSION OF REMARKS

OF

HON. JOSEPH MRUK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. MRUK. Mr. Speaker, with great concern about apparent irregularities, politics, and injustices in a joint division of the Army and the Navy to which my attention has been called, I wish to speak on that situation.

While the House Civil Service Investigating Committee has been conducting an inquiry into the affairs of the Army-Navy Electronics Production Agency, my personal interest has been aroused in the functioning of this agency, and I have been making my own investigation. Although the committee's probers are still engaged in their work on the conduct of the Army-Navy Electronics Production Agency—to which I shall hereafter refer as A. N. E. P. A.—I have obtained sufficient facts from several sources outside the committee to be able to anticipate that the report of the committee's investigators will be very revealing.

I understand, indeed, that the facts gathered by the committee's investigators are of so serious implications that the committee contemplates hearings on A. N. E. P. A.

It may be of significance that, in the midst of the committee's investigation, the chief investigator has been extended an appointment with the War Manpower Commission in the State of Georgia, which will take him from his important position with Representative RAMSPECK's Civil Service Investigating Committee and possibly leave his work unfinished. This development has been heretofore deplored publicly by George D. Riley, conductor of U. S. and Us, a nationally read column in the Washington Times-Herald, who last week wrote that "Dillar Lasseter, committee director, was going like all get out" and "was scratching pay dirt."

Mr. Riley added:

We generally look twice when a congressional committee is getting busy investigating civil service and some of the strange goings-on in important places. So many have failed to bring up the worms into the sunlight.

I am hopeful, however, that Mr. RAMSPECK and his committee will give A. N. E. P. A. an exposure to the sun.

My feeling is the result of what I have learned independently.

In commenting at all, I have but one interest, not of impeding our war-to-victory program, as mapped out by the military experts, but like the purpose for which A. N. E. P. A. was brought into being, to expedite the prosecution of the war.

A. N. E. P. A. is one of the biggest things in the war program. It was created by the Army and the Navy—by Gen. Brehon B. Somervell for the Army—to expedite the production and delivery of electronic devices which are vital to the waging of the war, like radio, radar, and all communications equipment.

I am personally perturbed about the charges I have been hearing with reference to A. N. E. P. A.—charges of politics, inexperience, mismanagement.

If "$6,500 is being paid to men for reading funny papers," as Mr. Riley said in his Times-Herald column, for that reason alone, if for no other reason, you and I in Congress will want very much to know about it, even though the agency affected is a branch of our Army and Navy, to which we properly delegate the military determinations. Paying men $6,500 a year and neglecting to see to it that they have something better to do with their time as civilian employees of the military services than to follow the adventures in picture-strip of Mutt and Jeff is no contribution to the solution of our manpower problem.

We should wish to know, too, why A. N. E. P. A. is top-heavy with high-salaried personnel, why many of the employees are receiving much higher salary than they were paid in private industry, why the agency has been lacking in ability to supervise, why so many of its workers are not qualified by prior experience as expediters, why Civil Service Commission qualifications for personnel were not acceptable to A. N. E. P. A., why politics seems to have entered into selection of personnel inasmuch as several A. N. E. P. A. officials are former Detroit automotive men and a large number of the employees are from the Detroit area.

According to testimony by General Somervell before the House Civil Service Investigating Committee on June 16 last, the Western Electric Co. "have something like $400,000,000 worth of work with us"—and General Somervell explained that he "wrote the president of the company, asking for the loan" of the vice president's services for 6 months. It was shortly after the Western Electric vice president, Fred C. Lack, had signed a contract with the Signal Corps of the War Department for a $74,000,000 job to be expedited by A. N. E. P. A. that Mr. Lack became head of A. N. E. P. A. Thereafter, "another man from the same outfit"—this quotation is also from the testimony of General Somervell—F. D. Tellright—has succeeded as the present head of A. N. E. P. A.

The entire electronics program, including the wire and cable program, should be rigidly investigated, and the Government personnel which have had to do with it should be investigated as to qualifications and integrity. Several billion dollars of our taxpayers' money is being spent for the procurements involved.

It is desirable, I believe, that the entire business of A. N. E. P. A. be explored not only by the House Civil Service Investigating Committee but also by other committees of Congress, and that officials of A. N. E. P. A. be made to explain many things.

The Church and Racial Relations

EXTENSION OF REMARKS

OF

HON. DANIEL ELLISON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. ELLISON of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an extract from an address made by the Reverend W. W. Judd on the subject of the Church and Racial Relations.

The address was prefaced by this statement from The Message of the Oxford Interchurch Conference 1937:

"The Christian sees distinctions of race as part of God's purpose to enrich mankind with a diversity of gifts. Against racial pride or race antagonism the church must set its face implacably as rebellion against God. Especially, in its own life and worship there can be no place for barriers because of race or color. Similarly the Christian accepts national communities as part of God's purpose to enrich and diversify human life. Every man is called of God to serve his fellows in the community to which he belongs. But national egotism tending to the suppression of other nationalities or of minorities is, no less than individual egotism, a sin against the Creator of all peoples and races. The deification of nation, race, or class, or of political or cultural ideas, is idolatry, and can only lead to increasing division and disaster."

The extract from the address follows:

"THE REFUGEES AND THE JEWISH PROBLEM

"Anti-Semitism is a festering sore, even in the supposedly liberal and tolerant Canadian scene.

"According to the religious census of Canada, 1941, there are 168,377 Jews, only 1.46 percent of the population. With such a comparatively small group, and with the tolerant and happy attitude of the English people during past generations as an example to us, one would imagine that there would be no anti-Semitic feeling among us.

"But there is. To generalize briefly, it is attributed to three alleged causes: (1) A general aggressive attitude of Jews in social and other departments of life. (2) Sharp business practices. (3) An international attitude not acceptable to some persons. Dr. James Parkes, a priest of the Church of England, probably the best contemporary Christian authority on this question, assumes that the first is a psychological attitude, the self-defensive mechanism working as a result of centuries of persecution and, therefore, our fault; that the second is not more apparent in Jews than in so-called Christians—there being good and bad Jews and Christians. The charge of emphasized international longings is surely an inheritance from the best of the Jewish prophets and is in line with the best of Christian visions for a decent world order wherein there shall be peace and brotherhood in a realized kingdom of God on earth.

"Without doubt the narrow attitude of the Jewish community to intermarriage with Gentiles is a contributing factor.

"It is sad to state, but an undeniable fact that there are evidences that this anti-Semitic attitude flames more brightly today. It is a repercussion from Europe. I need not mention the smaller evidences of this—personal and family dislikes, the attempts to bar Jews from certain city areas, the barriers placed covertly, if not overtly, against them by certain universities, medical societies, etc. Nor do I want to whitewash Jewish people entirely. They are to blame. But the greater blame lies with us as we review the history of age-long persecution and as we recall the whole Christian challenge to love our neighbors as ourselves.

"Sufficient to say that the Christian church people as such have to acknowledge their failure to sympathize and to help sufficiently to overcome this ugly spirit in our midst. If we do not do so, citizens generally will certainly not learn to do so. We must never forget that in Germany anti-Semitism was used as the first weapon to later attack all religion.

"A specific part of this problem which must be faced today is that of the refugees of religious and/or political persecution. They are both Jew and Gentile. In Europe today there are eight to ten millions of displaced persons of all races and all creeds, victims of Nazi persecution. Around the Mediterranean there are collected an estimated 200,000 seeking a permanent home in Palestine, north Africa, South America, or wherever they may be received. In Lisbon, the still neutral port of Europe there are always from ten to fifteen thousand ready to be rescued. Portugal can take no more, but receives from over the Pyrenees continually more who continue to keep the group up to about that norm.

"To her everlasting honor be it said, Great Britain has some 200,000 refugees, some arrived just before the war broke out, most at the time of Dunkerque or since. Some 60,000 of those are Jews. There are still being rescued or allowed to filter into Britain nearly a thousand a year. Today there are groups of Christian people in Britain pressing on government to allow more to enter, and to rescue them. Government is sympathetic but faces the difficulty of shipping facilities, the ability to feed more population, and so forth.

"These 200,000 are there in spite of the grave privations that the English people are themselves facing. Nevertheless the whole refugee community in its various national groups is participating in the war effort constructively and helpfully.

"British leaders are stressing the fact that this is not merely a Jewish problem, though they are keenly aware of what is happening to the Jews in Poland and in all Nazi-dominated territory. Nor is it a German problem, though there are German exiles, and probably thousands, if not millions of Germans still in Germany who suffer and irk under Nazi tyranny. It is a human problem.

"This brings me to what I want to emphasize. From the sheer humanitarian point of view, for sweet charity's sake, for Christ's sake, that is, for attempting today to give some reality to His gospel of love, Canada should open her doors immediately to many of these who might be rescued—whose lives may be saved, to put it bluntly—and should face her responsibility for a large-hearted admission after the war of a fair share of these people, Jew or gentile. The present writer is convinced that, in addition, such a policy will prove to be sound economically and contribute to cultural betterment. In fairness, too, to Britain we might well relieve her of some of the responsibility she so liberally assumed. On the highest grounds, however, Canada ought to take a vast share in lifting this burden of Europe's and Jewry's sorrow.

"This is a challenge to members of the Christian church. Officially, as far as pronouncements are concerned and so far as church officers are concerned in their endeavors to arouse public opinion, our Church of England in Canada has been in the lead in this regard. Since 1938 we have sought the good will of the people. Your social service department has assisted national committees in every way possible. But Canadian opinion is hard to arouse. We, in our secure western world, have become very complacent as a people; labor groups, recalling the depression, have fought against immigration (we believe that such an effort is against sound economic policy); some religious people, even religious groups, in their dislike of the Jews have overemphasized this element of the picture. And Government has, in the opinion of many, been very niggardly in its acceptance of responsibility.

"This truly is a challenge to the Christian conscience and will.

"All this reference to refugees is to a particular problem and must not lead us from our acceptance of a responsibility to our present Canadian Jewish compatriots.

"Malvern says, 'We urge that use be made of the opportunity provided by the presence of so many citizens of other countries in our own to make personal friendships with them and to learn more fully to understand the outlook of those nations. Recognizing the gravity of the Jewish problem, we urge all Christians to take their part in seeking an effective solution even at real cost, and in all circumstances to check the growth of anti-Semitic passions.'

"While we forever must preach Christ as the only Savior of the whole world, we must learn to live as citizens in happier relations with our Jewish brethren.

"I plead for better understanding, the forming of personal and family friendships, between Jew and gentile, collaboration in all good movements which look toward better relations with the Jews in our midst. In the United States for some years the very rabid anti-Semitism of parts of the community have been offset by the good work of the Conference of Catholics, Protestants and Jews. In Canada, for this 5 years past we have the Canadian Conference of Christians and Jews. We as church people should do all we can to strengthen that movement."

Resolutions of Commercial Club of Albia, Iowa

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. LECOMPTE. Mr. Speaker, a number of bills proposing to take from the Interstate Commerce Commission the power of fixing railway rates on interstate shipments and lodging this power with the Congress are now before the appropriate committee. The task of writing freight rates at the hands of 435 Members of the House and 96 Members of the Senate would be colossal and it may be doubted if this function could be handled as efficiently and as well as we find it being done by the Interstate Commerce Commission.

Under leave to extend my remarks in the RECORD I include resolutions adopted by the Commercial Club of the city of Albia, Iowa, dealing with this subject:

Whereas there is now pending before the Seventy-eighth Congress, first session, approximately 14 bills or joint resolutions, proposing to correct alleged freight-rate discriminations and urge passage of legislation proposing to provide for uniform freight-rate bills throughout the United States; and

Whereas if passage of said uniform freight-rate bills and resolutions were enacted, the Congress would assume virtually all of the fundamental powers which heretofore have been placed under the jurisdiction of the Interstate Commerce Commission; and

Whereas the Interstate Commerce Commission has functioned since its inception or in 1887 and has been given latitude as an agency of Congress to pass judgment on rates after full hearings into the facts of a particular case, which procedure has been of definite advantage to shippers, in that the Commission has passed upon rates according to the individual situations and facts controlling them, and such policy has met the general approval of shippers of the entire Nation; and

Whereas if uniform rates were prescribed by Congress, such rate structures would become fixed and inflexible and thus leave the Commission and carriers without discretion in setting rates to particular shipping or territorial needs, and would, therefore, handicap and restrain commerce; and

Whereas the board of directors of the Albia Commercial Club, Albia, Iowa, being located in south central Iowa, in what might generally be termed the industrial section of the State, and said community being located on four of the larger railroad lines operating within our State: Be it therefore

Resolved, That the Albia Commercial Club, of Albia, Iowa, by its board of directors in regular board session, does hereby register its objections to certain pending legislation which proposes to provide uniform freight-rate bills throughout the United States, and in support of such resistance, the board respectfully points out that such proposals are a definite departure from regulatory principles, which under the present rate-making plan under the authority of the Interstate Commerce Commission have left all shippers free to present their complaints for a determination by the Commission's judgment, and if such pending legislation were approved by Congress, then such substituted plan would impair the valuation of regulation to the shipping public; be it further

Resolved, That copies of this resolution be provided United States Senators GUY M. GILLETTE and GEORGE A. WILSON, of Iowa, and likewise be provided the Honorable KARL M. LECOMPTE, Congressman from the Fourth District of Iowa in which the city of Albia, Iowa, is located.

Dated this 7th day of September A. D. 1943.

ALBIA COMMERCIAL CLUB,
By JOHN H. HESS, *President*.

Attest:

HUGH W. LUNDY,
Secretary.

Passed and approved this 7th day of September A. D. 1943.

Fire Losses Are Menacing War Program

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. FENTON. Mr. Speaker, in the proclamation issued by the President designating the week beginning October 3, 1943, as Fire Prevention Week, the President stated that the Nation's war program is menaced by an alarming increase in preventable fire losses and that fires are bringing costly delays in the production and transportation of airplanes, ships, tanks, and guns—delays that mean a postponement of victory and the lives of many of our men on the fighting fronts.

I would like to call the attention of the Congress and our people to three very alarming facts in connection with this important matter to which the President so definitely refers in his proclamation—fire losses.

First. The National Fire Protection Association reports that there were more large-loss industrial fires in 1942 than in any year in our history. Also, that there were more large-loss industrial fires in the first 4 months of the present year—1943—than in all of 1942. The total fire loss in the United States in 1942 approximated $314,295,000. But these figures do not reveal the loss of life and production, and the destruction of critical war materials and equipment caused by these fires.

In the first 6 months of 1943 the total fire loss in this country is estimated at $190,514,000. At this rate, fire will devastate an even larger segment of American industry than in 1942, and the total 1943 fire loss may exceed $400,000,000. Such fire losses cannot be permitted to continue to impede the ever-increasing flow of vital materials demanded by our armed forces.

Secondly, the United States is burning its homes faster than they are being built. In 1942 approximately 350,000 dwelling units were constructed in an all-out effort to solve the country's acute war-born housing problem. During the same period 395,000 dwelling units were attacked by fire, many of them totally destroyed.

The tragedy of this staggering fire loss is the fact the great majority of fires are preventable—are primarily due to carelessness and ignorance. Thus, it is important to carry on our educational efforts—through Federal, State, local, and private agencies—even more intensively this year than in previous years. For homes burned today are replaceable, if at all, only at sacrifice to all-out war effort.

Thirdly, although the curve of industrial fire loss in 1942 swept sharply upward—and more homes were destroyed or severely damaged by fire than this country was able to build—it is very gratifying to observe that the trend on America's farms was reversed—turned downward. Farm fire losses were approximately 10 percent less than in the previous year. The United States Department of Agriculture, the State agricultural extension colleges, and the county agents and extension workers should derive a great deal of satisfaction from this record as it is due in a large measure to the educational activities carried on.

"Fire prevention is essential to conservation on the farm," according to Dr. David J. Price, president of the National Fire Protection Association. Pointing out that America's fire losses are on the upgrade and that farm losses, even in peacetime, amount to millions of dollars' worth of materials and equipment yearly, Dr. Price urges complete cooperation of all farmers in the observation of Fire Prevention Week. "Food burned in the barn is of no help to our fighting men overseas," says Dr. Price, "and the destruction of equipment by fire reduces the Nation's food production capacity."

Farm fires at any time are serious. In dollars, the loss runs into many millions—$200,000,000 annually from fires on farms and in rural communities, with an annual loss of 3,500 lives. But farm and rural fires today are infinitely more serious. War-born food shortages have turned farm fires from local tragedies into national, yes, into international calamities.

What do our farm fires mean today? Fires mean delay in delivery of food to our armed forces, our Allied Nations, and the nations of Europe which our armed forces are now occupying. Fires add to an already serious food shortage on the home front. Fires mean the destruction of hard—if not impossible—to replace homes, barns, and machines. Fires mean loss of life and timetaking inquiries at a time when every life and every hour spent on the production of food is so essential to victory.

Mr. Speaker, we must fight the enemy by fighting fire. We must reduce our industrial fire losses and our food shortages. We must demand preventive action now.

At this point in my remarks I would like to insert the President's Proclamation for Fire Prevention Week:

FIRE PREVENTION WEEK, 1943

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A proclamation

This Nation's war program is menaced by an alarming increase in preventable fire losses. Since Pearl Harbor the destruction caused by fire in the United States has been comparable to the damage caused by all enemy bombing over England during the first 2 years of the war. The loss to this Nation is just as real as if the destruction had been wrought by enemy bombers over America, or by saboteurs.

These preventable fires are being measured in thousands of workers killed and disabled; vast destruction of critical raw materials, food, and other vital supplies for our armed forces and civilian population; the ruin of war plants, factories, homes, and machinery—in many cases for the duration of the war. Fires are bringing costly delays in the production and transportation of airplanes, ships, tanks, and guns—delays that mean a postponement of victory and the lives of many of our men on the fighting fronts.

Today it is vitally necessary that we prevent destructive fire. Every State in the Union shares this responsibility. Every community must make an extra and thorough effort to detect and eliminate fire hazards. Only by this united endeavor can America guard her productive power against fire and eliminate a major hazard that threatens seriously to reduce supplies of war materials, food, clothing, and other essentials required by our fighting men overseas and by our civilians at home. The cause was never so clear; the need was never so great.

Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, do hereby designate the week beginning October 3, 1943, as Fire Prevention Week. I earnestly request the people of the country to take unusually active measures during that week, and throughout the year, to conserve our human and material resources from destruction by fire. I call upon State and local governments, the Chamber of Commerce of the United States, the National Fire Waste Council, upon all business and labor organizations, the pulpit, educators, civic groups, the press, the radio, and the motion-picture industry to initiate programs that will vividly bring home to all our people the dangers of fire and the methods of controlling it. Further, I direct the Office of Civilian Defense, the Department of Agriculture, the War Production Board, the protective services of the War and Navy Departments, and other appropriate Federal agencies to

lend their active support and assistance to the attainment of these objectives.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 30th day of August, in the year of our Lord 1943, and of the independence of the United States of America the one hundred and sixty-eighth.

FRANKLIN D. ROOSEVELT.

By the President:

CORDELL HULL,
Secretary of State.

Assuaging Flood of Raging Blood

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle:

ASSUAGING FLOOD OF RAGING BLOOD

The flood of blood has long been raging
Throughout the Eastern Hemisphere,
But now sure signs of its assuaging
Are seen and welcomed over here;
For we've been sending, 'cross the waters,
Both men and implements of war,
To help exterminate the slaughters
That friends of freedom all abhor.

The peace-inspired United Nations
Have, through their efforts, kept so far
The western world's civilizations
Safe from this nation-wrecking war.
Words are inadequate to measure
The sacrifices freely made
By our own land, in men and treasure,
That this disaster might be stayed.

With Italy's complete surrender,
Her people are delighted, for
Her erstwhile foe is her defender
In this tyrannic, savage war;
And, though we with a voice like Sherman's
Too cry out, "War is hell," we'll drive
From out of Italy the Germans—
Not one, now therein, shall survive.

With multiplied determination,
We will continue our advance
Till we effect the liberation
Of overpowered, conquered France;
Then we will focus our attention
On freedom-loving little Greece,
That, through the Allies' intervention,
She once again may dwell in peace.

Then we will drive these fierce marauders,
Mad Hitler's bloody-handed bands,
From out the erstwhile peaceful borders
Of all these lately conquered lands—
Then we must strike, in all directions,
These tyrants, and we must not cease
Till Germany, with hushed objections,
Shall through surrender sue for peace.

But, let us suffer no delusion—
While we're succeeding, still we are
Far from the coveted conclusion
Of this titanic, tyrant war.
Long as the war lords of the Germans,
And of the Japs, are in control,
They'll turn deaf ears to prayers and sermons,
And wreck the world to win their goal.

This is no time for celebration—
The clouds beyond are black with dread—
This is the time for consecration
To those great tasks that lie ahead—
The well-informed United Nations
Know, through their leaders, near and far,
That victory means obligations
Upon the victors in this war.

Though every single operation,
That we shall plan and carry through,
May cost beyond our expectation,
If it helps make our dream come true,
When we shall see the troops disbanding,
Rejoicing 'neath their flags unfurled,
The peace that passes understanding
Will set at rest the weary world.

Our troops must have the best equipment
That's ever been devised by man—
Yea, to make each succeeding shipment
Of weapons better is our plan.
It's good economy to borrow,
Today, if by it justice thrives,
And it becomes the means, tomorrow,
Of saving many soldiers' lives.

The quicker this war's won the better—
The sooner we spend what we must—
Though we become a bankrupt debtor,
Thank God, we know "In God We Trust"—
The fewer lives upon the altar
Of Hitler's war we'll sacrifice.
In God's strength, stronger than Gibraltar,
We'll win, regardless of the price.

The Nation's makers of munitions
And uniforms and cots and tents,
And miners, with their fixed ambitions,
Are our great first line of defense.
As long as these all pull together,
Led by the feeders of us all,
However foul or fair the weather,
We, under God, can never fall.

Among our World War women workers,
Responsive to war's stern demands,
Are found but few, if any, shirkers;
But they with willing hearts and hands
Into this Nation-wide endeavor
Are putting all they have and are—
And they expect to slow down never
Until we shall have won the war.

The Nation's needs today are greater
Than they have ever been before—
We've got to look to our Creator
For strength and wisdom, more and more,
That we may make and spend discreetly,
As He would have us make and spend,
That we may do His will completely,
In bringing this war to an end.

Nobody knows the day nor hour
When this war shall come to its close;
But we do know the greater power
We use against our savage foes,
Today, in every way, the quicker
Will Hitler's fighters have to cease,
And war's last ray of hope will flicker,
And go out—and there will come peace.

Then will begin world reconstruction,
Which will call on men, everywhere,
For such a season of production,
In which they all will gladly share,
That life's law, "Do ye unto others
As ye'd have them do unto you,"
Will lead us all to live as brothers,
And God will make our dreams come true.

—*Horace C. Carlisle.*

Unity at Home—Victory Abroad

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Unity at Home—Victory Abroad," broadcast by me over station WMCA on September 1, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, 4 years ago today Hitler's panzer divisions rolled across the frontiers of innocent Poland. The flames of war have since crossed the Atlantic and the Pacific, to engulf our peace-loving land and people.

Two self-styled "master races"—the Nazis in the west and the Japs in the east—set out to rule by force the destinies, lives, and property of every other people on earth, of every land, creed, and color. This drive for world domination has been stopped. Every great raid over Germany, every blow struck on land, sea, or in the air by the United Nations, is bringing home to these master races the growing might of freemen to resist and to destroy their power for evil.

Our boys are taking the measure of the enemy on the field of battle. How do we shape up on the home front?

After 4 years of war, Hitler has called upon Himmler, his No. 1 trigger man, and his Gestapo thugs, to keep in line the German people and their millions of enslaved workers from every part of Europe. We need no clearer confession that the Nazi home front is in serious danger.

In our own country, the home front is likewise composed of men and women from many lands; but they came of their own free will, in search of liberty and the chance to make good. Here in the metropolitan area reside more than 2,000,000 people who were born across the seas; and, in addition, almost 3,000,000 native-born with one or both parents born abroad. The majority of New Yorkers are thus only one generation removed from the Old World, and the bulk of these had a mother tongue other than English. Here in New York we have also a half million citizens of the Negro race.

Throughout this war, as in the years preceding, this diverse population, with very rare exceptions, has shown remarkable unity and cooperation. Without regard to race, creed, color, or country of origin, they share and cherish a common devotion to America, and their sons fight shoulder to shoulder in a common democratic cause. They are Americans all.

This unity on the sidewalks of New York is symbolic of America's strength. Only in a democracy would we find citizens of a minority race such as the Negro, serving with distinction as judges, and police officials, in legislative and executive positions, in the city and State of New York. Only in a democracy could people, drawn from the four corners of the earth, live as citizens and neighbors, uniting their efforts in the progress of our city and Nation.

Where this picture of harmony and good will is marred by some minority incident or problem, it simply shows that our performance does not quite come up to our sincere ideals.

In the recent Harlem outbreak, the physical damage caused by lawless individuals resembled the damage that might be caused by an enemy air raid. But the difference is this—while air-raid damage would have strengthened our unity, the damage that occurred in Harlem uncovered an element of disunity and a weakness in our armor of defense.

No race riot or conflict between races occurred, nor were enemy agents involved, in the Harlem outbreak.

Those individuals guilty of crimes must be punished; but no law-enforcing officer worthy of the name and no self-respecting community would stop at that. It is plain common sense, as well as good government, to correct the underlying causes of this disturbance.

We do not need more investigation so much as we need to apply remedies already well known, from past investigations in city, State, and Nation. At the root of such outbreaks, we find well-known conditions of segregation, discrimination, insecurity, overcrowding, and bad housing. In the last 10 years, with sympathetic leadership in New York City and State, and in the Federal Government, much progress has been made in improving these conditions. As an example, the Federal public-housing program, which I sponsored in Congress, allotted more than one-third of all its peacetime funds to Negro housing throughout the country, including a number of New York City projects. Yet this is but the beginning of what needs to be done, through public funds and private capital. Better housing, along with better city planning of recreation and other facilities, will go a long way to reduce antagonism, and cut down the cost of police, fire, and health protection. I am proposing in Congress now a far-reaching program of Federal aid to cities to assemble land for better neighborhood development and more slum clearance.

In every other field, the picture is the same; the continuing need overshadows what has been accomplished. More remedial action must and will be taken, especially in combatting discrimination in war industry and in the armed forces.

The heart of the Negro's economic problem is the limited opportunity for a job in private employment. And when the war ends will the Negro worker, who was the last to be hired, then be the first to be fired? Will returning American soldiers of the Negro race find their heroism unrewarded by a chance to earn their own living? Will these tensions, in various parts of the country, develop to the serious racial conflicts that followed the First World War and threatened every minority religion and group?

These are not mere post-war issues to be laid on the shelf for the time being. The manpower needs of the armed forces and war industry continue to increase. Throughout the world thoughtful men and women are coming to understand that real peace and security can only be achieved by extending the frontiers of liberty, by elevating the standards of living for all. Those who scoff at these goals breed an isolationist approach to world problems and a reactionary, intolerant approach to domestic problems.

Every agency of government shares a continuing responsibility for sound action. Effective results will often depend upon the attitudes and practices of the citizens, labor unions, and industries in each community. Therefore, independent of public authority, I would like to see public-spirited citizens of every race, creed, and color organize committees to marshal the forces of tolerance and goodwill. The whole course of American history has been a steady advance of these goals. We of this generation must do our part in making democracy work on a 100 percent basis.

Freight Rate Discrimination Against the South and West

EXTENSION OF REMARKS

OF

HON. J. O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address on the problem of freight-rate discrimination against the South and West, delivered at Nashville, Tenn., by the junior Senator from Tennessee [Mr. STEWART] over a national radio hook-up on August 12, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The growth of population in the South has reached the point where it seriously taxes the economy of the region to support it. Times have changed rapidly in the course of 40 years. Experience has demonstrated that the economy of the South does not function as well as it should, based upon the region's natural potentialities and the needs of an ambitious, capable, and growing population. We are in fact problem No. 1 in this respect. The time has come, therefore, when serious and sustained thought should be given to the discovery and correction of the underlying causes for our economic deficiencies. Much research has already been devoted to this subject.

The South's problems have been classified in some quarters into two categories. First is the type which has an intraregional origin, such as land erosion, wastage of natural resources, excessive tenantry, lack of adequate public health programs, insufficient reservoir of skilled labor, and so on. The other problem, however, originating in whole or in part on the outside, operates against the South by external force. This second problem, by its very nature, defies solution through local initiative and effort alone. In dealing effectively with it we must look for affirmative action by those agencies and powers, both private and public, which owe us the duty to act in our behalf. It is within the latter category that the freight-rate problem rightly falls.

The transportation problem of the country has many angles. The angle, however, which most seriously concerns the South is the regionalization of the freight-rate structure. Throughout all the discussion of this subject pro and con in recent years, I have never seen any attempt to deny the actual existence of regionalization in freight rates. Regionalization suggests rate differences. If there were no differences in rates or rate structure, there would be no regionalization. With this self-evident truth in mind, it ought not to be difficult to follow the thread of logic through all the meanderings of freight-rate adjustments to the ultimate conclusion that something is wrong in this field.

The first freight-rate study of a comprehensive nature was made by the T. V. A. in 1936. That study was published as a congressional document and received wide distribution. It was prepared for T. V. A. by the Honorable J. Hayden Alldredge, now Chairman of the Interstate Commerce Commission. It simplified this question so that an intelligent layman could understand it, and it showed beyond doubt that the South is at a substantial disadvantage. Later, the Board of Investigations and Research made a special study of this subject and filed a report with Congress, which is also being published as a congressional document. This report confirmed in all essential respects what had been said previously by the T. V. A.

In the interim, Congress had taken note of the situation and had amended the basic law so as to prohibit unjust and unreasonable discrimination between sections, regions, and territories of the United States.

Coupled with the amendment of the basic law just mentioned was a congressional mandate to the Interstate Commerce Commission to remove any of the prohibited discriminations found to exist. The Interstate Commerce Commission instituted an investigation which has produced another study of tremendous significance. In the course of its investigation the Interstate Commerce Commission put its staff of cost accountants, headed by Dr. Ford K. Edwards, to work on this subject and produced a monumental study. This study was introduced in evidence before the Interstate Commerce Commission. Realizing the significance of it, I introduced a resolution in the United States Senate to have it published as a Senate document, and it will soon be ready for distribution.

The stock answer for years to all the complaints of regional difference in rates as between the South and West and the North has been that because of a greater volume of freight in the North the railroads in that region can haul freight at a lower cost. Dr. Edwards was able to prove conclusively that costs of transportation in the South are lower than in the North. This controversial question, therefore, is now at rest. It has been established as well as any fact in the realm of economics could be proved that the differences in freight-rate structures as between the South and the North are not based upon differences in cost of rendering transportation service.

Do these freight-rate differences really hurt us economically in the South? An array of evidence has been gathered on this score also. The first T. V. A. report marshaled quite an array of statistics in support of the thesis that these differentials are an economic handicap. Another report by that organization has been filed with Congress which amplifies the previous study on this point. All sorts of evidence has been gathered in recent years, to show that these differences are not idle dreams, that they are not merely talking points for men in public life, but that they are real and are hampering and restrictive in their effect upon the industrial progress of the southern region.

The freight-rate differential is a fundamental problem It will remain so until it is finally solved. However there is a noisy element among us, even here in the South, who tell you it is not a problem; that everything about it is just as it should be, and that politicians especially should leave this intricate subject severely alone. You know who these people are; you know just what ax each one is trying to grind, and you know that if we should commit our economic destiny to the nurture of their philosophy we would continue to see a large percentage of each rising generation in the South migrate to other regions in quest of economic opportunity which their native region failed to grant; our people would continue to fight an uneven battle to keep up with the progress of civilization, and nature's rich endowments would continue to flow out of here in a raw or semi-finished state to enrich others more than ourselves.

Sometimes it is necessary in order to find the truth in a given proposition to reason from effect back to cause. That is one way to find the truth here. We have not developed industrially in the South and West as fast as the region north of the Ohio and Potomac Rivers and east of the upper Mississippi, which we ordinarily call the North. Everybody who has traveled knows that to be true without looking at statistics. It is in evidence everywhere. Authenticated Government statistics show very clearly that the North has manufactured, in terms of value, almost 75 percent of the Nation's industrial products since the statistics of this nature were first gathered. The northern region is in truth and fact the workshop of the Nation. It produces by far the greatest income per capita in the country and it supports the greatest proportion of population. It is not, however, the richest region from the standpoint of natural resources. Why then this great concentration of industry, of population, and of man-made wealth? There is, of

course, more than one single cause; but when we find that all that tremendous industrialization and growth have taken place in the region enjoying the lowest level of freight rates in the United States, it is not hard to believe that freight rates have had a good deal to do with such economic phenomenon and with the correlative fact that the South as well as the West are far behind industrially.

What is the real significance of this problem of regional freight rate differences? This question can be answered in simple terms. For well over a century the South has lived and struggled under a raw-material economy. All of us know that. But we have also learned by long and hard experience that such an economy produces a low per capita income. Not only that; it stimulates an excessive exhaustion of natural resources. Such a combination of forces inevitably means, if they are not checked or thwarted, that the South will remain relatively poor forever. A realization of these stern facts has convinced those who have the public interest at heart that a change should be made; that the economy of the South should be recast so as to take some of the emphasis off raw-material production by increasing the manufacture of high-grade industrial products.

Academic acknowledgment of the desirability of such a change in the economy of the South as I have mentioned is not sufficient. Affirmative and positive action must be taken; the way must be cleared; obstacles must be removed. And right here lies the source of some of the opposition of a small group of our own citizens as well as a larger group located in other regions. Some manufacturers of raw materials and semifinished products in the South have been the beneficiaries of relatively low rates—rates that do not yield, as Dr. Edwards very clearly shows in his study, the full costs of transportation which reasonably can be attributed to them on a distribution basis. They are fearful that any reduction in the rates on high-grade manufactured articles will bring about increases in their low rates. They are, therefore, unwilling to grant other shippers, both present and prospective, any of the privileges which they enjoy. On the surface they would be entirely content to see the natural resources of the South exhausted without leaving here a sufficient residue of productive wealth to justify the attendant reduction in the South's natural capital.

Some of our railroad managers are fearful, on the other hand, that reduction in the rates on higher-grade articles cannot be compensated adequately by any revision in the rates on raw materials, and they oppose a change for revenue reasons.

I am aware of the fact that these railroad managers express a willingness to adjust their rates to meet the legitimate needs of any new industry that may come along. These good intentions, however, are subject to several limitations. In the first place, no matter how anxious a traffic manager of a southern railroad may be to enable an industry on his line to reach the great markets of the North, he must have the concurrence of northern railroads before he can do it.

Another thing should be mentioned. Our friends in the North, even the present young Governor of the great State of New York, Governor Dewey, have made a great fuss over the effort of the South to equalize freight rates because they fear the South will get many of their most valuable industries. Governor Dewey said: "You know, that if the South secured lower and equal class freight rates, many New York manufacturers might leave the State." We of the South are seeking no advantage; we are not undertaking to destroy industry in any other region; we are simply asking for a free and unhampered opportunity to apply our native skill to the utilization of our own natural resources so as to advance our own progress and welfare. We aspire to build, not to destroy; we ask for equality, not preference; we seek the recognition of rights, not the granting of special privileges.

The O. P. A. and the Cheese Industry of Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, September 28 (legislative day of Wednesday, September 15), 1943

Mr. WILEY. Mr. President, I desire to ask unanimous consent to have printed in the RECORD an editorial written by a very distinguished New Dealer of my States, Mr. C. E. Broughton, whom I like very much. He publishes a newspaper, the Sheboygan Press. Every once in a while he writes an editorial taking me to task because of some statement or speech which I have made.

But C. E. Broughton is a newspaperman. He knows it is the business of the press to furnish unbiased facts and information to the public. He knows, when he steps aside and in his editorial column "takes a crack" at a political antagonist, that it is only fair and good newspaper sense to permit his opponent to reply and use the columns of his paper for that purpose. Consequently, every time he "wrote me up," I was privileged to publish my side of the case in his newspaper.

I have never found Charlie Broughton vicious, nor is he a "paint-pot artist," indulging in personalities.

He generally stands up for his convictions. It has been difficult for him to see anything wrong in the present administration. However, on September 24, 1943, he published an editorial in his paper entitled "O. P. A. Has a Duty To Perform." It begins with this idea:

We do not believe that O. P. A. would intentionally strangle the cheese industry here in Wisconsin, but this is happening as a result of discrimination under order M. P. R. 289.

It is a good old editorial. It is factual. He tells of O. P. A. receiving notice of the situation but doing nothing, and he asks:

How can you have greater production when a stifling hand is at the throat of the producers who in turn see a great dairy State laid on the altar of sacrifice?

It is time—

He continues—

that an awakened Washington, whether it be O. P. A. or Senators and Representatives, offer assistance, if war production is to be maintained and encouraged.

[For editorial in its entirety, see p. 7828, CONGRESSIONAL RECORD of September 27, 1943, House proceedings.]

Address by Brig. Gen. Frank T. Hines Before Jewish War Veterans

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, at the forty-eighth national convention, Jewish War Veterans of the United States, at Kiamesha Lake, N. Y., on September 18, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Commander Kaufman, distinguished guests, delegates, and members of the forty-eighth national convention, Jewish War Veterans of the United States, I appreciate very much the privilege of again addressing your national convention. Thank you, Mr. Commander, for your complimentary introduction.

It is always a pleasure for me to be present at veterans' conventions, and I am particularly happy to be at this one.

First, because I am an honorary member of the Jewish War Veterans of the United States, and naturally the organization occupies a special place in my heart; second, your organization is, in point of age, the oldest veterans' group in the United States with the exception of the gallant but fast diminishing groups of the Grand Army of the Republic and Confederate veterans; and third, because occasions such as these are significant for the opportunity they afford me to speak briefly of the tremendous part that those of the Jewish faith have played in the drama of American independence.

The history of Jewish patriotism and valor in America is well known to me. History reminds us of the unselfish service and patriotic devotion of Americans of the Jewish faith to our country, who love America better than their own lives.

In all the wars of our Republic, your coreligionists have made splendid contributions to our armed forces, and the present war is no exception. Your roster lists the names of some of America's outstanding heroes: The supreme token of American heroism, the highest decoration for gallantry in action, the Congressional Medal of Honor, is worn by your national commander, Ben Kaufman. I know that you will have glorious pages to add to your history, when the present conflict is victoriously concluded.

The record of the Jewish War Veterans on the home front since Pearl Harbor is most commendable. It was gratifying to learn that your national commander has pledged to Secretary Morgenthau that the Jewish War Veterans will sell $12,000,000 worth of bonds during the third war-loan drive. Knowing the enthusiasm and patriotism of your organization and its auxiliary, I am certain that you will exceed that goal.

Your purchase of war planes has been commendable, and is appreciated by the Government. Another patriotic endeavor is your gift of 13 ambulances to the War Department, and I am told that this is only the beginning. The activities of your members in Red Cross work, blood donations, and civilian defense

are so well known as to require only a passing mention at this time.

All of you, I am sure, have young relatives or friends serving in uniform in the present war. You would naturally be interested in learning something about the benefits which may be available to them through the Veterans' Administration.

To begin with, I would remind you that our laws affecting the present war follow the general pattern of those governing disability and death as a result of service in the last war—that nearly all of our key personnel have worked at the Veterans' Administration for many years, and so we have a trained and efficient organization, ready to meet whatever problems arise in the administration of benefits growing out of the present war.

In every instance, we are attempting to take advantage of the experience which we have gained, and so facilitate the administration of our present laws that there will be no cause of complaint on the part of those whom they are designed to benefit.

We have worked out a procedure with the Army and Navy so that, when a man is discharged from the service, that all of his papers, including his claim for pension, are forwarded to the Veterans' Administration office nearest the place of discharge.

That office immediately sends the papers to the Veterans' Administration office having jurisdiction of the territory in which the veteran resides.

This office adjudicates the claim on the records received from the Service Departments, determining his entitlement to pension and the existence of a vocational handicap, and then when the veteran is notified of his pensionable status, he is advised of his rights to file claim for vocational rehabilitation.

The form for the claim is inclosed with the notice, and then if he is found to be in need of training to restore employability, vocational advisement proceeds and entrance into training follows thereafter. He will be trained as near to his home as possible.

His pension will be increased during the period of his training up to $80 a month, if single, $90 a month if married, and with additional amounts for other dependents.

We are not setting up training centers of our own but are, on the contrary, making contracts as required with well-equipped and tried educational, agricultural, and industrial establishments and institutions. We expect that there will be a considerable amount of training on the job leading to employment.

I hope that you will convey this message to your young friends or relatives who may be disabled in the service in the present war: The future is not necessarily dark for the disabled man who keeps up his courage and is willing to meet the changed conditions which confront him. Even serious disability may be overcome with the training we will give him, and the employability which had been lost may thus be regained.

I would remind you that after the last war 128,000 disabled men completed training courses awarded by the Veterans' Administration and that many of these men have achieved success in their new careers.

The National Service Life Insurance, which protects the dependents of men in the present war, has now had twelve and one-half million applications, for a total face value of $90,000,000,000. I do not need to impress upon you the enormous size of this figure. Suffice to say it is more than double the amount of insurance taken out during the last war, and in addition it is about two-thirds of the total amount of private insurance which was outstanding at the beginning of the present war.

As you are aware, this insurance must be applied for by the man, and the premiums are deducted monthly from his pay. It is the lowest-priced insurance of its kind in the world. The limit a man may take is $10,000, and beneficiaries are restricted to his immediate family—wife, child, parents, brother, or sister.

There has been no great demand for beds in our hospitals as yet by veterans of the present war. However, as the Congress has already provided that they may be hospitalized without regard to service connection for disability, it is quite probable that a considerable expansion of our hospital facilities may be required to meet the future potential requirements of these younger veterans.

You may recall that a recent law signed by President Roosevelt removed the age differential in service-connected cases of widows and children and increased the rates, which now are: $50 a month for a widow regardless of age; $65 for a widow with one child and $13 a month for each additional child.

An orphan with no mother now receives $25 a month; two orphans, $38 a month, equally divided, with $10 additional for each additional orphan, equally divided.

The total amount which may be paid to widows and children in service-connected cases has been increased to $100 a month from the former limit of $83.

This new law applies to widows and children of the Spanish-American War, the last war, and the present war.

After the victory has been won, if we are to have a happy nation, our citizens must be gainfully employed. The nearer we are to having all of them employed, the nearer we will approach the highest ideal of a strong democratic nation.

The men who are now serving are entitled to preference in obtaining jobs.

Our efforts should be directed primarily to doing all that can be done to make sure that every veteran is gainfully employed. In this I am confident that the Jewish war veterans can be of very material assistance.

There has come to my attention a recent episode from the north African front. It concerns Dr. Ferdinand M. Isserman, who in private life is the rabbi of Temple Israel, St. Louis, Mo. He was on leave as special representative of the American Red Cross in north Africa, when he wrote about some of his experiences there. I will read a few excerpts from his writings at the front that I feel sure you will be interested in hearing. I now quote Dr. Isserman:

"I was sitting in my office at the north African headquarters of the American Red Cross when a young American Army major walked in. Before I could see his insignia, I noticed that his garrison cap had been crushed, and so I knew that he was attached to the Air Corps. On second glance, I saw the silver cross, the chaplain's insignia, on his open shirt collar. It was Chaplain James Davidson, Jr., formerly religious leader of students at Leland Stanford University, and now in charge of the chaplains at an air base in north Africa."

" 'Will you do me a favor?' he asked.

" 'Doing favors for the Army is the business of the Red Cross,' I replied.

" 'At my post,' he said, 'there are scores of Jewish boys, one of whom has just been awarded the Distinguished Flying Cross for dropping his bomb load after being seriously wounded. I have conducted Jewish services for them, but these boys have not had a service by a rabbi all the months they had been in north Africa. When can you come to our base?'

" 'I can leave this evening,' I said, 'if you could have me back here by 5 o'clock tomorrow afternoon.'

" 'I am leaving in a B–17 from the airport at 7 o'clock,' Chaplain Davidson said. 'Meet me there. I shall bring you back in the Fortress.'

"I went to the Red Cross Club, took a 300-year old Torah that had been loaned to the United States Army for the duration by a Jewish family in north Africa, took the Jewish chaplains' flag which had been issued to me by the United States Army for my use at Jewish services, and soon found myself in a Flying Fortress on my way to an air base.

"We decided that the service would be interdenominational in nature, along the lines of the fine fellowship developed by Jewish and Christian clergy in America—so uniquely American and so expressive of its finest traditions.

"The chaplain showed that he could work with lightning speed. He telephoned a number of units; communicated with various chaplains under his command and secured their cooperation; and cleared with the Red Cross to make certain that the Red Cross Club would be available.

"The next afternoon the altar was set up in the Red Cross Club, where Protestants and Catholics also hold services.

"In the center stood the scrolls which had been flown over in the Flying Fortress.

"The congregation sang America. I then read from the scrolls in Hebrew, and Chaplain Davidson did the translation in English.

"In the course of my sermon to these pilots and their coworkers, I said: 'This is the first time in history that a Torah has been flown in a Flying Fortress that it might be used in a religious service. At first it seemed strange to have these sacred scrolls in this most modern fighting plane. It seemed strange that the law of justice and of love should be placed in this dreadnaught of the air which went on missions of destruction and desolation.

" 'But I have changed my mind. You men who fly over the territory of Axis nations are in a sense not bringing desolation and destruction The bombs you unload are striking shackles from the hands and feet of the enslaved peoples of Europe. In a true sense, you are not bringing death and desolation, but liberty and justice. You destroy the prison house that men might be free. Whenever you go on such errands, you are carrying out the goals of liberty and justice—the kernel of the teaching of the Torah.

" 'A torah in a flying fortress—the law of justice and of love in the bomb bay of a war plane—not a contradiction nor a clash. Under the guidance of Allied aviators, the flying forts are bringing justice and liberty and are obeying that commandment of the torah inscribed years ago on the Liberty Bell: "Proclaim ye liberty throughout the land and unto the inhabitants thereof." ' "

I do not think that I have ever heard a finer tribute to true Americanism—to the tolerance and understanding of others' problems and sympathetic aid in their solution, which is the mainspring of our strong American national unity.

American tolerance—that, I believe, is our greatest national asset, our surest source of strength—a tolerance which is so conspicuously lacking in Nazi Germany—a land where intolerance has led to tyranny, first within her own borders, then against peace-loving nations.

This intolerance will lead to Nazidom's undoing in the end, and through disunity, speed her ultimate defeat.

When President Roosevelt lays his wreath upon the Tomb of the Unknown Soldier, he does not know nor does he care what the religion of that immortal American hero might have been—whether Protestant, Catholic, or Jew.

All he knows is that there at Arlington lies the remains of an American patriot who gave his all for his country's sake.

That is the spirit in which all of us must approach our present great problem, which is to win this war as speedily as possible and with a minimum loss of life.

To accomplish this end we must back up the war plans of President Roosevelt. That will make our unity so strong that nothing can stand between us and victory.

Commander Kaufman, I thank you for the privilege of addressing this convention.

Post-War Plans

EXTENSION OF REMARKS

OF

HON. FREDERICK VAN NUYS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. VAN NUYS. Mr. President, at a very delightful luncheon given yesterday by the Federal Bar Association of Washington in honor of the members of the Conference of United States Senior Circuit Judges, the Honorable John Biggs, Jr., senior judge of the United States Court of Appeals, Third Circuit, delivered an address on the subject Post-War Plans. The address was well considered and well received, and I ask that it be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Roosevelt has said: "There is a longing in the air." He was referring to the hope that lies in all our hearts that a just and lasting peace may come out of this holocaust.

In seeking the solution, the question becomes, How much of our sovereignty—our very precious possession—shall we yield?

We stand at the crossroads of history. On the signpost are 5 signs. One sign reads "Isolationism"; another, "Imperialism." One is marked "Treaties." The fourth has on it the single word "Confederation," and the last points to "Union with other nations."

SOVEREIGNTY IS A VITAL ISSUE

The way of isolationism requires no curtailment of sovereignty. We can try to imprison ourselves inside a Chinese wall. We tried this before. We were not very successful. We can try it again. If we succeed we will be a historical phenomenon of the first order.

We can become imperialists. If we do so we shall not be very popular with our present friendly neighbors to the north and south. Sooner or later we shall encroach upon their lands and upon their peoples. Our long undefended borders will become heavily fortified frontiers and it will be as difficult to go from New York to Montreal as it was to go from Paris to Hamburg just before the war, when Hamburg was still a city. Some of our neighbors are strong-minded individualists who think they are as much entitled to the good earth as we ourselves. Ultimately our unlimited imperalistic sovereignty would be curtailed by force.

To arrive at lasting world peace three ways are open. These roads are really two, for if we make treaties with enough of the nations of the world to insure peace, we shall become in fact a member of a confederation. This would entail some loss of sovereignty. To use a figure of speech, it would not remain as full as the full moon or as round as the earth. If we joined in a union of other nations our sovereignty would be still further curtailed.

With the history of the last four decades before us, I can hardly believe that the people of this Nation will not compel—yes, veritably compel—our leaders to embark upon some cooperative effort toward a world order, whether by treaty, by confederation, by union, or by some other device. We have spilt the blood of our sons in two wars on three continents. We have spent more than $250,000,000,000. The tale is yet to run. The last peace was simply an armistice between two wars. If a lasting peace is not made following this conflagration World War No. 3 will be on our doorstep before our children's children are fully grown. In Europe, from 1930 until the early spring of 1937, you could scarcely find a person in France or England, in Holland or in Belgium, who would believe that the second World War was already on its way. There was no concerted action against any aggressor nation. We had rejected the covenant of the League of Nations for fear that we might impair our sovereignty. We wanted to be in the world, but not of it. We had the earnest desire to eat our cake and have it too.

How pale the controversy in respect to the famous section 16 of the League covenant, "sanctions of pacific settlement," now seems in the light of the past 5 years. We were so concerned lest participation in the League would project us willy-nilly into a future war. Many of our citizens were convinced that if we became a full party to the covenant of the League of Nations we would be automatically precipitated into the next world conflict and our young men would be sent again to fight on foreign soil. We desired to escape this consequence at almost any cost. The opponents of the League—and I believe them to have been honest in their convictions—foresaw a day, if we joined the League, when the youth of the Nation might fight not only in France, but in Africa, in China, even in Japan. American participation in world affairs, said they, would have to be strictly limited to our own concerns and they visualized these as being circumscribed by the territorial United States or at least by the continents of North and South America. The very things which they feared the most have come to pass, but not because the United States joined the covenant of the League of Nations.

The League is or was (I don't know whether I should use the past tense or the present) a confederation of sovereign nations precisely as our earliest attempt at cooperative government in this country consisted of the confederation of the Thirteen Original States. Like our original confederation the League was not perfect, but it did possess machinery for effecting peace. The "sanctions of pacific settlement" provide that if a member resorts to war instead of to the Permanent Court of International Justice, the Council of the League shall "recommend to the several governments * * * what effective military, naval, or air force, the members * * * shall severally contribute to the armed forces to be used to protect the covenants of the League." In short, the Council has to meet and designate the members and strength of the posse designed to ride forth and punish the offending nation before anything can be done. The Council is empowered only to recommend the force to be supplied. The signatory nations are not bound to supply that force. The burden imposed on sovereignty by section 16 seems slight when viewed 20 years after the League was proposed and in the light of subsequent historical developments.

Section 16 demonstrates the weakness of a confederacy whose peoples possess no common citizenship or common system of laws and hence no common police force. This need not be the case but it has so turned out from the early Greek city-states to the Covenant of the League of Nations.

A union of sovereign nations, patterned along the lines of our own Federal Union, would obviate most of these difficulties. The citizens of the sovereign nations would be citizens of the union and a common system of laws would be applicable to all. A standing international police force to maintain peace within the union and throughout the world would follow naturally. Who would control the international force? The executive government of the union.

If the United States joined such a union our sovereignty would be impaired. For example, the power to declare war given to Congress by section 8 of article I of our Federal Constitution would be limited. Other powers conferred upon our executive and judiciary likewise would be curtailed.

Would either a strong federation or a union bring lasting peace? No man can say. War might be necessary to preserve the federation or union even if the members comprising it were most carefully selected. Such organizations might invoke jealousies from nations without the pale. Neither league nor union may be the best thing. They might be ineffective. Some other form of international order, based perhaps on purely economic principles, might supply the answer.

But this much I think is certain. The United States must go forward to meet its destiny. Otherwise destiny will move to meet us in some far less palatable form. Two world wars have come to us despite our isolationism and despite our preservation of unsullied sovereignty. Our untrammelled isolationism and our unsullied sovereignty were in existence for 150 years and today we find ourselves involved in the greatest war in history and fortunately possessed of alliances with so many nations and governments that most of us cannot even name them all. Our isolationism and our demand for unlimited sovereignty now look like the inside and the outside of the same cloak, a garment which either didn't fit us very well or was nonexistent.

Binding treaties between the English-speaking nations of the world to maintain the peace, if necessary by force, seem to be the irreducible minimum. A confederation between the democratic nations of the world, including those which will be reconstituted after victory, seems more desirable.

Treaties with Great Britain, Russia, and China, looking to the establishment and maintenance of peace and the creation of an international police force, should not be avoided. The United Nations are united in war. Why should they not be united in peace? Strong treaties effect a confederation. Still stronger treaties will effect some form of union. It is obvious that a standing police force would be of much greater value than a posse. The difference is one between established order and vigilante law.

I do not know the answers to these questions. History alone can answer. But a confederation such as the League of Nations is not chimerical or idealistic, nor would a confederation strong enough to amount to a practical union be unrealistic. Nothing is more unrealistic than the belief that we can go on pouring out our blood and treasure in recurrent world wars and retain our democratic system. The writing is on the wall. Some measure of our sovereignty, however small, must be given up if a lasting peace is to be brought to the world today. In the curious and complex world in which we are living, it is a paradox that the war and the peace can be won only by binding our strength into the strength of our friends and allies, and their strength into ours.

The future is in our hands. We may do with it what we will.

Marshall to Supreme Command

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD an editorial entitled "Marshall to Supreme Command," published in the September 23, 1943, issue of the Daily Register-Mail, of Galesburg, Ill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MARSHALL TO SUPREME COMMAND

The report that Gen. George C. Marshall, United States Chief of Staff, has been agreed upon by American and British Governments as supreme commander of Anglo-American troops appears to be authentic. At least there have been no speedy official denials of the story. And in spite of rumors and adverse speculations, it appears to us that this is a sensible, logical step, made in the interests of swift and sure victory.

Rumors of some contemplated change in the status of General Marshall have been current for days. They were taken cognizance of in the authoritative Army and Navy Journal of recent date, which took exception to the report that the Chief of Staff was to be transferred from Washington to a field command, presumably as head of the Allied forces now being primed for a full-dress invasion of the Continent from the west.

It was the opinion of the Army and Navy Journal that he was to be sacrificed to "powerful interests which would like to eliminate Marshall from the Washington picture and place in his stead an officer more amenable to their will." A Washington newspaper reported that General Marshall has been in conflict with the British over the plan of future operations, that Marshall had been pressing for an invasion from Britain while the British were holding out for the Balkan route. On the floor of Congress legislators have asserted that General Marshall was to be "kicked upstairs" because of his alleged conflict of opinion with "powerful interests" over the conduct of the war.

But these rumors and reports do not appear to fit in with the facts, if, as now appears to be the case, Marshall is to be made the Allied global commander in chief. It would appear, as the basis of his recent announcement, that the American forces have now reached the peak of their training and are ready for deployment in all sectors of the war fronts. Thus his job of organization and preparation of the American Army is complete. Add to this Churchill's announcement that there would be an Allied invasion of Europe from the west and President Roosevelt's assurances that the tempo of operations against Japan is to be stepped up on a grand scale, and it would appear that the time has at length arrived for the appointment of a supreme Allied commander to organize and direct this vast offensive in all its phases.

Marshall has been preeminent in the field of operations and organization and therefore would appear to be the logical supreme commander. It would appear that those who feared he might be relegated to some field command post are mistaken and that as global commander he will be in a place for which his experience and talents eminently fit him. It is a well-known fact that General Marshall, in the higher ranks, has never been a battle officer, but that his military reputation is built upon the solid achievement as an organizational, tactical, and operations genius. Moreover, it does not seem logical that the political leaders would run the chance at this stage of the game in transferring the American Chief of Staff from a type of work with which he is so familiar to field operations. In that category the Anglo-British have the redoubtable Montgomery, Alexander, Eisenhower, and MacArthur, any one of whom has a well-established reputation as a field and battle commander. It seems within the bounds of reason that if Marshall is to be in supreme command, some other field commander will be named to lead the invasion of Europe from the west. General Eisenhower is doing well in the Mediterranean, and to remove MacArthur from his present theater of action might be a tragic mistake.

Ordinary citizens are in no position to know the reasons, motives, or the circumstances which prompt the political leaders of the respective countries to decisions on the shift of command reported. They do know, however, that the operations of our armies are now moving successfully forward and that a very large share of the credit for this improved Allied situation is due to the work of General Marshall. There is no reason to believe that the creation of a supreme command with General Marshall at its head could do anything but speed up the day of final victory.

Plan for Post-War Government

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Post-War Government," printed in condensed form from a broadcast over station KPRO.

There being no objection, the address was order to be printed in the RECORD, as follows:

POST-WAR GOVERNMENT

(By W. L. Gleeson)

(Condensed from a broadcast over KPRO)

All the world leaders seem to be of one mind when it comes to the necessity of forming some kind of international government to control the relationships between the nations after this war is over. Yet, none of them have come forward with a concrete plan for setting up such an international government. The League of Nations failed and is not acceptable to most nations and peoples, so, of necessity, a new kind of international government is necessary; one that all the peoples of the earth can rally around and trust; one that will administer justice equally to all the nations of the earth and yet not be subject to domination by any individual or group of individuals.

It seems to me that the people all over the world, whether they be among the United Nations or the Axis Nations, are waiting for someone to propose a solution to the problems of the world, a plan that they can work in and trust to guide them in their future lives. That government must be patterned a great deal after the American form of government in order to afford the necessary checks and balances to keep it from ever falling into the hands of selfish individuals or groups.

Therefore, it should be formed of a legislative body made up of two houses. The international assembly should be composed of one elected representative from each state or province of each member nation. The senate should be composed of two senators elected by the people of each nation. Thus, the assembly gives all the people of the world a voice; the senate gives each government of the world a voice in the legislative branch. The terms of office should be 6 years for the senators and 4 years for the assemblymen, the terms to be staggered.

The executive branch of the international government should be composed of president, vice president, and secretary, whose terms of office should be for a period of 6 years, and who would be elected by joint session of the assembly and senate from among the members of these two bodies.

The international cabinet should be appointed by the president, with not more than two such members to come from any one nation.

The nations from which the three executive officers come would appoint new members to take the places of their members in the international congress who had been elevated to the executive positions. These appointments would be made by their legislative bodies or by congress.

The congress or legislative branch of each member government would appoint for life one justice of the international court of justice, which would be the international judicial body. The members of this international supreme court would elect from among them one who would be the supreme justice of the court.

This arrangement would give a well-balanced international government, charged with the job of creating and administering international law among the nations of the earth. All disputes between member nations, after having run their course through the lower courts, could have their final appeal to the international supreme court. The legislative body would make the international law and the executive branch would carry out this law All member nations would be required to join in suppressing hostile acts on the part of any nation, whether that nation be a member or not.

All matters of a national nature would be reserved unto the nations to settle in their own way among their own citizens, similar to the relationship of the States within the United States.

Such an international government would very quickly correct the evils that have led to so much bloodshed, such troublesome problems that lead to war, as tariffs, immigration restrictions, great money combinations, international monopolies of raw materials, cartels, and the manufacture in secret of materials of war to be used on neighboring nations. These evils would be regulated by this one government and, the causes of war once eliminated, with an international language and world money system instituted, the world should be on its way out of its troubles.

The present war debt of all nations—both Allied and Axis—should be assumed by this new international government, since all people are to blame for the war and they should all pay for it. The schools of the world should start teaching true history to clear up the confusion and ignorance that have plagued the peoples of the earth and brought on war in the past.

I am of the opinion that whoever picks up this plan and proposes it to the American people and the nations of the world will find that a majority of people will rally around it.

The Axis Nations can be invited to lay down their arms and come into the united nations of the world government on equal terms with the United Nations themselves when they disband their present governments and elect representative governments, and elect their representatives to the international government.

If this plan is proposed in a concrete and forceful manner it will help to restore order and bring peace quickly without further bloodshed.

Negro Aviators

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, September 29 (legislative day of Wednesday, September 15), 1943

Mr. BRIDGES. Mr. President, some time ago, when the training program of our military forces was being expanded, I offered an amendment to provide for the training of Negro aviators.

I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Lt. Col. B. O. Davis, Jr., at a press conference in the War Department pressroom, Pentagon Building, September 10, 1943, and made a part of the record of the hearings before the Military Affairs Committee on Senate bill 763.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I put down a few notes here simply for the reason that I would like to present some facts in as orderly a manner as I can. I am not prepared to make any set speech here this morning, but I would prefer to refer to these notes so that the story will be told in a comprehensive manner.

I have had the honor and the pleasure of commanding the Ninety-ninth Fighter Squadron from August 27, 1942, until September 2, 1943. During that period I saw 27 pilots and two-hundred-and-fifty-odd enlisted men develop from a relatively untrained state to a combat team of which anyone serving with the organization could justly be proud.

I said that I had the pleasure to command this unit—actually that pleasure was realized only when it became apparent that the Ninety-ninth Fighter Squadron had taken and could maintain its proper place in the northwest African theater of operations. Very little pleasure existed prior to that time.

Just what a colored pilot in a P–40 would do when antiaircraft fire burst about his ship, or when an enemy aircraft was strewing cannon shells and machine-gun bullets about his cockpit was a matter that was really conjecture in the minds of some of these high-ranking officers in the Army Air Forces.

SQUADRON WAS EXPERIMENT

The Ninety-ninth Fighter Squadron therefore was an experiment to determine whether the colored pilot was physically, mentally, and emotionally suited to the rigors of combat flying. It is a very significant fact, I believe, that all members of this organization were impressed at all times with the knowledge that the future of the colored man in the Air Corps probably would be dependent largely upon the manner in which they carried out their mission.

RESPONSIBILITIES HEAVIER

Every man in the Ninety-ninth will go through any ordeal concocted by combat or garrison existence to assure the successful completion of the experiment. At all times, every man realizes that the pleasures and relaxations that are available to men in other organizations are not available to him because his task is far greater, his responsibility is much heavier, and his reward is the advancement of his people.

Now it is necessary that I invite your attention to this philosophy in order that you may better understand the reactions of the individual officer and soldier of this organization.

I shall now relate to you our experiences overseas. These same experiences would be indeed commonplace if they were related about a white fighter squadron. For this squadron every step was a dramatic one.

I should like to state at the outset, and I consider this very important, that from the time this squadron left the continental limits of the United States, and that was on April 15, 1943, to the present time, there has not been a single circumstance or incident which could be regarded as discriminatory by the most rabid race leader.

The first act of the drama began the day before we sailed. The passenger list showed the transport commander that I was to be the senior line officer on board the transport. I wa directed to pick a staff consisting of an adjutant, mess officer, police and prison officer, a provost marshal, and then report to the transport commander as executive officer.

TRANSPORT STAFF, COLORED

This staff of colored officers carried out the orders and policies of the transport commander despite the fact that of the 4,000 troops on board, less than 15 percent were colored. After the first 24 hours or so of curiosity and wonder at this unusual staff of the transport commander, everything proceeded smoothly and without incident for the remainder of the 8-day voyage.

During all this time the members of the squadron basked in the awe of the attention paid them by other soldiers on board and succeeded admirably in creating the impression that the colored pilot and colored soldier are not so very different after all.

It was here also that the entertainment section, which isn't in any table of organization, was born. This section, under the capable direction of the acting special services officer, Lieutenant Letcher, went a long way toward effecting cordial public relations for the squadron.

This entertainment section provided an excellent show for units within traveling range of all of our bivouac areas from the port of debarkation in Africa clear on through Sicily.

Again the impression created in the minds of the audiences was that these men who were giving these shows are just about the same as the men in "my outfit," and this was not by accident because the men who participated in that show are intelligent men and they realized that at all times instead of just giving a show they were doing a job for the Ninety-ninth.

Upon landing in Casablanca we were met by the assistant A–3 of the Northwest Training Command, Colonel Allison, Air Corps. This officer, who is now on his way back to the States for a well-deserved rest, assured me that he would be available at all times for the solution of any problem that might arise.

MUST PREPARE FOR COMBAT

The following day he took me and my operations officer, Captain Roberts, in to see General Camp who informed us that we would remain in the area until we would be satisfactorily equipped for combat and that we would not move into the combat zone until I felt that everything possible had been done in the way of preparation.

He sent us on a preliminary reconnaissance of our new station, located about 150 miles inland. This station was located in French Morocco. Nearby was a service command station and the commanding officer of this station, Colonel Phillips, now in Sicily, was most cordial in his offers to ease any supply problems that might arise.

There was also at this station a fighter-bomber group commanded by Colonel Stevenson, whom I had the pleasure to know at the Academy. We moved to this station by a French train and covered 150 miles in about 17 hours, and when we complained about the slowness of the train we were informed that we were lucky to move at such a fast rate of speed.

Our stay there was probably our most pleasant stay overseas. We were there about a month. Most cordial relations existed between the members of the squadron and the members of the fighter-bomber group nearby. The pilots of the two organizations engaged in impromptu dogfights to determine the relative superiority of the P–40 and the A–36, and we were very happy to verify our belief that the P–40 was vastly superior in this phase of aerial combat. Enlisted men of the two groups got together very well in all types of athletic contests and other means of recreation.

FEZ HOSPITALITY RECALLED

The town of Fez was found to be one of the most delightful spots that any of us had ever visited. One unusual feature of our stay there was that members of my organization and members of these other organizations visited the town of Fez every night for a period of over a month and not one single unpleasant incident arose.

The officers of the squadron were made socially secure in the town by the visit of Josephine Baker. Miss Baker insisted on presenting several different groups of our officers to the prominent French and Arab families in the town. All in all Miss Baker was very largely responsible for our most pleasant social relations in the town of Fez.

It was during our stay here that four P–39 pilots whom we had met on the boat on the way over, came to visit us. They were ferrying some P–39's from Oran to Casablanca, and en route they, of their own volition, simply stopped over to pay us a visit. I mention this simply to indicate that a considerable bond exists among those who fly regardless of color or race.

GIVEN BRAND NEW P–40'S

Our equipment was of the best. We ferried in 27 brand new P–40's, and all of us experienced for the first time the thrill of flying a brand new airplane. Lt. Col. Philip Cochran—the Flip Corkin of Terry and the Pirates—was our most capable instructor. He imbued all of us with some of his own very remarkable fighting spirit, and in addition to that he taught us what to do and what not to do in aerial combat.

We all remember with a smile his opening commentary on the slowness of the P–40. "The P–40 pilot never yet ran away from a fight—because he couldn't." Yet we all know that the P–40 has a more remarkable combat record in this war than any other fighter airplane except possibly the British Spitfire.

The P–40, we jokingly say, has three important characteristics. The first one is turn, which enables you to present a very difficult target to an enemy fighter; the second is turn, and the third one is also turn. In aerial fighting this characteristic is naturally of great importance.

We had two other instructors who were with us until we left for Tunisia, a Major Keyes and a Captain Fachler. Both of these officers had had extensive combat training, one in England and one in African campaign, and both had just been returned to the training command for instruction purposes. These officers worked unceasingly to make us ready for the real test, and all of us felt very grateful for their efforts.

FINAL PHASE BEGAN MAY 31

On the 31st of May we took off for the Cape Bon Peninsula and the final phase of the experiment. I personally believe that no unit in this war has gone into combat better trained or better equipped than the Ninety-ninth Fighter Squadron. We were weak in

one respect only and that was simply that the squadron commander, myself, and the flight commanders had had no actual combat experience.

That is a very desirable feature because it gives a good bit of confidence to those who are led that the man who is in charge of the formation knows what he is doing and frankly I didn't know initially, nor did my flight commanders.

On the other hand, this deficiency was balanced by the fact that my pilots averaged about 250 hours in a P–40, and a young pilot in these days who has 250 hours in a P–40 before he goes into combat is a hard man to find.

All of us were a little on edge because we were going into something that we hadn't experienced before. This transition was eased by Col. William Momyer, who commands a very famous fighter group which is now located up at the front. We were attached to his group for operations and attached for operations means just one thing and that alone, simply that every night the group operations officer telephoned to my operations officer the missions set up for the next day.

I might explain that a little bit differently—the set-up in the African theater consists of the strategical air force and the tactical air force. We were members of the tactical air force. Under the tactical air force headquarters there is an air support command and this air support command doles out the daily missions to the groups.

HAD ONE-FOURTH OF MISSIONS

A squadron, although it is the basic fighting team in an air force, is actually a small unit, and consequently it would be much better for a single squadron to get its missions from a group headquarters rather than a large air support command headquarters. Colonel Momyer, in giving us the missions, treated us exactly as one of his squadrons. He had three of his own and we had one, that being four squadrons.

We got one-fourth of the missions given by his air support command. Colonel Momyer suggested initially that my flight commanders and myself fly as wing men on one of his missions so that we might get some experience initially before attempting to lead our own men into combat. He also advised me very completely on the details of running a squadron in a combat zone.

At that time, shortly after the 1st of June, the Pantelleria show was going on and our first missions were over that island. We dive-bombed objectives on the island every day until its fall on the eleventh of June. We had our first bomber escort, B–25's, B–26's, A–20's, and some British Baltimores, to the island.

Six of our pilots had their first brush with enemy aircraft during this show but the remainder of us experienced only some of the very inaccurate brand of flak that the Italians throw up. After Pantelleria, Colonel Momyer's group moved to the island and we received our operational control from a fighter group commanded by Colonel McNorris.

From the 1st of July to the 9th of July we escorted bombers to Sicily and these were our most active days. On every trip we were attacked by superior numbers of enemy fighters. The tactics employed by the enemy fighters were to draw off the escorts so they could get to the bombers. Actually they were not particularly interested in shooting down enemy fighters, so we had to take some action to prevent them from shooting us down.

GERMAN AIR TACTICS CHANGED

I would like to say just a word about the German air force. Its tactics have changed quite a bit since the Tunisian campaign. Its pilots are not as eager as they used to be: They have undoubtedly lost the best of them and they no longer press their attacks, as I hear they did in the past.

Whereas, formerly they would stay down and lap it up, they now make one ineffective pass and head for home. On the other hand, the pilots of my squadron who were initially uncertain of themselves, had now developed a very strong fighting spirit and were eager for an opportunity to meet the Germans and really fight it out.

An interesting sidelight in this connection is perhaps the growth of religious feeling among the pilots. Toward the end of the Sicilian campaign I had very little trouble getting together an audience for the visiting chaplain, Colonel Pinnel. He always had a nucleus of pilots to speak to.

Lieutenant Bolling, one of my pilots, was shot down by flak in the Mediterranean and forced to sit in his dinghy for 24 hours and he said to me, "You know, Colonel Davis, when you sit out there that long, shivering from cold at night and trying to hide from the heat of the sun by day and always hoping against hope that somebody is going to see you and pick you up, you just pray automatically."

MEN EAGER FOR BATTLE

After the middle of July we had a squadron of pilots whose fondest dreams were no longer about the girls back home. Instead they dreamed about a German pilot who would be foolish enough to slug it out in aerial combat. At our chosen altitude we had the better airplane, but the German has learned his lesson and now makes his pass from out of the sun, coming down at 350 or more miles an hour and gets on out. We get a fleeting shot as he passes by.

The most interesting engagement took place on a bomber escort mission to Sciacca, Italy. Actually, it probably shouldn't have been as interesting as it turned out to be. The controlling factor is that the leader of the bomber formation couldn't get his bomb bay doors open on the first run over the target.

This necessitated his going around two more times and it gave enemy fighters, who didn't know we were coming, the opportunity to get off their airdrome and come up and get us. We actually saw enemy fighters scramble and climb, and they really do climb.

Our ships were close escort for the bombers that day and we were right with them. The bottom, medium, and top cover was provided by another group of fighters, so we absorbed all of the attack of this 20-plus ME–109's, Macchi 202's, and FW–190's, and on that day we lost a couple more and damaged three.

ONE PILOT MAY BE PRISONER

We believe that one of our pilots is a prisoner of war. Incidentally, on that day General Eisenhower visited our field and during his stay congratulated Captain Hall, one of our flight commanders, on his and our first confirmed victory.

Our field was often visited by high-ranking officers of both the British and American Army. Among the visitors were such men as Air Marshal Cunningham, in command of the Tactical Air Forces; Lord Trancher, of the last war; General House, commanding general of the Twelfth Air Support Command; General Doolittle, who is in command now of the Strategic Air Force; General Spaatz, commanding general of the Northwest African Air Force; and many others which I won't name.

After ditto for the Sicilian attack the 10th of July, we provided cover for the landing beaches on southeastern Sicily. We escorted C–47's, which moved the air echelon of the various units to new bases on the island. On the 19th of July we moved to a base on the southern coast, and we provided air support for the ground troops by dive bombing. We strafed strong points, holding up their advance—trucks that were bottled up on the very few roads on the northern part of the island.

HAD TO TRAIN REPLACEMENTS

After the fall of Sicily we devoted our time to training replacements that reached us from the States. We got new combat crews and the men in charge of the training got a good bit out of the new responsibilities of the responsible places in the formations which they had to fly.

On September 2, I received orders assigning me to the Three Hundred and Thirty-second Fighter Group, and left for the States. I believe that the men that I left behind, instead of being the fledglings they were on the 1st of June, are now seasoned veterans of a combat experience that all of us may well be proud.

That concludes the statement which I planned to make, except for the following remarks: I can tell you that the men of my squadron and my other comrades at the front are just as interested in what you are doing back here as what they are doing over there. They are hitting hard—all of them, of all races, colors, and creeds.

To follow through, there is one big thing those at home can do. That is to "back the attack" with War bonds. I earnestly hope every colored person in America will do his part in the Third War Loan to keep their faith with our fighting men over there.

Let's Plan Now for Our Returning Soldier

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. PEPPER. Mr. President, on Wednesday evening, September 29, 1943, over radio station WMAL in Washington, D. C., the able senior Senator from Utah [Mr. THOMAS] delivered an address on the most timely and pertinent subject, Let's Plan Now For Our Returning Soldier. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is no new thing for governments to take care of veterans after wars are over. This practice started in ancient times. Soldiers have always been beneficiaries of the governments they have protected and of the governments they have helped to set up. But seldom have governments planned for the care of the veterans while the war was still on.

After 10 years of experimental planning in other lines, it is natural that our Government should turn to plans to better conditions for the returned soldier. If we do not plan hardship will follow. Injury will be done to millions of our men and women and their families. The war and post-war adjustments are bound to affect the whole economic structure of our land. Chaos, hard times, and unemployment of the gravest character may follow. That we must assume because the past has proved it. Not to be prepared would be a political blunder of omission which our people should never forgive.

Few realize the magnitude of our present war undertakings. While we have been in the process of adjustment to war industry

for over 3 years, still our industrial economy is not stable. With that fact in mind, it must never be forgotten that it is easier to adjust to a war economy than it is to change from a war economy to one of peace. The problem in adjusting to war is a simple one. It merely means turning all endeavor toward the defeat of the enemy. But the problem of adjusting from war to peace will be a complex one because that means the stopping of a single endeavor and the returning to the complex objectives of our national peacetime economic life. If, with pressure of war upon us, it has taken over 3 years to reach the position we have now, I think we can assume that it will take even longer than 3 years before our land attains a normal economic procedure again when once the war is over. I repeat, it would be a political crime not to plan in the face of these facts.

I have mentioned only general adjustments. Let us remember that the individual's adjustment will also be complex. After 3 or 4 years of war service, men's natures will have changed, their ideals, their outlooks, will be different, and society may change even in its attitude toward these men. Never forget Kipling described things right when he wrote:

"It's Tommy this and Tommy that and Tommy how's your soul,
But it's make way for Mr. Atkins when the drums begin to roll."

U. S. O.'s will not thrive when the war is over.

If the men and women in our Army and Navy have been fighting to preserve what we call "the American way of life," surely the Government which wants to maintain the American way of life, because that is what it is defending, should plan that that way will not be lost in the adjustment after the war when our soldier men and women have saved it through war. President Roosevelt tells us that we must not only win the war but we must see that it stays won. By that he implies a proper international organization for the preservation of peace. But, that is only half the task.

The preservation of the decent life domestically is quite as essential as the preservation of the peace for our Nation internationally. For a nation to be defeated by poverty, disease, and unemployment is quite as disastrous as to be defeated by a military enemy. War is the greatest of all wasters, but a loss of wealth and happiness through shiftless inertia on the part of Government is the next greatest waste. Let us never forget that fact. One brings death by murder; the other by suicide.

Everyone in the United States rejoiced that our President saw this problem as it may affect our fighting men and women. He has put forth his plan. That plan has been criticized by certain elements in our political life as being offered at this time for political reasons and for political purposes. Political indeed! Only those who do not know American history would so charge. The President d'd not mention the fact, but he might have said that most of that which he recommended was already our national policy and that his suggestions will be merely an expansion of what our Government has already put into law.

It is not entirely improper that I should be asked by the Evening Star to occupy this time on their forum in regard to this subject because one of the amendments to the Selective Service Act which I offered, and which I was successful in having accepted by the Congress of the United States, was an amendment giving to those who were called under that act into service a promise that the Government of the United States would see to it that those men who left jobs for this service would have their jobs back when they returned to civilian life. The guaranty of a job then became national policy by law. Being sure of a job is the greatest step toward restoring the individual's economic well-being.

When I showed that amendment to one of our leading Senators, he said it was a fine idea, everyone would be glad to see that the boys had their jobs back, but the amendment was patently unconstitutional. It never dawned on me that anyone would assume that if under the power of the Constitution we had a right to take a man from his job, we might not have a right to restore him to his job afterward. The Constitution of the United States is, of course, our fundamental law, but to me, in its final analysis, the Constitution is merely the people's companion in the accomplishment of the people's purposes. Those purposes may at some time be social, at some time economic, at some time political; they may even, when it comes to the defense of our land, be extremely personal. Under the Constitution, government may take away the property of one for the good of all. It may cause a man to lose his life. Surely, then, it seems to me the Constitution may protect a man in his job if government has been responsible for his loss of a job.

Now, of course, such musing is not constitutional law as such, but that is the way I felt and that is the way I argued. I will not turn to the exact constitutional argument I made on the floor of the Senate in defense of the amendment, but I will say this: The all-embracing war powers under our Constitution are so great that I doubt very much whether anyone will test those powers when they are exerted in a constructive way if they do not test them when they are exerted in a destructive way. This much, though, as a constitutional argument I will say: The Constitution of the United States confers upon Congress the express power to raise and support armies. That power is all inclusive. The Constitution likewise provides that Congress shall have power to make all laws which shall be necessary to carry into execution its delegated powers.

When we guarantee the boys called into the service their jobs in the Federal Government, no one could possibly question that right. The right to force a State to return a job to one of its employees is, of course, questionable. Therefore the amendment in this particular was merely advisory. The great question was whether the Government had the power to ask a private employer to give back to a soldier boy his job; and in a constitutional way this question, then, was simply whether the requirement that private employers restore to their jobs men who had been called to military duty was properly calculated to aid in the raising and supporting of an army. Of this there can be no doubt. The knowledge upon the part of men drafted for the service that their jobs would be open upon completion of their military duty is without doubt a highly important factor in sustaining and improving morale during their period of service. Likewise, the imposition of such a requirement upon employers will play a significant part in lessening economic maladjustments which inevitably accompany the conscription of an army. By reason of these considerations, as well as others of a similar nature, it was plain that a provision to assure the restoration of employment after military service was necessary and proper in the constitutional sense in the exercise of a power to raise and support armies, and is therefore valid under the Constitution.

Further, I think it is proper to say that if the Congress of the United States is not interested in making secure the lives of the citizens of the United States in every particular before, during, or after an emergency, Congress would be thoughtless about the welfare of the citizens of the United States.

What I personally want to avoid is distress of such a nature that will cause us to turn to make-work panaceas. I brought out on the floor of the Senate the blueprint law, providing for the making of blueprints and the gathering together of specifications and the full completion of plans for a works program so that our cities will be ready to inaugurate such a program in case a period of unemployment follows this war. Our experience in the depression showed that it took about 2 years to get ready to hire men on a great public-works project. The blueprint bill was designed to overcome this waiting period when men are desperate for lack of work.

As I remember the last war, the aftermath was worse than the war itself. It is pretty hard to urge patriotism on a group of men who have been called to defend their country and explain that it is a patriotic duty to work on some unnecessary project. You see, war has been with nations so long that all the honors which nations have been able to bestow upon men are given to our fighting men, but few nations have moved forward to that plane where they plan a peacetime happiness for those same men.

We have built and we are continuing to build hospitals for the sick and injured. We will provide vocational training for those who are not prepared enough to enter into their life's work. We will give bonuses and we will make jobs which are so close to ordinary charity that we will break the spirits of men. We will do all those things because we have done them. But surely, have we not enough of a social memory to realize that we will have to do those things and that, therefore, we might just as well plan to do them properly instead of haphazardly? In those plans can we not take care also of those men and women who have been fortunate enough to have missed injury in the war but who have not been fortunate enough to rehabilitate themselves economically in the peace? Think of all the things we do for the man or the woman who is called into the service. Is it fantastic to assume that government has an obligation to these same people when they are mustered out? It is a serious thing to take 3 or 4 years of a young person's life during the time that he or she might be getting a high school or college education. It is hard ever to go back. Young ambitious spirits almost refuse to go back. It is well that they do because there is always a generation following which is cheated or retarded by the preference of the generation of returned soldiers for whom special places are being made. The learning time naturally comes in our premature years. To cheat a man out of the opportunity to prepare for life is a sad cheating in very deed. Yet war does that, for it cheats not only the returned soldier but it also cheats the next generation by giving it the extra competition of the returned soldier.

Of course, our taxpayer associations will say we cannot afford it. Cannot afford good health. Cannot afford education. Cannot afford economic stability. Cannot afford purposeful, happy living. We may also be accused of being paternalistic. If we can afford billions and billions of dollars to destroy, we can afford thousands and thousands of dollars to build up. The economic well-being of our Nation demands it. Our social sensibilities demand it. The logic of the situation demands it. America can no longer say she cannot afford to do some good for her citizens when those citizens have done so much for America.

To a thoughtful person the saddest aspect of war, as that war is related to the people under a government, is that governments find ways to do anything for the benefit of persons during wartimes; persons, therefore, seem to be more valuable in times of war than in times of peace. Are they, though?

Even in times of great emergency, even for the soldier who fights more than all of his other twelve or thirteen million companions in arms, the time spent in actual battle is insignificant compared with the time spent in training and getting to and from the battle. Thus, even in wartime, the training of men is an all-important factor. Without it we would be defeated.

Should not the training for citizenship be reckoned quite as much worth-while? Is not a man, just because he is a man, important in the sight of any democracy? Or, is he to be thought of as the former Kaiser thought of him, merely so much gun fodder? How is it that in a democracy we sometimes slip to that place where we think it is economically unwise to build up and make strong our citizens?

Let me give you one illustration about how universal educatior and alert health measures in peacetime actually pay in wartime. In the testimony of one of the leading personnel officers of our Army before one of our committees it was pointed out that one-half of all the men called for the draft were rejected; that is, 5 out of every 10 men called were rejected for some reason or another. In those States where educational requirements were low, where school nurses were unheard of, and where health regulations were just average 7 men out of every 10 were rejected. But in those States where educational requirements were high, school nurses were furnished, and health administration was on a State-wide basis only 3 out of 10 men were rejected. In addition to that, the acceptance ratio of those persons who enlisted in our armed forces was very much higher in the States of high educational and health standards.

That is a lesson for all of us. Did the States who paid well for the education of their youth and for the improvement of health waste money? Certainly not. There is not greater waste in wartime, or in peacetime for that matter, than a man who, because of lack of educational qualifications or because of health conditions, which could have been remedied easily, proved himself unacceptable for military service.

No matter how glorious we assume war to be, no matter how wonderful the sacrifice of those who give their lives for their country, war must be marked down as an economic waste. It is a destructive process. The economic good that comes from it is merely accidental and not a result of planning. Any person who would plan an economic advantage for his people by way of the war process would be criminal indeed, especially when so many other ways are open.

Now let us stay in the realm of simple economics for a minute or two because when our boys come home and when we try to plan measures for their welfare, there will be those who say we cannot afford it. Isn't it strange that there is no one saying that we cannot afford all of this money that we are deliberately spending for destructive purposes? Hasn't the time come when it will be recognized as the most elementary kind of thinking to say that it is wiser to spend to build men and communities up than it is to spend to destroy men and communities?

I want to see the "four freedoms" enjoyed by us. I want them carried to the rest of the world by those of us who are convinced that the "four freedoms" pay from a dollar-and-cent standpoint. I want all mankind to recognize the worth of the individual life, and to realize that the bigger we can make that life the better it will be for all persons. The American people believe in that doctrine whether they recognize it or not. Most Americans have savings bank accounts. Most Americans believe in insurance. Most Americans have bought Government bonds. There are but few Americans, and they surely are not worthy of being called Americans, who do not realize that a happy neighborhood is a better place to live than one of squalor. When cities zone, they zone for the simple reason that man does not like to be questioned every minute of the day as to whether or not he is his brother's keeper. A happy neighborhood allows him to live his life out with less concern than if each day he must go to his place of employment through filth, squalor, unhappiness, and poverty.

Merchants like to establish their stores in places where people can buy. Do not tell me that the American people do not actually believe in high standards of life for everybody. The little soul who years ago thought that poverty was justified because it caused those of us who were not poverty stricken to express a sense of pity and thus built up our souls failed to realize how worthy of pity such souls were. This manner of argument shows that I believe that the proper care of our returned soldiers is a moral responsibility. I am deliberate in that because this Nation of ours is one built upon faith—and faith in its final analysis demands actions based upon moral reasons. Americans really want to see our Government act because it is right to act. They want right action, not just expedient action. This holds for our international as well as national relations.

I am deliberately making this case a moral issue because the war we are fighting is basically a moral one. The "four freedoms," if they are to be attained, can only be attained through a proper moral attitude, and when morality comes into our economics, then life becomes worth while. The day of the exploiter, the advantage taker, has not gone by any means. Men are not perfect. But show me, from one end of the United States to the other, where we honor today the advantage taker, the exploiter, the man who lives his big life by treading down the small lives of his neighbors. That day has gone in America. Even self-seeking colleges who like to increase their endowments by honorary degrees do not bestow those degrees on exploiters any longer.

Service to one's community and to one's fellow men is demanded of all. The soldier boys, when they return, will be taken care of. There is no doubt about that in my mind. The Government has already made it its policy, and the American people have given this policy their approval. Woe to the politician who goes in front of his people expecting votes who attacks his opponent for thinking of the welfare of American men, women, and children. The dollar-and-cent candidate, when it comes to taking care of our soldier men and women in communities where there are free elections, is a thing of the past in American politics.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. LAMBERTSON. Mr. Speaker, our national debt in this fiscal year will be increased $70,000,000,000.

Is it typical of the abundant life, making a penny look like a dime, or is it that it now takes a dime to get a penny's worth?

Is it possible that the students in the schools set up by Executive order to rule conquered countries will be called carpetbaggers?

It is estimated that by December it will take 80,000,000 envelopes to supply the armed forces each month. Our boys can both fight and write.

A bureau supervisor here ranks according to the number of persons under him. It is being revealed that it is an incentive for hoarding manpower.

Our future foreign policy is not intricate. It is simply a question of whether the ideas of the first President or the last one shall prevail.

We are hearing more and more of the United Nations and less and less of the old U. S. A. The latter is beginning to belong to the "horse and buggy days."

Mr. Stettinius is a capable man, but the only experience he has had officially with other countries is giving them lend-lease money. Naturally the question is raised, where will he be should someone shoot this end of Santa?

Is the Republican Party going to be forced to match the "Nudeal" in benefits from the Treasury to succeed? The urge is there. The future of a sound democracy is not guaranteed even if the fourth term is prevented.

Leaders of union labor are horrified in Kansas because they have been denied the right to organize State employees. In the great Empire State, where union standards have been permitted to lead the world, labor has not had the temerity to attempt to invade that field.

Last Letter of Lt. J. D. Franks, Jr.

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. RANKIN. Mr. Speaker, I am inserting in the RECORD a short statement from the Columbus (Miss.) Commercial-Dispatch with reference to the death of Lt. J. D. Franks, Jr., whose father Rev. J. D. Franks, is a leading Baptist minister at Columbus, in the district I have the honor to represent, together with a letter Lieutenant Franks wrote to his father on the day before he embarked on the bomber raid on the Rumanian oil fields, from which he did not return.

This letter was left with a friend with instruction that, if he did not return, it should be forwarded to his father.

I hope every Member of the House will take the opportunity to read it. I wish every citizen, every person under the flag, could read and reread this young hero's last message to his father. It would do more to inspire patriotism and to sell War bonds than all the ballyhoo in America.

It reads as follows:

When Lt. J. D. "Red" Franks, Jr., took off in his Liberator bomber for the August 1 mission over the Rumanian oil fields, a raid from which he failed to return—he was fully aware of the dangers ahead, but was equally proud of the opportunity to be of real service to his country, his family and friends, and

the Columbus, Miss., he had loved since childhood.

It was during the past week that his parents, Dr. J. D. Franks, Sr., pastor of the First Baptist Church here, and Mrs. Franks, received official notice that their son was killed in action on August 1. Earlier, Dr. Franks received a letter from the son, dated July 31, telling of his assignment for the next day, pointing to the importance of the mission in the victory effort, asking his father not to feel bitter "if anything should happen" and declaring, "I hope you don't get this letter."

His July 31 letter follows:

MIDDLE EAST, *July 31, 1943.*

DEAREST DAD: I want to write you a little note before our big raid tomorrow. It will be the biggest and toughest we have had yet. Our target is the oil fields which supply Germany with over three-fourths of her oil. We will get our target at any cost, and on a raid we never can foresee all that will happen. Our plans are made for high altitude bombing, but this time we are going in at 50 feet above our target so there will be no second trip to complete the job. We will destroy the oil refineries in one blow. Hitler cannot run his planes, tanks, and trucks without this oil, and the war will be shortened, they tell us, by a year after the raid and may knock Italy clear out of the picture.

Dad, if anything should happen—don't feel bitter at all. Please stay the same. I remember how happy you were when I did decide to go to the seminary and then again when I joined the Air Corps in preference of staying at the seminary. You are the best Dad in the world—always too good to a boy who was a pretty bad little redhead at times. I am glad that I am in this group and will get a chance at this important target. I know that it will save many lives from the results, so any cost is worth it. So, Dad, remember that and, the cost whatever it may be, was not in vain. I don't want you to think I gave up before I ever got in the air. No, that is not the reason I am writing this at all. We are all fully aware of the danger of this raid and I always want you to know that I love you and am so proud to be your son and can do this, even though my part is little.

Remember me to all the folks back home. Everyone has always gone out of their way to be nice to me. I love Columbus—everything about it—the people, town, and the spirit behind what makes it such a wonderful place to live. I love everything there.

Take good care of yourself, little Sis, and don't let this get you down, because I would never want it that way. Never change—be the same swell Dad always. Remember, you are doing the best job in the world now and you always have done the best one.

Hope you don't get this letter, but one never knows what tomorrow will bring.

YOUR DEVOTED SON.

My favorite chapter is ninety-first Psalm.

Rent Control and Adequate Milk Supply for New York City Workers

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the CONGRESSIONAL RECORD letters sent by me recently to O. P. A. Administrator Prentiss Brown and War Food Administrator Marvin Jones. These letters deal with two vital wartime problems affecting the people of the city of New York: rent control and an adequate supply of butter, milk, and other dairy products so essential to the health and morale of war workers and their families. Since my letter to Mr. Brown was written rent control for New York City has been established. However, the terms of this control are such as to continue to work a hardship on thousands of families, whose rents while not having been increased substantially since March 1, 1942, did go up tremendously prior to that time. The other problem—that of an adequate supply of dairy products—is one of utmost importance to the maintenance of the health and morale of war workers and their families.

The letters follow:

SEPTEMBER 22, 1943.

Administrator PRENTISS BROWN,
Office of Price Administration,
Washington, D. C.

DEAR MR. BROWN: I am writing this letter to urge speedy and favorable action upon the petition of Mayor LaGuardia and others for the establishment of a system of rent control for the city of New York. I represent a district in east Harlem where rents were exorbitant even before the beginning of the war, but where now even these rents have increased at a rapid rate. By October 1 it may be expected that a desperate crisis will face thousands of families in east Harlem, who live in crowded tenements, who have received no substantial increases in wages, and who find food costs 25 and 30 percent above the level for September 1942. If the anticipated increase in rentals goes into effect in October, we may expect several thousand evictions in my district alone.

Many thousands of my constituents are engaged in vital war work at the New York Port of Embarkation, the Federal Shipbuilding & Drydock Co., at Picatinny Arsenal, and in other war enterprises. It is a distinct hardship for these war workers to face increased costs for food and shelter and to face possible eviction in the next few days. In the past few days I have talked with many of these workers, who are definitely alarmed at the prospects of rent increases or evictions, or both, and who are insisting upon effective rent control for New York City.

I cannot urge too strongly that the Office of Price Administration not only act favorably in this matter but that as well that such favorable action should be taken immediately in order to alleviate the fear and worries of thousands of New York City families engaged in vital war activity. The immediate establishment of rent-control procedures will be a notable contribution to the war effort in New York City.

Sincerely,

VITO MARCANTONIO.

SEPTEMBER 29, 1943.

Judge MARVIN JONES,
War Food Administration,
Washington, D. C.

DEAR JUDGE JONES: Recent action by the Office of Price Administration in raising the ration-point values of butter and other dairy products has served to accentuate the already acute problems of homemakers in my district to provide a wholesome and balanced diet for the war workers of the family and the family's children. This action has served as well to indicate the need for immediate action on the part of the War Food Administration to accomplish greatly increased production of dairy products in the New York milkshed.

I am aware that you have indicated the establishment of a feed subsidy program for the dairy farmers. The plan for this subsidy thus far revealed seems in my opinion to be a good beginning, but even yet not adequate to meet the very crucial problem of milk shortages in urban areas of New York.

It seems clear to me that the subsidy provided farmers in the New York milkshed must be sufficiently large to provide genuine incentive to them to increase production, to engage in all-out war production. In the final analysis substantial increases in dairy foods can be looked for only from among the thousands of small family-sized dairy farms in New York. This is evident because larger farms already face a severe manpower shortage which is not likely to be sufficiently improved to provide for substantial increase in production. On the other hand a genuine incentive to the family-sized dairy food producer can result in the full utilization of the manpower and facilities of such small units.

I am aware that present plans are for a subsidy of 25 cents per hundred pounds of fluid milk for the New York milkshed to be distributed indirectly; and, that the underlying reasons for this program are said to be the good hay crop in the New York region and the increased costs of direct distribution of the subsidy.

I am writing this letter to urge most earnestly that the amount of the subsidy be increased and that payments be made directly to the individual producer. A larger subsidy will have the effect of definitely spurring production among the small family sized dairy farms. Direct payments will, in my opinion, prove cheaper in the long run because they will guarantee the achievement of the goal of increased production. It would be lamentable, indeed, if even after provision of a meager subsidy inexpertly distributed there still existed a milk shortage. Such a state of affairs would furnish fuel to opponents of subsidies; it would create a deep crisis in our wartime food problem.

It is for this reason that I am writing to urge an effective subsidy in order to provide real guaranties of increased production. At the same time an effective subsidy will have the effect not only of providing adequate supplies of dairy foods but of keeping the costs of these foods within the reach of the low-incomed families in urban communities. Both objectives are vital to our war effort.

I will appreciate your reaction to my suggestions.

Sincerely,

VITO MARCANTONIO.

Physically Handicapped Given Chance During War

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a short statement pertaining to work which the physically handicapped are today doing for our Government.

Mr. Jerry Kluttz presented these facts in his Federal Diary published several weeks ago in the Washington Post:

THE FEDERAL DIARY

(By Jerry Kluttz)

PHYSICALLY HANDICAPPED GIVEN CHANCE DURING WAR

To the physically handicapped, the war has been a real blessing. It has given them a chance to make a decent living. Employed here recently by Federal agencies are an armless phone operator, a one-armed teletype operator, a truck driver without feet, one-armed chauffeurs and truck drivers, a blind mechanic, and many others. In the past 6 months more than 2,000 physically handicapped persons have been placed in Federal jobs by the Civil Service Commission Physical handicaps are no longer considered. The only test is: Is the person qualified to do the job and can he do it without hazard to himself or to his fellow workers?

The blind are finding it fairly easy to get jobs There are now blind dictaphone and card punch operators. War Department has trained blind persons for inspection work. The blind, with an acute sense of feel, have proven to be excellent inspectors of clothing and other materials. A totally blind teacher recently was hired by Civil Service. The War Department recently offered to set up an office where all blind persons would be employed. However, some of the blind leaders objected to segregation. They insisted that the blind be treated as any other workman. The deaf hold many types of jobs, machine operators, clerical, professional, and labor jobs.

Prevention of Future Wars

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Springfield, Mass., August 19, 1943:

Ladies and gentlemen, we have come here today to talk to you about the consequences of this war in which all our energies and resources are now engaged. You all believe, as I do, that we shall win the war in due season—soon or late. You may believe as I do that at least in Europe very significant developments are already taking place which might lead to far-reaching military consequences, and will certainly lead to far-reaching political consequences.

Just as in 1940 I was much concerned that we be prepared for war, now in 1943 I am concerned that we prepare for peace, and that our peace be a victorious, fruitful and durable peace. What is the alternative? It is that as our young men are losing their lives today to make our country safe from foreign aggression, our sons and grandsons will lose their lives 25 or 50 years from now in the same cause. If this happens, our dead will indeed have died in vain.

If we are prepared to look upon repeated wars every generation as the inevitable product of our society then let us take immediate and realistic steps to put our whole civilization into the bowels of the earth where the flying fortresses shall not strike it by noonday nor the bombers by night. For in the wars of the future nothing above ground will be safe. Cities of a million people will be reduced to ashes overnight, their surviving inhabitants squeaking and gibbering, as Shakespeare said, in the ruined streets.

Fortunately we are today in a position to outbuild our enemy in planes and to keep enemy planes mostly from over our cities. Mostly, but not entirely, for, as we all know, the island of Oahu was destructively bombed in December 1941, and enemy shells have fallen within the limits of the continental United States. Every city, town, and hamlet in the United States has today, as you all know, an organization against air raids, and any day one of them may face a real, even a crucial test. Nothing seems more certain than that the bombing planes of the future will be far more powerful and devastating than those of today. They will carry for a far longer distance a much heavier load of more highly explosive bombs, aimed with higher accuracy. We must not imagine because our cities have escaped destruction in this war that they will necessarily do so in the next. In the nature of things no country can be wholly immune from attack. Think of the gratitude which the people of Hamburg and Cologne must feel to Air Marshal Goering for his assurances, no doubt entirely sincere, that no bombs would fall on German soil. The bombing which almost knocked England out of the war only 3 years ago was child's play to the bombing of today. If you can have those changes in 3 years, what will be the changes in the next 30 years?

I am arguing that we want to keep this country out of future wars. But I don't think that you will disagree with me about this. You will say, "Sure, keep us out of war, but how can you do it?" Well, by far the best way and the only sure way to keep the United States out of wars is not to have the wars. How can you abolish war as an institution? That is not such an easy question. It is a good deal easier to describe several ways in which you can't abolish wars. You can't abolish wars by passing resolutions and forming societies, either select and learned societies or large and popular ones. You can't abolish wars by acts of Congress like the Neutrality Act which Congress passed in 1935. That famous piece of legislation was passed on the theory that if we looked the other way whenever there was a war, or held our hands in front of our eyes, and had no truck with the combatants, we should be perfectly safe. It soon developed that this view was the reverse of the truth.

The only way to keep out of a major war is to make sure in advance that aggressor nations are always outnumbered, outgunned, and outarmed by nonagressor nations. Perhaps you will say "This is the old bankrupt idea of the balance of power." But the idea is not to see the forces of righteousness and the forces of unrighteousness just teetering the scales even. It is to see the scales tip down so heavily against military aggression that military aggression can never rise to its feet It would be better to call this the doctrine of the preponderance of power rather than that of the balance of power. Here in Springfield you do not maintain an even balance of power between your city police and the thugs, and robbers, and pickpockets, and murderers, and dope peddlers, and white slavers, and so on. On the contrary, you try to keep the hand of society so heavy on these lawless elements that they know in advance that they can never get away with their foul deeds This is the way we have got to approach the problem of an international society.

That, at any rate, is the way some of us feel in Congress and that is why we are here talking about it to you good people. We are not here as Democrats or Republicans, but as Americans whose first thought is not some vague, far-off, fantastic ideal, but the integrity and security of the United States of America.

The object of any foreign policy of this country is the integrity and security of America. There have always been some people in this country who have thought that a foreign policy was a luxury not to be thought of until complete perfection had been attained in all domestic arrangements. One of these people wrote me the other day. He was a successful grocer in my district and what he said boiled down to very plain English was something like this: "Here are all of us grocers getting the tar kicked out of us by the O. P. A., which is today the greatest evil in the country, and here you are running around talking about a foreign policy. Why can't you put your mind on something practical nearer home?"

I said to my friend in plain English something like this: "Suppose you keep your shirt on for a minute and do a little thinking. The reason you are plagued with the O. P. A. is that we have rationing and price control. The reason we have to have rationing and price control is because we are at war. The reason for our being at war now is that we failed to make suitable arrangements at the end of the last war to prevent this one. I want to make suitable arrangements now to prevent the next one. I shall do all I can now to help you with the O. P. A., but I don't want your son to be either a soldier in a new war or a grocer with new O. P. A. trouble. If the United States Senate had done a better job in 1919 and 1920, you wouldn't now be bothered by the O. P. A."

There have been several plans put forward in Congress to consider the position of the United States in the post-war world. We have a resolution in the House, the so-called Fulbright resolution unanimously reported out of the Foreign Affairs Committee. This simply provides that "the Congress expresses itself as favoring the creation of appropriate international machinery with power adequate to maintain a just and lasting peace, among the nations of the world, and as favoring the participation by the United States therein." This resolution will probably come up for a vote in the House next month or the following month.

In the Senate we have pending a more specific comprehensive resolution introduced by two Republican Senators, BALL, of Minnesota, and BURTON, of Ohio, and two Democratic Senators, HILL, of Alabama, and HATCH, of New Mexico. On account of the coincidence of the initials the newspapers have chosen to describe the resolution as if it were a chemical formula, B_2H_2. This is a handy term and I shall use it.

B_2H_2 reads like this:

"Resolved, That the Senate advises that the United States take the initiative in calling meetings of representatives of the United Nations for the purpose of forming an organization of the United Nations with specific and limited authority:

"(1) To assist in coordinating and fully utilizing the military and economic resources of all member nations in the prosecution of the war against the Axis

"(2) To establish temporary administrations for Axis-controlled areas of the world as these are occupied by United Nations forces, until such time as permanent governments can be established.

"(3) To administer relief and assistance in economic rehabilitation in territories of member nations needing such aid and in Axis territory occupied by United Nations forces.

"(4) To establish procedures and machinery for peaceful settlement of disputes and disagreements between nations.

"(5) To provide for the assembly and maintenance of a United Nations military force and to suppress by immediate use of such force any future attempt at military aggression by any nation.

"That the Senate further advises that any establishment of such United Nations' organization provide machinery for its modification, for the delegation of additional

specific and limited functions to such organization, and for admission of other nations to membership, and that member nations should commit themselves to seek no territorial aggrandizement."

As to (1), prosecuting the war against the Axis and using all our military and economic resources for the job, there can be no difference of opinion. The same goes for (2) and (3). No one doubts that as we occupy territories that have been under the German yoke we must govern the territories, feed the hungry, and generally take the necessary steps to restore the functioning of economic life and government in the country.

(4) Procedures for the peaceful settlement of disputes and disagreements is the idea of international arbitration which is centuries old and which has been quite generally accepted ever since the days of the Hague Court.

I suppose the debate on B_2H_2 will center around (5), the international police force. This is where the Wilsonian League broke down. As the lawyers said, it had no sanctions. Laymen said it had no teeth. The police force is the teeth. I think that there must be some such international force to keep the peace, to constitute what I have called the preponderance of power.

Opponents of this police force will do everything possible either consciously or unconsciously to misrepresent its nature. They will tell you that this force will conscript your sons and take them into foreign lands for long years at a time. It will do nothing of the sort. Such a police force could be and should be recruited by voluntary enlistment or enrollment. It could be and should be highly paid. It should have at its disposal the preponderating part of the world's military air force, and the world's navies. How the force should be composed is a question to be worked out. Mr. Ely Culbertson, for one, has made very specific, interesting, and reasonable recommendations. But one does not need to be dogmatic.

The only vital thing is that we collaborate with our allies to provide for the future policing of the world for the prevention of acts of aggression. At this point someone may say, "What is an act of aggression?" I do not think that we need spend much time on abstract definitions. It generally isn't very difficult to determine which of two parties to a quarrel started it. Ethiopia was not the aggressor against Italy, China against Japan, or Poland against Germany.

Another idea that people have is that when we work with other nations all we do is to give away the assets of the United States and get nothing in return. Of course, if we are stupid enough to do that, we deserve no sympathy from anyone. The idea of collaboration with other nations for the peace of the world is not to have the United States run an international W. P. A., to pay the Eskimos for raking the leaves which we furnish them to rake, or anything of the sort. This idea of collaboration is to keep America secure, but recognizes that to keep America secure you have got to have some friends. Populous and powerful as this country is, we have only around 7 percent of the world's population. Productive as it is, a Europe completely united against us or an Asia completely united against us could outproduce us in all the essentials for making war. Rich as we are in resources, we are far from being independent of the rest of the world. In fact, we must recognize that this country is not so rich in natural resources as it once was. The iron is running low in the Mesabi Range. The oil supply will not last forever. The future is with the vegetable matter that grows, not with the mineral deposits that are depleted. And you can grow as much on any other continent as you can on ours.

This is no time for America to be arrogant. Where should we be today if the British had not won the Battle of Britain? Where should we be today if the Russians had given in at Stalingrad? Remember the simple historical fact that we have become involved in every world war. Even in Colonial times the European wars caused reflex wars here like King Philip's War, the French and Indian War, and so on. We fought France rather informally in the earlier days of Napoleon. Later on we switched in 1812 and fought the British in a war that gives us little cause for pride or satisfaction. We failed to keep out of the First World War though we had at the head of the State Department in the person of William Jennings Bryan the greatest pacifist in our history and in the White House in the person of Woodrow Wilson a man with a religious abhorrence for war.

In 1939 we kept saying that this was not our war, that the Yanks were not coming, and so on. But all that changed on a quiet Sunday morning in Oahu. The Axis knew it was our war, even if we didn't. Some people will say, "Think about peace when the time comes. When the war is over. When the tumult and the shouting have died. When the captains and the dictators have departed."

The answer to that is in the old couplet: "When the devil was ill, the devil a monk would be; when the devil was well, the devil a monk was he." If we don't forge our weapons and weld our metals in the hot fires of war, we shall not do it in the cool days of a vapid normalcy. It was the policy of normalcy that got Hitler and Hirohito to planning the overthrow of our Republic. I ask you now to help us who are working in Congress for a wiser policy which will bring to our sons and grandsons not death but life. You will then be following the motto of this Commonwealth, whose sword has ever sought "a tranquil peace under liberty."

Dedication of Guntersville, Ala., Public Use River Terminal

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Hon. JOE STARNES, master of ceremonies at dedication of Guntersville Public Use River Terminal, Friday, September 24, 1943, broadcast over MBS through station WJBY:

Fellow Americans, we are assembled at the southernmost point on the Tennessee River at Guntersville, Ala., to dedicate with appropriate ceremonies the opening of the Guntersville Public Use River Terminal. It is one of the four public-use terminals constructed by the Tennessee Valley Authority to provide docks, storage, and other terminal facilities for the ever-increasing volume of river traffic on the Tennessee River. In the magnificent audience present are national leaders in the fields of motor, rail, and water transportation; shippers of agricultural, building, industrial, and petroleum products from the Great Lakes, the Midwest, the Ohio Valley, the Gulf Coast, and the Southeast; public officials representing local, State, and National Governments which include members of State legislatures, Governors, and Members of Congress from the Tennessee Valley area. We have also the Chairman and the Board of Directors of the Tennessee Valley Authority, the Chairman and members of the Interstate Commerce Commission, the president of the Inland Waterways Corporation, and The Adjutant General of the Army representing the War Department, representatives of the Navy Department, and the Maritime Commission. The presence of these representatives of business and government indicates the importance and the character of these ceremonies.

In this spacious harbor, with its sylvan setting, supplies of grain from the Midwest, motor-combat vehicles from the Detroit area, and petroleum products from the Gulf are being unloaded. From this point will be shipped cotton, pig iron, building material, and other products of the region. Although the giant Kentucky Dam near the mouth of the Tennessee will not be completed until early in 1944 and the first 200 miles of the river has only a 6-foot channel the growth of water traffic over this stream has been phenomenal.

At present the T. V. A. and the area it serves has gone to war. All the resources of this region—and they are varied and immense—as well as its people, are dedicated to winning the war for freedom. Half of the aluminum for our plane program, elements for production of synthetic rubber, food, and fiber for victory, and the greatest chemical warfare arsenal in the world, and vast explosive manufacturing plants are a part of our contribution to the safety and security of the Nation. The electric power made available on this the second largest power-producing stream in the New World has made it possible to attain production goals which guarantee victory and freedom for our people.

The use of our inland waterways and this port with its modern terminal facilities has saved our Government hundreds of thousands of dollars in carrying charges on war equipment. This use has helped to relieve our railways, which have done a magnificent job, and has saved precious rubber and gasoline.

We have here a perfect example of what a unified transportation system of motor, rail, and water can do to develop the resources of a region and promote the national economy. These facilities and this system can serve in war and in peace. In the postwar period the Nation can well afford to include the improvement of its inland waterways and develop its hydroelectric power possibilities as a part of a program to develop our natural resources and provide needed employment. The hope of the industrial development of the South with the consequent raising of its standards of living and its income to the national level lies in the development of its inland waterways and its hydroelectric possibilities. The T. V. A. has given us a shining example of efficiency and economy in operation. Its program of developing the natural resources of a region by coordinating the forces of nature for service to the human family heralds the dawn of a new era for the South and the Nation.

Increase of War Production

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. OUTLAND. Mr. Speaker, American labor and American management are doing a fine war-production job. They will continue to cooperate to the utmost until the dictators come to their

inevitable surrender. Labor and management are not looking for praise for their efforts. They know full well that it is their patriotic duty to do their bit on the home front while their sons and brothers are risking their lives on the battle fronts.

They are looking, however, for all the cooperation they can get which will aid them in increasing even more their record output of the materials of war. It is imperative, especially because of the manpower shortage, that management, labor, and Government make the most efficient use of our present working force.

This can largely be accomplished by improving working conditions in plants through providing advice to labor and management on programs of prevention and control. Government can help industry and workers to solve the problems relating to accident and health protection, medical care, proper food, housing, transportation, shopping, and child care. Solution of these problems, even in part, will go far toward stepping up our war production.

Such a remedy is provided for in the proposed Working Conditions Service of the United States Department of Labor, for which President Roosevelt is asking a supplemental appropriation of $709,000. Provision will be made by the Department of Labor to assist individual war plants so that management and labor can solve their specific problems and meet output schedules with a fully productive work force.

The Department of Labor has been highly successful in its preventive work and it can be made more effective by a supplemental appropriation.

The National Committee for the Conservation of Manpower in War Industries, set up by Secretary of Labor Perkins before Pearl Harbor, has done a splendid job in reducing industrial accidents and in training supervisory personnel in proper safety methods. Since July 1940, 21,525 war plants have been serviced by the committee and approximately 39,000 key supervisors have received safety training in 116 engineering colleges in different parts of the country.

In terms of accident prevention, over a million man-days were saved to 10,500 war plants serviced by the committee in 1942 alone. Over two-thirds of these plants have markedly reduced their accident frequency rates. During the first 6 months of 1943 this percentage increased to nearly 75 percent.

Contrast this record with that in the 70,000 war plants not yet serviced by the committee for lack of funds and personnel. The core of war production is manufacturing; this industry accounted for 20 percent or 497,970 of the more than 2,300,000 job injuries estimated to have occurred during 1942 in the United States.

The Department of Labor may well be proud of its accident-prevention work. It has been definitely in the interest of increased war production and is so recognized by management and labor. Such a preventive program should be expanded at this time so as to take in the entire field of a working-conditions service for the benefit of a Nation engaged in total war. The requested supplemental appropriation would be of tremendous value to this end.

High Lights on United States Navy's History

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Cornwall, yeoman second class, United States Naval Reserve:

In the course of American history, two events of outstanding importance took place on the date of October 27. In 1775, on that date, a bill providing for the construction of the first ships of the Navy was presented to the Continental Congress and, therefore, that date may be considered the birthday of the American Navy. October 27 is also the anniversary of the birth of the late President Theodore Roosevelt, who did so much for the upbuilding of American sea power and the establishing of sound national policy for the country. It is because of the above facts that October 27 was selected as the date for the annual observance of Navy Day.

On November 1, 1775, a letter from George Washington was read in the Continental Congress. In it he deplored the lack of naval strength. Next day an appropriation of $100,000 for the construction and equipping of a naval force was authorized. A committee was appointed to administer naval affairs.

Later that same month the tiny *Alfred* and *Columbus* were commissioned—the first ships in the Colonial Navy. Saltonstall was the captain of the *Alfred* and Whipple was captain of the *Columbus*. The *Providence* was the last of the fleet to be commissioned in the Continental Navy. Her captain was Tom Hazard. The total number of vessels which served the Continental Congress was 42.

The day he got his papers, John Paul Jones, flag lieutenant of *Alfred*, repaired to the Hall of Congress, where John Hancock gave him a commission and the new flag that was to be the standard by sea of the United Colonies—13 stripes, alternate red and white, with a canton bearing the rattlesnake of Carolina coiled round the pine of New England and the motto "Don't Tread on Me!"

The original naval committee (Silas Deane, John Langdon, Christopher Gadsden, Stephen Hopkins, Joseph Hewes, "Light Horse Harry" Lee, and John Adams), was succeeded by a second, which suggested a fleet of 13 vessels to be ready by March 1776, and recommended appointment of a third committee to supervise construction and equipment. The Congress adopted this report and a Marine Committee was appointed with 13 members, 1 for each colony. The Marine Committee, the forerunner of the Navy Department, administered naval affairs until December 1779, when it was succeeded by a Board of Admiralty. In 1781 the cumbersome administrative functioning of committees was realized and authority finally vested in 1 man, Robert Morris, Agent of Marine. After 1784, when Robert Morris retired to private life, the affairs of the Navy consisted only of settling accounts. There were no ships and no establishment to administer.

The early American Fleet was commanded by Esek Hopkins, who, on December 22, 1775, was granted a commission by the Continental Congress as commander in chief of the fleet. When Hopkins surrendered his command a year later the commission he had held was not passed on. During the remainder of the Revolutionary War the only commissioned officers in the Navy were captains and lieutenants.

In the chaos that followed the Revolutionary War the Continental Navy disappeared. By 1786 the United States had not a single armed vessel. Soon it was evident that a navy cost less than tribute to pirates and the necessity for one began to be felt. On March 27, 1794, the President of the United States signed an act providing six frigates for the purpose of protecting United States shipping from the ravages of Algerian pirates. The act states specifically that there was no intention of inaugurating a permanent navy, though, in fact, it did just that.

With renewed activity, due to the act of 1794, the War Department took over the handling of the Navy's business. Officers were appointed to the new service, and the building and equipping of the frigates went forward under the War Department administration. The need for a separate Navy Department was soon apparent, and on April 30, 1798, Congress passed the legislation establishing the office of Secretary of the Navy. The Navy Department, as we know it today, began to function on May 21, 1798, when Benjamin Stoddert took office as the first Secretary of the Navy.

The history of the Navy is replete with action. The quasi-war with France, 1798–1801, saw its baptismal fire. Tripolitan pirates next brought it into the Mediterranean. Then came the War of 1812. Suppression of the slave trade necessitated considerable activity.

As it passed from sail to steam, the Navy made its contribution in the campaigns of the Mexican War and in the more peaceful propagation of occidental civilization by the visit of Commodore Perry to Japan.

The lessons of the Confederate War established more definitely than ever the importance of adequate naval armament. Despite these lessons, the canvas on the masts of the Navy's ships flapped aimlessly for 15 years in the doldrums of post-war antipathy.

The first step toward a new Navy came under the administration of President Garfield, when an advisory board was appointed to report on the needs of the Navy. President Arthur, in his first annual message in 1886, declared: "I cannot too strongly urge upon you my conviction that every consideration of national safety, economy, and honor imperatively demands a thorough rehabilitation of the Navy." In spite of the reluctance of Congress to accede to his views, the birth of a new Navy occurred in his administration.

Later, under the leadership of President Theodor Roosevelt, naval development went forth apace. The World War No. 1 added another chapter of expansion. In June 1940 the phrase "two-ocean navy" was heard for the first time. This was when France fell and the fall of England seemed imminent. Under the leadership of President Franklin D. Roosevelt, we have now the largest navy in the world. The present global conflict has emphasized the capital importance of the American Navy.

We have built a new Navy since December 7, 1941. Four years ago the Navy had a total officer strength of about 10,000; today more than 185,000. Four years ago it had 3 aircraft carriers; today—despite battle losses—dozens. Our ships have stood the

test of battle. Initial weaknesses in anti-aircraft armament and in fire-fighting equipment have been remedied. American ships today are tough; they mount more armament—particularly more antiaircraft guns—than those of any other nation.

Sea battles have proved the basic soundness of American naval tactical doctrine; that soundness was tested at Midway and Coral Seas.

Americans are traditionally proud of their Navy, and they have good reason to be, for throughout its stormy, illustrious existence it has remained a powerful and courageous striking force. The fanatically loyal spirit of Navy men is the result of an unbroken stream of tradition transmitted from hand to hand from the Revolution to the present day.

Former American Ambassador Speaks at Polish Commemorative Program in Philadelphia

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by former American Ambassador William C. Bullitt, which appeared recently in the Polish Catholic Press Agency's Weekly Review:

At a meeting of the Polish Relief Committee of Philadelphia, in the Academy of Music on Sunday September 12, 1943, Hon. William C. Bullitt, former United States Ambassador to France and Soviet Russia, delivered an address on the occasion of the fourth anniversary of Poland's entry into the war.

In his address the former Ambassador gave a clear description of Polish political affairs, from 1914 when he was war correspondent in Poland. Since then he has seen "Poles at many tragic hours facing death with clear eyes, calm souls, and faith in God." Much has changed since that time but two things have not changed: "the spirit of Poland and my conviction about the future of Poland. Poland will rise again and live, free and independent, the spirit of the Poles is unconquerable."

"Polish policy," continued the Ambassador, "was firmly based on the simple principle that no Polish Government would ever give up an inch of Polish soil or submit to any new partition without a fight. This fact was known to every statesman in Europe and America.

"The Poles have learned through the centuries that peace cannot be sought by appeasing a dictator—any dictator—that each concession is followed by new demands, that each partition is followed by a new partition until there is nothing left to partition.

"Before Hitler attacked Poland, he knew that Poland would fight. That first act of Polish courage made possible the hope of freedom that exists today for all the nations of Europe. And it is to the eternal honor of the Poles, that, of all the peoples of the world they were the first to dare to face the forces of evil incarnate in the Nazis.

"At the end of the war, the devastation in Poland will be even greater than the devastation at the end of the war in 1914; and the massacre of millions of Poles, especially of leaders in all walks of life, will place before the people of Poland a task of reconstruction of terrible proportions. I believe that the people of Poland will be equal to the task.

"Poland will live again," concluded Mr. Bullitt, "because each Pole has at the core of his being the determination that is expressed in the first words of the Polish national anthem: 'Poland is not dead while we live!'"

MANY CITIES HONOR POLAND

New York City paid a glowing tribute to Poland at the civic manifestation held in Town Hall under the auspices of the American Women's Voluntary Services, attended by more than 1,200 persons. The Star Spangled Banner was sung by Miss Emily Roosevelt and the Polish national anthem by Sgt. Pawel Prokopieni, the singer of Tobruk. Miss Regina Zaorska, chairman of the organization committee, introduced Mrs. Edgar Leonard, who presided. The speakers were the Honorable Michael Kwapiszewski, Polish Minister Plenipotentiary, who represented His Excellency the Polish Ambassador; Maj Cora Bass, W. A. C., Mr. William Agar, president of Freedom House; Mr. Henry Noble Hall, war correspondent, and Prof. Oscar Halecki, director of the Polish Institute of Arts and Science. Prof. O. Halecki congratulated the organizers on having chosen the 12th of September to commemorate Poland's heroic resistance and to pay tribute to General Sikorski, her great leader, for it was the anniversary of a glorious Polish victory won by the Polish King Jan Sobieski before Vienna when European Christendom was saved from the Ottoman invaders more than 250 years ago.

Poland's resistance to Hitler's unprovoked aggression in September 1939 was commemorated at a mass meeting in the Veterans' Auditorium in Syracuse, N. Y. The Reverend C. Piejda delivered the invocation, Attorney John Chmiel presided. Mayor T. E. Kennedy, the Reverend J. Kociela, and Douglas Drummond, of the United States Treasury, were the principal speakers. During the program selections were rendered by Polish refugee artists, Miss Eva Jaxa Debicka, pianist, and Mr. Z. Protasiewicz. War bonds amounting to $51,000 were sold to Polish members of the audience.

Similar programs were arranged during the past week in Passaic, N. J.; Bayonne, N. J.; and Bronx, N. Y.

Post-War Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on post-war planning which I delivered last Friday at the New York Times forum on post-war foreign policy, in Times Hall, New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two events of far-reaching importance in determining American foreign policy have taken place this month.

On September 7 the Republican Post-War Advisory Council declared unanimously in favor of "responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world."

Last Tuesday, September 21, the House of Representatives passed, 360 to 29, the Fulbright resolution favoring the "creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world, and as favoring United States participation therein."

The value of these two actions is that they constitute a recognition, first, of the tremendous urgency and importance of determining what shall be the post-war foreign policy of the United States, and second, that peace can be maintained in the world only by joint action of many nations and that the United States must and shall assume its share of responsibility.

We recognize that neither of these declarations constitutes a clear and definite statement of United States policy. They state an objective, the maintenance of world peace and justice by cooperative action, but the policy, the specific steps necessary to achieve that objective, must still be decided. The next step is to decide the form and degree of international cooperation we in the United States are prepared to support.

Unless we decide these questions by positive action of Congress now, we face a grave danger that the tragic epilogue of World War No. 1 will be repeated after World War No. 2. Our people then were overwhelmingly in favor of our participation in cooperative international efforts to maintain peace, but the issue was drawn, not on that broad objective but on the specific means of attaining it, namely the League of Nations. And it was drawn even more closely on certain specific articles in the League covenant.

The same thing will happen after this war, in fact already is happening. Our militarists, imperialists, and extreme nationalists are all in favor of the principle of international cooperation to maintain peace today, but they oppose now and will oppose later any specific policy or program to attain that objective. Our best hope of winning the lasting peace all of us hope for is to fight out and decide this all-important question of specific policy now, while the terrible cost of war is close to us and before scores of extraneous problems can be dragged in to becloud the main issue.

Once we accept the principle of international cooperation, there are two further basic decisions to make. First, shall our machinery of cooperation consist of a system of alliances or pacts, or of an organization? And second, what minimum authority and power must this machinery possess in order to do the job?

The four authors of Senate Resolution 114, two Democrats and two Republicans, sought to put into plain English the very minimum degree of international cooperation we believe is necessary to prevent World War No. 3 from happening.

We decided the first question in favor of an organization. Alliances are unstable, it is doubtful whether the people of the United States would ever accept them, and almost inevitably they tend to become imperialistic, balance of power devices, leading eventually to war. Organization, with strictly limited authority in clearly defined fields, is the democratic method of meeting this problem, and we are, after all, fighting this war for democracy and peace, and against tyranny and aggression, which is an exaggerated imperialism.

The United Nations, with provision for admission of other nations to membership, is the obvious nucleus for the international organization, whatever its eventual name may

be. The United Nations will win the war and write the peace. We also propose that the United States take the initiative in getting the United Nations organized now. The reason for that is simple. Our action in repudiating the League after World War No. 1 is still fresh in the minds of our Allies. They can hardly proceed effectively with post-war plans until they know with some assurance and definiteness what our position will be. Only a clear and definite directive from Congress can provide that assurance.

One basis for opposition to a specific statement by the Senate now is that we do not know what England or Russia wants. It might be answered by the simple fact that we know more about what position Britain and Russia are likely to take than they do about our position. The United States position is the biggest single question mark today in post-war international planning.

But fundamentally, the views of other nations have nothing to do with the initial determination of United States policy. What we are trying to decide is the kind of specific international program to maintain peace the United States will support. The program finally adopted will be hammered out in conference with our allies and will in due course be presented to Congress for acceptance or rejection. If the United States takes a clear, positive position, that position will have tremendous influence in shaping the final program, but our influence will be much less if we have no such clear policy.

Building a just and lasting peace is the greatest single task facing us and the world today. It is our obligation to ourselves to state as clearly as possible what we believe to be the best answer to the problem and then do our best to gain international acceptance for as much of it as possible.

Having decided on an organization with the United Nations as a nucleus, what is the minimum authority such an organization must have to maintain world peace? We state them in the resolution as follows:

"To establish temporary administrations for Axis-controlled areas of the world as these are occupied by United Nations forces, until such time as permanent governments can be established.

"To administer relief and assistance in economic rehabilitation in territories of member nations needing such aid and in Axis territory occupied by United Nations forces.

"To establish procedures and machinery for peaceful settlement of disputes and disagreements between nations.

"To provide for the assembly and maintenance of a United Nations military force and to suppress by immediate use of such force any future attempt at military aggression by any nation."

Why are these the minimum powers? The two functions of relief and temporary administration are with us already. All of us who have watched governmental institutions evolve and develop realize that the policies followed in relief and temporary administration activities will to a very large degree set the pattern for the post-war peace. If that peace is to be a United Nations peace, those policies should be United Nations policies. Perhaps if there had been some such agreement among the United Nations, or even Britain, Russia, and the United States, before north Africa, Russia's attitude might not be the question mark it is today.

Establishing procedures, principles and machinery for peaceful settlement of international disputes is imperative if we really mean to outlaw war as a method of settling them. There is not much argument over this function or over the first two for that matter.

The real dispute is over the question of whether our international organization shall have military force at its command to stop future attempts at military aggression or whether we shall rely in the future on the forces of individual nations being used to stop such attempts at aggression.

The League of Nations tried the later method. It did not work. Individual nations, once the bitter lesson of this war has faded with time, are likely to do just what they did in the thirties—refuse to fight or risk war simply to save the peace of the world. It is particularly true of democracies, where the people's hatred of war is a powerful influence, that individual nations are extremely reluctant to even risk war except when their own security is threatened vitally, and sometimes they are reluctant even then.

Certainly it would be futile to expect individual nations to order their own forces into action against an aggressor without assurance that other great powers would do likewise. Just how much chance would there be of winning agreement to war against an aggressor among all major powers and how long would it take to get it? And what would a determined aggressor be doing while the debate took place? The tragic history of the thirties is our answer.

We seek to establish international law and order, and no government, however, limited its scope or powers, ever proved effective unless it had somewhere at its command the force to make its rules of conduct binding on would-be outlaws. Why, in the face of the League experience, proceed on the assumption that by some miracle men and nations will change overnight and clever, unscrupulous aggressors will no longer exist?

This would, of course, involve a delegation of limited sovereignty to the international organization. The United States would agree to outlaw military aggression and authorize the United Nations to use force against any nation which attempted it, ourselves included.

Those who oppose this delegation of power, it seems to me, must base their opposition on one of two assumptions. One is that the United States may at some future date wish to attempt military aggression. The other assumption is that the authority to use force solely to stop aggression would be perverted by the majority and used against the legitimate interests of the United States or other member nations in a minority.

Both of these assumptions to me are incompatible with a fundamental faith in democracy, the cause for which we are fighting. As long as the United States remains a democratic republic, I do not believe there is the slightest chance of our becoming an aggressor. And the very heart of the democratic process is the belief that the majority of men and women want to be decent, to do what is best for all the people and protect and defend the rights of their fellows. Without that belief and faith, Hitler's attacks on democracy would be true. And what is true of individuals, is likewise true of nations. If we proceed to set up our machinery to maintain peace on the assumption that scoundrels among nations are in the majority, we are licked before we start. Our only hope is a firm faith that the great majority of nations and peoples want peace, decency, and justice and that it is the outlaw minority against which we must be on guard.

Plea for Stoppage of Subversive Practices Retarding the War Effort

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio speech which I have prepared and delivered for release in Oregon.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, fellow Oregonians. Since the convening of the Congress nearly 3 weeks ago, the great subject of debate has been the manpower problem. To win the war General Marshall and Admiral King have testified that they need 10,709,581 men and women serving in various capacities in the combat forces of our country by December 31 of this year.

Most of us in the Congress accept these figures because we have confidence in the knowledge and purposes of the present Chief of Staff of the Army and of the present Chief of Naval Operations. We believe them to be men of exceptional ability, intelligence, and patriotism and that they are experts in their particular public duties. When they state that to carry out their over-all war program they need so many men by a certain time, the safety of our country demands that the Congress, the President, and the people cooperate unitedly to meet the requirements specified.

The question then arises, where are we going to get the required number of men by the time indicated without disrupting the continuous flow of ships, airplanes, munitions, clothing, food, and matériel of all kinds. Unless our combat forces are constantly supplied with needed material things at the time and place they are required, their efficiency as fighters is impaired, and they may be, and sometimes are, defeated as a consequence.

The surrender of our unprovisioned troops on Bataan Peninsula in the Philippines, and the slaughter of our inadequately armed soldiers at Dutch Harbor, while strikes and slowdowns were in operation in a number of war and essential industries, are sad examples of this fact. Moreover, our obligations as the arsenal of democracy to supply our allies under the lend-lease arrangements, as well as to furnish the vital necessities of the American people, themselves, require continuous and ample production, if we are not to make the fatal mistake of forsaking our allies who are depending upon us, or of breaking down on the home front.

Various Members of the Congress have insisted that a thorough resurvey of the noncombatant manpower consumed in the various Federal bureaus under the President, where there now are in excess of 3,000,000 payrollees, be made; and that the total number of such payrollees be reduced to the absolute minimum which efficient and economical Federal administration requires. Moreover, we demand of the President and his executive departments that those men then remaining in the Federal bureaus and departments who can qualify for combat service, and who can be spared from governmental occupations, be released for military, naval, or other services where they may be more usefully employed.

In all this proposed shifting and allocating of manpower, the WACS, the WAVES and the SPARS offer a very useful, needed, and effective service. As a member of a number of Senate committees which have much to do with the conduct of the war, I desire to record the Nation's gratitude for, and high appreciation of, these fine, noble, and patriotic girls. It would be well if all of us at home, in and out of war industries, would emulate their fine example of efficient, patriotic service to the Nation in time of war.

Next, we demand that inspections of war industries and other essential operations be made, to ascertain the facts relative to hoarding labor, enforcement of and participation in strikes, slow-downs, subversive shop practices, and any other activities which unnecessarily and inexcusably retard, or withhold, needed supplies from reaching our soldiers, sailors, and marines in the combat areas.

I cannot understand why public opinion silently countenances the treasonable practices which prevent supplying promptly our Army and Navy with every needful thing we have or can get. The cruelty of drafting fine young men into the combat services and sending them into battles all over the world, while many of those in safe employments at home refuse to work, and to work diligently, is reprehensible. An aroused public opinion manifesting its disapproval of labor hoarding, fomenting or engaging in strikes, slowdowns, and subversive shop practices can effect a reform of these unpatriotic activities overnight. Why are our people and many persons in Government itself so complacent about these things?

Moreover, do we not learn anything from history and even very recent history? The international bankers and traders of England, France, and America, seeking their profits, financed and supplied Germany with everything Germany needed with which she was known to be preparing herself for war. War against whom? Why, war against the very nations—England, France, and America—of which the international bankers and traders were themselves citizens. Where now are the profits of those selfish and unpatriotic internationalists?

The sit-down strike originated in France. The French laborer was persuaded into believing he was advancing his own welfare, or he was coerced, into engaging in strikes, slow-downs, and subversive shop practices at a time when the Government of France was feverishly trying to prepare for the conflict which her wisest statesmen foresaw in the actions of Germany. Where now are the social gains of the French workingmen? If we lose this war, we all lose all.

What has happened in France can happen in America. If we do not all—labor, capital, and citizens—cooperate unitedly for winning this war, disaster will surely overtake us. This war is not yet won, and every day and every hour of every day which it continues thousands of fine American men and boys are being killed or disabled or maimed for life.

When this Second World War was declared, there were, and still are, in the veterans' hospitals throughout the Nation many patriotic Americans who were wounded and broken in body and mind 23 years previously in World War No. 1. I know whereof I speak on this subject, because I frequently visit the veterans' hospital in Portland.

When the budget for combat manpower was being compiled by the Military Affairs Committee of the Senate, of which I am a member, and the Draft Act was under consideration, it was estimated that there would be 1,000,000 casualties to our American troops, alone, in the calendar year of 1943. For month past the sick and wounded men and boys of the American forces all over the world have been returning, unannounced and unheralded, to our shores. Our available hospital space is being depleted rapidly, while we have just begun the heavy fighting by massed armies.

In my opinion, he who now idles, foments, or engages in strikes, slow-downs, labor-hoarding, or subversive shop practices not only is jeopardizing his own liberty and freedom, as those in France did, but he also is endangering the success of our war efforts and most selfishly and heartlessly causing many American men and boys to lose their lives, or to linger for years in pain and distress in more and more veteran and other overcrowded hospitals. You who are listening to me have a vital interest in this strike and slow-down business which follows the vicious activities of those racketeers of labor who, as parasites, profit from the earnings of the workers, and by force and violence and other means of intimidation compel many patriotic and naturally industrious workingmen to engage in inefficient shop practices and other subversive acts which delay and make unnecessarily expensive, our war-production efforts.

Not only that, but by these subversive practices our entire Oregon area is now designated erroneously as a congested industrial labor area and the various new industries and Federal projects which your Oregon congressional delegation has secured, and others which they now are trying to get, or others which already are in operation, are being denied both orders of work and authorizations to proceed with operations, by Presidential directives or by administrative-bureaucratic policy.

By the declaration of the executive department that the entire Oregon country is a congested labor area more than 100,000 kilowatts of Bonneville power are being wasted day after day, week after week, month after month and year after year. This available, but unused, cheap power should, long before now, have been in use furnishing the power to make vitally needed munitions and a multitude of products of many kinds for our combat forces, our allies, and for the necessities of the American workers at home.

Not only that, but after the war when our surviving boys return to their homes, they will be seeking jobs. Also, many of those who now are employed in stimulated war industries will then, too, be looking for jobs. Moreover, the boys and girls who now are in high schools and colleges—they also will be looking for jobs. Where are we going to find all these jobs after the war if we cannot now establish and encourage established industries with their needed pay rolls in the Oregon country?

Is the war effort to be denied the benefit and our domestic economy to be stifled, by the failure to utilize now the unrivalled advantage of Bonneville's cheap power and the abundance and variety of raw products available in Oregon which can be fashioned into every conceivable thing to supply our combat forces and provide for the ruined and hungry people throughout the world? This Federal department ruling that the entire Oregon area has a real labor shortage is far reaching in its ruinous effects.

Perhaps there is not so much a shortage of labor in Oregon as there is a shortage of laboring in some of our war and other essential industries. I hold the very highest Federal politicians in the executive branch of the Government, and the profiteers, and the racketeers of labor, responsible for this supremely selfish, heartless, and unpatriotic situation.

The officers in the Army and Navy maintain the discipline which is necessary for combined, cooperative, and orderly successful effort because the President, as Commander in Chief, and the laws and regulations in force, support the officers in their plans and methods but, in domestic productive effort, that support is exerted in encouragement of the racketeers of labor; which in turn brings about confusion and shortage of production and impairment of the war effort.

The common citizen can do something about it. He can make it his patriotic business to ascertain just how productive is the effort of everyone—employer and employee alike—who is receiving remuneration in war and other essential occupations; and if the record does not disclose a reasonable productive result, ascertain the reason why, and place the responsibility in each case on the person where the responsibility belongs; then demand a constructive reform, in the name of humanity, success in our war effort, economy and efficiency in federally financed activities, and in patriotic devotion to American ideals.

In a democracy an aroused public opinion can accomplish anything. Let your voice be heard and your deeds be constructive, unselfish, encouraging, and solely patriotic. Do nothing in malice; but from this day forward let us all—every American citizen—make his greatest possible contribution in maximum personal service to winning the war at the earliest possible moment at the least possible cost in lives, matériels, funds, and taxes.

In desperate earnestness, a marine in the combat area under command of General MacArthur was inspired to write:

"And if our lines should form, then break
Because of things you failed to make—
The extra tank, or ship, or plane
For which we waited all in vain
And the supplies which never came—
Will you then come and take the blame?
For we, not you, will pay the cost
Of battles you, not we, have lost."

Tribute to the President and His Administration

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. GUFFEY. Mr. President, from a source to which no political significance can be attached, I offer a tribute to the President and the present administration for their management of the war and the home-front activities—a page ad appearing in the Washington Times-Herald, and sponsored by a local store.

This ad I might say, is characteristic of other ads appearing throughout the country, and they are all genuine tributes to the management of the war. This commendation is shared by the majority of the American people not actively engaged in political propaganda. Statements are made in this ad that the President is doing a splendid job in the direction of the war on the battlefields, as well as on the home front, in the supervision of the war agencies, control of the cost of living, direction of war production at amazing peaks, and the moving of troops and material on schedule. In my opinion, if there is any fault-finding from the standpoint of the management of the war or of economic conditions, such criticism does not emanate from the average citizen, but is prompted by political prejudice.

The contribution of billions of dollars to the purchase of bonds for the management of the war is a tribute in itself. The spontaneity and the willingness of the people to buy is a vote of confidence in the management of the war.

The patriotic fervor exhibited at the bond meetings, the eagerness of the people to enlist and participate in the war activities, and the stoic reserve with which the people have met the casualties of close relatives or the few reverses of battle, are all conclusive evidence of the wholehearted support of the American people of our great President and his assistants.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

Mr. President, we think you're doing a swell job, not only on the battlefields but on the home front as well.

It's easy to criticize, easy to censure, easy to call those war agencies of yours so much alphabetical nonsense, but facts speak for themselves, and it is by facts that we can measure the value of these agencies. It's a fact that the O. P. A. has, after more than 20 months of war, kept the cost of living far lower than it was after 6 months of the last war. It's a fact that the W. P. B. has helped plan and control in such a manner as to keep war production at amazing peaks. It's a fact that the O. D. T. has helped keep war transportation smooth, with troops and matériel constantly on the move. It's a fact that these and the other war agencies are fulfilling their functions. These agencies cost money. It's a good investment in our own futures to support them.

They do their part. Let's do ours.

Let's back the attack with everything we've got.

Buy more War bonds today.

Shortages in the National Milk Supply

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. CAPPER. Mr. President, calling attention to serious impending shortages in the national milk supply, a national policy in opposition to subsidies was adopted on Wednesday of this week by the National Cooperative Milk Producers' Federation in their national emergency meeting in Washington.

The federation policy was immediately brought to the attention of nearly 150 Senators and Representatives at a congressional dinner.

The federation's policy statement was presented to the members of the Congress by John Brandt, of Minneapolis, federation president.

Adoption of the policy was unanimously approved at the afternoon session of the federation's emergency meeting, which was attended by representatives of the 64 member units of the federation from 23 States.

Text of the statement of policy, which I ask be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A serious impending shortage of the national milk supply now confronts the American people. Increase of the number of ration points on butter to 16 per pound or double the number of points originally set by the Government, and the recent freeze on sales of fluid milk, are but surface manifestations of a critical condition whose advent was predicted early in the year by the National Cooperative Milk Producers' Federation. Failure of the Government to provide means whereby dairy farmers could pay for advancing production costs, including higher farm wages and feed costs, is the cause of this national crisis with respect to the milk supply. An arbitrary policy of holding down prices of some dairy products and beating down the prices of others without regard to its consequences, now brings the people face to face with the stark reality that violation of the eternal principle of supply and demand coupled with rationing of relatively low-priced commodities leads to scarcity.

Instead of following the simple and natural course of adequate pricing to obtain adequate production, the Government has chosen the hard way of attempting to freeze prices, freeze the free movement of producers from one outlet to another and to substitute instead various types of subsidies, to give producers partial compensation under terms and conditions which greatly inhibit their freedom.

At this time we will not attempt to discuss the relative demerits of the different types of subsidies. We limit our comment to the broad question of subsidy in lieu of adequate prices at a time when the vast majority of the people of this Nation are amply able to pay for the food which they are now eating. Such a policy is open to many objections, among which are:

1. Food subsidies represent a constantly increasing public debt which will be transferred, when they return from the war, in large part, to the men in our fighting forces, the majority of whom are now serving for $50 per month.

2 Food subsidies are inflationary. The printing of bonds to pay for food is not unlike the printing of currency to pay for governmental expenditures when the governmental credit has run out.

3. Food subsidies imply that the Government intends to share more or less permanently the payment of the grocery bills of its citizens without regard to their capacity to pay their way through life.

4. The new milk subsidy, which we are informed is being worked out on the basis of individual subsidy payments to some 3 million producers of milk, will strengthen bureaucratic control over the lives of the farm people.

The payment of subsidies has developed an elaborate scheme of interlocking controls, so that the terms and conditions of receiving a subsidy constitutes the exercise of policing power not contemplated by existing law. Thus government by regulation is constantly supplanting government by law; and government by regulation rapidly emerges into government by fear. Knowledge is without our possession of many instances wherein this type of governmental compulsion is being exercised coordinately by various branches of officialdom to require persons to obey regulations through pressure tactics and to make them fearful of entering the courts to protect their constitutional rights.

While one branch of the Government is putting an iron hand upon food cost, another branch of the Government is continuously telling the Congress that the people have so much money unexpendable that it must be taxed away from them and that compulsory savings must be inaugurated; and various plans are offered to utilize the increasing take-offs from the incomes of individuals. We hold that a line of distinction should be drawn between those who are able to pay their own grocery bills and those who for various reasons, such as old age, dependency, disability and lack of sufficient skill, and workers in educational, ministerial, and kindred types of employment are not able to earn a sufficient amount of money to provide a decent standard of living. For such as these we concede that the Government should in some degree supplement low-standard earnings with relief payments. But for the remainder of the people it seems to us only common sense that they should pay their own way through this war and not transfer their present living costs to the returning members of the armed forces. If Congress intends to subsidize living costs for those who can afford to pay, let it make cash payments to those consumers who are to benefit; and let those beneficiaries shoulder the responsibility of this stigma. Farmers do not desire such payments. They seek only fair prices.

A large percentage of America's remaining dairy farmers can and will survive the distress under which they now labor. Many will abandon dairy operations. More will curtail dairy production so as to reduce their losses to a minimum; but enforced self-protection of this character will not maintain enough production of milk and its products. The choice, therefore, lies with the people as to whether they will prefer to pay moderately increased prices for dairy products or severely curtail and in some instances do without these products until the time comes when dairy production can be revived.

We are confident that the Congress is aware of this serious economic situation. We therefore offer to the Congress the suggestion that it immediately enact legislation which will direct the responsible agencies of the Government to provide reasonable price ceilings which will at least compensate milk producers for their increasing costs of production and enable them to meet the competition of alternative opportunities in farming.

Experiment in World Freedom

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Experiment in World Freedom," published in an issue of recent date of the Chicago Times. I desire to call attention to one sentence appearing in the editorial. In that sentence reference is made to the gentleman from Arkansas, Representative FULBRIGHT, as follows:

Mr. FULBRIGHT was attacked because as a Rhodes scholar he had gone to Oxford to "learn to betray his country and deprive it of its independence."

I regret exceedingly that the sentence appears in the editorial. I do not agree with the matter contained in quotation marks. Representative FULBRIGHT is a patriotic and loyal American citizen, and certainly it is no disgrace to have been a Rhodes scholar.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXPERIMENT IN WORLD FREEDOM

The wheezy oracles of isolation were given an ignominious brush-off by the American Legion national convention in Omaha last week. Speaking for more than a million veterans of World War No. 1—"the war to end all wars"—the Legion adopted this resolution:

"Our own national interests must ever be our first concern and we believe that our Nation can best serve and protect its national interests, commensurate with its power and responsibilities, by participation in the establishment and maintenance of an association of free and sovereign nations, implemented with whatever force may be necessary to maintain world peace and prevent a recurrence of war."

The first law of preservation for any nation is to be first concerned about its own best interests. Conscientious isolationists who felt the two oceans were our protection from attack changed their minds a few minutes after they heard about Pearl Harbor. Their sentiments are now well expressed in the Legion's endorsement of American participation in an "association" of powers that will maintain peace by the use of force if force becomes necessary. The nations in the association are to be "free" and "sovereign."

OUR EXPERIMENT IN FREEDOM

In the light of our experiences in the two world conflicts, with their great sacrifices in life and treasure, the self-interest of the United States demands freedom from war. Isolation didn't give us that freedom. Our association with other free nations may. The Legion wants to try the experiment. When we instituted our democracy we were experimenting in freedom, too. A world association probably will go through all the growing pains that our American form of government has experienced.

It is something to put on record that the politically minded die-hards among the isolationists didn't dare to pitch into the Legion the way they went after Representative FULBRIGHT. FULBRIGHT's resolution, just adopted by the House by the whopping vote of 360 "yes" to 29 "no," is closely akin to the Legion's document. They're twins in sentiment, though the Legion's words are stronger.

WHERE DID LEGION LEARN TO "BETRAY"?

Mr. FULBRIGHT was attacked because as a Rhodes scholar he had gone to Oxford to "learn to betray his country and deprive it of its independence." Do the critics of FULBRIGHT want to tell us where the Legionnaires learned to "betray" their country? The Legion's sentiments about the prevention of war come from battlefields, from hospitals where Legion buddies lie crippled and helpless and from cemeteries were Legion comrades sleep. If there is any betrayal, it's from advocates of the irrational doctrine that no matter how serious the consequences may be to present or future generations, nobody who is Republican should agree with any policy of the Roosevelt administration.

LIKE THE FIGHT AGAINST SLAVERY

Narrow, disgusting partisanship was repudiated by Republicans at their Mackinac conference. The Mackinac resolution is a parallel document to FULBRIGHT's and the Legion's. The situation resembles that of 1858. Lincoln in the Freeport debate with Douglas explained that the northern, central, and southern Illinois Republicans each had adopted resolutions against the spread of slavery. Lincoln said that they did not agree with one another in everything but they had one feeling and sentiment in common—they were all against the perpetuation of slavery. The solidarity of the antislavery people threatened the politics that Douglas typified. Said Lincoln:

"I'll tell you what he (Douglas) is afraid of. He is afraid we'll all pull together."

Today there are as many views and resolutions against the perpetuation of war as there were in Lincoln's day against the perpetuation of slavery. The important thing is the agreement on the common sentiment against the perpetuation of war as a means of settling international problems.

The isolationists want the Democrats on one side and the Republicans on the other. They're afraid we'll all pull together. To destroy the President, they would destroy the possibility of world peace.

At Freeport, Douglas ridiculed the Lincoln doctrine that "A house divided against itself cannot stand." The verdict of mankind is that Lincoln was right and Douglas was wrong. The American people believe that the Lincoln doctrine now has world-wide connotations which must be discovered. They believe there must be a formula for getting along with other free peoples so that Americans can enlarge their own freedom rather than diminish it.

The wheezy isolationist oracles, groaning against the inevitable, are playing the Douglas role. As they thrust the political ax into every plan for permanent peace, they even ape Douglas in misusing the word "sovereignty" as a smoke screen.

The New 1-Cent Piece

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. CAPPER. Mr. President, after receiving a number of complaints from my constituents in Kansas about the "war pennies" which look so much like dimes when they first come from the mint, I wrote the Secretary of the Treasury asking if it would be possible to have these coins made in a different size, or that the pennies be differentiated from the dimes in some other way.

I received an answer from Mrs. Nellie Tayloe Ross, Director of the Mint, which gave such complete and interesting information on the subject, that I ask unanimous consent to have her letter printed in the appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TREASURY DEPARTMENT,
Washington, August 9, 1943.

Hon. ARTHUR CAPPER,
Topeka, Kans.

MY DEAR SENATOR CAPPER: Your letter of August 3, 1943, to the Secretary of the Treasury in regard to the resemblance of the new 1-cent piece to the dime has been referred to my attention.

It is unfortunate that the color of the new coin as it comes fresh from the press does somewhat resemble that of the dime (although not more, I suggest, than the 5-cent piece resembles the quarter).

You of course, are aware of all of the conditions that induced the change of content in the piece. Copper had been completely withdrawn by the War Production Board and it was impossible to obtain from the Board a commitment guaranteeing any other material for the coinage than that which was adopted. Enough zinc for coating the coin was allotted because common steel rusts. Plastics which were considered were denied as strategic material needed for war purposes.

You will also recall, doubtless, that the act which authorized the change of content of the minor coins carried an amendment directing that "* * * in determining such physical properties, the Secretary shall take into consideration the use of such coins in coin-operated devices." Obviously, the unadaptability of an enlarged coin would have violated that mandate and the mere mention of it as a possibility would have aroused vigorous protest from manufacturers and operators of these machines all over the country.

Many persons have proposed punching a hole in the coin. That recourse also would have rendered it unfit for use in vending machines by reason of altered weight; another obstacle was that it would have required a change of design. A hole in the head of Lincoln would undoubtedly have been displeasing to the public. So urgent was the need for 1-cent pieces when the new material was adopted there was no time for developing a new design, a step which takes much more time than is generally realized and entails many mechanical problems when adopted.

You will be interested to know that the Mint has been making experimentations over a period of months to determine whether a darkening treatment could be given the coin to overcome its shiny appearance when new. (It soon turns dark with handling.) It has been found that many processes produce excellent results in the laboratory, but when tried on large-scale production are unsatisfactory.

Letters coming into the Department indicate that as the public becomes familiar with the dire need of copper for armaments and what the release has meant to the war effort, of that which was consumed in the 1-cent piece, their impatience over any inconvenience they suffer by reason of the color of the substitute is much abated.

Knowing as I do your own reasonable attitude toward matters of this kind, I feel confident that you will grasp the difficulties that have beset the Mint in producing with unsuitable and undesirable materials a coin acceptable to the public.

With assurance of my high esteem for you, I am,

Yours sincerely,

NELLIE TAYLOE ROSS,
Director of the Mint.

Gallup Poll on International Police Force

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD a report of the Gallup poll appearing in the Washington Post Sunday, September 26, on the question whether th people of America favor an international police force to maintain peace. In taking this poll, the Gallup Institute made sure that every person polled knew at least one argument for or against an international police force, and the results of the poll show 75 percent for, 17 percent against, and 8 percent undecided.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

WORLD POLICE IDEA IS GIVEN WIDE SUPPORT

(By George Gallup)

PRINCETON, N. J., September 25.—The House acceptance of the Fulbright resolution looking toward American world cooperation after the war accurately reflects the opinion of the American people

In all public opinion surveys on various aspects of international cooperation the institute has found substantial majorities in favor of having the United States play a more active role in world affairs after this war than she did after the last war.

The most recent test of sentiment on the subject, just completed by the institute, concerns the widely discussed question of an international police force.

Opponents of the police force proposal which is incorporated in the Ball-Burton-Hill-Hatch bill pending before the Senate, claim that the American people as a whole have not really weighed the arguments for and against a world police force.

A SPECIAL TEST

In view of this charge the Institute has conducted a special experiment to determine whether persons most familiar with the subject are for or against the world-police-force idea and how their opinion differs from the average attitude.

The survey followed the procedure of making all persons interviewed prove whether they know what is meant by the term "international police force," and whether they can cite at least some of the arguments that have been presented for and against the proposal so far.

All persons who could pass the information test and were able to name at least one argument for or against, were then asked:

"Taking into account the arguments for and those against, how do you yourself stand—are you for or against an international police force?"

The vote came out almost precisely the same as that recorded in a recent survey of the whole Nation.

The vote of the "informed" is:

	Percent
For	75
Against	17
Undecided	8

When the Institute recently polled the whole country the vote was 74 percent in favor, 14 percent opposed, and 12 percent undecided.

When the informed vote is analyzed according to Republicans and Democrats, no fundamental difference of attitude is found. Republicans favor a world police force by 73 percent, Democrats by 78 percent—indicating that for the present at least the issue is one which transcends party lines.

CHIEF ARGUMENTS

The chief argument in favor of an international police force, in the opinion of the informed group, is that it would hold down aggression or prevent wars from starting or spreading.

Other arguments advanced are that it would protect smaller countries from aggression, and that some kind of world police force is necessary to put teeth into any post-war league of nations that may be formed.

Among the chief arguments listed in opposition to a world police force, it is interesting to note that only a few people mention either loss of American sovereignty, fear that America might become embroiled unnecessarily in other people's quarrels, or fear that a police force might some day be turned against the United States.

Rather, the chief arguments center around two things—that the police force idea would be hard to administer from a practical point of view, and that it would lead to resentment on the part of the countries being policed and would therefore be likely to upset world peace rather than maintain it.

As for practical difficulties of enforcement, many voters express fear that there would be sharp differences of opinion as to when a police force should go into action. They say that if aggression breaks out, jealousies among the world powers might prevent the police force from being used, just as there was widespread controversy over the use of league sanctions before this war.

Manpower

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. HILL. Mr. President, there has been some criticism of a statement delivered on September 2d last by Mr. James P. Mitchell, Director of the Industrial Personnel Division of the War Department. I ask unanimous consent that Mr. Mitchell's statement may be printed in the Appendix of the RECORD, so that it may speak for itself, and that accompanying Mr. Mitchell's statement there may be printed a very brief statement of his background.

The PRESIDING OFFICER. Without objection——

Mr. DOWNEY. Mr. President, I should like to withhold consent to the request until the background referred to is read. I should like to know something about Mr. Mitchell.

Mr. HILL. I shall be very glad to read the background, as it has been furnished to me by the War Department. The following is the War Department's statement of Mr. Mitchell's background:

Mr. James P. Mitchell is the Director of the Industrial Personnel Division of the Army Service Forces. He was formerly personnel director of the Western Electric Co. at Kearney, N. J., before he came to the War Department.

Mr. Mitchell came to Washington in 1940 to help set up the training within industry program, and he has been with the War Department since December 1940. He is a very well-known industrial relationist and his services were sought among others to help establish the training within industry program.

Mr. Mitchell came to the War Department as Chief of the Labor Relations Section of the Construction Division under General Somerville. Then under the reorganization of the Army on March 9, 1942, when Services of Supply were set up, he became Director of Industrial Personnel Section. The Services of Supply Division has since been changed to the Army Service Forces.

Mr. DOWNEY. Mr. President, I thank the Senator very much. Of course, I have no objection.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Whenever the Nation's manpower problem is discussed, somebody inevitably questions the size of the armed forces. The question is valid, but when it is presented as the whole manpower issue to the exclusion of all the rest somebody is befogging the issue.

The plans of the Army and Navy have never called for a total combined strength which would exceed 17 percent of the country's labor force. Complete preoccupation with 17 percent of the problem to the neglect of the remaining 83 percent is cutting off the view of the forest because of a few trees. When one considers the additional millions of persons of working age who should be in the labor force and are not, the total role of the armed forces is even smaller.

Two major steps were involved in determining the manpower objectives of the armed forces. First, the strength requirements were measured on a basis of strategic military plans. Secondly, the desired strength was carefully measured against the manpower available in the Nation and the needs for both military and civilian production. The data clearly show that the manpower available in the United States is more than sufficient to meet the needs of the armed forces, war production and essential civilian production.

The Chairman of the War Manpower Commission was right when he testified before Congress 2 weeks ago that there is no over-all national manpower shortage. Here are some factors which contribute to the appearance that we do have one:

1. The American people are not yet mobilized for war. A far smaller proportion of our population of working age is either at work or in the armed forces than in any other major nation at war. A substantial reserve of idle labor, principally women, remains unused.

2. In spite of this reserve, our civilian labor force during 1943 has remained below the level reached last year. New additions to the labor force have failed to match the withdrawals for the armed forces and the Census Bureau reported that in August the civilian labor force was 1.3 million below what it had been a year ago.

3. Although a tremendous increase has taken place in war employment and the size of the armed forces, we have hardly touched the vast reserve of potential war workers in nonwar manufacturing, construction, trade and services, or in agriculture, which has increased its employment. On balance these groups have changed little and have contributed virtually nothing to the war labor force. In other words there has been virtually no net movement of workers from nonessential to war activity. The expansion in direct war activity has come almost exclusively from the unemployed and from new entrants into, or additions to, the labor force.

4. Manpower is maldistributed. While there is enough labor available to meet all requirements, there are acute shortages in some areas at the same time that great surpluses exist in others. According to the latest classifications of the War Manpower Commission, there are 59 important labor markets where "current acute labor shortages" exist while there are 91 important labor markets where "labor supply is and will continue to be adequate to meet all known labor requirements." For instance, in California where much of our vital airframe industry is concentrated, there will be a shortage of 92,500 workers even after all potential re-

serves are used; but in Texas there is a net surplus of 182,500.

These situations and other difficulties, such as turnover, cannot now be cured without a national service act. Such legislation is badly needed today. The War Department will continue to advocate a National Service Act as a basic essential tool, employed by every other major nation at war.

However, we are not under the illusion that such legislation alone will solve our difficulties. Even when such legislation is obtained, there are other fundamental responsibilities which must be discharged by employers, labor and our communities, or the problem as a whole will continue acute. We will devote ourselves here to two such major responsibilities.

LABOR UTILIZATION

In wartime it is the solemn obligation of every consumer of manpower, as well as materials, to keep his need to an absolute minimum. The Army tries to meet its own obligation by continual study of its needs and the development of techniques for conservation. Since we set our original goal, the Army has reduced its demands for military manpower by more than a half-million. This was achieved by a careful analysis of every spot where a soldier could be spared. Defensive installations in the Western Hemisphere will be reduced by approximately 2[illegible] 000 and 80,000 men will be saved by r[illegible] tions in overhead and in our replac[illegible]nt and school program.

The Army is also a large consumer of civilian manpower. In June 1943 we had 1,347,000 civilian workers in our arsenals, depots, ports of embarkation, modification centers, etc., throughout the United States. Since that time, by improvements in techniques and careful study of every job we have cut that figure by 144,000—more than 10 percent! It was not easy; it took ingenuity, and drastic revision of methods.

We are continuing to examine every possible device to save manpower, but the Army, with its combined military and civilian personnel comprising less than one-sixth of the labor force, cannot solve the entire manpower problem. The major portion of this burden necessarily falls upon you and the forces you represent—management and labor.

Management and labor have already shown that a vast amount can be done to increase productivity. It is the actual accomplishments in some establishments which we take as our guideposts to what can be achieved generally—not theoretical goals worked out on blueprints. One aircraft company, making heavy bombers, reduced the number of man-hours per bomber from 110,000 to 27,000, and is now producing four bombers with the labor previously required to make one. Numerous other examples might be given.

The changes which have taken place are of an infinite variety: Shifts in plant layout, job simplification, upgrading of workers, redesigning of machines, short cuts in transportation of materials, etc. Sometimes it was just a matter of improving morale. Moreover, in many cases conservation of manpower went hand in hand with an improvement in quality.

Many of such improvements result from better labor-management cooperation, effective labor-management committees, and suggestions from individual workers.

These accomplishments indicate the tremendous possibilities for improvement elsewhere. When one firm can reduce its labor requirements per unit by 35 percent, one naturally questions the failure of another firm to improve at all. The record is uneven, and much remains to be done.

Obviously, one of the simplest techniques available is for one firm to learn from another. Records of comparative man-hours by firms making similar products immediately reveal striking differences. The experience of the more efficient company should be made available to the others. The media for exchange of management experience should be enlarged. And you can depend on the War Department to help clear the channels for such exchanges.

The Ordnance Department has demonstrated the practicality of such technique in its Government-owned, contractor-operated establishments, where exchange of information between the more and the less efficient firms has in some instances improved the latter's efficiency by as much as 40 percent.

Many employers have told us of large increases in labor efficiency resulting from small improvements in plant facilities for workers. Making available hot meals, short rest periods, recreational facilities, and better light or ventilation, giving the worker a greater sense of participation through inviting his suggestions and keeping him informed of plant progress and change, have all been found by some plants to contribute to higher efficiency.

In concluding this item, I want to emphasize that one of our most important manpower reserves lies within our own plants. There are two ways of making manpower ends meet: One is to bring in more labor, the other is to reduce our need for labor by increasing the productivity of the labor we have. Without a national service act, we are approaching the limits of the first possibility. We must fully explore the second. A 10-percent increase in labor efficiency is equivalent to a 10-percent increase in your labor force—only it's more effective, more lasting, and under present conditions more practical—and it's a job only you can do.

COMMUNITY ORGANIZATION AND SUPPORT

In time of war at least, the number of people who will work in a particular plant (or enter the labor market at all), as well as worker efficiency and rates of turn-over and absenteeism, depend upon conditions of life outside as well as inside the plant.

The number of in-migrant workers who can be moved into a community is dependent upon the amount and type of housing available for them to live in. Workers' preferences as to plants will frequently depend upon the relative adequacy of transportation facilities. Rates of absenteeism are often related to the availability of shopping, banking and other personal-service facilities during nonworking hours. Efficiency at work, as well as absenteeism, is closely linked to the availability of recreational facilities during leisure time. And everybody now recognizes the relationship between the adequacy of child-care facilities and the number of mothers in a community who are willing to take jobs and stay at them.

These things are largely dependent upon the community—not only what facilities it has, but the adaptation of those facilities to the exigencies of war. The War Department has seen striking examples of the differences in production between a community fully backing the war and a community following its normal peacetime patterns.

The proportion of women at work in some communities exceeds the proportion in others by as much as 25 and 30 percent and the reasons are apparent. In one community a woman is proud to work in a war plant because the general atmosphere is such that she is regarded as a slacker unless she is at work. In other communities we find a hostile attitude toward the woman worker; she is accused of being greedy for war wages or neglecting her children, or it isn't socially acceptable for a woman to do factory work.

Go into Wichita, Kans., which is a war-boom community if ever you saw one—the population has doubled since 1940—and you find it is successfully meeting its production and manpower problems. One of the reasons is plain. Stores and banks are open at night, movies run midnight shows, there are dances for late-shift workers; transportation schedules have been adjusted to the convenience of war plants; ample new housing facilities have been provided. A worker does not have to take a day off to shop or to find some relaxation. He does not quit his job to go to another community because his living conditions are bad. All resources of the community have been mobilized to recruit every potential worker for miles and miles around. The press, the schools, the churches all cooperate.

In other communities where our production was failing we have generally found that these things were not being done. The community was indifferent.

In this type of community the War Department has sometimes had to remove contracts as a means of self-protection—protection to more vital contracts whose timely performance was threatened by manpower difficulties. We cannot continue to place contracts in an area where manpower problems are so acute that essential war production schedules may not be met. We do not like to remove contracts. It is difficult; it throws our schedules out of line; it causes delays; it is costly. But we are forced to when a plant or a community, or both, fail to meet their own problems.

Who is the community? You, its leaders. Business, labor, industry, the press, and radio. The leadership you exercise, the pressures you apply, the interest you show, will determine whether management and labor in a plant will work in a community environment which will interfere with your job, or one which will ease and help solve your production problems.

Seven months ago the War Manpower Commission officially advised the War Department that it would be impossible to obtain sufficient labor in Dayton, Ohio, to meet its production goals. The War Department considered the removal of some of its contracts. When word of this reached the people of Dayton they got to work in their own community to lick what was in effect an artificial shortage. Today the War Department is no longer considering the withdrawal of contracts from Dayton, and the War Manpower Commission has reclassified it from group I to group II. The Dayton story is a valuable practical example of how community action can help industry and labor solve production problems.

As the war continues, manpower stringencies will get tougher. The war industries of the country and the armed forces require several million more persons before leveling off. The three chief sources of manpower remaining are (1) idle persons, chiefly women, who are not in the labor force; (2) persons engaged in nonessential activities; and (3) the more efficient employment of those already in our plants. National service legislation is essential for the mobilization needed for earliest possible victory. But the tasks outlined here—maximum utilization of labor and vigorous community action—are equally significant, and these depend on us.

Our Duty Is To Serve

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. POULSON. Mr. Speaker, the following editorial appeared in a newspaper in my district while I was on the coast, and it impressed me as one that is very opportune at this time:

OUR DUTY IS TO SERVE

Twenty years of suppression of the rights, freedoms, liberties, of free speech and free

press in Italy, as introduced by the Fascists and enforced by their now deposed leader, Benito Mussolini, is reaping its reward, a reward that swept them into oblivion politically, and will eventually end in the trial of the bandits and for some of them the death sentence False doctrines enforced upon peace-loving Italians, and equally false leaders who attempted to chain the rank and file of the people could not last and could only have one end—repudiation. Today Italy is all but on the verge of ruin, its world empire gone, allies who are in reality enemies, like Germany, desperately trying to absorb what is left, and the powerful forces of the United Nations standing ready to administer a knock-out blow

Italy never was strong, but it was made weaker by a bombastic, swaggering, strutting, clanking, gold-braided political upstart in Mussolini, who was willing to stoop to the tactics of an assassin He betrayed his country by taking up the cause of Adolf Hitler after his defiance of the League of Nations in his brutal invasion of north Africa in carrying out his attempted theft of Ethiopia He could have and would have been stopped then had it not been for the weak-kneed attitude of League members. Had he there might not have been a Second World War But having gone so far another murder could not hurt his conscience, so he buried the dagger to the hilt into the back of France when it was staggering from the blows of Germany.

False prophets there will probably ever be. But in the fate of Italy, which permitted the nullification of all rights and freedoms won with sacrifice over centuries, only to be swept away by skilful reformers, there is a significant moral that other countries in this world are not likely to ignore nor forget. Dictators—those who seek to center all power within themselves—must suppress the freedom of the rank and file of the people if they are to survive. And when the people in unconsciousness or through unconcern, permit their liberties to be taken from them, they pave the way for their own destruction. It is their duty to the country they love and to themselves to be ever watchful and zealous of those freedoms.

Outright Lying

EXTENSION OF REMARKS

OF

HON. ZEBULON WEAVER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday September 30, 1943

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein an editorial which appeared in the Asheville Citizen-Times, Asheville, N. C., under date of September 19, 1943.

The editorial is as follows:

OUTRIGHT LYING

Perhaps the most demagogic and the most dishonest argument of current circulation is being used by the National Committee to Abolish the Poll Tax and the Southern Conference for Human Welfare in their campaign for the elimination of the poll-tax requirement for voting in Federal elections.

Here is one relatively tame example of this half-lie, half-truth reasoning as indulged in by the National Committee to Abolish the Poll Tax:

"The poll tax locks the ballot away from 10,000,000 white and Negro citizens in eight Southern States. In 1942 an average of only 3 percent of the population in Alabama, Arkansas, Georgia, South Carolina, Tennessee, Texas, and Virginia voted. The poll tax prevented the others from voting. The average in the non-poll-tax States was 25 percent."

This argument is cunningly, even fraudulently, designed to foster two conclusions:

1. There are 10,000,000 citizens of these eight Southern States who are disbarred from voting by the operations of the poll-tax requirement. (The Southern Conference for Human Welfare which is just an echo of the national committee blurts out as much: "When we abolish the poll tax, we release 10,000,000 more votes for democracy.")

2. The poll-tax requirement solely explains why only 3 percent of the residents of these Southern States—against an average of 25 percent in the other 40 States—voted in the 1942 congressional elections.

Neither of these conclusions is correct. They possess only a minimum of truth to make them plausible to the ignorant and the unwary and a maximum of falsity to make them positively contemptible.

It is true that in these 8 Southern States there are, according to the 1940 census, 13,500,000 citizens of voting age. It is also true that in the 1940 Presidential election these States cast only slightly more than 3,000,000 votes. The difference between these two totals is, of course, approximately 10,500,000.

But there is no warrant in fact, however, for the assumption, cleverly and even dishonestly conveyed, that all of these 10,500,000 nonvoters were prevented by the poll-tax requirement from voting. If that conclusion be correct, then how do you account for the fact that 27,000,000 citizens of voting age in the 40 nonpoll-tax States failed to participate in the 1940 election?

The poll-tax requirement does have the effect of disfranchising many citizens who are unwilling or unable to pay the tax. That fact must be admitted by friend and foe of the voting stipulation. But it only partly explains why 10,000,000 citizens of the 8 Southern States did not vote in the 1940 election. There are other factors—some of those same factors which account for the failure of 27,000,000 voting-age citizens of 40 non-poll-tax States to discharge the first duty of good citizenship. Something should be pardoned to civic apathy in the South when so much must be pardoned to civic slothfulness in other sections of the Nation.

Only less important than the poll tax requirement as a bar to more general voting in the South is the absence of a virile opposition party. Citizens, North or South, are not apt to rush to the polls to vote when the outcome of the election is a foregone conclusion. The National Committee to Abolish the Poll Tax declares that only 829,088 votes were cast in the 1942 congressional elections in the eight poll-tax States. In the Presidential election of 1940, these same States cast over 3,000,000 votes. The poll tax had little or nothing to do with the appalling shrinkage. The explanation is to be found in the fact that the Democratic candidates for Congress had little, or no opposition, in 1942 general election. The vote in North Carolina—which happily is a non-poll-tax State—dropped 55 per cent from 1940 to 1942 despite the very determined opposition which the Republicans offered in two or three districts.

Are the National Committee to Abolish the Poll Tax and the Southern Conference for Human Welfare advocating the establishment of a strong opposition party in the South? Certainly the Southern Conference has no such interest for it has openly derided the very intimation that the South might find some virtue and some praise in Republicanism.

The National Committee to Abolish the Poll Tax indulges in indefensible demagogy—to use a mild phrase—by singling out certain Southern Congressmen and Senators from the eight States and arguing by inference that the poll tax requirement is solely responsible for their presence in Congress.

If the poll-tax requirement is responsible for the fact that Congressmen DIES of Texas and SMITH of Virginia are in Congress, then by the same reasoning the absence of a poll-tax requirement must be responsible for the equally significant fact that non-poll-tax States are represented in Congress by such worthies as Congressmen HAMILTON FISH, CLARE HOFFMAN, and VITO MARCANTONIO, and Senators WHEELER and NYE.

The National Committee to Abolish the Poll Tax pushes its irresponsibility to shocking lengths when it declares: "There are 79 poll-tax Representatives and 16 poll-tax Senators in the United States Congress. They control by chairmanship 17 of the 47 standing committees of the House, 11 of the 33 of the Senate. The poll tax perpetuates them in office. They grow in power as seniority rights give them control of more and more committees every year. Their bloc of votes in Congress, combined with the opposition, is used at every opportunity to defeat the administration's progressive and win-the-war policies and measures. On the floor of Congress they defend lynching, anti-Negro discrimination, and anti-Semitism. They are the fountainhead of legislation against aliens, against labor, against war production, and for inflation."

This argument is not only dishonest, it is despicable. It undertakes through the slimiest insinuations to create the impression that every Member of Congress from eight Southern States defends lynching, anti-Negro discrimination and anti-Semitism, votes against the win-the-war policies and measures of the administration, opposes war production, and favors inflation.

The National Committee to Abolish the Poll Tax draws any prestige to which it may pretend from the distinguished men and women who have loaned their names to it as sponsors. Among these sponsors are Mrs. Eleanor Roosevelt, William Allen White, Father John A. Ryan, Dr. Harry Emerson Fosdick, Bishop Paul Kern—to mention only a few of an impressive list.

Unless and until these sponsors emphatically repudiate such arguments, they can not evade all responsibility for them. Woodrow Wilson laid down the fundamental proposition that corporation directors should be held accountable for the malpractices of their corporations. That same standard of morality should be applied to sponsors. Distinguished citizens who are disposed to lend their names as collateral to organizations might do well to repair to their dictionaries and to ponder the definition of "sponsor."

Foes of the poll-tax requirement for voting have many fair and honest arguments to support their position. Their case is not so fatally defective that it must be bolstered with foul insinuations, loathsome charges, and fraudulent conclusions. No one ever serves the cause of democracy by seeking to win votes for a democratic reform with arguments that appeal to mischievous prejudices, draw false conclusions, and libel individuals. Religious leaders do not advance the cause of religion by lending their reputations as credentials for falsehood. Educators do not aid in the search for truth when they permit their names to become associated with mendacious propaganda calculated to obscure the truth.

Resolution To Welcome the People of Italy to the Family of Liberated Nations

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 27, 1943

Mr. LUDLOW. Mr. Speaker, wars are not won entirely by bullets and cold steel. Strange as it may seem, wars may be won, or, to put it more correctly, wars may be partially won, by kindness.

That is the reason why I say that we are not using all of our resources in waging this war. We are shooting at the Axis governments with only one barrel when we should be using both. While we continue to carry on our military operations unceasingly we should be doing more by good-will efforts to create a split between the peoples of the Axis-dominated countries and their tyrannical governments, and that is where we should bring into use the other barrel—the barrel of friendship and kindness—the Good Neighbor barrel.

While we are pouring lead into the armies and munition plants of the enemy, let us give the people of the home fronts in the Axis-ridden countries some intimation of the kindness we truly feel for them, as differentiated from their unconscionable rulers. We can do this in a spirit of the utmost sincerity, as our quarrel is not with the genuine folks of the enemy countries but with their totalitarian masters, who grind and enslave them.

No one is more anxious to see the United Nations win this war quickly and completely than I am. I would give my right arm if the boys could be homebound by Christmas, bearing the palm of victory. And I believe that the responsibility of this country of ours will not stop at the war's edge. For that reason I voted for the Fulbright resolution. We are up to the eyebrows in the world war and we cannot escape our responsibility to participate in the postwar reconstruction.

The point I am trying to make is that I sincerely believe we can win the war about twice as quickly if we will show to the peoples of the enemy countries—and prove to them—that we stand for a better world after all of this agony is over; that we stand for peace and law and order and for self-determination and free enterprise and for keeping the lanes of opportunity open to enable human beings everywhere to order their own lives. Let us give Hitler and Tojo unstinted hell, but while we are doing so let us be kind to the innocent peoples who are their victims and we will win this war much sooner than otherwise. When the enemy peoples really understand the purposes of the United Nations in respect to making a better world the home fronts in Germany and Japan will crack and that will be the beginning of the end of Hitler and Tojo.

Our purpose in this gigantic world conflict is not tinctured with the slightest scintilla of selfishness. We are putting into the struggle vast treasures of men and money for the one and only purpose of helping to make a better world. Words cannot describe the priceless stake we are investing, and now let us arise to the heights in spreading the gospel of kindness among the real people of the earth in order to create an atmosphere of mutual trust and understanding which is necessary to make the future of the world secure. For the reasons stated, I have believed, and I still believe, that the United States should take the lead in the formulation of a statement of United Nations peace aims which would give all of the victims of totalitarianism a clear conception of the better world which we hope for, and that this statement should be broadcast to the world and dropped by millions over enemy and enemy-dominated countries.

In harmony with the philosophy above expressed and in order that the people of the United States may be brought into closer friendly relations with millions of human beings who have suffered under the totalitarian yoke, I have introduced in the House a concurrent resolution which reads as follows:

House Concurrent Resolution 42

Concurrent resolution to welcome the people of Italy to the family of liberated nations

Whereas a recent broadcast unintentionally and unfortunately placed the United States in a false light before the people of Italy; and

Whereas the Congress of the United States, democratically elected by the people, is in a position to convey to the people of Italy, the victims of Fascist rule, and to down-trodden, oppressed peoples everywhere, our Nation's sympathy and friendship for them and our purpose to help them: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That the Congress of the United States, speaking in behalf of the people who elected it, welcomes the people of Italy to the family of liberated nations. We congratulate them on the overthrow of the horrors and slavery of fascism. We sympathize with them in the struggle that is before them in reclaiming their country from the Nazi invader and in reconstructing their nation and we want to help them. In the cosmic evolution that is going on the might of America is pledged to support by all reasonable and constitutional means the freedom, peace, and security of all right-thinking and right-doing men. We hail the overthrow of fascism in Italy as the dawn of freedom for all of the Axis-ridden countries and as pointing the way to the final consummation of a peaceful world of self-governing peoples.

The adoption of this resolution by both Houses of Congress would be more than a mere gesture. It would be a meaningful expression of the good neighbor feeling that is enshrined in the hearts of all Americans. Its effect on the public opinion of the Axis nations could not be otherwise than helpful. It would correct the mistake that unfortunately was made by the "moronic old king" broadcast.

This resolution is an appropriate corollary of the Fulbright resolution, which the entire Nation applauded. It was most encouraging to the people of America to find when the Fulbright resolution was under consideration that Congress has an awareness of its responsibility in respect to international relations. The adoption of the resolution I propose would meet with the same popular acclaim that greeted the Fulbright resolution. The people expect their Congress to assert its responsibility in international affairs.

I hope the members of the Committee on Foreign Affairs will give early and thoughtful consideration to my resolution and that they may see their way clear to send it to the floor of the House with a unanimously favorable report.

Why Shouldn't the Price of Crude Oil Be Fixed At a Parity With Other Commodities?

EXTENSION OF REMARKS
OF
HON. JAMES V. HEIDINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. HEIDINGER. Mr. Speaker, under leave to extend my remarks, I desire to include a letter which I have received from N. V. Duncan, of Fairfield, Ill. Mr. Duncan is a man of broad business experience and for the past few years has been a successful independent oil operator. He has drilled many wildcat wells and knows the problems of the independent oil operators. His letter is as follows:

FAIRFIELD, ILL., *September 25, 1943.*

Hon. J. V. HEIDINGER,
Old House Office Building,
Washington, D. C.

DEAR SIR: I was very glad to note that you introduced the bill known as H. R. 3203 which would provide for an increase in the price of crude oil. This oil production is so vital to the war needs that nothing should be left undone to insure ample supply.

The facts and figures compiled by the most reliable authorities clearly prove that the reserves and supplies of crude oil are dangerously diminishing, due to the fact that the market price does not justify sufficient investment to correct this situation, and the only remedy for it is to immediately raise the price of crude oil to a level that will get investment capital again interested in wildcatting and developing, and I hope that your bill will receive immediate and favorable consideration.

Yours very truly,

N. V. DUNCAN.

Free Enterprise Must Prevail

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PATMAN. Mr. Speaker, there is a growing concern in this country that

there are some in high places in this Government who would, if they had the power, change our form of government from our present system of free enterprise, which has made our national economy the highest in all the world, to a socialistic or communistic form of government.

Some people even contend that our President holds such views, but in none of his spoken or written statements have I ever found the slightest indication of any such ideas. I do not believe that President Franklin D. Roosevelt has ever held such views, or would under any circumstances tolerate or permit any such views to prevail, if within his power to prevent their adoption. I consider President Roosevelt a real friend of small business and our system of free enterprise.

Let me warn any person or group who hold such thoughts or aims or desires that neither this nor any subsequent Congress is going to allow them to put over their pet destructive theories as against the tried and true policies on which this Government has been built.

Our country was founded on freedom—freedom of speech, freedom of religion, freedom of opportunity and enterprise, and freedom of fear. Under this system we have grown to be the richest Nation in the world, in many ways the strongest, with the highest living standards. The United States with 6 percent of the world's population has 30 percent of the wealth of the world by reason of our fine system of free enterprise.

Most large business firms in the United States were at one time small businesses, and in nearly every case they have grown through the industry and foresight of plain, ordinary American men. Many of these men were born and reared on our American farms.

A TYPICAL ILLUSTRATION

As an illustration, I want to cite the case of a firm in my home State of Texas, which just recently celebrated its twenty-fifth anniversary—the Duncan Coffee Co. of Houston. This business was founded by its president, Herschel M. Duncan. He came to Houston at the age of 19, directly from his father's farm at Fountain Run, Ky. Mr. Duncan's first job was in the plant of a coffee roaster in Houston.

Eleven years later, through his grasp of that business, he was able to start his own company on an extremely small scale. He was joined by Lester Bland, the present secretary and treasurer of the company. Their common practice was to put in 16 hours a day building it up. I have been informed the first day's sales of this new firm was $2.62, and the second day $5.63.

Through the ingenuity of these two young men and of Mr. Duncan's brother, Charles, who joined them 3 years after the business was started, the Duncan Coffee Co. has grown to be one of the largest independent coffee roasters in America. This growth did not just happen. These men and their employees worked for it.

To make their business the largest of its kind in all Texas, they, of course, had to establish a reputation for making fine products but, just as important, they had to establish a reputation for fair dealing and civic consciousness that is best disclosed through this letter by the Governor of Texas to Mr. Herschel M. Duncan on the twenty-fifth anniversary of the Duncan Coffee Co.:

HAS CIVIC CONSCIOUSNESS

STATE OF TEXAS,
EXECUTIVE DEPARTMENT,
Austin, Tex., August 10, 1943.

Mr. HERSCHEL M. DUNCAN,
President, Duncan Coffee Co.,
Houston, Tex.

DEAR HERSCHEL: May I take this occasion to congratulate you on the twenty-fifth anniversary of the Duncan Coffee Co.

Your business is typical of free, independent American enterprise that has made our American economy the highest in all the world, and it is American management such as yours, together with your employees, that has enabled our country to "go over the top" on every war loan offered by our Government.

Your action each year for more than 20 years of annually sharing the profits of your company, by your yearly practice of paying each salaried employee 10 percent of their annual pay as a Christmas bonus, is well known in Texas, and surely indicates that American business has a heart.

Your action, at the height of the depression in 1933, of discarding automatic machinery in order to put additional men and women to work received wide commendation throughout the Southwest, and was a further indication of the civic consciousness of American business.

I sincerely wish you, your associates, and your employees many more years of happiness and prosperity.

Sincerely yours,

COKE STEVENSON,
Governor.

The progress of the Duncan Coffee Co. is typical of thousands of localized, independent business institutions in every line of activity which have been developed from a small beginning to grow gradually until they become substantial additions to the commercial well-being of this country.

Many others were pioneers in their respective lines of endeavor by taking their chances with the growth and progress of the United States. In many cases they have been under the management of several generations of the same family. As these companies progressed, they likewise contributed to the growth and progress of concerns in other lines of business, on the basis that one feeds another. It is this cooperation that has made this country the commercial and productive giant that it is.

This enterprise should not be interfered with by any new-fangled ideas intended to revolutionize concerns like the Duncan Coffee Co. Such companies are an asset that should be scrupulously protected against any attempts to destroy a system which has earned, by years of effort, a rightful place in the business sun.

WANT TO LEAVE GOOD NAME

Enterprises of the type of the Duncan Coffee Co. will never consent to a socialistic or communistic form of government. It is upon such companies we must depend to ward off any attempts to substitute some ism that is untried for one that has been given the acid test over many decades.

Mr. Speaker, today just as was the case 50 or 100 years ago, the businessmen of America are not only concerned with leaving an estate to their children. To them leaving a good name is just as, or more, important. This is something that some of our advocates of radical business changes apparently do not know or have not taken the trouble to learn.

A great many years ago Abraham Lincoln said:

> It is a struggle for maintaining in the world that form and substance of government, whose leading object is to elevate the condition of men, to lift artificial weights from all shoulders; to clear the paths of laudable pursuit for all; to afford all an unfettered start.

As long as we maintain free enterprise in America, steering clear of monopoly, we shall afford all an unfettered start toward progress.

We must continue to improve, safeguard, and protect free enterprise, neither controlled nor operated by the Government.

The Plight of the Pacific Northwest Dairy Industry

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. COFFEE. Mr. Speaker, the plight of the dairy industry in the Puget Sound area of the State of Washington is poignantly acute. The dairymen in that region have solicited the aid of the Washington State congressional delegation to the end that its influence be employed in an effort to secure relief for the dairymen of the Seattle-Tacoma milksheds and for the State of Washington as a whole.

In the spring of 1943 the dairymen realized it would be necessary to get price increases this fall. In pursuance of that need the Seattle Milk Producers' Association, in cooperation with other dairy organizations, the Washington State Grange, and the Washington State branches of the American Farm Bureau Federation, requested Washington State College to make a survey on the cost of producing milk in the State of Washington. The dairymen felt that the men identified with the Washington State College were best qualified to make a fair and unbiased survey, being disinterested and objective, and capable of making a dispassionate appraisal of the situation.

The preliminary analysis was completed the first part of August 1943. This

was submitted to the O. P. A., accompanied by a request of the dairymen for an increase in price. Attached hereinbelow, and by this reference made a part hereof, is a copy of this petition directed to the Office of Price Administration on behalf of the dairymen of the Seattle-Tacoma milkshed. The O. P. A. thereupon set out to check these figures with their own accountants. The dairymen gave them all the assistance and cooperation possible. The O. P. A. sent its recommendation to the regional O. P. A. office at San Francisco early this month.

The Seattle O. P. A. office informed the dairymen that the Office of Economic Stabilization, effective September 1, 1943, ordered the O. P. A. to make no adjustment in price to either the producers or consumers until some national plan could be worked out. Hence, the dairymen now find themselves in the grave position of having prices frozen on a much lower level than dairy prices obtaining in California, although the same ceiling prices are placed on alfalfa hay in California as in Washington.

This situation cries out to high heaven for immediate remedy. There is no logic or reason in permitting this injustice to continue without change. The dairymen are all opposed to subsidies. They feel that the method of subsidy is not the proper procedure to employ in ameliorating the conditions under which they must work. The dairymen insist that consumers have the greatest income in history and are spending the lowest percentage of their income for food. The people are faced with the very serious situation of having to secure more milk from the sources that normally go into manufactured products. These manufactured products are earmarked for lend-lease and for the military forces. This may best be illustrated when I point out that milk for Seattle consumption required the purchase, in September, 2 years ago, of 13,431 pounds per day from outside sources, as contrasted with 55,052 pounds of milk per day purchased outside the Seattle milkshed area 1 year ago, and 115,855 pounds of milk per day purchased outside the Seattle milkshed area this month. This is 9 times as much outside milk as was purchased 2 years ago.

The enormously increased demand for milk was brought about because of the presence of more people with more money and by the drying up of the milk supply in King and Snohomish Counties of the State of Washington, representing a drop in such milk production of 15 percent of what it was 1 year ago.

Dairy farmers are very much discouraged by the attitude of the United States Government. Dairymen feel that of all people they have been hit the hardest by governmental policies. Consumers in the Puget Sound area are still paying the same price as they did in December 1941, but dairymen are paying twice as much for feed and labor. Demand for labor in that area is possibly the greatest of any place in the whole United States. The increase in population means that these additional residents want milk and other dairy products. The dairymen are anxious to produce it if the Government would give them the least bit of encouragement. Dairymen look to Congress, the legislative branch of the Government, as the only hope left.

To me it is all too apparent that a reasonable price increase in butterfat and milk products should be granted at once by the O. P. A., pending subsequent adjustments. The dairymen have a real cause, as is shown by the attached petition, which is a copy of a letter sent by the Seattle Milk Producers' Association to the O. P. A. and which incorporate the essential arguments and data explanatory of the whole situation.

SEATTLE MILK PRODUCERS' ASSOCIATION,
Seattle 99, Wash., August 13, 1943.

OFFICE OF PRICE ADMINISTRATION,
Seattle, Wash.

GENTLEMEN: We are submitting this supplemental petition specifically for a price increase for the producers of milk for the Seattle fluid-milk market. This request has been delayed until the survey conducted by the extension service and experiment station of the Washington State College was completed. A copy of this survey is in your hands under the general request for price increase to dairy farmers. We believe that this survey has been especially well conducted and analyzed.

Let us point out that the dairymen adjacent to Seattle show as efficient and economical a production as the dairymen for the State average. Table 2 in the college report shows that fluid milk for bottling cost 80.2 cents per pound butterfat (1942) or 6.1 cents per pound butterfat more to produce than milk for manufacturing for the State as a whole. We have figured the cost of fluid milk in table 2 to comply with our local conditions for increased labor and feed costs. A copy of this is attached hereto as exhibit 1. This shows a cost of $1.083 per pound butterfat for city milk at farm. At present the maximum price allowed our organization to pay producers is 87 cents per pound butterfat f. o. b. Seattle. The average hauling cost from the farm direct to the city plants is 5.16 cents per pound fat. This would leave an average net price at the farm of 81.84 cents, or the difference between the price received now and the adjusted cost of milk in table 2 (108.3 cents) of 26.46 cents per pound butterfat. Figuring that the average test of the milk coming into Seattle is 3.8, this figures approximately $1 per hundredweight of milk. We are, therefore, asking that the producers' price to the dairies be advanced $1 per hundred pounds of milk. This is in addition to the 90 cents per pound butterfat now charged for a day-to-day service on class I milk.

This is an urgent request, requiring prompt action. We have possibly delayed too long in trying to get a clear picture of what the supply and prices of both feed and labor were going to be this fall and winter. We should know not later than August 20 that this price request will or will not be approved by the Office of Price Administration to be effective September 1. Dairymen and feed dealers are now making arrangements for their winter feed, both hay and grain, while the harvest is on in eastern Washington. Hay is now being baled, and grain is being threshed. Storage space, man-hours, and dollars can be saved by shipping direct from the fields to this territory. If there is no prospect in sight for a price to pay the increased production costs, many dairymen will not bother to arrange for their winter feeds as they will reduce their herds or sell them. Between now and September 1 most dairymen will decide their course for the coming year.

The figures submitted in the college report show that dairymen's costs have advanced sharply during the past year. At best, Seattle will experience many difficulties in securing a milk supply for this winter. If production and sales follow the normal course from now until November, Seattle will be short 100,000 pounds of milk per day of city-inspected milk by November. Let us point out that the O. P. A. has set the same ceiling price on hay for Washington, Oregon, and California, and approximately the same prices for concentrates. We also note that O. P. A. has just advanced the ceiling price on soybean cake and meal to $11.50 per ton, $10 a ton on cottonseed meal, and $2 a ton for linseed-oil meal. According to the latest Government reports, farm labor is higher in Washington than in any other State in the Union. Feed prices in California and Washington are practically the same. Hay costs less in Los Angeles than it does in Seattle. (See attached feed-cost table, exhibit 2.)

We are sure that these comparisons justify a price advance. In addition, let us point out that the average price for home-delivered milk in the 25 leading milk markets in the United States is 14.84 cents per quart while Seattle's price is only 14 cents for 4-percent milk. The price of 14.84 cents per quart in the 25 cities averages less than 4-percent butterfat. (See exhibit 3.)

Indications are that the demand for labor in Seattle's territory is increasing faster than any other city of the same size on the Pacific coast. The following figures indicate the recent trend. Column inches of help wanted advertisements in—

	July 4, 1943	Percent	Aug. 1, 1943
	Inches		*Inches*
Seattle Sunday Times	301	20+	371
Portland Oregonian	482	26−	355
San Francisco Chronicle	386	10−	346
	Aug. 9, 1942	Percent	Aug. 8, 1943
	Inches		*Inches*
Seattle Times	139	------	470

NOTE.—Reported by the Seattle Public Library.

This does not include special ads.

You will note that Seattle is increasing in column inches while Portland and San Francisco show a decline in the last month.

At least 90 percent of the men, women, and children working on farms producing milk for Seattle are within easy riding distance to war plants. Please consider that the hourly wage rates figured in our figures in the cost of producing milk are 50 cents an hour for family labor and 75 cents per hour for the operator and hired help. The facts are that farmers are paying $1 per hour and dinner for harvest hands. Practically no industrial plants pay less than $1 per hour for experienced help.

The Government in its war food production program has recognized the part price plays in getting essential foods produced. Under the program, it has increased prices to get these foods produced. This year the minimum prices set by the Government on peas was $17.50 per ton more than last year, and the floor price for potatoes was $45 per ton. These and other cash crops are competing for dairy lands. With the removal of the Japanese, the growing of vegetables has grown more profitable, due to the public's being willing to purchase vegetables with no ceiling at a price that

will pay the operator more profitable rates than dairying. This was verified at three meetings held at Auburn, Duvall, and Snohomish on June 1, 3, and 4, 1943. The farmers were asked how many farms they knew of that were used for dairying last year and were not being used for dairying this year. There was a total of 29 farms reported, with 2,263 acres that supported 981 cows last year. This acreage is now in cash crops or supporting beef cattle.

Hay crops in the Seattle milkshed are about 10 percent short of last year so that much more hay will have to be purchased and used at a price that is 60 percent above last year.

A suggestion has been made that other milk supplies in factory sections could be drawn on. Let us point out that any milk brought from these sections means less butter, cheese, canned milk, and powdered milk to be manufactured for the armed forces and Lend-Lease. It will not add to the total production of dairy products. In addition, there are a lot of difficulties presented in this. First, let us point out, that the manufacturing plants do not find it profitable to divert any of their milk to Seattle at the full price of 90 cents per pound fat. Second, the O. P. A. in the amendment M 13 to MPR 329 prohibits, without the approval of the regional officer, the paying of a higher price than was paid these particular shippers in January 1943.

With the price to the city shippers in these territories frozen and the manufacturing price not frozen, the premium for city milk is not enough to justify the producers changing over to produce city milk under the city health requirements. In addition, there is the physical difficulty in getting new tanks and receiving equipment for cooling to transport this milk to Seattle. There has been a big change in the State during the past year in this direction already. These figures show the change and are taken from the report of Mr. R. S. Waltz to the board of directors of the United Dairymen's Association at the meeting of June 16, 1943. This is a comparison of the 7 months' sales from November 1, 1941, to May 31, 1942, and the same period from November 1, 1942, to May 31, 1943. This showed a drop in evaporated milk of 46 percent, 1943 from 1942. Butterfat in raw milk for bottling increased 42 percent. Butterfat and sweet cream dropped 16 percent, butter dropped 10 percent, and cheese dropped 41 percent. This covers 50 percent of the State's production. This change-over from manufacturing to city milk has already reached a dangerous point. It seems more advisable to keep the production up in the regular fluid milk territories close to the fluid milk markets.

There is another factor that is a vital one. That is the attitude of the dairymen themselves. Most of them have reached the stage where, if the Government continues to hold down dairy prices, they are ready to change over to projects and crops, in which their land and their labor, including their family labor, will give them greater dollar returns. Some of them have already done this. With the difficulties of securing feed and labor facing them, dairymen are possibly not as much concerned as the public would be if the public understood the real picture. This is readily understandable when both their land and labor can be used to give them many more dollars than dairying will at the present prices.

In justice to the citizens of the city of Seattle and the dairymen, we feel that the price asked would insure the public of milk and allow the dairymen to continue to operate. We feel that the public is willing to pay whatever increased price is necessary to maintain a supply of bottled milk. Bank deposits have increased from November 30, 1941, to June 30, 1943, approximately 67 percent; from $572,305,230 to $955,380,828. Milk to the consumer is still the same price as on November 30, 1941.

We therefore ask your prompt action on this and trust that we will receive the same.

Very truly yours,

SEATTLE MILK PRODUCERS' ASSOCIATION,
ROBERT COWAN,
Secretary-Manager.

Current prices and values per unit						$30.00	$10.00	$59.00	------	------	------	$75.00	$50.00	$75.00	------	------	------	------	------	------	------	------	------
Cost at current prices						$82.80	$19.50	$63.13	$16.36	$1.46	$183.25	$43.80	$26.12	$51.90	$121.82	$3.59	$41.88	$33.13	$384.56	$37.77	$346.79	$1.083	$0.8163
Percent of increase						------	------	------	------	------	48.3	------	------	------	65.8	------	54.8	------	------	------	------	------	------

[1] In computing the price received per pound fat no credit was allowed for the value of the skim milk retained on the farms of sweet and sour cream producers. Under present price levels for milk solids not fat a credit of from 9 to 10 cents per pound fat seems justified for this item.

Fuel Oil for Farmers

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 30, 1943

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend and revise my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter from the officers of the Farmers Union of Peake, Local No. 1541, at Pleasanton, Nebr. This letter indicates that the farmers of Nebraska are having difficulty in getting fuel oil to keep their tractors operating. It is generally understood that many small refineries are forced to close because under Government regulations they are not permitted to operate to their full capacity. It further demonstrates the necessity of getting the price of crude oil raised to that point which will encourage the drilling of new oil wells and which at the same time will permit the pumper wells to operate at a reasonable profit.

If the farmers are unable to get fuel oil to run their tractors there will certainly be a serious shortage of food in 1944. It is estimated that the United States lacks about 50,000,000 acres of having enough harvested acreage to produce sufficient food to maintain the American standard of living. We cannot expect to supply food for lend-lease and foreign countries with the shortage of food on our own American tables.

The primary question of 1944 is going to be the production of enough food to sustain the people of the United States. I have every confidence in the ability of the American farmers to produce the needed foods if they are assured a reasonable profit, sufficient machinery, farm repairs, and an opportunity to plan their production without governmental interference.

For the farmers of the Midwest to produce food they must have tractor fuel. I urge upon the Members of Congress to recognize the problems set forth in the letter from this farmers' union in Nebraska. This should be of particular interest to the people in the consuming East if they are to have food sufficient for their needs in 1944.

PEAKE LOCAL NO. 1541,
Pleasanton, Nebr., September 27, 1943.

Congressman A. L. MILLER,
Washington, D. C.

DEAR MR. MILLER: The Farmers Union members of Peake Local No. 1541, of the Farmers Educational and Cooperative Union of Nebraska, in their regular September meeting were discussing the tractor fuel situation, as we have had some difficulty in getting fuel to keep our tractors going.

Our National Cooperative Refinery Association at McPherson, Kans., is only able to operate at about 60 percent of capacity due to Government regulations. It's hard for us to understand why we are not allowed to operate at 100 percent. Is there a shortage of crude oil? If so, why have the Washington authorities been cutting the production of crude oil? Why isn't some inducement made for the discovery of new supplies or the price of crude oil raised?

We maintain that farming is an essential war industry. Probably the biggest war industry. The farms are stripped of young men The middle aged, the old, the infirm, and the women are left to produce the food for a mighty and ever-expanding Army and Navy. The people left on the farms must have tractors if food is to be raised in sufficient quantities. Tractors require fuel, and this fuel is just as important as fuel for fighting tanks and planes.

We ask you as our Washington representative to do what you can toward correcting this situation and avoid a serious food shortage here in the United States.

Sincerely yours,

VERN DOROTHY,
President.
MRS. ALBERT KROTZ,
Secretary.

The Book, Christian Bases of World Order, by Vice President Wallace—Review by Hon. Claude Pepper, of Florida

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, September 30 (legislative day of Wednesday, September 15), 1943

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a review of the book, Christian Bases of World Order, containing notable and outstanding addresses by our distinguished Vice President. The review was written by me and appears at page 619 in the autumn number of the magazine Religion in Life.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

CHRISTIAN BASES OF WORLD ORDER

(By HENRY A. WALLACE, Francis J. McConnell, et al.)

The Merrick lectures for 1943 of Ohio Wesleyan University point the way to the good earth which good men everywhere want after the war. Vice President WALLACE, whose spiritual insight is a distinctive characteristic of his wisdom, in the first lecture, Practical Religion in the World of Tomorrow, strikes the note and tone of the whole series.

The other 11 lecturers—a church leader, the president of a theological seminary, a professor of philosophy, a college president, a religious worker, a professor of economics, an intelligence officer in the Planning Division of the Office of War Information, a research director, a professor of public health in the Yale Medical School, the chairman of the governing body of the International Labor Office, a professor of eduction with peculiar understanding—discuss fundamental Christian principles as related to the individual and a social order and such factors as race economic freedom, the land, politics, health, justice for workers, and human character, in a world order.

The 12 lectures taken together show the conception of Christianity in its essential nature and character, and then the application of those concepts to the conduct of men and nations of men. The fortunate reader readily follows through the series the thread of the Christian ethic. It is easy to see that a faith, a creed, an attitude which makes the individual better, can better the world. In fact, it is obvious that only some great inner force which can restrain the strong fires within men can prevent devastating conflagration around man's whole world.

Moreover, one sees that the effective way to control men is not from the outside, but from the inside, to tether them by their own consciences. If men hope to have a better world, they must want a better world, and rationalize such a hope upon the understanding that such a world really offers larger satisfaction than any other.

It is clear that the universal recognition of the principles of the brotherhood and dignity of man, which are fundamentals of the Christian faith, would promote peace. And the practice of the Christian virtues by individuals and nations would prevent war. From these concepts would also flow human conduct within nations as well as among nations which would reconcile, if it did not prevent economic conflict and promote such distribution of economic assets, or at least economic opportunities, as would make for the kind of an order for which most men have ever yearned.

A real compassion for humanity naturally stimulates provision for man's health, his education, the kind of home he lives in, the chance he has to work, the sort of recreation open to him, and the institutions with which he may identify himself in his reaching out after the things which pull him upward. The Christian regard for human life, of course, abhors murder, whether it be homicide or aggressive war. Regard for another's property, also a fundamental of the Christian ethic, will protect the goods, the land, and the homeland of all.

These lectures, with their penetrating analysis, give one the feeling that all human experience has proved the rightness of Christian principles, not only as a creed but as a code of human conduct. They who have ridiculed the claims of the Christians that Christianity must be the spirit of a better world on earth are at last coming to see that these Christ followers were not religious zealots proselyting their faith. They were statesmen. By the test of experience, then, by age-old trial and error, by the understandable principles of cause and effect, punishment and reward, men everywhere are feeling that of a truth crime, individual or national, does not pay, and good works and the good life almost universally do.

Once men are moved only by the desire to do right, the way of right is not so difficult to find. For if men respect one another's possessions, if they appreciate the dignity of one another, if they really desire to do one another no harm, if they are moved to succor one another against misfortune and to give each to the other his due, all manner of difficult matters can be resolved and men can get on together, so that all may find in living some comfort, satisfaction, and exhilaration.

And these principles, the basis of private conduct, are no less applicable to the relations of nations, for these entities very peculiarly have the vices and the virtues of individuals.

These able lectures, then, have told us only a little differently what Christ told us, that He is the "way, the truth, and the light." Christianity will work. In fact, everything else has failed. Christianity, squared by human experience, is the only foundation upon which men may ever hope to build a fruitful and peaceful world for healthy and happy human beings.

The publishers of Christian Bases of World Order are to be commended for bringing to statesmen and citizens these moving voices which call us to a better world.

CLAUDE PEPPER,
United States Senator.

WASHINGTON, D. C.

Synthetic Rubber

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. PATMAN. Mr. Speaker, August 23, 1943, one of the largest synthetic rubber plants that has ever been constructed commenced the production of synthetic rubber near Beaumont, Tex. It was my privilege to attend this opening and to witness this giant plant come into production according to plan. Mr. George W. Vaught, vice president of the B. F. Goodrich Co., the concern that constructed and is operating the plant, delivered an address at a dinner that evening in Beaumont, which disclosed some very interesting information, I commend its reading and study to any person concerned about the present rubber situation.

The address is as follows:

THE JAPANESE PLAN

In America we have known for many years about the Japanese knowledge of human anatomy, demonstrated by their skill at jiujitsu.

We learned on December 7, 1941, of their knowledge of economic anatomy, demonstrated by their action in severing our 10,000 mile rubber life line from the Far East, the most effective possible single blow which they could strike at the then sleeping American industrial body.

For more than 100 years we accepted rubber as a matter of course. We used some 35,000 products made from it, and, we committed what came close to being a fatal error—we took rubber for granted. We had given little, if any, thought to rubber from the strategic angle. I suspect that we didn't realize how important it was in that respect.

But the Japanese knew. They knew that today's land armies have an almost insatiable appetite for rubber—that it required 1,750 pounds of rubber for a medium tank—3,200 pounds for a 10-ton ponton bridge.

The Japanese knew that air power can't be sustained without rubber—a modern bomber of one type needs 2,200 pounds of rubber, used in literally dozen of its parts.

The Japanese knew that no naval force can carry on without the service that rubber performs—a heavy battleship requires 150,000 pounds of rubber. That is enough to equip more than 2,000 automobiles with tires and tubes, including spares.

The Japanese knew that the mills of industry, heavy and light, need rubber in countless ways to keep them going. Conveyor belts, transmission belts, hose of a thousand kinds, insulation, gaskets, gloves. They knew how dependent we were upon rubber-borne vehicles for the essential movement of goods and persons from one point to another in this country and from home to factory.

So when they slashed down through Malaya, Singapore, Sumatra, Java, and Borneo—taking over areas from which nine-tenths of all the world's rubber had come—they felt they had practically a death grip on our economic jugular vein. This was economic jiu-jitsu in finished form.

They had caught us with a bare year's supply of rubber on hand—about 600,000 tons—and we can thank the stock-piling program of our Government for our stocks being that large instead of only about one-fourth that amount, which was a normal inventory. They knew that the amounts of tree rubber we could scrape up from other regions—such as Ceylon, India, Africa, and South America—would supply only a pitiful fraction of our needs. Undoubtedly, the Japanese knew, too, that all the domestically grown vegetable rubber sources we could dig up—the guayule bush, the cryptostegia vine, the Russian dandelion, and all the rest—wouldn't add up to a "hill o'beans" actually, so far as meeting the rubber appetite of this Nation was concerned.

Yes; the Japanese were very smart. They planned it that way. But the fight wasn't over; that is, the rubber fight wasn't over because there was one thing that the Japanese didn't know, or couldn't appreciate. That is the tremendous ability of that once peace-geared American industrial machine—and of the American people.

PROGRESS OF AMERICAN RUBBER PROGRAM

Today the national rubber program is well under way.

We are going to win—we are going to win the main event of this war, and en route to that victory we're going to win the battle of rubber.

And it is to celebrate one of the longest advances the Nation has made along the highway to victory in this battle that we meet here today—to mark the opening of the largest synthetic rubber plant in the world.

This reminds me that one of the sorriest miscalculations the Japanese made was due to the fact that they didn't know about Texas!

Certainly they didn't figure that, inside 2 years after Pearl Harbor, this one State would have in steady operation plants with an annual capacity of 255,000 tons of rubber—almost half as much as this whole country's normal consumption in prewar years.

Yet, that is what the Texas share in this national synthetic-rubber production program amounts to. The actual start of production in the plant at Port Neches brings the Lone Star State close to its eventual position as the largest single factor in the national rubber-producing program. This total State capacity of 255,000 tons per annum will be more than one-third of the total national production of Government financed synthetic rubber.

The two main ingredients of this man-made rubber, butadiene, and styrene, are home-grown in Texas. One of the most striking examples of adapting the great petroleum resources of this State to serve the Nation's needs for rubber is right here at Port Neches, where the magnificent new plant of the Neches Butane Products Co. produces butadiene and feeds it through a pipe line only a few hundred feet to where it begins getting the polymerization treatment.

Well, it would seem certain that the Japanese must not have known about Texas.

For that matter, I believe that even America didn't know her own strength, especially her ability to make rubber on a large scale. Certainly the miraculous expansion of synthetic rubber production facilities to the point where it can now be safely said that they are going to fill the bill, in quantity and quality, has pleasantly astounded many of us who were much closer to the situation than the Japs were.

For my part, if someone had told me 3 years ago that in August of 1943 I'd be in Texas to attend the opening of the world's largest synthetic rubber plant, I probably would have thought that he had "a touch of Texas" in his head.

On second thought, though, that wouldn't have been an illogical prediction because certainly there was some discussion going on, even then, about the desirability of our country meeting at least a part of its rubber needs by making rubber synthetically out of materials native to this land. And it surely would not have required a crystal ball to foretell that when, as, and if America did go into synthetic rubber in a big way, Texas would play an outstanding part.

ACTION IN 1940

It was just 3 years ago last June—almost exactly 18 months before Pearl Harbor—that public attention was first focused on the weakness of our Nation's rubber position—and the creation of a synthetic rubber industry as a form of national defense insurance was proposed.

I remember the reception in a New York hotel on June 5, 1940, when B. F. Goodrich announced that it had started manufacture of automobile tires made with its own synthetic rubber, Ameripol, and offered them for general sale. That was the first commercial venture in synthetic automobile tires in this country—and in fact the only one up to the release a couple of months ago of the first tires made with Government rubber.

At that time—June 1940—general-purpose synthetic rubber was a brand-new material, hardly out of the laboratory stage. Our company president, Mr. John L. Collyer, explained that he felt called upon, in the interests of national preparedness, to take a step which under normal conditions would not have been necessary—and, in fact, was unwarranted from the strictly commercial viewpoint. For normally there was no place in our economy for general-purpose synthetic rubber, because of the cost differential with natural rubber.

The primary significance of that June 1940 meeting was that it did center both public and official attention upon the fact that the Nation was at the mercy of anything that might happen to interrupt the flow of rubber from the distant East. We then were getting 97 percent of our supply from that part of the world.

We resorted to a little dramatization to get that point over, projecting upon a screen a rubber-laden ship being torpedoed en route from the Far East to this country. I recall that all of the guests were rather impressed, though many indicated they thought we had overdone it a bit. But as it turned out, we hadn't.

That meeting attracted attention, also, to the fact that synthetic rubber provided the only means by which this country could, quickly enough, win its independence of remote sources for this indispensable material.

And the lessons learned in the commercial manufacture of tire-type synthetic rubber, and from the on-the-road testing of those tires, unquestionably played a large part in enabling the Nation to embark with confidence upon the staggering large-scale synthetic program when war came along and more than fulfilled the direst apprehensions about rubber supply.

Now this summer, week by week and month by month, we are seeing the actual bringing into being of a national production program that doesn't contemplate leaning upon any outside sources for rubber supply. The program is already rolling in a number of locations—it's beginning to roll right over there at Port Neches—and aiming at such a scale as few of us, even those responsible for that 1940 meeting in New York, quite visualized then.

TEXAS AND THE RUBBER INDUSTRY

That brings us down to today and to Texas, and what synthetic rubber means to this State—and what this State means to the synthetic rubber program and to this Nation at war.

Texas and the rubber manufacturing industry have had much in common for many years. Not only cotton, but carbon black and sulfur, two of Texas' most distinctive natural resources, are basic ingredients of manufactured rubber.

Maybe you didn't realize it, but normally one out of every 13 bales of cotton used in this country goes into tire fabric and tire cord. Rubber needs cotton to supply its tensile strength in hundreds of things—belts and hose and clothing, and tires.

Nearly nine-tenths of all the carbon black made in this country is used by the rubber industry. More than 80 percent of this comes from the sour natural-gas wells of the Texas Panhandle. It's the stuff that makes tire treads black, and it also gets a major share of the credit for the greatly increased resistance to wear or abrasion, that modern tires have. This, by the way, was one of the many contributions of B. F. Goodrich scientists to the rubber industry.

And, of course, you know about rubber and sulfur * * * sulfur is the indispensable material that makes possible the vulcanization of rubber. The rubber industry is one of the largest consumers of sulfur used "as is."

But what is happening this summer is that, under the spur of war necessity, Texas is going far beyond her role as a supplier of ingredients and coming into her own as the leading producer of the main product itself—man-made rubber.

For some years now Texas has been in the process of emerging from the role of raw materials supplier into one where a healthier proportion of actual manufacturing and processing operations contributes to the State's economic well-being. The well-known slogan sums it up: "What Texas Makes Makes Texas."

The creation of this huge rubber-making industry down here unquestionably represents an important milepost in the transition of Texas into a State that makes things.

Because, even though the end product here is still a raw material, the extent of the "value added by manufacture" (through jug-

gling molecules) in this case is tremendous. Consider that only a few years ago butadiene and styrene were produced in very limited amounts and were not much more than laboratory curiosities.

I believe it should be made clear, at this time, that the location of this large capacity of synthetic rubber production in this part of the country was not based on market potentials, present or future. It was—and there is no secrecy about this—strictly a matter of military logistics: getting the raw materials together for quick and large production, and with a minimum of cross-haulings.

FUTURE OF SYNTHETIC RUBBER PRODUCTION

Cost comparison with natural rubber

I am not unmindful of the questions that have been raised about survival of this country's synthetic rubber industry after the emergency; questions stimulated by the possible difficulties in competing on a straight-out price basis with natural rubber under normal commercial conditions.

No one can give the complete answer to this now, but to me it seems inevitable that the American people—regardless of a price differential—will insist on continuing the operation of these plants after the war, just as they will insist on retaining air bases, military aircraft, and battleships.

Even if the cost should be somewhat higher than natural rubber I firmly believe we should keep these synthetic plants intact and in operation at least on a limited basis so that the insurance policy which we have created will not be allowed to lapse and so that we may progress further in the manufacture and use of synthetic rubber.

I believe that those responsible for the Nation's defense, after the war is won, will want to continue to specify synthetic rubber in national defense equipment in sufficient amounts to assure this continuing operation. This will provide the Nation with adequate production capacity for use in an emergency, and at the same time afford protection against high prices of natural rubber.

Actually, in the long run, the cost differential may not be as great as some now anticipate. There are indications that the continuing application of American ingenuity and research will accomplish the same marvelous cost reduction and quality improvements in production of this material that we have seen take place in numerous other commodities and products

In the short time that volume production of synthetic rubber has been under way technical advances have run so well ahead of expectations—both as to capacities of given plants and in the adaptation of the material to necessary uses—that estimates of its eventual ability to compete with natural rubber are being favorably revised every day.

As a matter of fact, I was discussing this cost problem just this afternoon with the man who has been responsible for the construction and now for the operation of more synthetic-rubber production capacity than any other man in the world, our own Mr. Arthur Kelly. He tells me that it is his firm belief that competitive private enterprise will be able to make synthetic rubber in the postwar period at costs not materially above and may be competitive with the costs at which natural crude rubber can be profitably delivered to these shores.

The history of the rubber industry over more than a hundred years has been marked by extraordinarily wide swings in the price of crude—from a high of $3.06 per pound in 1910 to a low of 2⅝ cents per pound in 1932. Several restriction schemes and other unnatural factors contributed to this, yet in the long run it has been the inescapable law of supply and demand that finally prevailed. So the existence of a ready and able synthetic-rubber industry after the emergency would serve as one of the most effective possible guaranties against future skyrocketing of natural-rubber prices.

World production and world consumption of rubber

Another important question has been raised that needs our attention. When we have a synthetic-rubber production in this country of more than 1,000,000 tons a year, and when we recapture the far eastern rubber lands, with a capacity of 1,700,000 tons per year, this will make a total production capacity of about 2,700,000 tons, which is 2½ times as much as the average world absorption for the 3 peak years of 1939, 1940, and 1941. This was an average of 1,100,000 tons per year.

As businessmen, you can see instantly the problem that this might create. Only a tremendous increase in demand for rubber products could absorb this potential surplus. Instead of offering an answer to the question that this problem poses, let me give you some statistics to dream about. It is possible you will find a satisfactory answer.

First, United States, with a population of 130,000,000, has in recent years consumed more than one-half of all the world's rubber production—about 10 pounds per annum per capita. China and India have a combined population of 810,000,000—more than 6 times as great as ours. The per capita consumption of rubber in those countries was only 0.03 of a pound during the last year for which statistics are available. Russia, with almost another 200,000,000 population, consumed approximately one-third pound per year per capita. Now, in these 3 countries alone there is a population of more than 1,000,000,000 people.

It can be quickly figured that if an improvement in the standard of living in these three countries alone raised the rubber consumption by 1 pound per capita per annum, it would actually change the prospect of an oversupply to the possibility of a world scarcity of rubber as a long-range prospect. Now, the possibility of this new market for rubber will depend upon two things: First, improved standard of living, which we read so much about, and, second, a low cost price of the commodity. A stable low price for rubber, I believe, will contribute more than any other one thing to the prospect of world consumption requiring this large production, and, certainly, low-cost synthetic rubber will peg the price of all rubbers to prevent the runaway prices of our last 25 years' history.

PRESENT USES FOR SYNTHETIC RUBBER

Synthetic rubber as a material has emerged from the question-mark stage. It is being widely used now. Within a few months the technicians of the rubber industry will be able to say, with the backing of experience, that it can be satisfactorily used interchangeably with natural rubber for nearly all purposes. Just the other day the Navy reported that by September 1 it will have converted more than 60 percent of its crude rubber requirements to synthetic rubber, including such articles as submarine battery jars, flotation gear, rubber boats, gas masks, rubber-jacketed wires and cables, and fully 75 percent of its mechanical goods. Even the tires for the Navy's smaller passenger cars, jeeps, and trucks have been wholly converted to synthetic rubber and they are proving highly satisfactory, the Navy said.

Passenger-car and light-truck sizes of tires, recent ones made with 99.8 percent synthetic, have proved in tests and in actual use that they'll deliver service and mileage comparable to that expected of naturals. With the larger sizes for trucks and busses, there are still some problems, arising from the fact that such tires are commonly subjected to overloading, and long, fast hauls—conditions which cause high tire temperatures—and, though synthetic rubber itself has greater heat resistance than natural, it does generate more heat under flexing and that puts a greater strain on the fabric elements of the tire.

This problem is under concentrated attack and steady progress is being made. The industry feels that a solution is simply a matter of time and further experience.

Meanwhile synthetic rubber has already proved its adaptability in sources of vital war products. In some of them—like bullet-sealing fuel cells, gasoline hose, carburetor diaphragms, and hydraulic accumulators—synthetic is no mere fill-in, but is absolutely indispensable, making possible things that couldn't be made with natural rubber alone. And in many others it has been used successfully by B. F. Goodrich combined with natural rubber in varying proportions—in airplane and military ground vehicle tires, conveyor belts, endless-band tracks, inner tubes, life rafts and pontons, gloves, etc.

That's just a smattering of what synthetic rubber means to this Nation at war. You, here, are getting a first-hand glimpse of the early stages of what synthetic rubber means to Texas——and that's a long and, I hope, a pleasant story that reaches a lot farther and deeper than any of us can see right now.

WINNING THE BATTLE OF RUBBER

Developments have been much faster than any of us thought they would be. Seeing the veritable forest of towers out there today I was reminded that one of your Texas papers, commenting on our B. F. Goodrich "Ameripol" announcement in New York 3 years ago, actually went out on a limb and discussed the possibility of Texas, because of its oil and gas resources, becoming what he called a modern rubber plantation.

Well, that's what we've got right here today—though I doubt if even the writer of that prophetic article anticipated that those "plantations" would spring into being, and on such a tremendous scale, within 3 years.

There is some danger that in taking note of the truly marvelous achievements that have been wrought in bringing this synthetic rubber industry into being, we lose sight of the fact that, as of right now and for at least several months into the future, this country is still in a critical situation with regard to rubber supply.

The fact is that this country is heading into the last half of 1943 still in the grip of a rubber crisis. Stocks on hand have declined steadily, and will continue to do so for several months. Our reserve stocks and the rubber contained in finished products must bridge the gap until these giant synthetic plants are actually keeping pace with the United Nations' tremendous wartime rubber needs.

The most recent report of Rubber Director Jeffers mentioned that there would be some 5,000,000 passenger-car tires of synthetic rubber produced this year, and another 30,000,000 in 1944. He made it clear, though—and it bears reemphasizing—that although this sounds like a lot of tires it is actually a rock-bottom minimum necessary to the maintenance of essential transportation.

So there is no justification for relaxing our vigilance in protecting and extending the life of every bit of rubber that we have. Mainly, that means practicing all the rules for tire health, sharing your car, and confining your mileage to the essentials.

As for the immediate problem of producing enough synthetic rubber to keep the United Nations rolling toward victory on the battle fronts and sustaining essential civilian transportation, the Jeffers report indicates that that problem is fairly well in hand. It estimates that about 250,000 tons of synthetic rubbers of all types will be produced this year in the United States, and the production in 1944 should be 750,000 tons or more, which definitely means that we are winning the battle of rubber.

General Marshall

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Oregonian of Portland, Oreg., for September 23, 1943, concerning General Marshall. The editorial follows:

GENERAL MARSHALL

No other military commander in the history of America's wars has enjoyed such public and official backing as Gen. George C. Marshall. That goes for George Washington and Ulysses S. Grant, who solidified their support after rather than before their victories. And in no other country in the present warring world, save possibly China, is there a captain to approach his particular position.

Russia is without a known over-all strategist, unless it is Stalin himself. Various able Russian generals have been mentioned and have passed from attention. Britain has muddled along so far as her military commanders are concerned. Through the hard test of battle, Generals Alexander and Montgomery, and Lord Mountbatten, have come to prominence, but more as field commanders than as over-all strategists—except, possibly, in the case of Alexander. So also in the case of Japan, particularly since the death of Yamamoto. And, of course, Germany is in that category also, where commanders have died or disappeared abruptly and where there is no approach to a Bismarck, Hindenburg, or Ludendorff—only confusion.

In regard to our own military picture, it is natural there should be extreme admirers of General MacArthur and of General Eisenhower. But even the partisans of these field commanders will seldom be found arguing against General Marshall so far as the general command and the strategy of the war are concerned. From the very beginning of our active part in the war—through all the meetings of Mr. Roosevelt and Mr. Churchill and of the joint war councils—word has been leaking out that General Marshall was the strategic brain. Both the President and the prime minister have publicly paid him compliment on that score. And since, at the same time, his simplicity, self-effacement, forthrightness and consecration, have won Congress and the country, he is placed in a position wholly unique in our military history.

Meanwhile, let us all be determined to give full credit to the British Government and to the British war cabinet if they actually do accept General Marshall as the supreme commander in chief—as now seems to be the issue. Early in the war, the report was that the British people, in view of their exposed position, never would be able to accept anyone but a British commander for the direct invasion of Europe—someone fully aware, from the British viewpoint, of how completely the British isles would be denuded in case of defeat, and of how important this would be. If now, General Marshall is accepted as the supreme commander, probably operating, to begin with, from London headquarters, this will be a compliment and vote of confidence which has no precedent and certainly should not be underestimated.

Frank Michael O'Brien

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. KENNEDY. Mr. Speaker, in the death, on September 22, of Frank M. O'Brien, distinguished editor of the New York Sun, the city and State of New York, as well as the Nation, lost a great man and a great American; the loss to American journalism, at its best, which his luminous talents had served with unselfish industry, integrity, strength, and grace for the better part of his 68 years, remains profound and irreparable.

Ever since 1926, when he succeeded to the editorship so notably discharged by his renowned predecessors, the late Charles A. Dana and Edward P. Mitchell, Mr. O'Brien met and maintained the full measure of his responsibility to them, to his profession, to his community, and to his country with such modest distinction and self-effacing all-absorbing devotion that he is forever enshrined as the peer and companion of his famous forerunners, the third of a noble triumvirate, the last of an illustrious dynasty.

Born in Dunkirk, N. Y., of that Irish immigrant stock whose sturdy and sterling virtues have enriched our Nation throughout its entire history, Frank Michael O'Brien brought to his task those qualities of character which are always associated with the Irish—a warm abundant vitality, energy, and sense of humor, a wide range of human sympathy, a quick intelligence and tenderness, a deep loyalty to the highest ideals in thought and conduct, the courage of his impulses as well as the courage of his convictions, a pure love of God and of his fellow men, an uncompromising passion for the truth and an equally uncompromising contempt for sham, hypocrisy, humbug, and dishonor.

According to his obituary notices, it would appear that, as a boy, Frank O'Brien aspired above all else to the occupancy of the engineer's seat in the cab of a locomotive. This ambition, we are told, faded into oblivion on the day he got his first newspaper job. Nevertheless, if I may take issue on this point, I believe with all my heart that, in the final analysis, his long and distinguished career in American journalism was essentially that of an engineer of the American mind and soul, directing and driving a powerful locomotive, the most powerful in the world—the engineer of free and untrammeled thought in the locomotive of public opinion.

As head of a great American newspaper, Frank O'Brien was ever vigilant at the throttle, jealously watchful of our American heritage of liberty of opinion and speech, scornful of the threats and pressures of special interests and selfish seeking, an unrelenting foe of everything and everybody false, pompous, and anti-American.

That record of his service to his job and his fellow citizens is surely the record he himself would wish to be remembered by. When Frank O'Brien climbed down from his engineer's seat and turned in his report on his last run to the Supreme Engineer of us all he must have been greeted with a warm welcome as he entered into his well-earned rest and reward:

When earth's last picture is painted, and the tubes are twisted and dried,
When the oldest colors have faded, and the youngest critic has died,
We shall rest and, faith, we shall need it; lie down for an aeon or two,
Till the Master of all good workmen shall put us to work anew.
And only the Master shall praise us, and only the Master shall blame,
And no one shall work for money, and no one shall work for fame,
But each for the joy of the working, and each in his separate star
Shall paint the thing as he sees it for the God of things as they are.

[From the New York Sun of September 23, 1943.]

FRANK M. O'BRIEN

"Full big he was of brawn and eke of bones," but bigger still of mind and heart. To those most closely associated with Frank M. O'Brien in the daily conduct of this newspaper he was, first of all, a friend, and after that a supreme master of their craft. It would violate all his canons of professional propriety for them to indulge in extravagant lamentation over his passing. They can but acknowledge the depth and soreness of their loss.

Simplicity and integrity were the keys of his character. Though he was vigilant to note and evaluate the most minute shifts in trends of popular thought, he was nevertheless a helmsman and not a weathervane. By the polar star of his own carefully pondered convictions he steered a well-charted course across every sea of controversy. He had the highest respect for the readers of his newspaper; he held in profound distrust all roarers and rabble rousers and demagogs. He once wrote this in a letter to a critic who had complained that a leading article opposing a city sales tax had not been sufficiently exclamatory:

"The Sun has never found it necessary to bellow at its readers or to treat them as if they were 12-year-old children. It credits them with reasoning processes which enable them, when a subject is well illuminated, to arrive at their own decisions."

Although the arena of debate was not his favorite field, he never hesitated to enter it when occasion seemed to call. He could break a chivalrous lance with any worthy foe, but when it came to deadlier combat his favorite weapon was the rapier, never the bludgeon.

Few men of Mr. O'Brien's native shyness and modesty have managed to scale the professional heights to which he attained. Although over the years his influence upon public opinion has been enormous, the circle of his intimates was small and he did his best to keep it so. He rarely attended public dinners and assemblies. An invitation to dine with visiting royalty, whether of rank or of fame, almost invariably found him equipped with a previous engagement. It was never easy for any passing potentate, however well armed with letters of introduction, to pass through the door of his private office. He once told a friend that he didn't

care much to meet so-called important people. If anybody said or did anything really important, he explained, he would hear about it or read about it anyway.

But he did seek acquaintances among the common run of folk. He believed that the poor have a better grip on the realities of existence than the well-to-do. The poor, he was wont to say, come face to face with these realities almost every day of their lives and have no language with which to speak of them save that of unvarnished candor. He knew many of the working people with whom he came into occasional contact, could call most of them by name, remembered whom and when they married, how many children they had, how they were getting along, whether a friendly hand might give a needed lift over a hard place. He helped but never patronized.

He knew the politics of New York City and State as an industrious schoolboy may know his primer. His memory for names, quotations, and incidents was prodigious. He knew something—and sometimes a great deal—about most of the city's politicians, from leaders to party hacks—knew to whom they were indebted for favors, how much they did or did not contribute to party funds, what jobs they were after, what friends they might be expected to assist, what causes had claimed their allegiance in the past. He could forecast the results of an electoral campaign with something approaching clairvoyance. He never forgot a man known as a keeper of his word; he neither forgot nor forgave a breaker of promises, a betrayer of trusts. He told the truth himself and expected others to do likewise; once he made up him mind that somebody was undependable or a trifler with veracity, he was against him for the rest of his life, no matter to what station that person afterward might ascend.

Whatever Mr. O'Brien wrote he wrote with sparkle. He had a trenchant, sometimes a mordant, wit, but his editorial utterances were characterized by a clear, compact, and luminous style which marked a fine sense of proportion and fitness of things. He never used four words where three would do the job; he never wrote a pretentious word when a simple one would serve. Sham he abominated; pomposity he loathed; intellectual dishonesty was to him an unpardonable sin. Whenever he encountered any of these imposters he lashed out with phrases that bit and stung. Yet there were occasions and themes upon which he could write with amazing tenderness. In his personal relations with coworkers and subordinates he was more than fair; he was considerate in a way that revealed a sincere and affectionate good nature.

The Sun is proud of its long line of editors, from Dana through Mitchell to O'Brien. It is the opinion of Mr. O'Brien's colleagues that in every respect he was the peer of his illustrious predecessors. Most of them will say that they are better newspapermen for having sat at the feet of Frank O'Brien. All of them will say that to know him was to be strengthened in faith in the innate dignity of the human race.

[From the New York Times]

"He was a newspaper man's newspaper man." Frank M. O'Brien, whom our neighbor, the Sun, has just lost as editor, could hardly be described in any better phrase. He had worked his way up through nearly every rung of the ladder. He had been, on various papers, proofreader's assistant, local reporter, correspondent, political reporter, news editor, city editor, editorial writer, columnist and editor. He had a gift for mordant humor under which many a victim smarted. But he also had a depth of feeling that won him the Pulitzer Prize in 1921 for his article on the burial of the Unknown Soldier. The other qualities of his writing—his accuracy, terseness, sureness of touch—had been arduously mastered out of a wide experience. He will long be revered by younger writers on the Sun as he himself had revered his own predecessor as editor, Edward P. Mitchell. His death is a profund loss, not only to the Sun but to American journalism.

[From the New York Herald Tribune]

In the death of Frank Michael O'Brien, editor of the Sun, American newspaperdom loses one of its ablest figures. He was a modest man, not widely known to the public; in his own profession, however, he was recognized as a master. It was said of him that he could do anything in a newspaper office that needed to be done, and that he could do it well. His long and distinguished term as editor of his paper won him recognition as a worthy successor to those other two exceptional journalists, Charles A. Dana and Edward P. Mitchell.

Mr. O'Brien, as a writer, was known for his unusual clarity. There was never anything slipshod or slovenly about his style, and he could not abide these traits in other writers. He well deserved the Pulitzer prize, which he won in 1921 for his editorial on the burial of the Unknown Soldier, which to this day remains a model of simplicity, feeling, and genuine eloquence. Likewise, his The Story of the Sun was perhaps, as Mr. Mitchell said of it, "the first real biography of a newspaper itself," and it will remain good reading as long as people are interested in newspapers and the people who make them.

There was a great deal more to Frank O'Brien than his knowledge of affairs and his professional competence, great as these were. He possessed that valuable quality which can best be summed up in the word "character"; this quality was evident not only in his own life but it left its mark, as it inevitably would, upon the newspaper whose policies he directed. He had the scholar's contempt for shoddy and devious writing, and the gentleman's hatred for shabbiness and indecency wherever found. If the making of newspapers is a noble profession—and we believe it is—then men like Frank O'Brien made it so.

EDITORIAL TRIBUTES TO LATE EDITOR OF THE SUN IN OUT-OF-TOWN NEWSPAPERS

[From the Hartford Courant]

The death of Frank M. O'Brien, editor of the New York Sun, leaves the profession of journalism in the United States distinctly poorer. City editor of the Buffalo Express at the early age of 21, Mr. O'Brien was an active newspaperman for 43 years, and not far removed from news work during the years he served as secretary of Mayor George B. McClellan of New York, between 1906 and 1910. He had occupied the post of Dana and Mitchell, one of the most distinguished in the Nation, since December, 1926.

Despite the anonymity that must shroud the work of an editor or editorial writer, Mr. O'Brien's writings were easily detected by many of the thousands who daily scanned the Sun's pages. Once, to the honor of the profession he adorned, that rule of namelessness was broken, when his unforgettable editorial on "The Unknown Soldier," written in 1921, was singled out for a Pulitzer prize award. The article is now required reading in every American school of journalism worthy of the name.

To many a layman unversed in the ways of sanctum and city room, Mr. O'Brien became known and appreciated through his book, The Story of the Sun, published in 1918 and still considered a model history of an individual newspaper. By his deft descriptions of Charles A. Dana, of his doughty managing editor, Amos Cummings; of Selah M. Clark, the Great American Condenser, who for years as head of the copy desk taught so many now famous authors how to pack their punches; of "Boss" Lord, Sam Wood, the ship-news poet; the irrepressible Frank Ward O'Malley, who really discovered Broadway, and the other characters that made his chosen paper the delight of New York, he revealed the real romance that lies behind the daily production of a newspaper. If the Sun has been for these many years, a newspaperman's Bible, credit is due in no small degree to Frank O'Brien.

[From the Baltimore Sun]

Save on such occasions as that in 1921, when his editorial on the burial of the Unknown Soldier in Arlington won the Pulitzer prize, few people outside the newspaper profession knew much about Frank M. O'Brien, editor of the New York Sun, who died yesterday. But all mature men inside that profession knew about him and his high competence, day in and day out.

Not all his work was done on the Sun, of course. He was the sort of writer and reporter for whose services newspapers competed among themselves, and he was employed by perhaps half a dozen of them before he settled down to be the elder statesman of the Sun. The paper which got him knew in advance that it would acquire cool and mature judgment, technical skill, and human warmth, and with these a self-effacing modesty, a willingness to merge his identity with that of the journal of which he was a part. He was no prima donna.

Yet because of his judgment and his skill, his personality shone through the cloak of anonymity which he chose to wear. Practiced readers could pick his work out of the mass and, even when he forbore to write, the imprint of his method was there. Hasty, scrabbled writing, like hasty, scrabbled opinion, was difficult in any office of which he was a part.

In the maintenance of its standards journalism probably suffers from more handicaps and more temptations than most callings. Frank O'Brien was one of those practitioners whose professional pride kept the newspapers with which he was associated from giving up hard-won ground.

[From the Syracuse Herald]

Frank M. O'Brien, whom death has removed from the editorship of the New York Sun, was the inheritor of a great tradition which he revered and worthily carried on.

This native of Dunkirk had been a reporter in Buffalo while Charles A. Dana was serving his last years as head of the newspaper for which he won national recognition. * * *

It was said of Mr. O'Brien that he could do anything to be done about a newspaper office and do it a little better than anyone else. He avoided the spotlight of personal publicity, concentrating on his job. He was a forceful editorial writer, known for his clarity. His integrity of character was reflected in the newspaper he directed.

[From the Buffalo Courier-Express]

In conferring an honorary degree on Frank M. O'Brien the late Cardinal Hayes cited him as "the complete journalist—a man whose identity is usually concealed in the customary anonymity of journalism, but whose pen is a source of needed guidance to this topsy-turvydom."

If Frank O'Brien preferred the traditional anonymity of his craft as far as the reading public was concerned, he was no dim and shadowy entity to other newspapermen. It

would be difficult to find an experienced American newspaperman to whom the name of Frank O'Brien is unknown.

Indeed, the late editor of The Sun of New York had become almost a legend in his profession while he still lived. He was a great newspaperman, one of the greatest of his times. It is a source of pride to the Courier-Express that Frank O'Brien began his brilliant career as a cub reporter on the old Courier and later became city editor of the old Express—and therefore might be termed doubly an alumnus of this newspaper.

Post-War Employment—A Job for Private Enterprise

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Oregon Labor Press, the same being a statement of S. Eugene Allen, editor and manager. The editorial is as follows:

POST-WAR EMPLOYMENT—A JOB FOR PRIVATE ENTERPRISE

(Statement of S. Eugene Allen, editor and manager, Oregon Labor Press (A. F. of L.) to JOSEPH C. O'MAHONEY, conducting hearings in Portland for the Post-War Planning Committee of the U. S. Senate)

I appreciate the opportunity to make this brief statement to your committee, Senator.

At the outset I want it made clear that I don't believe there is any pie in the sky. What we have—or what we will get—will be what we work for and what we pay for. Whether or not we get our money's worth in any enterprise, be it post-war planning or something else, depends largely on how well we understand what we are doing and on knowing what we want so that we can set out to secure it by the most direct route.

One of the lessons that we surely have learned from our experiences during the past 12 years is that, in the main, "made work" and even legitimate public works are unproductive. Such work is in the nature of a service and not of production; and standards of living depend upon productive enterprise. In other words, I am saying that the philosophy of providing employment to citizens by government has served to enable those citizens who received the employment to live, but it has not solved the fundamental problem of unemployment and it has been carried out by use of our national credit without increasing productive capacity.

I hope that private enterprise and free labor will combine their talents and resources to build an expanding economy and thus raise standards of living when peace comes. I have no faith in the philosophy of the economic state expanding its activities and bringing better living standards. Rather, I think, it will contract standards and that with the contraction will come abandonment of free institutions.

Neither labor nor industry has been entirely unselfish in the past, and I think it highly unlikely that they will be in the future. Nevertheless I am sure that both groups have learned lessons. They have seen that the solutions to their problems lie in the preservation of free institutions and in genuine collective bargaining. Both are learning that the remedy for the ills—real or fancied—that they suffer is not to hasten to Washington and demand a law but to sit down with mutual confidence and solve their own problems. Full employment at high wages, with capacity production at small profits per unit but a large volume of unit sales is essential to an expanding economy and a higher standard of living.

Now, then, I apprehend that there must be some continuing controls of business and industry. These ought to be kept at the very minimum, and they ought to have only one end in view—protection of the public against unethical and uneconomic practices. In the long run neither labor, management, agriculture, nor finance may indulge in such practices and retain the confidence of the public. And lack of public confidence means repressive legislation that may well strike at fundamental liberties.

Despite my conviction that we must rely upon private industry and free labor and agriculture to provide a secure future and an increasing standard of living, I know that governmental agencies must take a large—although, I hope, temporary—part in the immediate post-war era. While plant reconversion and expansion is taking place our people must have employment. I do not have a detailed plan in mind, but there are two or three factors that I think cannot be ignored in this connection.

In 1932, we found the State and local governmental subdivisions had largely exhausted their credit and were without funds. The Federal Government, on the other hand, was in excellent financial position and had sound credit. In my opinion, this situation is likely to be reversed when hostilities cease. State and local governments are getting debt retired and building up reserves. The Federal Government is burdened with a tremendous debt. This fact must be borne in mind when making postwar calculations. The pattern is not the same as it was in the emergency days of 1932.

Now then I said in the beginning that we have to pay for what we get. There are, of course, many methods of payment. Past experience indicates that most of us would rather have someone else pay the bill. I think serious consideration ought to be given to the possibility of whatever public works programs are undertaken being placed upon a self-liquidating basis, as far as possible.

Such projects might include roads, tunnels, bridges, waterway improvements, and projects of that character. Of course, certain projects such as schools and municipal improvements which are not capable of being handled in that manner should supplement such self-liquidating projects.

It seems to me, also, that the whole question of taxation and public finance ought to be reviewed and definite areas defined for Federal, State and local taxation. This must be done if we are to avoid costly and duplicating revenue systems, and no fair basis of taxation can be arrived at without consideration of this aspect of the problem. Certainly it would be a proper one for consideration now.

This is a very brief discussion of only a few major points, but they are matters that I consider important and upon which decisions must be made in order to formulate a sound policy. I want to emphasize again that I think that most Americans hope that governmental enterprise will not become entrenched and that Government will turn its resources to development of an expanding economy by enabling private enterprise to build up reserves now for that day and to preserve the free institutions that make private enterprise possible.

Georgia 4-H Club Liberty Ship

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. VINSON of Georgia. Mr. Speaker, since mid-April the 110,000 4-H Club members in Georgia, led by county and home demonstration agents, have been selling and buying War bonds to pay for a $2,000,000 10,000-ton Liberty ship. At least, they started out to sell that many, and ended up with enough bonds bought and sold to pay for more than four such ships—more than $9,500,000 worth.

To make the program more complete, they are raising food projects in their 4-H work to fill the ship with food to go to our men in the armed forces. Actually, of course, this ship will not be loaded with the food, but the club members are growing enough food to sell to fill one or more ships, and this food will be released into commercial trade channels.

On September 17 this ship was launched in Savannah, and Sallie Cook, a Newton County 4-H girl, christened it. Also, attending the launching were more than 300 outstanding 4-H members who had helped in the bond selling and food-production drives. Many of the boys and girls were seeing a ship for the first time and were amazed at the size of their contribution to the war effort.

To reach every man, woman, and child who might be interested in buying a bond the club members spent their spare summer hours going from house to house in the rural areas, and from one business house to another in towns and cities. In some counties 4-H members led the bond drives for 1 or more months.

Each bond purchaser received a certificate bearing a picture of a Liberty ship and stating that Georgia 4-H'ers appreciated the help given to their campaign. County and home demonstration agents, who distributed the certificates, reported that many 4-H members bought bonds in the drive.

The Georgia 4-H'ers named their ship for Georgia's former senator, Hoke Smith, because he was coauthor of the act creating the Agricultural Extension Service, of which 4-H work is a part. Already South Carolina clubsters are conducting a similiar campaign to pay for a sister ship, the steamship *Asbury F. Lever*.

Congratulations to the Georgia 4-H'ers on their outstanding work have come from the United States Treasury Department. The Extension Service of the Department of Agriculture, realizing the value of the idea in selling bonds in rural areas, has sent an explanation of the name-a-ship idea to all State etxension services in the Nation.

And already several other States are making plans to name a Liberty ship. North Carolina Club Leader L. R. Harrill has indicated "We probably will go to sea, too." And Oklahoma 4-H'ers are paying for a number of bombers with bonds. Plans for 4-H members in other States to name and pay for Liberty ships are under way.

In their fill-a-ship and food-for-fighters campaign, the Georgia 4-H Club boys and girls are producing seven important food products needed by men in the armed forces. These are beef, pork, poultry, eggs, Irish potatoes, sweetpotatoes, and peanuts. All of these can be produced throughout the State, and club members in each county are attempting to grow enough of these products for sale to feed the servicemen of their county for a year.

Records based on service units are being kept on these food-production projects. A service unit is the beef, potatoes, or any other of the foods one man in the armed forces eats in 1 year.

The average man in the armed forces eats yearly 150 pounds beef, 80 pounds pork, 45 pounds poultry, 35 dozen eggs, 250 pounds Irish potatoes, 25 pounds sweetpotatoes, and 250 pounds shelled peanuts.

Townsend Plan

EXTENSION OF REMARKS

OF

HON. MAURICE J. SULLIVAN

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. SULLIVAN. Mr. Speaker, in the pursuit of better legislation for our people and in our effort to improve our standard of living we must not overlook our first obligation as Americans, namely, the winning of the war. Whatever our purposes are or may be in regard to better domestic laws, the facts are that success along these lines will mean little or nothing if we lose the war.

The Townsend members throughout the country are sincere, patriotic Americans. Their sons and daughters are serving their country in combat areas and on the home front. They are doing their good part in such organizations as the Red Cross, the U. S. O., civilian defense, and other groups in behalf of the war effort. Especially have they been active in the sale of War bonds and War stamps. With true American heritage and patriotic devotion to the American way of life they will continue their utmost efforts along these lines until victory is ours.

While military success is our first objective, we as good citizens also have on the home front the responsibility of maintaining our way of life. We must preserve our American institutions and make sure that when the soldier boys return home they will have a job and the opportunity of free enterprise.

To the end that a maximum number of jobs may be provided after the war, that our democracy may be continued, and to meet humanitarian needs, I urge the Congress to enact the principles of the Townsend plan into law. This plan is before the Congress in the form of a bill, H. R 1649, known as the Cannon bill, and was submitted on February 2 of this year. This bill has been and is now in the Ways and Means Committee.

This plan provides for national uniform annuities for senior citizens and those incapable of employment. The costs of these benefits are to be paid by a tax of 3 percent on the gross income of persons and companies, excepting incomes up to $100 a month. The amount collected by this tax, less administrative costs, will be prorated monthly to those qualifying.

This plan of providing for old age and for total disability has many advantages over our present unfair, cumbersome, and inadequate social security, which, if continued and extended, will create a caste system no democracy can tolerate. Perhaps one of the greatest of these advantages is that it treats everybody alike, all are taxed at the same rate on business volume—less exemption—and disbursements are made equally to annuitants, regardless of their previous position or station of life.

The senior citizen retiring from gainful occupation, whose income had been $100 a month, would receive the same annuity as the person who had received $250 a month. No economic royalty pension class would be possible under the Townsend plan provisions.

Millions of good American citizens believe the Townsend plan should be given a trial; at least it is entitled to a fair hearing and debate on the floor of the House. Fair play, present and post-war conditions demand our honest and sincere recognition of the good American principles set forth in H. R. 1649. Now, while the Congress is rather inactive, is a good time to delve into this subject of social security. I urge that something along this line be done without delay.

The Government of the United States Should Do Its Part in Providing Men for Our Armed Forces and for Our Essential Civilian Economy

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. CURTIS. Mr. Speaker, many Americans were shocked when it was revealed recently by members of the Military Affairs Committee that there are 300,000 single men and married men without children, between the ages of 18 and 37, working for the Government and not in the armed forces.

Mr. Speaker, can it be possible that the bureaus, boards, and agencies of this Government are a party to draft dodging? The necessary functions of this Government can be run without those 300,000 men. They are not indispensable. The preservation of this Government is not dependent upon those 300,000 people's being kept on the Government pay roll. Before the homes of America are invaded and fathers of small children taken into the armed forces, these 300,000 men in Government service, who are qualified physically, should be taken.

Mr. Speaker, it is my observation that the people back home are making things go with a minimum of help. Farms, factories, offices, stores, shops, restaurants, and every type of enterprise are getting along with little or no help. Men and women are working hard and long hours. To meet the needs of the armed forces for more men, the various Government boards, bureaus, and agencies should be called upon to do as well as the people back home are doing.

A very thoughtful editorial, published in the Omaha World-Herald on Sunday, September 26, 1943, has made a suggestion in reference to manpower, which merits the consideration of this Congress. I extend my remarks by including that editorial:

MANPOWER PRESCRIPTION

To ease the manpower shortage this newspaper offers a constructive suggestion: Fire 1,000,000 civilian Federal employees.

There are more than 3,000,000 of them today. Before the war program started rolling in 1939 there were only 925,000, although many people thought the bureaucracy was somewhat overstuffed at that time.

If 1,000,000 were dismissed, there would remain more than 2,000,000—more than twice as many as in 1939.

There would still be more than one civilian employee of the Government for each five military employees. The ratio of 1 to 5 prevailed in the first World War.

True, some of the million who might be discharged are women, and men not eligible for military service. But presumably every released Government worker would be able to hold a job in private industry. Thus the plan would make 1,000,000 additional pairs of hands available for the main task at hand.

But perhaps you argue that the Government couldn't spare 1,000,000 employees. Perhaps you can prove it.

Almost every business firm now operating can prove with pencil and paper that it couldn't function with the number of employees it now has. But all of them manage somehow.

The Byrd Economy Committee said:

"The Government finds itself in the peculiar position of advocating and sponsoring a full labor-utilization program within private industry but neglecting the same problem insofar as the Federal service is concerned."

Obviously no such program will be put into effect by the bureaucrats concerned. They are constantly clamoring for more employees, issuing more rules and regulations which require more clerks and executives, increasing the red tape which binds the Nation's managed economy.

The needed reduction can be made only by the arbitrary action of Congress.

Granted, such an order would cause some confusion until the bureau heads had made the necessary reorganization.

But in the long run we believe it would make for greater simplicity, less confusion,

and more efficiency. W. M. Jeffers gave a demonstration of that when with a mere handful of employees (by Washington standards) he made the rubber administration the most successful and productive agency in the Capital, in 1 year's time.

A drop of 1,000,000 Government pay rollers could quickly be translated into 1,000,000 more soldiers or 1,000,000 more workers in the undermanned war industries.

We submit it is worth trying.

Grits

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. RICHARDS. Mr. Speaker, in the Fifth Congressional District of South Carolina hominy is a favorite food at every table. In most of the rest of the country the word hominy means the big, whole grains of corn. But in my district when we speak of hominy we mean hominy grits, a wholesome cereal food which when properly prepared is a dish fit for a king. We all eat hominy—white, black, rich, and poor. We find it equally good for breakfast, for dinner and for supper. Now, it is almost impossible to buy grits in my district. They have disappeared from store shelves. One reason for this, I am informed, is that millers can get more corn meal than grits from corn and, the price being the same, they grind meal instead of grits. The Office of Price Administration should remedy this situation by some means. Deprive us of anything except our grits. It may be necessary for the sake of the war effort to take away most of our gasoline and to tell us when we can buy a pair of shoes and a pound of sugar and when we can kill our hogs and drive our automobiles. That may be necessary to win the war. But I believe that in some way the grits bottleneck can be broken and that we can win the war and have grits too.

In the following letter I have asked Mr. Brown of the Office of Price Administration to help find a solution to this problem:

SEPTEMBER 28, 1943.

Hon. PRENTISS M. BROWN,
Director, Office of Price Administration, Washington, D. C.

DEAR MR. BROWN: At the present time it is almost impossible to buy hominy grits from any merchant or any crossroads store in the Fifth District of South Carolina. Although corn is bountiful and the small millers are willing to grind it, there is some fault in the price or distribution plan which makes it virtually impossible to buy this inexpensive staple food which is so popular in our section of the country.

This shortage evidently is not confined to my district as I have heard complaints from other areas as to the difficulty met in purchasing grits. I am informed that the ceiling price on grits is the same as that on corn meal, and it may be that millers are grinding only meal as they can get more meal than grits from the corn. There may be other reasons for the shortage also.

It seems to me that the ceiling price on grits could be raised slightly or the ceiling price on meal lowered slightly or some other correction in the present distribution plan made to meet this situation. Small though it may seem in the war program, this is important to the people of my district. I should appreciate any assistance you can give in working out a solution to this problem.

Sincerely yours,

J. P. RICHARDS,
Member of Congress.

A Letter From An American Hero

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include a letter written by a young soldier from my congressional district to his people, relating a most harrowing experience after having been shot down over Italy. I present it for the CONGRESSIONAL RECORD in order that the people might know first hand the sacrifice, the heroism, the courage, and the dangers which the young men of our country are enduring in order that this Nation might live.

To him and to his comrades in arms and the men in our armed services the world over, we of the Congress of the United States can assure them that their Government and its entire resources are pledged to support them to the utmost.

We honor and salute this young hero, Lt. Robert Kurz, for the heroic part he has already played in the greatest struggle that has ever faced mankind. As the Representative of the Seventeenth Congressional District of Michigan, I am proud of him.

AUGUST 8, 1943.

DEAR MOM, CARL, JANE: This is about the first chance I've had to write a letter in over 2 weeks, and this time I have the best excuse in the world, as you'll soon see. What I'm about to tell you has me stumped whether I should tell you or not, but I figure you may hear about it and worry, so here goes.

This all happened recently, and I can't give you some of the facts, as it's against War Department regulations. To start off, we were shot down over Italy by antiaircraft fire. It set our plane on fire, and all of us had to bail out over the Mediterranean. I'll just give you a story of what happened to me, as that is all I'm allowed to do.

The first thing that happened was my chute failed to open. I finally tore it open, and that silk over my head was the most beautiful sight I've ever seen. When I hit the water the chute was over me, and I was all tangled up in the shroud lines. I finally released myself after a long struggle and then pulled the cord to inflate my Mae West, but the thing wouldn't inflate. I tried to blow it up by mouth, but the valve was stuck and I couldn't get any air in the darn thing. I started shedding my clothes, and after about a half hour I had everything off but my undershirt. All this time I think I drank about half the water in the sea. I started to go down about three times, but every time I did I'd think of you, Mom, and I'd start paddling again. After keeping afloat for about an hour a swell took me up in the air, and way off in the distance I saw a life raft with two fellows in it. I whistled as loud as I could, and they heard me and started paddling over. When the ship hit the water and exploded, it threw one of the life rafts out and the radio operator picked it up when he landed near the wreckage.

About this time a shark about 12 feet long made a pass at me and I kicked him in the face. For about a half hour he kept pestering me and every time he got close I had to either hit him with my fist or kick him. Let me tell you I was never so scared in my life, I knew saying "Please Lord, don't let me die this way." The raft finally got within hailing distance and I told them to hurry up as the sharks were around and I was exhausted from staying afloat for over 2 hours. They couldn't paddle very fast as only half the raft was inflated, the other half had a couple of holes in it. They finally pulled me into the boat and it's a good thing because I couldn't have lasted much longer. For a while we had to blow up the raft by mouth but we finally found a hand pump. The inflated part had a small leak in it and we had to plug it up with our finger. Nothing much happened that day and night only it was cold as hell during the night. Half the night I layed on Chris's lap and the other half on the radio operator's lap. I had an awful pain in my side. The pain finally went away and my arm and two fingers stopped bleeding. Oh yeah! I forgot to tell you the shark nipped me a couple of times, they were small cuts and are O. K. now.

The next day we tried to paddle toward Italy but it didn't do any good as the current was taking us to the southwest. Just before sundown we saw a plane in the distance and shot up one of our flares. He saw us and came over and for the next hour he circled us. During this time he dropped some objects in the water about a mile from us and we later found out it was five life rafts for four members of our crew. Enemy planes chased the plane away and we were pretty disgusted. The next morning at sunrise we saw two men on a raft and when we paddled over it was the four members of our crew. That morning we were spotted again and later on we were picked up. We were pretty exhausted after 44 hours in the sea. We spent a couple of days in the hospital and now are back with the squadron again.

Our crew is through with combat flying and we are now "sweating out" whether they are going to send us home or not. Maybe I'll be seeing you soon, who knows. At any rate don't worry about me in the least as I'm feeling like a million after a little rest.

About all the dope for the present so take it easy and don't take any wooden nickels. You can show this letter to Dot and Kathryn so I won't have to write it over. Say hello to them for me.

Love,

BOB.

Aluminum Development in the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 28, 1943

Mr. COFFEE. Mr. Speaker, the people of the Pacific Northwest are in-

tensely interested in the development of the light metals industry in that area. In that favored section, nature has given us an abundance of cheap hydro-electric power and has filled our mountains and our soils with aluminum bearing clays. Efforts are being made by public spirited citizens to persuade the Government to make possible and encourage the establishment of an aluminum test plant in the Pacific Northwest for the use of local clays, employing recognized processes. This pilot plant would develop a practical process for the utilization of clays indigenous to that area as the base from which aluminum could be made. Despite the united efforts of public spirited citizens, every obstacle has been thrown in the way of the establishment of such a plant. The War Manpower Commission charges there is a shortage of labor. Before that excuse became current, it was contended there was no feasible process for the manufacture of aluminum from aluminum bearing clays. I suspect that the Aluminum Trust is again exerting its powerful influence to curtail or eliminate all potential competition.

The Tacoma Daily News-Tribune, of Tacoma, Wash., in a recent issue carried an editorial which is illuminating. I append such editorial herein below and also attach a statement on the aluminum situation made by Roe E. Shaub, chairman of the Pacific Northwest Alumina Committee and president of the Tacoma Chamber of Commerce. The editorial and article are as follows:

THE ALUMINUM INDUSTRY

Aluminum is one of the most important metals in the world today. Its use in airplanes makes it a war essential. Besides this, it is employed in countless other ways in these critical times. When peace comes, there will be dozens of new products into which it will go.

Aluminum now is made from a substance which is found in this country in Arkansas. Quantities of it are brought from Latin America, and yet there are great supplies of a clay in the Northwest which will furnish by a new process, alumina, from which the finished product, aluminum, is made.

Northwest communities are naturally interested in projects to utilize this great supply of native clay. We already have an aluminum plant in Tacoma; there are several others in the Northwest. These plants, in all probability, cannot survive peacetime competition, for their supplies will have to be brought long distances and the cost will make the operation here too expensive. It seems like a common-sense proceeding to utilize the big clay deposits hereabouts in a new process to keep these aluminum plants going. It would furnish employment after the war and would mean the continuation of the industry here when peace comes.

Plans had been made for a test plant in the Northwest using local clays. Then the War Manpower Commission stepped in and refused to give clearance to the plant, because portions of the Northwest have been designated as acute labor-shortage areas. The new alumina plant would probably employ only about 150 workers—certainly a number which would have little bearing on any so-called manpower shortage.

A committee representing the three States of the Pacific Northwest has been organized to combat this ruling of Commissioner McNutt. It is headed by Roe Schaub, president of the Tacoma Chamber of Commerce. "Both Washington and Oregon State directors of the Manpower Commission are ready to certify that there is ample labor without disturbing any labor markets in any or all of the tentative sites that have been selected for the plant," said Mr. Shaub in a statement last week. "The fight for alumina industry in the Pacific Northwest is even more important than appears on the surface. If we are licked on this one, we are going to be licked on a lot of others."

The so-called manpower shortage in the Northwest was largely in the Boeing airplane plant at Seattle. This was really due to wage differentials which the Government for a long time refused to adjust. Workers in the airplane plant were not paid a scale comparable to the shipyards. Consequently, the industry lost many prospective workers to the shipyards. Thus the shortage was largely of the Government's own making. Instead of frankly correcting the situation, for a long time the Government tried to close other lines of business and thus indirectly force labor into the airplane plants.

There is another reason why this matter is of the utmost importance. The aluminum industry is controlled by a giant combination. Naturally, this combine does not want to see competition after the war which would upset its hold on the market. Northwestern clays, using a process already in successful operation in other countries, might force trade changes of great economic importance. This, also, probably has an important bearing on Washington, D. C.'s refusal to permit this test plant to be constructed.

THE ALUMINUM SITUATION

(By Roe E. Shaub, chairman of Pacific Northwest Alumina Committee and President of the Tacoma Chamber of Commerce)

Two years ago representatives of the United States Bureau of Mines, the War Production Board, and other interested Government agencies, approached Northwest business leaders pleading with them to stir up interest in the producing of aluminum oxide from Northwest clays.

They pointed out that existing domestic supplies of bauxite, source material for aluminum under present processing methods, are dwindling and may last less than 5 years. They pointed out the submarine danger in importing bauxite from the Guianas, the source of two-fifths of our present supply, and stressed the military necessity of having ready a substitute for bauxite when the supply is exhausted.

They called attention to the huge beds of alumina-bearing clays in the Northwest, and urged that a process be perfected by which this alumina could be commercially extracted.

Thus appealed to, Pacific Northwest leaders organized the Columbia Metals Corporation, backed by some of the most able and substantial citizens of the area. Working with the Chemical Construction Corporation, one of the Nation's outstanding engineering firms, they spent 2 years and much money in analyzing the clay beds and perfecting a process for working them commercially.

Today the process has been successfully demonstrated over a long period at a pilot plant. The first 50-ton-per-day unit of a commercial plant, to cost $4,000,000, has been approved by all governmental agencies except the Manpower Commission. It has been refused clearance there because some portions of the Northwest have been designated as acute labor areas.

Actually, surveys have shown that establishment of the plant at any of the four tentative locations—Longview, Wash.; Troutdale, Oreg.; Canby, Oreg.; or Salem, Oreg.—will not disturb the labor situation elsewhere.

An unrecognized factor in the so-called critical areas seems to be that the shortage is largely in unskilled labor, and that there is an abundant supply of most kinds of skilled workers. Another factor was the manpower shortage at the Boeing Aircraft Co. plant, but that situation is improving rapidly since an adjustment was made in the wage scale.

Every pound of imported bauxite, as well as the domestic supply mined in the East and South, must be shipped 2,500 to 3,000 miles by rail as alumina before it can be fed into the reducing pots of the big aluminum plants here in the Northwest.

More than half of the pig, or ingot, aluminum that comes out of these plants is reshipped by rail another 3,000 miles across the country, to be rolled into sheets.

Rolled into sheet form, much of this aluminum is shipped a third time across the country, to be built into war planes by the many Pacific coast airplane plants.

Are we going to continue to permit operation of a foolish and unnecessary system that requires three trips across the Nation, tying up needed rail equipment and trackage, before bauxite can be turned into one of the war's most needed metals—aluminum?

When the Nation faced a shortage in rubber, the public was taken in on it. The public demanded action—and got it. Wheels began to turn in high gear on an experimental synthetic-rubber program, and today our rubber difficulties, in the main, are solved.

Eventually it will be necessary to substitute Northwest clay for bauxite as a source of aluminum, to meet the Nation's need in the light metals post-war era. If the substitution were made now, it would insure a permanent supply of this vital war metal, in case the war continues to a point where bauxite is exhausted.

Pacific Northwest alumina will help win the war faster.

And its availability will be insurance against losing the war.

President Versus Press

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, October 1 (legislative day of Wednesday, September 15), 1943

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "President Versus Press," published in the Washington Times-Herald of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRESIDENT VERSUS PRESS

President Roosevelt at his Tuesday press conference attacked what has come to be called the Hearst-Patterson-McCormick press, though there is no connection between the Hearst and Patterson-McCormick papers.

A POLICY OF INTIMIDATION

The President's purpose, obviously, was double-barreled: (1) To intimidate the Hearst and Patterson-McCormick papers, and

through them all the other newspapers and magazines in the United States, into obsequious subservience to his will; (2) to further his ambition for a fourth term. When, and if, he gets a fourth term, he will be our one-man ruler, our despot.

Mr. Roosevelt's method of belaboring the Hearst and Patterson-McCormick papers was funny and, we thought, inept. He took as the occasion for his attack some rumors printed in these papers about an impending transfer of Chief of Staff George C. Marshall to command of an Allied invasion of western Europe. These rumors, said the President in effect, gave aid and comfort to the enemy.

That, of course, is improbable. It can matter very little to Hitler who is Chief of Staff in Washington. What matters to him is how many United States troops are in the European war theater, and who commands them there. Nor can it matter much to Tojo whether Marshall or anybody else is Chief of Staff in Washington.

However, if it does matter, the President's rebroadcast of these rumors through the world-wide amplifier of a Presidential press conference must give the enemy far more aid and comfort than if the President had ignored the rumors. Further, his statement that he could not confirm or deny reports of a Marshall transfer for 10 days, 10 weeks, or 10 months is pretty sure to unsettle, we should think, the officers of the General Staff.

RESPECTABLE HERALD TRIBUNE

Mr. Roosevelt quoted with approval, thereby making them his own utterances, two recent editorials from the New York Herald Tribune, attempting to chide us for alleged divisionist and obstructionist tactics. This so pleased the Herald Tribune that it reprinted both of these editorials yesterday. The Herald Tribune, said the President, is a respectable newspaper.

Respectable, but not popular. The New York Herald Tribune is the smallest, as to circulation, of the 4 New York City morning newspapers. According to the latest Audit Bureau of Circulation's statement, its daily circulation for the 6 months ending March 31, 1943, was 293,304; its Sunday circulation, 546,705.

The paper is the mouthpiece of the New York and vicinity genteel moneyed crowd—the select coterie which feels that things British are superior to things American; that the noblest aspiration an American can have is to become the father-in-law of a British title; that American gentlemen in peace years should spend considerable time and money in Great Britain, clinging to the fringes of British high society.

The Herald Tribune is Republican; but it is for Wendell Willkie for our next President—Willkie being Roosevelt's alter ego on foreign policy and author of a book advocating United States surrender of independence to some sort of world superstate. Willkie wrote this book after a trip around the world aboard a United States Army bomber kindly furnished to him by Mr. Roosevelt.

How did the Herald Tribune get to be an Anglomaniac newspaper? Well, its titular head is Ogden Reid, son of the late Whitelaw Reid and brother of Lady Jean Templeton Ward. Whitelaw Reid took over the New York Tribune in 1872, on the death of Horace Greeley.

Of Whitelaw Reid, the Encyclopedia Britannica says:

"In 1905 Reid relinquished his active editorship of the Tribune, but retained financial control. * * * In 1897 he was special Ambassador of the United States on the occasion of Queen Victoria's jubilee; in 1902 he was special Ambassador of the United States at the coronation of King Edward VII, and in 1905 became Ambassador to Great Britain. In 1881 he married a daughter of Darius Ogden Mills (1825–1910), a prominent financier. He died in London on December 15, 1912."

At this time he had been Ambassador to England for 7 years, under Theodore Roosevelt and William H. Taft.

This was the gentleman from whom Ogden Reid inherited the New York Tribune. These salient details from the life of Whitelaw Reid may throw some light on the question why today the New York Herald Tribune worships everything connected with Great Britain and the British Empire, is somewhat mortified by the Declaration of Independence, and feels no visible qualms about a reunion between the United States and the British Empire.

Plotting a Sensible Course for Peace

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Plotting a Sensible Course for Peace," delivered by me in Denver, Colo., on September 15 before the Social Science Foundation of the University of Denver, in cooperation with the Rocky Mountain Radio Council in their presentation of Journeys Behind the News.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A permanent world peace is the heartfelt desire of every decent human being, but before any durable plan is advanced the problems likely to be encountered should be understood and thoroughly considered.

Naturally, too much detail would result in endless haggling, while a hush-hush policy casts suspicion. I feel that a frank consideration of post-war conditions everywhere as a sound basis for post-war collaboration might avoid a series of tragic blunders. We cannot know too much about this involved and complex matter.

For the problems of peace domestically and internationally are far more difficult than war itself. In war we dare not permit selfishness or difference of opinion to crop out. In peace precisely the opposite will be true unless we reach an understanding beforehand.

In Asia and Europe hundreds of millions of human being are slowly starving to death. Throughout the globe economic, political, and social revolution is the order of the day. That is a gloomy outlook, but the world is in a gloomy predicament and we must have the courage to face it.

The moment war stops the full impact of this terrifying situation will sweep us off our feet unless we are prepared for its devastating challenge. Demagogs, political theorists, opportunists, and empire builders will take full advantage of our dazed disunity when peace comes suddenly; and peace, whenever it comes, will come suddenly.

In our own country we face not merely the threat but the reality of demoralizing inflation which, one way or another, must reap a terrible toll in suffering and chaos. When the war ends the Federal Treasury will be hopelessly bankrupt with debt service charges consuming our total annual revenues.

Our one hope for preserving this Republic, in my opinion, is that private industry operating under the free enterprise system will somehow provide the opportunity whereby we may tediously toil and produce our way out of an almost impossible economic wilderness.

We are spending more money in this war than all of the United and Axis Nations put together, but that is no indication that we can make a similar peacetime contribution. There is a bottom to every barrel. Much as we may desire it, we cannot rehabilitate the world when the war ends unless first we rehabilitate ourselves. Improvidence at home will decree impotence abroad. When the world discovers that we are only poor relations, they will lose all interest in our theories. Uncle Sam will learn to his chagrin what every former rich man learns about friendship when he goes broke.

Instantaneous world-wide radio communication and vastly improved transportation facilities have made spiritual, cultural, social, and commercial isolation utterly impossible in our one world. So far as I know, no responsible person in the United States is advocating such isolation. However, in the family of nations, every nation has its own conception of international morality and its own private problems that only it is competent to judge and adjust. Subscribing to such vital considerations and acknowledging their existence is not obnoxious nationalism; it is merely good, old-fashioned honesty and common sense.

Both Stalin and Churchill have frankly dropped some pretty broad hints as to their objectives, and the emphasis has been on what they expect to get and not on what they expect to give. As I get it, both are laying the ground work for a policy of unrestricted imperialism and empire building.

What I am trying to develop is that we must not enter into an alliance with any empire builder nor attempt too much in trying to dictate to the other 93 percent of the world's population how the world shall be managed if empire building be the objective of our powerful allies. I am not pleading for aloofness. I am urging an honest approach to a stupendous task and I am urging a modesty in keeping with world statistics. No tail has ever successfully wagged a dog for very long, and justice must in the end prevail.

How much better it will be for our peace of mind, our own institutions, and civilization itself, if we attempt a reasonable and honest program and fulfill that program with something to spare rather than to try to run the whole world, and fail through conceit, disloyalty to our ideals, and insufficient substance. It is just as disastrous to attempt too much as it is to attempt too little, and an abandonment of our ideals in the post-war period will ruin us. Accept what we do not like if we must, but may we never stoop to the approval of a wrong.

Whether we like it or not, the post-war world is to be divided into spheres of influence. Russia at this moment appears destined to dominate all of northern continental Europe including Germany, France, the Balkan States, and the Baltic States.

I am far from happy over this outlook, and I am not advocating approval nor am I advocating a policy of appeasement toward Russia, but unless the United States wants years and years of war we must graciously accept inevitables as inevitables.

Britain will likely dominate the Continent of Africa, and the Mediterranean states. Australia will muddle on as before with more and more independence and India will never know that the war for freedom has been fought.

The Japanese islands should be turned over to China, and China should be given every encouragement and assistance, but I doubt that Britain and Russia will agree. The Philippines should be freed by us in accordance with plans already agreed upon, and the East Indies and Indochina should no longer be reserved for the special exploitation of European Caucasians. The Orient should be left to the orientals once the Japanese have been completely liquidated.

Our own particular sphere of influence will likely be the Western Hemisphere. In that case the Monroe Doctrine needs to be revitalized in view of the new era of European imperialism, and whatever steps necessary should be taken to protect the Americas and all of them from European exploitation.

The good-neighbor policy of Secretary Hull in any instance must be perfected and extended as our foreign policy. Latin America, however, should neither be pampered nor exploited by us, and our silly patronizing assumptions of racial superiority, and the playing of the role of Santa Claus should, out of respect for them and ourselves, be abandoned forever. International friendships like private friendships stem from mutual understanding, mutual respect, mutual esteem, and mutual interest, and are not purchased in the market places.

Full cooperation with other nations, and especially the proposal to enter into postwar alliances with Britain and Russia is very attractive to America, since we are so anxious to win a permanent and durable peace. However, we should always remember that peace, to be durable, must be built upon righteousness and justice, and not on alliances. If we are going to enter into alliances we should insist that our proposed confederates meet our ideals and standards of international integrity and decency. If they will not accept our theories against nonaggression and against the dominance of so-called inferior people, frankly, we ought not to enter into an alliance with them. That should be our price.

Russia, Hitler's former ally, has proved herself a valiant and valuable war partner since Hitler divorced her. Hitler's perfidy has saved the world and doomed him to certain defeat. Russia has been restored to respectability as a world power by her magnificent response to Hitler's effort to double-cross her and loot her, and every American is proud and grateful to have her on his side in this war, regardless of how she finally got lined up with us.

Russia has never attempted to deceive us. She is anti-Christian, antidemocratic, and anticapitalistic, and does not pretend to be otherwise. If we misjudge her and misunderstand her, the fault is ours, not hers. Many of our own leaders, however, for reasons best known to themselves, are trying hard to deceive us about Russia.

If she persists in her pagan philosophy and her newly found policy of imperialism and continues to spread communism by revolution all over the world, the Western Hemisphere may one day come into open conflict with her, but that possibility must be glossed over at the present time. It can be met by future generations.

Stalin's speeches and Stalin's course of action, in Russia and out, do not make comforting and reassuring reading to any capitalistic nation, but we hope that with added responsibilities he may become less radical, more democratic, and less anti-Christian.

Thanks to our policy that she can commit no wrong, our other powerful ally, Great Britain, will doubtless realize her opportunity of empire expansion which she has sought for centuries in the dark continent of Africa and in the Mediterranean. She, with or without an alliance, will remain our good neighbor and friend because it is the salvation of her empire to do so.

Our perfect relations with Canada cannot be improved. Everything points to a long continuance of this Jonathan-and-David, idealistic, international friendship because it is based on justice, mutual interest, and understanding.

Our ties with Australia and the Pacific southwest are most comforting. We have no ambition to fly our flag over one acre of additional territory, unless it be a few island outposts necessary to the protection of the Americas and I honestly believe that we want justice to prevail everywhere and among all peoples.

The United States can and will, if she devotes herself to such a cause, weld the Americas into the finest and most wholesome international relationship ever to exist in all history. In time, if we are patient and prudent in their exercise, we can gradually extend the system of good neighborliness and cooperation to other countries if we insist upon international justice everywhere. Do we have common sense, judgment, integrity, and stability enough to play the game that way, or must we forever be enchanted by the political intrigues of Europe, and despise our own true destiny?

Americans who advocate policing the world have not consulted history sufficiently. Empire building and exploiting the world and policing the world will always go hand in hand. We must refuse to be a party to such a role.

For instance, if we should substitute policing for the good-neighbor policy, our leadership in Latin America built up so painstakingly by Secretary Hull would be at an end within the hour. Let's be brutally frank. Citizens of the United States in a private capacity are not above exploiting peoples of neighboring nations. Many influential persons in America have a financial interest in the production of sugar in Cuba with substandard labor. Strike out justice in international affairs and all you have left is force. We must make a choice.

We should cooperate in every possible way with every nation on this earth to establish a just and understanding world. More than that, we should assume the leadership in that glorious adventure. But, we must proceed in an honest and sensible way to accomplish this desirable objective, and not sound off with a lot of silly platitudes with our heads in the beguiling clouds of European intrigue, and our feet bogged down in the clay of the Amazon swinging a policeman's billy.

Speak Up, America

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able address delivered on October 1, 1943, by former Gov. Alf Landon over the Columbia Broadcasting System on the subject Speak Up, America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is now time for plain talk in view of the obvious attempt to present the American people an alliance with Great Britain as an accomplished fact. Also considering that the President's message to Congress is tantamount to suggesting a blank check for his future handling of foreign affairs.

The American people know what they want, but are not sure of the best way to get it.

We are all one in fighting the war. Outside of a little fringe of extreme internationalist and extreme isolationist, the bulk of us are trying to make it plain that we are prepared to do our part and more in helping maintain peace in the post-war world.

Most Americans are willing to do that, but only if the post-war world we are asked to guarantee collaborates with us in helping remove the seeds of another war.

Unlike our Vice President I reject, with considerable feeling, the idea that America is most likely to do any "double crossing."

Now is the time to make sure of our basic principles in post-war international policies. There never has been and never will be any integrity in power politics.

By making a military alliance, however temporary, with one country, America abandons her traditional impartial role of peacemaker and becomes a partner in the imperialism of Great Britain. Before doing that we have a right to know what Britain's future plans are beyond the fact that she "intends to hold her own."

We want to work with Russia and Great Britain.

What is more important we must work with them. But also it is just as vital to them—if not more so—that they work with us.

We should use our admitted power and influence, to restrain imperialism. But how can we talk to Russia about the rights of small nations while we are talking about a partnership with imperialistic Britain?

If the British-American alliance were to continue "for a good many years" as Churchill suggests, how are you going to unscramble the eggs when, if ever, it ends.

We should push the permanent settlement of the Jewish problem. It is not a Jewish problem alone. It is not one for Britain alone. It is a world problem in building the foundation for a lasting peace.

We should uphold the rights of China. It is not a simple question between the Chinese and the British, but a question of removing the dragon's teeth of another war.

How India's longing for self-government is met will be evidence to all the world of the effective sincerity of the Atlantic Charter.

We must insist on "open covenants openly arrived at" regarding the whole colonial question with Holland and Great Britain.

We must support the rebuilding of a powerful France. Before we underwrite the British Empire "as is," we must know more about the British plans for a fair and reasonable settlement regarding the future of the native populations—not only in the British Empire—but others that she may be seeking to acquire.

If we are to help establish a peaceful world, colonies must not be mandated to one nation, but a committee of nations, and that committee should consist not simply of the great powers alone. Small nations such as Sweden should be a part of it.

In other words, no military alliance with one country simply maintaining the colonial status quo means a peaceful world. It must be fair, just, and mutually beneficial to Asiatics, Slavs, Latins, Jews, and Teutons, if you please, as well as Anglo-Saxons.

If it isn't that, we will never do away with war very long.

There are conclusive signs that China and Britain and Russia do not see alike on highly important post-war questions.

Stalin is giving rather conclusive signs that Russia is going its own way.

I believe that now is the time for America to be hard-headed, realistic, fair, and plain-spoken if a lasting peace is to be established.

But our efforts are being weakened both at home and abroad by the President's mismanagement of our foreign affairs and by the hallelujah policy that America will clothe, feed, educate, and rebuild the world.

Any administration with a record so unsympathetic to democratic processes and customs as Mr. Roosevelt's has been in domestic affairs must not be trusted with any more blank checks either at home or in foreign policies.

Mr. Roosevelt has a long record of irregular governmental short cuts. He has attempted to eliminate Congress from its constitutional place in our Government. Time and time again the President has either ignored the clear mandate of our legislative branch, or expanded legislation beyond the manifest intent of Congress. He has subsequently ignored his own statements or the statements of his representatives to the Congress and to the country at the time the legislation was being debated.

In view of candidate Roosevelt's record, hailed by neurotic liberals as the acme of responsible statesmanship—in view of Mr. Churchill's suggestions for a common citizenship, which certainly implies generations rather than years—in view of the Treasury's plan which surrenders America's financial post-war leadership to Great Britain—in view of the universal bewilderment regarding the administration's foreign policy—in view of all those facts I fear the mind of the American people is being conditioned as the bureaucratic New Dealers cynically put it—for the old-fashioned balance of power alliance that will hang like a millstone around the neck of generations yet unborn.

In further reply to the President's hint for another blank check let us take a brief look again at the record.

We have had the B. E. W., the O. W. I., the O. F. R. and R., the Lease-Lend, etc., all carrying on a bitter political fight behind the battle front.

We have the President carrying on important conversations, if not actually making agreements without the knowledge of our Secretary of State.

When the State Department should be running the whole show, we have had the leftist-rightist fight going on behind the battle front. I hope the recent reorganization of conflicting agencies will clear up the confusion. But our past experiences with the many reorganizations so characteristic of this administration does not warrant our confidence in beneficial results. Politics between the New Deal bureaucrats has not ended at the water's edge.

Who speaks for America? This babble of voices is making us a laughing stock before the world.

Thank God regardless of all the administration's bureaucrats' confusion and bickering behind the battle front, we have the Army and Navy doing America's job on the battle front, and doing it magnificently.

The mad world we are living in calls for sound planning and common-sense thinking similar to that our forefathers used building this great Nation.

When the American taxpayer realizes that the world expects lease-lend to be continued for years after the longed for peace comes, he is likely to put his hands in his pockets and walk off from a lot of world chores that could and should be done—especially so when he realizes that lease-lend means an outright gift.

The British are confidently counting on our newly built merchant-marine ships being shared with them on a lease-lend basis. They also expect that we will make agreements with them sharing world trade and world business on a cartel basis.

Now, if anyone raises these skeletons of European empires or American post-war donations at the feast of post-war planning a few may accuse him of playing Hitler's game of dividing our victorous war coalition.

But no one can rightly claim that the hush-hush policy is clearing the atmosphere of distrust between Russia, Britain, China, and America. Furthermore, the administration's evident approval of the post-war British-American military alliance forces the discussion of empires and donations.

Which is the worse—keeping still and misleading our allies as to real sentiment in America, or speaking out in the hope that the world will realize that American public opinion will not in the end support the global programs of the "spenders"?

We must not allow the spenders to give away everything around the home place or do us the injustice of giving the impression that we will stand for a permanent policy of "give away."

Recently a Member speaking in the English Parliament voiced his alarm—and rightly so—that England might not be so fortunate as to have Roosevelt and Wallace to deal with after the next election in "divvying up" our merchant marine. Therefore this Member of Parliament urged that the divvying up should be done immediately.

If the world is planning for us to be its post-war sugar daddy with lease-lend, W. P. A., relief and rehabilitation, etc., etc., it is evident that America is likely to turn in revolt not only on the hallelujah program, but along with it, on the program highly necessary on the whole of reasonable world collaboration and cooperation.

Do we want a part in creating another war a generation hence by hush-hushing these unpalatable questions I have been talking about?

Especially are we concerned when it is proposed that we become a partner with a highly imperialistic nation. It is a tragic "mistake not to face the difficulties as they actually exist and try to work something out on a practical basis."

Britain's, and also Russia's, intentions toward China, India, north Africa, Poland, Palestine, France, are vital questions that must be settled in fairness and justice before there is any hope of any international cooperation succeeding permanently in establishing peace—especially by way of the proposed military alliance with one country.

The failure to meet these highly important and inflammatory questions prepares the seed bed for the next war—force or no international force.

We must help rebuild a world worthy of our sacrifices. The goal of America is a stable and peaceful world. We can and must work to that end without expecting to right all the wrongs of the world in one treaty. But we at least must get started in the right direction—in the direction of Woodrow Wilson's 14 points which have been given only lip service by our allies. Before we make post-war commitments is the time to reanimate these points. The groundwork for a peaceful world must be laid now by removing some of the causes of war.

Let there be no easing up in the war efforts of our mighty and victorious coalition. Plain talk will help clear the air of suspicion, and it will strengthen rather than weaken the natural association of England and America and the solidarity of the Allies, not only for the present, but in the future.

It will help us bring about the more decent world on which lasting peace depends.

Russia Poses First Great Crisis of the Peace

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. RANKIN. Mr. Speaker, Capt. Eddie Rickenbacker told us some time ago that communism was leaving Russia and was coming to the United States. I understand he says now that Russia is moving rapidly toward a saner system of government, as well as a saner system of economy, and a saner way of life.

We are told that Russia has abolished the Trotsky commissars, those misrepresentatives of the Russian people who attempted to meddle with the affairs of the Army and to control the Army officers.

We are told that Russia has abolished the Comintern, that detestable, despisable, damnable system of anarchy that was attempting to stir up revolution in every country in the world, including our own.

We are told that she has torn down the streamer that Trotsky placed across the gates of Moscow, that "religion is the opium of the people," and has opened up the churches of Russia.

We are told that since getting rid of the Commissars, Russia has gone back to a decent military system, and that instead of every man greeting his superior officer merely as "comrade" and denying him any other recognition, she has reestablished military discipline, restored the insigne on the shoulders of the officers of her Army, even on down to the corporals. Captain Rickenbacker tells us now that they are among the snappiest soldiers in the world.

They are breaking away from the old communistic system and are paying men and women according to the amount of work they are doing in the various plants manufacturing war materials, and the results they produce. One step seems left for Russia to take and that is to restore the rights of private property, the right of the people to own their homes and their lands; and I predict that the Russian soldiers who are doing the fighting will see that done when the war is over, just as surely as the world stands.

But the international situation, as it affects the future of Europe, is becoming more and more complicated, as will appear from the following article by James B. Reston, which appeared in last Sunday's New York Times, under a London date line, entitled "Russia Poses First Great Crisis of the Peace."

It reads as follows:

RUSSIA POSES FIRST GREAT CRISIS OF THE PEACE—QUESTIONS CONCERNING HER AIMS AND OUR INTENTIONS MUST BE ANSWERED

(By James B. Reston)

LONDON, October 2.—The preeminent aim of the British people and the major long-term object of their foreign policy is to attain se-

curity—by which they mean peace and full employment—through cooperation with the United States and Soviet Russia.

Coincidentally, their greatest fear is that instead of bringing the United States and Russia together with China and the British Commonwealth into an effective "world authority," they may get caught between their two strongest allies or may be forced to choose between them.

The British are fond of describing themselves as a bridge between Moscow and Washington but they do not want to be attached to only one side of the river, and they certainly do not want to get stranded in the middle of what promises to be a pretty turbulent post-war stream.

The British are not yet faced with the dilemma of choosing between the United States and Russia. They have not been developing the art of the compromise for a thousand years to get caught in any impetuous one-sided decision at this late date in their history; but they see the possibility of that dilemma approaching and it is possible, though not entirely probable, that they will be faced with it in October when they meet with representatives of the United States and Russia in the three-power conference.

THIRTY-DAY DEADLINE SEEN

It is becoming increasingly clear that we are approaching in this conference the first great political crisis of the peace. Within the next 30 days the Russians expect us to put forward definite proposals, not only about the time and place of our attack on the west coast of Europe, but on our policy for dealing with Germany and other European powers after the war.

They want to know where the Allied armies are going to attack and when; they want to know how we propose to deal with Adolf Hitler, or the German Army, or some other faction that may attempt to make peace on behalf of the German Reich; they want to know what we intend to do when and if liberal elements within the countries now occupied by the Germans revolt and attempt to take over the power—and the property—held by the former ruling groups within these countries; they want to know whether we insist on having a say in the restoration of eastern Europe and the Balkans, and if so, what we think of their collaborating in the reconstruction of western Europe.

We and the British have a few questions ourselves. We want to know whether the Russians intend to respect the sovereignty of the small nations and the right of those nations to settle their own internal affairs; we want to know how dead is the Comintern which they killed after they said it did not exist; we want to know when and if they intend to open "the fourth front" against Japan after our third-front and our second-front help in the destruction of the German Army; and, of course, we want to know, too, what the Russians think about the future of the Baltic States, Poland, the Balkans, and other countries of Europe, the Middle East and the Far East

In other words we have reached the "$64 question" stage in the relations between the Allies, and while that does not necessarily mean that the grand alliance will not continue to function if everybody does not get satisfactory answers to his questions it does mean that we are faced with the first real opportunity we have had, first, through the Allied political commission which will meet probably next week at Algiers, and, second, through the tripower conference of foreign ministers, to guide relations between the three great powers into constructive channels.

WAR QUESTIONS

So far as questions relating to the war are concerned the British are clear as to their answers to the Russian questions; it is true—in fact, it is one of the remarkable accomplishments of the war—that their politicians and soldiers and ours have reached a degree of understanding and unity on the complex problems of this conflict that is unprecedented in the history of coalition warfare. Our answers to the Russian questions about the war will not always satisfy Vyacheslaff M. Molotov, Soviet Foreign Commissar, but at least the British know where they stand with us on these questions and that is all that they ask.

It is on the political and post-war questions that the British approach their dilemma. It may be true, as Assistant Secretary of State Adolf Berle has assured us, that the State Department is eager to discuss any questions that the Russians and the British raise, although that does not explain the differences in the Russian and American proposals for the agenda for the tripower conference.

But discussion is no longer enough for the Russians; and the views of the Senate are even more important than the views of the State Department; they do not want words, but a specific declaration of policy on such questions as the future of the Baltic States and the boundary of Poland, and with all the good will in the world it is difficult to promise that Secretary of State Cordell Hull or Under Secretary Edward R. Stettinius, Jr., is to be specific about these things until the Senate gives the State Department some indication as to where it stands.

The British may be able to stand out against Russia's political demands this month; they did so once during the negotiations for the Anglo-Russian Treaty when Mr. Molotov demanded recognition of the Soviet Union's incorporation of the Baltic States, and they may be able to do so again, but it must be recognized that Britain is in a far less favorable position to stand out against any other great power today than she was before the war.

The days of Britain's splendid isolation are dead; for centuries they have relied for their immunity on their island position and their naval and industrial power and on the division of power on the Continent; but these and many other things have changed and Britain must and is changing her policy to meet the new events.

The very nature of power, which in the end determines almost all international political policy, has changed.

In the days of Disraeli, when communications were slow and nations were virtually self-contained and education and political consciousness were restricted, power could be based in this island on a small army and a powerful navy and on the skill of craftsmen and the abilities of a privileged class.

THE INDUSTRIAL POTENTIAL

But today, as the Political and Economic Planning Club in London recently pointed out, "the elements of power have radically changed." Power now rests on industrial potential; on the ability to control or insure the supply of vast quantities of raw materials from sources scattered throughout the world; on a high order of technical and administrative skill; and, last but not least, on the ability to command continued and active allegiance of the increasingly individualized and politically conscious masses.

These qualifications only a bare handful of the greatest powers can command, and it follows, therefore, that the world is moving irrevocably toward a new international system—a system in which the political life of humanity will be organized in a few large and relatively integrated groups under the leadership or domination of the principal great powers.

The British not only see and accept this as a fact but are inevitably driven for their own protection into a policy of collaborating much more than they ever did before with other great powers. The hard, inescapable facts of their changed economic position and the changing economic position of the world have driven them to this.

They know, for example, that their now almost stationary and aging population of less than 47,000,000 is only a little more than a third as large as ours and less than a fourth of Russia's; they know that they cannot in the last half of the twentieth century count on being the workshop or the financial or shipping center of the world, as they were in the latter half of the nineteenth century; even their Navy is no longer undisputed mistress of the seas.

MERCHANT SHIPPING

It has not escaped the attention of this people either that the United States will build almost half as much merchant shipping this year as Britain had before the war, or that our industrial production will be a third greater than it was in 1939, or that a great part of their foreign investments are gone, or that the United States will, in 1944, produce 25 percent more rubber than she ever bought before the war, or that even before the war the center of gravity of the world's heavy industry had moved from this island westward to the United States where, in 1937, we were able to produce 51,000,000 metric tons of steel to Russia's 19,000,000 and Great Britain's 13,000,000.

In consequence of these and many other factors for which there is no space in this dispatch it is becoming clearer that Britain and her Commonwealth are determined, if possible, to work out an economic system with the United States—note Lord Keynes' mission in Washington—and with Soviet Russia and the Continent.

There is a growing realization here that Britain cannot get the two things she wants above all—peace and full employment—without cooperation from other powers, and this means particularly the United States.

But if she cannot get this cooperation from the West then, to save herself, she will have to turn to Soviet Russia and the continent of Europe.

That is the dilemma she hopes to avoid either this month or next year; that is why she hopes Soviet Russia will not press her to choose now; and that is why she hopes to get guidance from the Senate as to where the United States stands.

World-Wide Aviation

EXTENSION OF REMARKS
OF
HON. WILL ROGERS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. ROGERS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

SANTA MONICA, CALIF.,
September 21, 1943.

S. J. SOLOMON,
Chairman, Air Lines Committee for United States Air Policy,
Washington, D. C.:

You have my permission to release contents my letter September 13, which read as follows: "I have studied with great interest

the declaration of policy on world-wide aviation as advocated by the 16 signatory air lines. It is my firm belief that the basic policy involving free competition under reasonable governmental regulation will be necessary to insure the development of a sound and efficient post-war foreign air-line system. I pledge my active support to the over-all effort now being put forth to assure American supremacy in international air-line operation through the American principle of competition."

DONALD W. DOUGLAS,
Douglas Aircraft Co., Inc.

Congress and the Peace

EXTENSION OF REMARKS
OF

HON. ORVILLE ZIMMERMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. ZIMMERMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech by Josephus Daniels over a national hook-up on Sunday, September 26, 1943:

Mr. Muhlenberg, the first Speaker of the House of Representatives and all his successors would have regarded the demand of that body for a voice in international affairs as revolutionary. The fathers in framing the Constitution conferred the exclusive right on the Senate to have a part in agreements with foreign nations. But on Tuesday the Members of the House "riz up" and declared that the time had come to end delay, and shilly-shallying and tell the world that the people of the United States favor participation by their country in the setting up of international machinery "with power adequate to establish a just and lasting peace among the nations of the world."

It was revolutionary and without Constitutional warrant. But it was glorious and heartening. It showed that public sentiment is king in America. Fresh from their constituents, the Members supported the resolution of Mr. FULBRIGHT, a new scholar in politics, who is wearing the mantle of Woodrow Wilson, the great scholar in politics, who pointed the way to permanent peace during and after the World War.

There was only one fly in the ointment. Having taken an extra Constitutional step to win the vote of the Mackinac Island straddle, there was added to the original resolution the surplusage of four words "through its constitutional processes." The objection to that phrase is that it opens a door through which a four-horse team of obstruction can be—may be—driven. It only befogs the original clear-as-crystal resolution. From time out of mind when opponents of any act wish to defeat it without disclosing their real motive they raise the bug-a-boo of "It is unconstitutional." When is a law or resolution unconstitutional? A distinguished jurist once said: "The Constitution is what the judges say it is." Experience proves that statement, as witness the fact that a majority of the Supreme Court declared the income tax and the Child Labor Law and other reforms unconstitutional. Later they were reversed. The extra words added to the resolution of the House which was made without Constitutional mandate, carried with its a suggestion that the President and the Senate might try to put over some unconstitutional pact upon the people. Judging by what happened in 1919, there may be some justification for that fear. But, though the Senate is hampered by archaic rules and one-third of the Senators can thwart the will of the people, let us hope and believe that the present Senate will as promptly and as patriotically respond to the popular demand as the House has done.

Notwithstanding the added words. America salutes the House of Representatives for responding to the demand of the men fighting to end war and their comrades on the home front that there shall be no such betrayal of the aspiration for peace after this war as disgraced us after the 1918 armistice. The action of the House ought to be followed by a constitutional amendment requiring the joint vote of the House and Senate for the ratification of treaties. The reason for associating the Senate with the President in treaty action ended when the membership of the Senate became large. One compelling reason for including the House in treaty ratification is that one-third of the Senate, plus one, can now, as they did in 1919, block the road to peace. The Senate in that period kept us out of the League of Nations. By that act they insured the fulfillment of Woodrow Wilson's prophecy made in St. Louis in September 1919. He said:

"There will come, in the vengeful providence of God, another struggle in which not a few hundred thousand fine men from America will have to die, but as many millions as are necessary to accomplish the freedom of the peoples of the world."

In the light of the literal tragic realization of the holocaust forecast 25 years ago, it is unthinkable that Congress should fail to grasp the opportunity now offered of making this conflict truly a war to end war. That deliverance is within our reach.

Petroleum Goes to War

EXTENSION OF REMARKS
OF

HON. H. STREETT BALDWIN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. BALDWIN of Maryland. Mr. Speaker, I am just in receipt of a copy of a speech made by Mr. Bruce K. Brown, Assistant Deputy Administrator, Petroleum Administration for War, before the National Petroleum Association at its meeting in New York on September 22, 1943; and because it contains such a comprehensive explanation of the shortage of gasoline and petroleum products in the United States and answers so many of the questions which are now being asked of my colleagues in the House, I would like to insert the speech at this point in the RECORD, for their information:

I want to talk to you today of petroleum hydrocarbons, but I promise that I shall not embark on a scientific discussion, nor shall I invoke any plea for greater production for war.

Science proceeds apace and, as I have told you before, I think almost every month that has passed since Pearl Harbor has induced a hothouse growth in technology as great as that which we experienced in a whole year of the last decade preceding the war. I could talk of that technology, but I shall not today.

I could implore each of you to reevaluate your present operations in the petroleum industry to detect and correct any faltering in maximum production for war—for much yet remains to be done before it will be possible to evaluate today in the terms of a hoped-for peace in the tomorrow. You will be hearing more from the Petroleum Administration concerning maximum production of war products—but not today.

Today I would like to discuss petroleum hydrocarbons only from the standpoint of what is happening to them. That subject is one which is certainly of common interest to the petroleum industry and to the Petrcleum Administration. You and I are mutually distressed, I am sure, over the lack of appreciation on the part of our friends, our customers, and our masters—the American public—of the part that petroleum must play in winning this war.

Let us consider these petroleum hydrocarbons—refined products ready for use—on exactly the same basis as we now have to consider everything else—manpower, womenpower, food, textiles, metals, shipping, and dollars. Let us consider how much of our petroleum products must go to war and how much can be retained for home use. Hydrocarbons drafted for war can't stay with us but the American public wants to know just what is becoming of those precious petroleum products upon which they have so long relied for their well-being, their comfort, and their pleasure.

First of all, let us go back 25 years in order to get a good running start on our problem. During the First World War we refined and had available each day in the United States about 200,000 barrels of gasoline. We sent less than 37,000 barrels per day overseas at the peak of activity in 1918—less than 20 percent of the total available. According to Capt. Paul Foley of our Navy, the total requirements of "aviation spirit" (the forerunner of our 100-octane aviation gasoline) by the United States, Great Britain, France, and Italy for the last half of 1918 was scheduled at about 7,000 barrels per day. The United Nations in this war will be producing and burning that much aviation gasoline in the interval between this moment and the time I finish delivering this brief paper.

Oil was very important in the First World War and it seemed awfully important to civilians too. Prices rose and there were "gasless Sundays." As to the military importance of oil this same Captain Foley (in Petroleum Problems of World War) said:

"Reviewed in the perspective of 6 years, it is clear that next to the physical number of bayonets on the Western Front, the factors contributing most to victory were the impetus conferred on those bayonets and the flexibility given them by gasoline. Tank, tractor, and aviation activities all were measured in terms of gasoline. It evacuated the wounded and effected replacement of combat troops. * * * Not in exaggeration was it said that a drop of petrol had been the equivalent of a drop of blood. The torch borne high on Flanders Field was a gasoline torch."

But however important oil may have appeared to be to the civilian population in 1918, it was fully eight times as important in the year before we entered World War No. 2. In 1941 we used about 4,600,000 barrels of crude oil and natural gasoline in our refineries each day and made available to the public about 1,600,000 barrels of gasoline. Very little gasoline was consumed by the military. Very little aviation gasoline was consumed.

In the present month and for an undetermined future number of months, we hope to refine in this country about 10 percent more crude oil and natural gasoline than in the pre-war era. Thus, it might be reasonably expected that we should have more gasoline available than ever before, and that assumption is correct. Gasoline production

is currently about 1,800,000 barrels a day—that is all types of gasoline for all purposes.

"But," the public says, "where is it?" "Why can't we use it?" "Why shortages?"

The answer is, of course, that petroleum is going to war. We know that. The public knows it. Unfortunately, however, the separation of petroleum from its normal associates, the civilian public, brings protests which to me seem more violent than any I have heard raised against sending other commodities to war. For this reason it is incumbent on us all to explain the situation patiently, again and again.

Statistics are uninteresting. The old adage "Figures don't lie but liars 'figger' " seems well forward in the public mind. Furthermore, the shroud of secrecy necessarily cast over overseas shipments of petroleum products and over present and ultimate productivity of critical war products, such as aviation gasoline and toluene, tends to confuse even the best informed. However difficult the task, it is necessary that we keep plugging, within the limits of military secrecy, at the job of telling and retelling the story of petroleum products in the war, because it is extremely important to public morale and to the standing of the oil industry that the story be well told and well understood.

What I have to present to you today is not a new set of statistics but merely a somewhat different way of telling the story. Instead of spreading numbers throughout my talk I shall give you all of the principal figures at once and then put them together in a way which, I trust, will bring out the story.

Restating the petroleum side of it, we are currently using each day about 4,400,000 barrels of crude oil and natural gasoline and we are turning it into about 3,800,000 barrels of products. The balance goes into refinery losses, refinery fuel, and crude export. The amount of crude exported is quite small and is diminishing. Out of these raw materials we produce each day about 1,800,000 barrels of gasoline and 2,000,000 barrels of all other products. The Petroleum Administrator recently stated that the military services had to be supplied with about 600,000 barrels per day of gasoline. High officials of the services recently stated that the total military demand for all petroleum products exceeded a million barrels a day. In this present month about 32 percent of all petroleum refined products are used by the military. The figure will rise to 40 percent before many months.

The above figures are all that are really needed to provide a base for an easily comprehended story of where our petroleum hydrocarbons are going.

But I have more figures to point up the story. None of them are secret and few are new.

In the halcyon days prior to Pearl Harbor we had about 27,500,000 passenger automobiles. That number has now dropped to about 24,500,000. That drop-off of about 11 percent represents cars worn out and not replaceable because no new passenger automobiles have been manufactured for many months.

No one would be foolish enough to think that because there are 11 percent less automobiles on the road, those that are left should have more gasoline than ever because everyone realizes that the automobile companies did not really stop producing automobiles. Instead of Chryslers, we have produced tanks; instead of Willys-Overlands, jeeps; and instead of Fords, aircraft engines, bombers, and the like. Among such little items the President recently announced the production of 123,000 planes, 53,000 tanks, and 1,233,000 trucks. Those numbers will rise. Further, most of our citizens know instinctively that our military vehicles are greater gas eaters than civilian automobiles and trucks. They are more powerfully motored; they are bigger; they go faster, they go farther. The comparison is particularly striking in the case of automobiles and planes. In 1 hour's travel at the legal speed of 35 miles per hour, a passenger automobile will burn about 2.5 gallons of gasoline. But a fighter plane will travel 10 times as far in an hour and will burn about 60 gallons of gasoline. Our great bombers use several times that much. That part of the story has been told before, told better, and with more illustrations. The telling of it has allayed some protests but we all know that the motorist is far from convinced. If he accepts such explanations, he does it to be a good sport—not because he is completely satisfied.

A very considerable part of our available foodstuffs has to be diverted to military use at home and overseas. Bearing in mind that the military currently requires only 600,000 barrels of gasoline daily, or approximately one-third of what we have available, and that the quantity of all petroleum products still available for civilian use is 64 percent, the corresponding figures on food are of interest. According to the latest figures available to me, the following percentages of foods are available for civilians:

	Percent
Butter	78
Beef	74
Pork	67
Cheese	58
Potatoes	89
Sugar	84
Coffee	77
Salmon	43
Sardines	39
Raisins	50
Prunes	54

And the average of canned beans, tomatoes, corn, and peas, 64.5 percent.

Compared to these figures, an availability of gasoline to civilians of 66 percent does not seem too bad.

Why is it, then, that our friends, our customers, and our masters—the great American public—submit so patriotically to short rations on some foods and, at the same time, seem critical of any shortness in petroleum supply?

The need for food is universal and universally recognized. Within narrow limits rich man, poor man, soldier, civilian, American, Briton, Chinese, Russian, Frenchman, or Italian can and does, if it is available, consume about the same amount of foodstuffs. Our people are inherently generous and they do not really contest the need for allotting 30 percent or more of our available food to military and overseas use. Why, then, is it so difficult to explain that 30 to 40 percent of petroleum must likewise be employed?

Of course, there is one small difference which we note immediately.

In the case of food, no one attempts to influence the citizen to protest. Fortunately, our States have not taxed the consumption of food, and hence the shortening of civilian consumption in the States does not affect tax revenues so directly as a shortening in the civilian consumption of gasoline. Further, there are no organized societies or associations of food eaters whose welfare depends upon a continuous availability of ample quantities of prunes or beans or whose officials rise up and denounce the Food Administration or the food industry, because a storm ruins a peach crop or because water wells run dry.

However, I do not think that outside stimulation accounts for any considerable part of the honest perplexity which we note in the minds of our friends as to the shortness of petroleum supply. I have another theory about it, and I can best introduce it by suggesting a possible analogy in the field of food.

As I have previously stated, it looks as though we civilians could make use of 67 percent of the pork available and 50 percent of the raisins. We now have almost 67 percent of the gasoline still available to us, and I doubt that we will ever have to get along with less than 50 percent—the same as our "current raisin ration," to make a bad pun.

Let us suppose, however, that in addition to eating raisins, we civilians used raisins as a raw material to make plastic articles, and suppose further that the essential demand for plastic articles was such as to require one-quarter of the whole raisin crop. In such a case the diversion of 50 percent of the raisin crop to the military and the continued use of 25 percent for a civilian purpose, that is making plastics, would let us have only one-fourth of our normal peacetime ration of raisins for dietary purposes—not one-half.

Applying this analogy to petroleum supply, I think we can discover the missing chapter in the story which we simply must make our citizens understand. To the pre-war passenger car driver, gasoline was something to be bought at the corner pump. He bought it in company with his peers and fellows. Trucks, busses, taxis, municipal cars, and farm tractors did not block the entrance of the station driveway. The auto driver was hardly conscious of the nonpassenger car use of gasoline. Had there been a serious and mysterious shortage of gasoline in some area and had all of those other vehicles piled into the service station driveway, the average American motorist would have graciously admitted that those other vehicles needed gasoline worse than he did. It is late in the game to point that out to him now, but it must be done.

Reverting to the approximately 1,800,000 barrels of gasoline which we produce every day, only a small proportion can safely be used by civilian passenger automobiles. As stated by Petroleum Administrator Ickes, the daily military demands already are at the rate of 600,000 barrels. That leaves 1,200,000 barrels. Exhaustive surveys indicate that trucks, busses, and taxis simply must have 450,000 barrels each day. Failure to provide it would mean a break-down in essential public transportation services. That leaves 750,000 daily barrels of gasoline to be divided between industrial use, farm use, and civilian passenger automobiles. It should be obvious to all that nonessential industries have been pretty much discouraged by lack of priorities for raw materials and by manpower problems so it is not asking too much to urge confidence in the idea that there is little waste of gasoline in present industrial use. The farm situation speaks for itself.

And so—there it is. We have only so much gasoline and it must be divided up. The ever-expanding military use is easily understood and cannot be criticized. But it is a serious mistake to assume that all that is left is available for A, B, and C coupons. When that individual who never purchased his gasoline except at a service station erected for his express convenience is brought to realize that there was always—even in peacetime—and still is a tremendous consumption of gasoline by trucks, busses, taxis, tractors, and farm equipment which is just as vital to his welfare as convenient personal transportation, we shall have gone a long way toward winning him to the view that petroleum is going to war.

Mr. Speaker, I would also like to include the following short statement which gives us some idea of the use to which gasoline and other petroleum products are being put at this time:

First. It takes 12,000 gallons of gasoline to train one pilot.

Second. Tanks of one division use more than 10,000 gallons in traveling 100 miles.

Third. One thousand Flying Fortresses use 400,000 or more gallons of gas in a single 4-hour mission.

Fourth. It takes one-third of a tank car to fuel one Flying Fortress.

Fifth. One airplane engine burns its weight in gas every 2 hours.

Sixth. General Covell stated recently that 65 percent of all supplies shipped to Africa were petroleum products; 50 percent of all tonnage going overseas now is petroleum products.

Seventh. General Somervell stated several weeks ago that the requirements for the military for the remainder of 1943 would be 1,000,000 barrels of oil per day, not including aviation gasoline and aviation lubricants.

Eighth. Thirty and one-half percent of all gasoline products east of the Rockies goes to the military.

Ninth. There will be enough gasoline for all essential driving if the public will only conserve on less essential driving.

Critics Are Useful Animals

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. SCOTT. Mr. Speaker, from time to time I have called attention to the tendency on the part of all too many New Dealers toward the suppression of criticism. Free criticism is implicit in freedom of speech. It is only natural for men in positions of authority to resent any criticism of their omniscience as they drive toward important goals, but unless we have a full and fair appraisal of the actions of our public leaders, even including the self-anointed ones, we will not have an informed public opinion.

Unless we have an alert and informed America we have failed in laying the groundwork for a just peace. The executive department is unwilling to treat the American public and the American press as adult partners in the coming enterprise of winning the war. Being unwilling to recognize the value of telling Americans as much as possible about the war, they must expect continued criticism for this lack of candor and for a deplorable want of faith in the good judgment of the citizenry.

Under leave to extend my remarks, I include herewith an editorial from the current issue of the Saturday Evening Post:

CRITICS ARE USEFUL ANIMALS

Back in the dark days of 1941, a mid-ranking New Dealer was complaining about criticism of the administration. He thought something should be done to shut it off. Somebody suggested that the Bratish didn't feel that way and that, even in the midst of a war, Mr. Churchill had to take a shellacking in the House of Commons whenever his critics thought he was holding out on them. "Perhaps," said the young man of the New Deal, "that is why the English aren't winning the war."

The right of free speech and free criticism has to labor under such illusions even among its friends. The Bill of Rights is too often regarded as a pleasant conceit in a schoolbook but a hindrance to the efficient carrying out of large affairs. The eager New Dealer, cited supra, is not alone in believing that people who ask inconvenient questions ought to be suppressed because they interfere with winning wars, extending social gains and other worthy causes.

Well, let's look. Now that the British, plus the rest of us, are winning the war, it might be asked whether the fact that Mr. Churchill had to pause in his exacting tasks to answer criticism may not have had more practical use than we are accustomed to think. For one thing, America was watching the war very closely in those days, and the fact that Mr. Churchill could be criticized in Parliament and in the newspapers undoubtedly had its effect in reconciling America to the necessity of playing a role in the conflict. More important was the fact that a people which knows that its leaders are under constant scrutiny by its representatives and a watchful press has a basis for confidence and for "blood, sweat, and tears" which is lacking when the only contact with government is through propaganda and arbitrary orders.

The real obstruction to better understanding between Russia and the democratic nations is the fact that we have no means of knowing what the Russian people think about things and they have no way of knowing what we think. As between us and the British people, no such barriers exist, despite the efforts of the bureaucrats to create them. When we object to imperialism, the English know it; and when they complain that we are sometimes a little hard to take at close quarters, we hear about it. The people of Russia today have no idea about the doubts which exist in this country over Stalin's post-war plans, and there is nobody in Russia who can demand that Stalin make himself clearer. Because Russia is a dictatorship, unity with her is difficult and tortuous, even when we know how vitally we depend on keeping relations friendly.

So we say again, "freedom of speech" is not just a pious expression tossed off by a group of elderly gentlemen in wigs and knee pants. It is a concept of government which takes full account of the fact that its exercise will often make our governors restive, but which has paid off over a century and a half in the development of a people which has learned to respect leadership, but also knows that a leader who cannot endure criticism should retire from the scene.

Lorain, Ohio, Exceeded War Bond Quota

EXTENSION OF REMARKS

OF

HON. ED ROWE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. ROWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lorain (Ohio) Journal:

ADMIRAL KING: MISSION ACCOMPLISHED—LORAIN

E. J. KING, *Commander in Chief, United States Fleet, Washington, D. C.:*

Lorain exceeded its third War bond campaign quota of $3,015,168 on September 23, 10 days ahead of schedule.

Then with your encouragement, we raised our sights to a new goal of $4,000,000. Today, the final day of the campaign, your home town respectfully reports the mission accomplished. More than 16,000 Lorain residents have subscribed a total of $4,447,912 to help bring "confusion and ultimate disaster to our enemies." This is 44 percent more than the original quota and represents an average of 1½ purchases for every family in Lorain. In dollars, it averages a $100 bond for every man, woman, and child in the city.

YOUR FELLOW LORAINITES.

The Stepchild of World War No. 2—The Cotton Farmer

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, one of the paramount issues that most Congressmen living in a cotton farming district found out during the recent recess was the cotton farmer's feeling of resentment for the way he has been kicked around, abused, and discriminated against.

He is certainly correct when he names himself the stepchild of World War No. 2. With high wages for industrial workers, with high wages for most employees, with high prices for many farm commodities, the cotton farmer as regards the price for cotton is ignored. With the high cost of fertilizer, farm labor, seed, machinery, and so forth, necessary to produce one of the most essential materials for the war, that is, cotton, a reasonable person would expect that cotton producer to receive a price commensurate with the cost, and so forth.

That is not the case in regard to the cotton farmer. Washington bureaucracy governs the prices of all manufactured and agricultural products. In comparison with all classes of products in both fields of production, the cotton farmer stands practically alone, as the most discriminated against of them all. He is not comparable with any of the other producers when it comes to the price of his product.

This legislative body, of which I am a Member, passed legislation that would give the cotton farmer approximately 25 cents per pound instead of the 18 cents that he is getting today. Unfortunately this badly needed legislation was vetoed, for what reason we all still wonder.

The cotton farmer should be getting 35 cents per pound for his cotton if he were getting fair treatment and a price in comparison to the present price of most agricultural producers and industrial producers.

The cotton farmer's costs have doubled in most instances and in some they have increased threefold, yet the price for his cotton remains the same. He cannot make the fair profit that he is entitled to. He knows, just like we know, that some manufacturer is getting

the profit that he deserves and there is no argument that the cotton farmer needs it far more than the manufacturer. Any investigation of the true facts will show that.

Just how long is the cotton farmer going to continue to play the unfair and unwanted role of the South's persecuted problem child No. 1?

How long is the South's leading crop going to be a political football to be kicked around unreasonably?

How long is the South going to be discriminated against by having its largest and most productive crop—King Cotton—dwarfed into a midget when it comes to price?

Mr. Speaker, the time has come when this body should act in fairness to themselves and in fairness to those abused and persecuted cotton farmers. A bill has been introduced by me which can remedy the situation. The cotton is now being picked and ginned. If we act now we can save the situation. If we delay, it will be fatal for whom—the cotton farmer, the stepchild of World War No. 2. I urge you to act and act quickly.

Pupils of Coxestown School, Harrisburg, Pa., Work for Victory

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks in the RECORD, I am including a letter from Miss Mildred E. Crouse, describing in detail the work which has been done in one of the smaller schools in Dauphin County. It seems to me that this school has made a remarkable record of achievement in all lines of endeavor connected with the war. I believe that anyone who reads this letter may perhaps find suggestions which could well be adopted by the schools in their district. I delayed inserting this in the RECORD until this time in order to obtain Miss Crouse's permission. In her last letter to me she advises that the complete sale of War bonds and stamps has reached the sum of $6,821.25 for the school year:

DEAR MR. KUNKEL: I was wondering if you might like to hear what one of the smaller graded schools in Dauphin County has done as its "bit" in the Schools at War program, during the fiscal school year. Now when I say smaller, I mean that our building, which is located on Greenawalt Lane, Harrisburg, in Susquehanna Township, known as the Coxestown School, has 3 rooms in use, and an enrollment of 75 boys and girls, in grades 1 to 6.

Our first project, of course, above all others, has been the sale of War bonds and stamps. The total sales starting September 22, and including this past week, amounted to $6,614.05, and $5,356.35 of that has come in since March 2, when we started a Buy a Jeep campaign.

The children completed a large, brightly colored, knit afghan, and sent it to the Coatesville Hospital to be placed on the bed of a World War No. 1 veteran from Harrisburg who is a patient there.

Forty-five crossword puzzle and scrap books were made and given through the Y. W. C. A.-U. S. O. to the WAC's, as they left Harrisburg to go to their various fields of duty several weeks ago.

Approximately 3,600 old silk and nylon hose have been gathered to go on their way for parachutes, etc.

Old papers, rubber, tin cans, and metal have been salvaged by the children and turned over to the several scrap drives.

The last Saturday of each month the boys spend going about the community collecting fats for victory.

Just before each registration period for ration books, etc., the teachers would hektograph instructions, etc., concerning the high lights about same, then the children would distribute them to the homes in the community, thus avoiding much turmoil on days of registration in the school.

You may have received many such letters as this and it may not interest you, but being our Representative in Congress at Washington, I thought we would like to let you know, even though we are small, that we can and will do our part for victory.

MILDRED E. CROUSE.

Gasoline Rationing

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. PLOESER. Mr. Speaker, this is the opinion expressed of those in charge of the national rationing program and should bear weight with the Members of Congress, the Office of Price Administration, and the Office of Defense Transportation:

SEPTEMBER 21, 1943.

Hon. WALTER C. PLOESER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PLOESER: I have been connected with a rationing board since November of last year, and during the regime of the various chairmen in Washington, the boards have always been advised that things would be simplified from an operational point of view, but, instead, we are continually getting more and more requests which complicate rather than simplify the work of local boards.

I am enclosing herewith a letter from the administrators of the southern California board, which expresses the sentiments of the members of the board extremely well, probably much better than we could have written it, and I assure you that all the statements therein can be readily verified should anyone care to take the time to do so.

I would like to add the thought that the O. P. A. has continually stressed the great amount of black-market gasoline which is available throughout the country, and, in my opinion, due to the fact that there are two separate units issuing gasoline rations, viz, the O. D. T. and the local rationing boards. Most of the black-market gas is made available through a surplus of T-type coupons, because of the fact that the O. D. T. is extremely liberal in the rations allowed to truckers. It would seem that when truckers run short of gas, it is no trouble at all for them to get additional rations to supply their slightest whims and wants and, of course, having an abundance of coupons, they do not hesitate letting their friends in the filling stations have a sufficient amount to meet their needs.

I am sure that anything which you can do to call to the attention of the various Members in Congress the great abundance of additional work and more hours which are continually being thrust upon the boards, and anything which can be done to alleviate the situation will be greatly appreciated by thousands of volunteers and board members.

The most recent plan which is causing us in the administrative capacity to shudder, is the one whereby some men totally strange to the community and totally disrupting our files, check each individual ration issued, and ask a board member to recheck. This presents a task so destructive to the routine and morale, and so Herculean in scope that if it is carried to its ultimate conclusion it looks very much as if a whole new rationing board will have to be appointed.

The point which the board members fail to recognize is how some total strangers to the community are in a better position to ration gasoline to individual members of the community, and we feel that when this work is completed there will still be the same percentage of errors as at present exist, or perhaps even greater, and in the final test, of what benefit will this be to the community which we serve?

Very truly yours,
A DEPUTY ADMINISTRATOR OF A
WAR PRICE AND RATIONING BOARD.

AN OPEN LETTER TO O. P. A. AT WASHINGTON, AND TO ABOUT 200 RATIONING BOARD CHAIRMEN IN SOUTHERN CALIFORNIA AND THROUGHOUT THE NATION

It is hard to believe what we Rationing Boards have been through, needlessly, during the past few weeks. What follows here is hard to put down in writing.

That a rationeer's revolt has not yet set in outwardly and in fact, as it has inwardly and in spirit, can be laid to the loyal stick-to-itiveness of weary board members and staff members, paid and volunteer. O. P. A.'s latest blunder has severely strained every one's loyalty.

The make-over of B and C books, following the summer load of A book renewal, provokes this letter, and now that some of the smoke has cleared away, some big and rather ugly facts stand out boldly. One is clear, that O. P. A. has little intention of keeping its oft-made promises to streamline the programs to "ease up the work of the boards"—"to give more authority and control" and "grant more paid help to the boards".

The writer heartily wishes that he could believe in those promises. But they have been made and broken too often for us to be misled, even though the promises come from a different voice or spokesman—no matter whether in the press, over the radio, or in the letter pages of Green Book inserts. The effect is almost always the same—a promise to "ease up" is usually a softening tap preceding a heavy blow. A lot of palaver over board "sacrifice"—deep gratitude and sweet words invariably are followed by some newer and clumsier confusion.

This make-over of B and C books, with its complete waste of a full complement of coupons, is still in the class of world mysteries. Its justifiable benefits are in the limbo of guesswork. It cannot be denied that millions of books have been totally wasted,

millions of weary work hours thrown away and millions of tire-miles burned up needlessly by car-owners getting their books changed.

Have you seen any gain worth the effort? Was it worth all this scrambling just to get A, B, and C coupons to look alike? Was it worth it just to get the old ones out of circulation on an exact fixed date to the utter confusion of boards, car owners and gas industry alike? O. P. A. could have demanded that the license numbers be written on the face of old B and C coupons and made them valid that way, saving all the needless work and waste. Such writing had been done by many thousands anyway. This program would have saved the mad rush of switching.

Will it lessen the black market? The only reason advanced for this supreme blunder of all O. P. A. blunders has been the black market. Will it turn that trick? What makes any rational person believe it will? It has created more ill-will, despair, and confusion than anything since rationing began, and we do not leave out any of those hectic hourly changing programs either. It seems so wholly unnecessary and work-wasting. It came out just at the time of lowest volunteer working staffs. The new food calculation (and coupons) for cafes, etc., had just been thrust onto the boards; stove rationing, with its new forms and a volume of new regulations, arrived at the same moment. In 3 issues of the Green Book within 10 days—over 600 pages of new matter came for digesting.

As one who has been constantly on the chairmanship job, full time, unpaid, since November 1942, we believe that O. P. A. has again fully demonstrated its inability to learn by experience. It proves its incapacity to plan suitable programs, and effect them, without making weltering blunders, so many of which we have groaned under during these 10 months. The waste material and time has been tremendous. At first, when O. P. A. was new, this may have been excusable. Now it is little short of criminal wastefulness of manpower and material in a time of all-out war.

We still believe in rationing as much as ever, but we deplore the gigantic and far-reaching tragedy of errors for which administrative O. P. A. is responsible. We ration boards have borne the brunt of the errors; we have been the goats in every case. Washington O. P. A. makes the rules; we have to interpret them but always working against the trend of punitive regulations—or what is worse—the uncertainty of interpretations and directives; and the certainty of confusing delays, changes, and news. We want to be fair—to do our sworn duty in upholding law. We want also to fairly and intelligently guide the rationed public, whose servants we are in this matter. But confusion, delay, and complicated programs make this impossible. Confidence is shattered; the whole ration structure is endangered because of the blunders at the top layer of authority.

Board members elsewhere, who have been consulted, express themselves in somewhat the same terms as above. Not one defended the many recent mistakes and failures. The kindly patience of last winter, when rationing was new and all of us were green, has given way to a despairing wish that something might be done about it—perhaps some giant bursting blunder to end all O. P. A. blunders.

If Washington O. P. A. does not know that the repeated blunders are striking at the very heart of public-ration morale—at the core of their acceptance of controlled price and supply regulation—then O. P. A. must indeed be stupid and incapable.

The mental attitude of rationing-board members, affecting as it does the staff of paid and volunteer workers, and above all, the rationed public itself, is a highly important factor. And, in spite of loyalty and patriotism, which cannot be questioned, despite the full fervent wish to help win the war, despite the thousands of sons and daughters of "rationeers" who are in service, it becomes increasingly apparent that O. P. A. is steadily breaking down the very staunchness and willingness of the unpaid (in money) and devoted hundred thousand or more men and women who have been drafted by their communities (not by Washington) to do the job which O. P. A. freely admits cannot be done without this citizen force.

Of course, O. P. A. might create a complete change-over of membership. Plenty have quit in disgust. But the vast majority stay on the job because they could only be forced out—costly though it is for them to serve. Plenty of us would not quit, tired as we are, short of a demand by the communities who put us there or a Supreme Court decision ousting us. It is our fight and this is our way to help win it. So we'll stick. But we want things changed. What can we do about it? Well, we can tell Washington what we think, instead of just grumbling. (Copies of this are being sent to Washington O. P. A.) We can tell our Senators and Representatives how we feel about it. So we are sending copies to them. You know they have facts and influences wholly unknown to us laymen. Of course, they might say this protest is "all wet." Copies of this are going to every board chairman in southern California, to district O. P. A., to regional at San Francisco, and to one or more ration boards in every other State. I am sorry I cannot send more.

Needless to say, the writer is sending this out entirely at his own expense, not using any O. P. A. help or facilities or material, and paying the postage because he believes that something should be done to get the boards to confer with one another, or at least express themselves to Washington on the many factors which so vitally affect the boards, as well as rationing itself. As the boards go, so goes rationing. If we believe in it, let's help straighten out the kinks and twists. Further than this, the writer has no wish.

Sincerely,

WILLIAM A. LIPPMAN,
Chairman Board 82.7.5,
Palm Springs, Calif.

P. S.—I'm glad I wrote this before I read Green Book No. 52—master sheet news letter, paragraph 4—that Himmleresque plan leaves me wordless!

September 10, 1943.

Coal Production

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. VURSELL. Mr. Speaker, it is about time the War Labor Board changed its attitude toward the rank and file of the coal miners of the Nation and began thinking of getting coal to keep the people from freezing this winter rather than to continue dodging the issue in an effort to embarrass the labor leaders who represent the miners. If the War Labor Board and the Government are willing to give up their pet peeve, settle the coal mine dispute, and get greater production of coal for our citizens and the war effort they now have their chance.

The United Mine Workers of Illinois and the coal operators have reached an agreement on the proposed 8½-hour day. All the War Labor Board has to do now is to approve such agreement. Doubtless, if this Board will approve this agreement, its terms will be accepted throughout the Nation with a new wage contract entered into between the mine workers and the operators. It is to be hoped that the President and the War Labor Board will see the urgent necessity of such action. I refer to the President because there is little question but that none of the bureau heads, in an important matter like this, would make a decision without his approval.

Without the renewal of a wage contract the coal miners have carried on with the exception of a short time out on strike, and they have done a good job in production for the Nation. As a class they have not received the consideration and credit that is due them. It should have been evident from the beginning that with the increase of the cost of living that the wages of the miners, either by allowing portal to portal pay or in other ways, must be increased.

Their scale of wages has been far below the scale of wages in the munitions factories. Their work is and has been more hazardous than that of most industrial workers. All over the Nation women with no experience and with only a few weeks training have been drawing higher wages than the miners who have spent years in acquiring the skill of their trade. It should have been evident to those in charge of the War Labor Board that you cannot keep a group of men, who are organized and whose ranks number into the hundreds of thousands, at a wage level far below what their neighbors are making in less hazardous work and in better working conditions than are those of the miners. It is to be hoped that the War Labor Board will abandon its hard-headed attitude and that peace may come to the mining industry with a greater production of coal because our output now is lagging behind production goals by over 500,000 tons per week.

This Nation faces a serious fuel shortage during the coming winter. Thousands upon thousands of American homes will be cold because of an inability to obtain fuel. The responsibility for this fuel shortage must be accepted by the War Labor Board, inasmuch as its unreasoning attitude toward the miners is as directly responsible for the strife in that industry as the refusal of the miners to work under conditions which they regarded as intolerable.

Mr. Speaker, I believe the great majority of the Members of this House, if they had an opportunity, would vote for the proposal that is now before the War Labor Board. I am sure the coal miners have the sympathy of the majority of the Members of this House who recognize their hazardous employment and who also recognize that this group of men has been underpaid for many months when taking into consideration the high

cost of living and the wage standard set for other industrial workers.

It is to be hoped that the War Labor Board will abandon its arbitrary policy, approve this agreement, and stop the uncertainty and strife in the mining industry in the interest of the men who work in the mines and in the interest of the war effort and our civilian economy.

The Subsidy Roll-Back

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. GATHINGS. Mr. Speaker, the question of subsidizing the consumer's grocery bill on many items will be decided in Congress before the end of the year. Only a short time before the recess of Congress, the House, by a few votes, failed to override the veto of the President on the Commodity Credit Corporation extension bill, which carried a provision prohibiting subsidy payments for the purpose of rolling back prices to the September 15, 1942, levels on certain foods. In order to authorize the continuation of the Commodity Credit Corporation, a compromise was reached which permitted the payment of consumer food subsidies to January 1, 1944. Since Congress reconvened, the War Food Administrator, Marvin Jones, has repeatedly asked that Congress extend food subsidies in order to reduce the cost of living.

While the outcome of the legislation is in doubt, both sides are marshalling forces for a fight to the finish. The anti-roll-back group is attempting to obtain a two-thirds majority of both Houses against the proposal, feeling that the President again would veto any measure outlawing these payments. The proponents claim that they have enough votes to continue food subsidies. Until the final roll calls are held it will not be known what effect the recess and the visits by Members of Congress with the people of their districts will have on the outcome.

Farm organizations oppose roll-back subsidies as unsound in that the people would be passing on to future generations grocery bills which can better be paid now by the consumers with the high wages they are receiving.

The whole problem comes down to this—whether America wants to continue the socialistic trend of the past several years by creating another bureau in the National Government at the expense of individual freedom and independence and placing additional swarms of Federal overseers on the top-heavy pay rolls at a time when the manpower problem is becoming more acute than at any time in the country's history.

The Federal pay roll could be cut one-third, and the result would be more efficiency.

It was proposed originally that the prices be rolled back on certain meats, on butter, and on coffee. The savings on the food bill on these items would approximate $3.92 annually per person, while it is estimated that the cost of the program in salaries, retirement of bonds, and in interest payments would be $9.15 per person. Our children and our children's children will pay more than double the amount saved in current food costs under the plan.

Bank deposits are in excess of $100,000,000,000 at this time. Currency in circulation in the United States is about $15,000,000,000, which is three times what it was only a few years ago. The national income in 1943 will be from one hundred and forty to one hundred and forty-five billion dollars, which is nearly double what it was 5 years ago. Bearing in mind these facts, it seems logical that we in America are in a better position to pay our food bills now rather than defer a part of them until after the war is over.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. GATHINGS. Mr. Speaker, the war emergency has brought the O. P. A., O. D. T., W. P. B., O. W. I., W. F. A., N. H. A., and innumerable other alphabetical bureaus, but it has also given the Federal Government an excuse to inflict, or attempt to impose, many and sundry controls over the individual citizens such as the roll-back subsidy and grade labeling. The latest scheme to regiment America is the Wagner bill, which has been termed the "cradle to grave" security proposal. It is a broad bill, covering many subjects. This legislation was proposed in the report filed by the now extinct National Resources Planning Board, headed by Frederic A. Delano, an uncle of the President. Among its provisions it would place in the hands of one man, the Surgeon General of the United States Public Health Service, the right and power to employ doctors and set up the amount of pay they would receive, determine fee schedules for services of physicians, establish qualifications for those who specialize in any particular medical field, decide upon the number of patients for whom any physician may serve, determine by bureaucratic directive the particular hospitals or clinics which would be eligible to provide service for patients.

If the sweeping provisions of this legislation are enacted into law, the result would be to destroy the private practice of medicine. The doctor with all his training and skill would be at the mercy of one man, whose mandates and decrees would be issued from Washington, making the practice of medicine subservient to the will of the state and the politicians.

Under the present free American system medical science has developed continuously through the years, dreaded diseases have been conquered, and the lives of our people spared. Political control or Government control of the practice will mean medical care through physicians who are politically amenable instead of those who are more learned and skillful. The doctor serves humanity regardless of whether his patient is rich or poor. The Government doctor would come when called or fail to come. He would be supervised and managed to such an extent that a good part of his time would, of necessity, be consumed in studying Government regulations and unraveling red tape. It is estimated that the cost of the program would amount to $3,000,000,000 a year, or the total amount of money expended by the Republic of France in 1938 for all purposes.

If this socialistic crystal-gazing scheme should be enacted into law, it would be the forerunner for the establishment of centralized Federal control of all the professions and all private business.

Available Acreage for Production

EXTENSION OF REMARKS
OF
HON. HARLAN J. BUSHFIELD
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. BUSHFIELD. Mr. President, Carl H. Wilken, educational director of the National Association of Agricultural Commissioners and Secretaries, delivered a very able address entitled "Available Acreage for Production" at the National Food Conference at Chicago a few days ago. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, Thomas Edison said, "All wealth comes from the soil."

The theory today is that all wealth comes from government.

This meeting and the food shortage that looms on the horizon can be blamed almost entirely to our failure to use common sense, arithmetic, and the soil of the United States.

Our economic education has been a mass of theory, neither based on facts nor on a foundation of fundamental economy.

During the past 50 years our economists have practically forgotten that raw material, especially farm production, is the foundation of our national economy. They forgot that the farm produces 65 percent of all raw materials and that the farm income is the origin of all national income.

An analysis of 30 years of the United States as a business reveals that a drop of 1 percent in the initial farm income will translate into 1 percent unemployment, and a loss of 1 percent in factory production, and a loss of 1 percent in national income. The records

of the United States Government, our Department of Agriculture, our Department of Commerce, and Department of Labor, have been used in making the survey.

In the past 12 years from 1930 to 1941 the failure to maintain farm prices at par with finished goods caused the Nation to suffer a loss of $463,000,000,000 of potential income, or an average of approximately $38,000,000,000 per year. I realize that this sounds unbelievable and fantastic, but if we stop to think and realize that the record in 1940 gave the national income as $77,000,000,000, with farm prices below par, and that in 1942 we had a national income of $119,000,000,000, with the general commodity index almost exactly the same as in 1926, facts become stranger than fiction. This difference in national income in the 2 years was $42,000,000,000. And if we look further, the record reveals that we had $39,000,000,000 of national income in 1932 and one hundred and nineteen billion in 1942. This is a difference of eighty billion a year. Economic education that permits that sort of variation in 10 years' time, in the same nation, with the same supply of raw-material resources, the same people, and the same government ought to be discarded and replaced by arithmetic that for centuries and centuries has been the foundation of all science. The classics tell us, "Remember, O stranger, arithmetic is the most accurate of all sciences, the mother of safety." The reason for this huge loss is a simple factor of a trade turn of the farm dollar in trade channels. This trade turn of the initial farm dollar ratio varies with definite mathematical exactness as farm income is exchanged for other goods and services.

From 1921 to 1940, each dollar of farm income created, on the average, $7 of national income. Most economists cannot believe that the farm income is first even though the record proves conclusively that unemployment and loss of factory production follow the drop in farm income. Our good old-fashioned common sense ought to prove that it takes about 6 months on the average for raw materials to go to the factory and from there through our trade channels to the ultimate consumer as finished goods. Common sense ought to prove that if the producer of raw materials is paid 75 percent of parity, that when the factory wishes to market its product that it can sell only 75 percent as much as if he had been paid 100 percent. The facts of the case are—and they can be proved from the record of the Nation as a business—that industry determines its market for finished goods at the relative price level that it pays for its raw materials.

Once we recognize that fact and realize that it's a mathematical law of exchange, then we will stop guessing and hoping for an answer to our economic riddle. In all our efforts to solve the so-called farm problem we did everything that man could dream about except maintain 100-percent parity in the way of price. Finally, through war, the price of farm products was restored to par. That is an indictment of our economic thinking Coming back to the seven times turn of the farm dollar, it means that for each billion dollars of farm income that was lost in the period when farm prices were below par the Nation lost $7,000,000,000 in income or purchasing power. We worried about the cost of maintaining proper farm prices when we should have been thinking of the loss that we are having because we did not maintain them. It is high time that we learn this one simple fact: that to operate the Nation as a solvent business to employ our labor and to maintain a national income to consume our production, a foundation of parity prices for farm products must, because of the laws of mathematics, be our first step.

Once we build that foundation, bureaucratic government and government planning by trial and error and retrial and more error becomes unnecessary. Because of the loss of income resulting from low farm prices during the so-called depression and the resulting underconsumption our economists developed a surplus complex of overproduction. All expansion of production was held in abeyance even though our annual increase in population requires approximately an increase of 3,000,000 harvested acres per year if we wish to maintain an American standard of living.

The failure of our economists to recognize the importance of agriculture also resulted in a failure to recognize the fact that our harvested acreage is the foundation of all farm production. Production of livestock, dairy products and poultry as well as raw materials for our industrial processing of farm products depends on seven principal crops: corn, wheat, oats, barley, rye, flax, and cotton. They constitute over 85 percent of all harvested acreage in the Nation. Let us, therefore, examine the foundation in order that we may know how large a plant we can build.

Using 1910 as a basis of 100, our harvested acreage in 1943 will have increased 6 percent. During the last war we plowed up submarginal land in the areas of low rainfall and in 1919, we harvested 12 percent more acres of farm crops than in 1910. With the drop in farm prices in the latter part of 1920 much of this acreage was abandoned as unprofitable. Through drainage of bottom land in areas of rainfall, and reclamation through irrigation, by 1929 we had increased our harvested acreage to 255,000,000 acres or approximately 8 percent more than in 1910. Since 1929 our failure to expand the foundation of harvested acreage and our surplus complex which took harvested acreage out of production, we have dropped back to 106 percent of the 1910 acreage.

During that same period we had an increase in our domestic population of 42 percent and added to that an increased demand for farm products by industry in producing finished goods other than food. Let me drive that fact home to you. Since 1910 our foundation of farm production harvested acreage has been increased 7 percent and our population has increased 42 percent. Today, instead of being a surplus-production nation, we are deficient in the basic acreage to feed and care for our own Nation on what we like to call our American standard of living. It is only natural that you ask, Well then how did we produce enough to get by? In the first instance, with a loss of thirty-eight billions a year because of subnormal farm prices, a third of our population was just existing, rather than enjoying an American standard of food, clothing, and other materials made from farm products.

In the second instance, again going to the records of the Department of Commerce, the record reveals that from 1925–41 inclusive, we had a net import of farm products to supplement our own production. In the period from 1925–29 we averaged a net import of approximately $350,000,000 per year, foreign valuation. These net imports contributed to the breaking down of farm prices in 1929 and the resulting depression. Even in 1932, with 15,000,000 unemployed, because of low farm prices, we had a net import of $7,000,000 worth of farm products. In 1934–41, when our theorists really got under way, we paid our farmers approximately $1,000,000,000 per year not to produce and increased our net imports to an average of approximately $700,000,000 per year, foreign valuation. We use the term "foreign valuation" because imports are recorded in terms of prices paid in foreign countries. When translated into domestic values and units of production the net imports from 1934–41 were equivalent to 50,000,000 acres per year.

With shortage of shipping, as a result of the war, many of these imports have been shut off. The recovery of the American price level has removed the surplus from underconsumption even to the point of rationing. Lend-lease supplies have increased the demand for exports of farm products. The result is shortage and a shortage that is equivalent to at least 50,000,000 acres. The only source of increasing our harvested acreage is through reclamation of swamps or irrigation of farm lands in areas of low rainfall.

Both of these methods are, of course, not available on short notice. Efforts should be made, however, to initiate such a program of reclamation because our normal increase in population will require an expansion of about 3,000,000 acres per year. We can plow up some of the submarginal acres. Shortage of farm machinery, labor, and low prices will tend to prevent this source from being used. Acres now in cultivation can be made to yield more by the use of fertilizers. But again shortage of fertilizers tends to prevent an increase in production from that source.

As a result, more cries from Washington and paper planning for more production will be in vain.

Failure to recognize the basic factor of harvested acreage in the production of farm products has resulted in an over-expanded livestock, dairy, and poultry program. The production of these products will have to be curtailed by liquidation in the next 6 months. This will result in a shortage of food in 1944.

Not to the point of starvation but to an extent never experienced in the United States. All because of the simple fact that we did not use arithmetic in analyzing the foundation of harvested acreage, the foundation for all farm production.

We have made many commitments to our allies in the way of food products. We do not have the basic foundation to produce these products and our promises will be like those of the bragging upstart, promising that which he couldn't deliver, because he never had it to give.

In closing, I wish to state, without reservation, that in the post-war era, if we maintain farm price parity, we cannot have a depression in the United States. We can have a solvent Nation and help the rest of the world organize a prosperous economy, instead of one that exploits, booms, and busts.

But, always we must remember that our form of government, our freedom and our future of tomorrow rests in the soil of the United States and that the crops from the harvested acreage determines employment, income, and expansion for our Nation. A prosperous United States can and must precede all international cooperation. When we have that, and not until then, will we have a foundation for peace.

The Young Dead Soldiers Do Not Speak

EXTENSION OF REMARKS
OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. MALONEY. Mr. President, the Treasury Department recently issued an "anonymous editorial" in connection with the recent bond drive. This editorial, entitled "The Young Dead Soldiers Do Not Speak," was widely published, and excited much comment and praise.

As a result of the great interest created by the publication of the article it has become known that the author is Archibald MacLeish, Librarian of Congress. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE YOUNG DEAD SOLDIERS DO NOT SPEAK

Nevertheless they are heard in the still houses; who has not heard them?

They have a silence that speaks for them at night and when the clock counts.

They say, We were young. We have died. Remember us.

They say, We have done what we could but until it is finished it is not done.

They say, We have given our lives but until it is finished no one can know what our lives gave.

They say, Our deaths are not ours. They are yours; they will mean what you make them.

They say, Whether our lives and our deaths were for peace and a new hope or for nothing we cannot say; it is you who must say this.

They say, We leave you our deaths; give them their meaning; give them an end to the war and a true peace; give them a victory that ends the war and a peace afterward; give them their meaning.

We were young, they say. We have died. Remember us.

The Contagion of Folly

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. SCOTT. Mr. Speaker, as a former prosecutor, I had occasion over a 15-year period to become familiar with the excellent work done by the better-business bureaus throughout the country. Their activities in the prevention of frauds have saved countless people from racketeers and unscrupulous promoters.

Under leave granted, I include a letter from the chief of the division of securities of the State of Ohio to Mr. Hugh Smith, manager of the Philadelphia Better Business Bureau, and I also include an address given by Mr. Smith before the National Association of Securities Commissioners at Cincinnati, Ohio, on September 2, 1943:

STATE OF OHIO,
DIVISION OF SECURITIES,
Columbus, September 11, 1943.

Re National Association of Securities Commissioners Cincinnati convention.

Mr. HUGH SMITH,
Manager, Philadelphia Better Business Bureau, Philadelphia, Pa.

DEAR MR. SMITH: After taking time to reflect upon the type and quality of the address which you presented to the securities commissioners in Cincinnati, I have become more appreciative of your cooperation and that of the better-business bureaus in maintaining business ethics at a high level. Your address was thoughtful and constructive and voiced a sense of responsibility much needed in these times. The work of the better-business bureaus and our work as administrators of securities laws overlap at many points, but at no place more than in the work of fraud prevention. Your remarks relating to the dangers of dissipation of War bond funds were most appropriate. I am sure that all the commissioners deeply appreciated your time and effort and contribution.

In addition to the address which you gave, we appreciated knowing you and having you participate in the functions of our association. We have long enjoyed pleasant relationships with the better-business bureaus and your coming to this twenty-sixth annual convention added to the great fund of mutual helpfulness which we have long enjoyed.

Most cordially yours,

PAUL L. SELBY,
Chief of Division.

Some years ago, a prominent writer published an essay in which she spoke of the contagion of folly. She said that like other forms of contagion it is spread by personal contact. I selected her phrase for the title of my talk, not because I want others to pursue my folly in going about making talks, but because it seems to me to depict a condition which we may face in the securities field in the post-war era.

Most confidence games and securities swindles which victimize the public are handled through personal appeal by clever high-pressure salesmen. The contagion is often spread by the victim himself, who, in good faith, sends the salesman to relatives or friends. He may even conduct a sort of fifth column of his own by mentioning his good fortune to others who, in turn, become infected and clamor to be "taken." It is a cycle with which we are all familiar. Ponzi was one such classic example.

Already there are signs of potential dangers. These may not take the form of the usual stock and bond type of security. Their device will still be essentially a security in a somewhat different garb.

One of our western coast bureaus reports they are already learning that promoters of not too savory character are now working in defense plants, principally for the purpose of developing private sucker lists for current and later use in the sale of oil lands or leases.

Within the past few days we received an inquiry at our office about one company, a reputable one, which is collecting money on a direct selling basis from householders in connection with the sale of silverware. This silverware is not available for delivery now, but will be furnished after the war. Purchasers have been given certain types of certificates or receipts which are to be redeemable for the merchandise.

In the hands of a responsible company this is a reasonably safe transaction. It is an exaggeration of the lay-away plan commonly used in legitimate merchandising.

On the other hand, I believe you can see the possibilities in such a procedure in the hands of irresponsible or unscrupulous sellers. It's like buying a ticket to your own funeral. The interim certificates used in this particular transaction are being directed to the attention of our State securities commission and to the Securities and Exchange Commission to see if they come within their definitions of securities, since they most assuredly are evidences of indebtedness.

This is mentioned merely as one possible variation of enterprises which we may encounter.

None of us is wise enough to foresee how our present business and industrial structure, which has been adapted to winning the war, will be changed to meet the needs of peace. There are, unquestionably, many complex situations which we will face, and some of them will bring financial hardship to people who have, during the war, known unaccustomed prosperity. It is natural that they should grasp any opportunity to combat the situation. Sharpers always take advantage of such conditions.

When our soldiers return, they will want to get back into civilian life as quickly as possible. They will feel a need to accelerate their efforts to make up for the precious years they have devoted in the protection of their country. The promoter who offers them speedy access to business partnerships, executive jobs and ground-floor opportunities in industries which allegedly have boom tendencies, will probably find many ready takers. As of yore, the hook will be that the prospect must put up money to show his good faith, or he must buy an interest in the business.

But even if all the psychological factors were right, the situation would still be sterile for the promoter if his prospective victims didn't have the money to make his schemes profitable.

Probably the greatest accumulation of wealth that has ever been in the hands of the public now exists, not as a promoter's pipe dream, but as a reality. According to the figures secured from the United States Treasury Department, the holdings of Series E, F, and G War and Defense Savings bonds in the hands of the public through July of this year were $19,304,515,000. This, of course, does not take into consideration savings accounts, money in safe-deposit boxes, old socks, and chimney corners, and the host of tangible things which people have acquired.

It doesn't need market surveys by alleged experts to point the way. The sharpers know the direction and are getting ready for the kill.

These bondholders represent many people who never previously owned securities. Some of them are young—boys and girls who, until they were suddenly catapulted into the war effort, had never been employed. They are uninitiated into the normal type of business transaction. This is also true of many men and women who enlisted in the armed services and who have set aside a part of their earnings to purchase War bonds. In addition, there are those who may have been familiar, to some degree, with investment transactions before the war, but who have now been away for several years, have been thinking of entirely different things, and who may have moved permanently to new locations. Such people need a refresher course in the principles of personal financial protection.

You know, of course, as well as I do, that the chances for organized crookedness in the securities field, or the operation of securities frauds on a large scale, such as prevailed after the last war, is practically nonexistent today. At the close of the last war fewer States enjoyed the protection of securities legislation. Since that time many States have not only acquired such laws but the officials appointed to enforce them have become skilled and experienced in their tasks. Some of the laws then existing, as well as later legislation, have been subsequently amended and strengthened. The Securities Exchange Act was passed and the Commission which it created has become well established in its field.

Then, too, consider the great accumulation of information in the files of every member of your association about the past performances of men whose character and conscience would allow them to indulge in the barbecue of sucker flesh now turning on the spit. I learned that the securities violations section of the Securities and Exchange Commission, up to July 31, 1943, had approximately 45,000 individual records of men and companies whose past records reveal attempts at financial black magic.

There is also available the tremendous reservoir of records in the files of the Federal

Bureau of Investigation. While many of these records do not concern the securities field, others may and do, and they lend strength to performance in this field.

In 1918 there were 8 better-business bureaus. Today there are 83—83 fraud-fighting organizations welded into a national protective association of great strength.

It is readily seen that the sharper who expects to prey upon holders of War bonds, and also upon those who have enhanced their financial position during the war period, will face more formidable barriers than his predecessors faced in previous years. We will, of course, have with us the free lancer, the hit-and-run opportunist, the subdivision real-estate racketeer, the business breaker instead of broker, the business opportunities artists, and others of the same ilk.

Fortunately, there have been important developments in methods of education and communication. The radio was in comparative infancy in 1918. It has now grown into a means of communication which penetrates into nearly every home. There has been a marked development, both in and out of our educational institutions, on courses of instruction for consumers. These courses not only embrace facts about vitamins contained in various foods, and how to take care of the baby, but they also deal intelligently with the financial and investment problems of the family. There are favorable factors, and we must apply them to the problem.

Just as the swindlers are anticipating the post-war market for their spurious wares, so should all of the protective agencies, working together, now prepare their plans to meet such attacks. This entire subject was given serious consideration at the annual conference of the National Association of Better Busines Bureaus held in Omaha early in June of this year. We concluded that this should be a period of education, so that by the time the onslaught arrives, the public will be on its guard, and will recognize the earmarks of dangerous schemes. They should also be familiar with the functions of the governmental agencies in the securities field and know how to avail themselves of their protection.

The essential and basic function of your department is, of course, the registering of dealers. This in itself is a great protection to the public. The fraud aspects of securities are not disengaged from this main function. But they are or should be a specialized feature of it. The most effective way to fight fraud is to prevent it in the first instance.

I realize that most securities commissions do not have an appropriation in their budget for publicity or educational purposes. In fact, many commissions are not adequately staffed at the present time to carry on the executive and investigational work necessary for the full enforcement of their laws. This should not prevent us, however, from studying the problem carefully and utilizing every available source of reaching the public with this message.

We in the Better Business Bureau believe that our activities will help to temper the legalistic aspects of agencies entrusted with the enforcement of securities acts. It would be a great gain if every securities commission had a statement available, in common language, explaining the securities law for the man on the street, telling him how he can avail himself of the facilities and authority which now alienate him to some extent by their detached formality.

The formality followed by many commissions in answering inquiries from citizens of their respective States does not encourage intimacy. I have seen some of these letters. They are brief, official, and legalistic in language, stating that the party named is, or is not, registered in accordance with section such-and-such, of article so-and-so, of the act of such-and-such a date. Sometimes, but not always, a printed copy of the law is enclosed. This is too much for the ordinary person, who, if he were able to interpret the law, might not have found it necessary to make inquiry in the first instance.

For years, better business bureaus, each working in its own locality, and frequently joining hands in more widespread educational efforts, have been urging the public to heed the slogan—"before you invest—investigate." This has brought tremendous dividends over the years and as we all know, many schemes which would have been serious violations of the Securities Acts, and which might have caused great financial loss to the public, have been nipped in the bud because they were brought to your attention and because your subsequent swift action curbed them. The power of publicity is still one of the most protective measures in the world.

Recently, many of our bureaus (and I speak for the Philadelphia bureau because I know first hand about this effort) have been distributing hundreds of thousands of small leaflets of a size for insertion in pay-roll envelopes. These have been furnished without charge to industrial plants, large offices, stores, and other business firms, for distribution to their employees. They carry educational messages such as "Before you invest—investigate." The recipient is asked to be on the alert for any scheme which comes to his attention, and he is asked to report it promptly to his local better business bureau. The results in our case, and I know in that of other bureaus, have been amazing. These small leaflets turn up some interesting inquiries and reveal the activities of many individuals about whom we might not hear for months or until they had accomplished great damage.

Every consumer who writes into our better business bureau on any subject, usually receives, in addition to the reply to his specific inquiry, some educational literature about other schemes which he may encounter. In this way, people are put on their guard.

Envelope inserts, or posterettes, one of which I show you, are given wide distribution. This one, pertaining to War bonds, reads: "The promoters have their eyes on your War bonds. Their propositions will sound good—they'll promise you quick profits. Unfortunately, the promoter is the only one who profits. If you are urged to cash your bonds for investment in an unknown proposition—investigate. Your War bonds are one of the best investments you can make, and the best interests of your country are served if you keep them." This is a message which we must get into the hands of every War-bond holder. We are preparing it in poster form for the bulletin boards of industrial plants and offices. Many other types of posters are used by better business bureaus in their own cities, and many more are in preparation.

One comparatively unrecognized and undeveloped medium which reaches large numbers of employees, most of them holders of War bonds, is the house magazine or employee publications. The extent to which this field has developed was a great surprise to me. An article in a recent issue of the Wall Street Journal reports that house magazines now reach 40,000,000 readers, and that $50,000,000 spent in a year on these publications were considered a good investment.

Many better business bureaus have available to them the constant use of radio facilities, advertising space in newspapers, suburban and neighborhood papers, trade publications, and other media. Thousands of speeches are given every year before classes in high schools, colleges, and universities, as well as before foremen's associations, employee groups, women's clubs, and consumer gatherings.

Some years ago the Pennsylvania Securities Commission prepared for use a statement written in nontechnical language, about the securities law of our State, its protective facilities, and how to use them. We published this in our bulletin, which has a wide distribution in a diversity of sources, many of which, in turn, are distributing agencies of their own. We reprinted this article in a leaflet and gave it a wide distribution. We also included it in every letter answering inquiries on the subject of securities. So important did we feel this place of educational literature to be that we recently asked the Pennsylvania Securities Commission to revise the article bringing it up-to-date. We shall then reprint it in quantity, and get it into the hands of as many War-bond holders in our State as possible. This is a job which might well be worth consideration in other States. These are just a few ideas to stimulate further thinking about the many avenues open to us. We have only to avail ourselves of these opportunities.

On behalf of the National Association of Better Business Bureaus, which I have the privilege of representing here, I convey to you our appreciation for the splendid cooperation which we have received from your group over a long period of years. It has been a very happy relationship. We know that when the post-war problem begins to take its definite shape, it will find us working more closely together for the public protection than ever before. Right will prevail on the side offering the most effective educational facilities. Together we can thwart whatever devious plans the swindlers may prepare. In so doing, the contagion of folly will not have the opportunity to breed or to spread.

A Great Citizen Passes

EXTENSION OF REMARKS
OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. PLOESER. Mr. Speaker, it is with deep sorrow that I announce the passing of an outstanding public servant and distinguished jurist.

From a little community named Black Jack in St. Louis County, of my district, came a man named Julius R. Nolte. His family were pioneers. During the 64 years of Judge Nolte's life he distinguished himself as an outstanding lawyer, a most able jurist, and a great humane citizen.

In memoriam, I extend an article to his honor from the St. Louis County's Watchman-Advocate:

CIRCUIT JUDGE NOLTE, 25 YEARS ON BENCH, DIES AT THE AGE OF 64—MEMBER OF PIONEER COUNTY FAMILY WAS ADMITTED TO BAR IN 1906—SERVED AS MAYOR OF CLAYTON

St. Louis County and the State of Missouri lost one of its outstanding jurists and most highly respected citizens in the death early Tuesday morning of Circuit Judge Julius R. Nolte, of division No. 1 of the St. Louis County Circuit Court.

Judge Nolte, of 307 North Bemiston Avenue, Clayton, prominent lawyer and a former school teacher, who once served as assistant prosecuting attorney of St. Louis County and was a former mayor of Clayton, died from

uremia, at Deaconness Hospital, at the age of 64 years. He became ill about a month ago, rested for a time at his home, and then returned to the bench, but only for a short time, when he was removed to the hospital.

A native of Black Jack, Judge Nolte throughout his active career was a stanch Republican, and because of his legal ability and sterling qualities was appointed by Gov. Sam A. Baker, in 1928, as provisional judge of the St. Louis County Circuit Court to fill the vacancy caused by the illness of Judge James C. Kiskaddon. During the same year he was first elected to the judgeship and was reelected for 6-year terms in 1934 and 1940.

Judge Nolte is survived by his wife, Mrs. Julia Wilson Nolte, and a sister, Mrs. Ruth Couch, of Flat River.

Funeral services were held Thursday afternoon at Bopp's Funeral Church in Clayton, with Rev. Walter Langtry officiating. Interment was in Black Jack Cemetery.

The following named members were appointed to represent the St. Louis Bar Association as honorary pallbearers at the funeral of Judge Nolte:

Marvin E. Boisseau, William W. Crowdus, Samuel W. Fordyce, Arthur J. Freund, James E. Garstang, Elmer H. Grimm, Lon O. Hocker, Arthur V. Lashley, John S. Marselek, Barak J. Mattingly, Walter R. Mayne, Thomas F. McDonald, David L. Millar, Glen Mohler, Roland F. O'Bryen, J. Sidney Salkey, Spencer M. Thomas, Alva C. Trueblood.

Judge Nolte was born at Black Jack, August 25, 1879, a son of Robert and Josephine (Leber) Nolte, pioneers of this country. His father was engaged in farming and fruit growing and for many years was active in school work. The judge graduated from Kirkwood High School in 1897, followed the profession of a school teacher in his early years, and was later appointed a deputy circuit clerk.

Judge Nolte studied law at the St. Louis Law School and was admitted to the bar before the supreme court, January 17, 1906, and was enrolled in the Supreme Court of the United States March 2, 1926. He served as assistant prosecuting attorney of St. Louis County from 1909 to 1910, and in 1922 was elected mayor of Clayton, retiring at the end of his term.

The marriage of Judge Nolte to Miss Julia Wilson, who survives him, occurred June 17, 1903. She is a daughter of the late Dr. C. C. Wilson of Cape Girardeau.

Letters to My Constituents

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, under leave to extend my remarks, I include three letters which I am sending to my constituents, as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

MY DEAR TEACHER: I am writing this letter for a twofold purpose—first, to tell you what I have done here in Washington in a conscientious attempt to help and aid you in your problems, and second, to ask for your vote and support in the coming Governor's election to be held January 18, 1944.

In the last Congress preceding this, the present Seventy-eighth Congress, the Federal aid bill for State schools, which means so much to each of you, died with the ending of that 2-year session, having laid dormant in committee for 2 years.

In this term of Congress the same bill was introduced both in the House (H. R. 2849) and in the Senate (S. 637). Up until September both bills have been inactive in committee. After discussing the matter with representatives of the Louisiana Teachers Association in Louisiana, I was determined not to let this present bill receive the same fate as in the preceding Congress.

I, therefore, on September 20, 1943, proceeded to secure a discharge petition for the House bill (H. R. 2849) and my signature is No. 1 on this petition. Two hundred and seventeen additional signatures are necessary to bring the bill from the committee to the floor. It is my opinion that the needed signatures will be secured shortly.

Since the House differs from the Senate in that there is no discharge petition remedy in the latter, I have taken Senate bill (S. 637) up with several Senators personally and they agreed to take the Senate floor and demand action by the Senate committee. In this way the bill can be brought to the Senate floor for consideration.

Thus I am convinced that both Houses will take action on these bills in plenty of time to bring them to a vote and enact this bill into law.

This act would vitally aid the school systems of Louisiana. The bill provides that the United States Government will not supervise the spending of the money by the State school systems.

Under the terms of this act $20 and more per educable child in Louisiana is guaranteed. The teachers would get a 35-percent increase in pay. Since more than 4,000 teachers have quit teaching in Louisiana, this act would not only help you, but prove an incentive in securing additional teachers to relieve the present shortage. Today as our school system in Louisiana now operates, the school teachers are the poorest paid group in the State. This is shameful. Louisiana's present annual share of these Federal funds under this proposed act is $3,000,000. The maximum share in the future goes as high as $7,000,000.

I intend vigorously to support this bill so that no stone will be left unturned in order to enact the bill into law in this session of Congress, which will continue for approximately 1 year and 3 months longer.

I have consistently voted for all bills directly or indirectly aiding schools, and, on the other hand, have fought and voted against all bills directly or indirectly adversely affecting our school systems.

I did not attempt to write a school program into my platform for Governor, feeling that same could be done in a much better fashion by your association. It is my suggestion that if you have any ideas or recommendations for the school program in my Governor's platform, please write or contact Mr. Howard Wright, the secretary at Baton Rouge, in order that he can in turn pass them on to me.

You, of course, realize that I am far better known over Louisiana today. My backing is more substantial than ever before. Then, too, my service here in Congress has enabled me to demonstrate that I can be of real service to you and other citizens of Louisiana and leaves no doubt in your mind that I would make the kind of Governor you want. Even my worst political critics praise my work here in the Nation's capital.

If I can further assist you individually, or as a group, at any time, I hope you will feel free to call on me.

It may be that I will not have the privilege to see you and talk with you as I had hoped to before election on account of my many duties here in Washington, so that is the reason I am writing you this personal letter, asking for your vote and support so that we will win a great victory on January 18, 1944.

With kindest personal regards, I am
Sincerely yours,

JIMMY MORRISON.

P. S.—Enclosed you will find my speech of recent date, which I hope you will enjoy. I also enclose article by Director Edgar L. Morphet, of administration of finance, Florida State Department of Education.

Best regards,

JIMMY.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

MY DEAR FRIEND: I know that there are times that one must appeal to his friends. You were one of my very close friends who thought so much of me that you donated to my campaign for Governor in 1940, and by so doing made possible perhaps the most scintillating and colorful campaign the State ever saw. I still have that card with your name and address on it, which I shall always keep and cherish.

As you know, I am in another campaign. It is not my purpose to ask for another donation, but rather to express my deep appreciation for your kindness in the last campaign and to ask you for something that is far greater than money—your support in this coming Governor's election, which will mean so much to both of us.

Being a lot better known throughout the State at this time, and having recently had the opportunity of serving the people in Congress, I believe that we will all win a great victory on January 18, 1944, which, of course, is election day, and it will give me the long-awaited chance of being of personal service to you.

It may not be my good fortune to see you personally, as I hope to, but I am going to count on you to help organize your community and put your shoulder to the wheel once again in order that victory will be ours.

I will be in Louisiana soon to begin the campaign.

Looking forward to seeing you then, I am
Sincerely yours,

JIMMY MORRISON,
Member of Congress.

P. S.—Enclosed is a part of the CONGRESSIONAL RECORD, The Gold Dust Twins, which I hope you will enjoy. Best of luck.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

MY DEAR FRIEND: A mutual friends of ours was telling me about you the other day. I told him that I was going to write and ask you for your vote and support in the coming Governor's election, January 18, 1944.

You, of course, realize that I am far better known all over Louisiana today than in the last Governor's race. My backing is more substantial than ever before. Then, too, my service here in Congress has enabled me to demonstrate that I can be of real service to the people. Even my worst political critics admit this. If I can assist you at any time I hope you will feel free to call on me.

I may not have the opportunity to see you personally, so am taking this means to tell you that I would certainly like to count on you for your support.

With kindest personal regards, I am
Sincerely yours,

JIMMY MORRISON,
Member of Congress.

P. S.—Enclosed is a copy of a speech made on the opening day of Congress, after the recess. Please especially note that part about the St. Lawrence waterway and how it would affect New Orleans and Louisiana.

Best regards,

JIMMY.

Visit by Senators to the Fighting Fronts

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Arthur Krock, published in the New York Times of October 3, entitled "War Tour by Senators Promises Wide Benefits," and also an editorial from the Baltimore Sun of this morning entitled "Men Who Justify the Existence of America," relating to the tour recently taken by several Senators who visited the various war fronts where our troops are engaged, with particular reference to the report recently made on the floor of the Senate by the able junior Senator from Massachusetts [Mr. LODGE].

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times of October 3, 1943]

WAR TOUR BY SENATORS PROMISES WIDE BENEFITS—CARE AND RESTRAINT IN THEIR COMMENTS INDICATE CONGRESS WILL GET VITAL DATA ON OUR EFFORTS ABROAD—LODGE REPORT CONSTRUCTIVE

(By Arthur Krock)

WASHINGTON, October 2—The parliamentary pilgrim among warriors, on inquiry bent, has always been a figure of fun, a source of irritation, or both. Anecdotes that drift back to the capitals concerning him are frequently contemptuous. He is expected to make reports to his colleagues and his constituency that are ignorant and foolish, often destructive, after looking into things for himself and for them.

Typical of the traditional species of legislator as "a chiel amang ye, takin' notes," was Kipling's character, Pagett, M. P. Not a wandering legislator, but virtually the same, was the author's Lord Benira Trif, for whom Mulvaney, Ortheris and Learoyd staged a fake peril and rescue and transformed his projected criticisms of the army in India to grateful praise.

But the five Senators who returned to Washington this week from an air trip around the world, during which they visited every theater of combat in which Americans are active and talked with every field commander and numerous members of the rank and file, have shattered the comic tradition. What they reported on and off the record, after they came back, made sense.

A VARIETY OF REPORTS

Particularly cogent, informing and thought-compelling was the testimony given by Senator HENRY CABOT LODGE, Jr., of Massachusetts, the youngest of the group. And very keen anticipatory interest attends the report which Senators JAMES M. MEAD, of New York, and RALPH BREWSTER, of Maine, will make for the Truman committee, of which they are members, on the activities abroad of Washington war agencies, including the propaganda and informational services which are operated by the Office of War Information.

It may be that before the record is complete one or more of the globe-trotting Senators will say or write something that will fall into the traditional pattern of the inept or the destructive. But nothing that has emanated from any of the four that have reached Washington—Senator A. B. CHANDLER, of Kentucky, is still on the way home—belongs even remotely in that category.
